PLANNING COMMISSION/SUBDIVISION COMMITTEE AGENDA
REGULAR MEETING

Wednesday, September 25, 2024 – 7:00 PM

NOTICE TO THE PUBLIC – This Agenda contains a brief general description of each item to be considered. Except as provided by law, action or discussion shall not be taken on any item not appearing on the agenda. Supporting documents, including staff reports, are available for review at City Hall in the Development Services Department or on the City's website at www.cityoflosalamitos.org once the agenda has been publicly posted.

Each matter on the agenda, no matter how described, shall be deemed to include any appropriate motion, whether to adopt a minute motion, resolution, payment of any bill, approval of any matter or action, or any other action. Items listed as "for information" or "for discussion" may also be the subject of an "action" taken by the Planning Commission at the same meeting.

Agenda-related documents provided to a majority of the Planning Commission after distribution of the Planning Commission agenda packet (GC §54957.5) will be made available for public inspection at the meeting. Such documents will also be available at the Development Services office, 3191 Katella Ave., Los Alamitos, CA 90720.

In compliance with the Americans with Disabilities Act, Assistive Listening headphones are available and can be checked out by the Department Secretary. If you need special assistance to participate in this meeting, please contact the Department Secretary at (562) 431-3538, ext. 110. Notification at least 42 hours prior to the meeting will enable the City to make reasonable arrangements to ensure accessibility to this meeting. [28 CFR 35.102.35.104 ADA Title II]. Language translation services are available for this meeting by calling the Development Services Office at least 42 hours in advance.

If you are unable to attend this meeting in person, you may submit comments on any agenda item or on any item not on the agenda by email to gmartinez@cityoflosalamitos.org with the subject line "PLANNING COMMISSION PUBLIC COMMENT". Comments received by 3:00 p.m. the day of the meeting will be compiled, provided to the Planning Commission, and made available to the public before the start of the meeting. Staff will not read email comments at the meeting.

If, as an attendee, or a participant at this meeting, you will need special assistance beyond what is normally provided, please contact the Development Services Department at (562) 431-3538, extension 500, 48 hours prior to the meeting so that reasonable arrangements may be made.

1. CALL TO ORDER

2. ROLL CALL
Chair Cuilty
Vice Chair Zellmer
Commissioner DeBolt
Commissioner Grose
Commissioner Hastie
Commissioner Legere
Commissioner Loe

3. PLEDGE OF ALLEGIANCE

4. ORAL COMMUNICATIONS

At this time, any individual in the audience may address the Planning Commission and speak on any item within the subject matter jurisdiction of the Commission. Please state if you wish to speak on an item on the Agenda. **Remarks are to be limited to not more than five minutes.**

5. CONSENT CALENDAR

All Consent Calendar items may be acted upon by one motion unless a Planning Commissioner requests separate action on a specific item.

A. Approve of Minutes

Recommendation:

Recieve and File.

6. PUBLIC HEARING

A. Site Development Permit 22-02 Lampson Project

The Planning Commission will consider resolutions for recommendations to the City Council Regarding certification of an Environmental Impact Report pursuant to the California Environmental Quality Act, Adoption of a Statement of Overriding Considerations, Adoption of a Mitigation Monitoring and Reporting Plan, Approval of a Tentative Parcel Map 2022-133 (For Finance and Conveyance Purposes), Approval of a Vesting Tentative Tract Map No. 19263 (For Condominium Purposes), Approval of an Affordable Housing Unit Application, and Approval of a Site Development Permit – Major for the 4665 Lampson Project Located at 4665 Lampson Avenue (APN 130-012-35) to Allow Redevelopment of the Project Site with 246 Residential Units consisting of a variety of housing product types, including 55 single-family detached homes, 114 townhomes, and 77 for-rent multifamily apartment homes comprised of 76 units restricted to lower income and one unrestricted manager's unit (the "Project").

Recommendation:

1. Open the Public Hearing;

2. Take testimony; and,

3. If appropriate,

4. Adopt Resolution No. 2024-06, entitled "A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF LOS ALAMITOS, CALIFORNIA, RECOMMENDING THE CITY COUNCIL CERTIFY THE FINAL ENVIRONMENTAL IMPACT REPORT, ADOPT A STATEMENT OF OVERRIDING CONSIDERATIONS, AND ADOPT A MITIGATION MONITORING AND REPORTING PLAN FOR THE

4665 LAMPSON PROJECT LOCATED AT 4665 LAMPSON AVENUE (APN 130-012-35) TO ALLOW REDEVELOPMENT OF THE PROJECT SITE WITH 246 RESIDENTIAL UNITS (APPLICANT: LAMPSON PARK PLACE, LLC)"

5. Adopt Resolution No. 2024-07, entitled "A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF LOS ALAMITOS, CALIFORNIA, RECOMMENDING THE CITY COUNCIL APPROVE TENTATIVE PARCEL MAP 2022-133 (FOR FINANCE AND CONVEYANCE PURPOSES) AND VESTING TENTATIVE TRACT MAP NO. 19263 (FOR CONDOMINIUM PURPOSES) FOR THE 4665 LAMPSON PROJECT LOCATED AT 4665 LAMPSON AVENUE (APN 130-012-35) TO ALLOW REDEVELOPMENT OF THE PROJECT SITE WITH 246 RESIDENTIAL UNITS (APPLICANT: LAMPSON PARK PLACE, LLC)"

6. Adopt Resolution No. 2024-08, entitled "A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF LOS ALAMITOS, CALIFORNIA, RECOMMENDING THE CITY COUNCIL APPROVE AN AFFORDABLE HOUSING UNIT APPLICATION FOR THE 4665 LAMPSON PROJECT LOCATED AT 4665 LAMPSON AVENUE, IN THE MULTI-FAMILY RESIDENTIAL (R-3) ZONING DISTRICT (APN 130-012-35) TO ALLOW REDEVELOPMENT OF THE PROJECT SITE WITH 246 RESIDENTIAL UNITS, INCLUDING 77 AFFORDABLE MULTI-FAMILY APARTMENT HOMES (APPLICANT: LAMPSON PARK PLACE, LLC)"

7. Adopt Resolution No. 2024-09, entitled "A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF LOS ALAMITOS, CALIFORNIA, RECOMMENDING THE CITY COUNCIL APPROVE A SITE DEVELOPMENT PERMIT – MAJOR FOR THE 4665 LAMPSON PROJECT LOCATED AT 4665 LAMPSON AVENUE, IN THE MULTI-FAMILY RESIDENTIAL (R-3) ZONING DISTRICT (APN 130-012-35) TO ALLOW REDEVELOPMENT OF THE PROJECT SITE WITH 246 RESIDENTIAL UNITS (APPLICANT: LAMPSON PARK PLACE, LLC)"

7. ITEMS FROM THE DEVELOPMENT SERVICES DEPARTMENT

At this time, City Staff may also report on items not specifically described on the Agenda that are of interest to the community, provided no action or discussion is taken except.

8. COMMISSIONER REPORTS

At this time, Commissioners may also report on items not specifically described on the Agenda that are of interest to the community, provided no action or discussion is taken except to provide Staff direction to report back or to place the item on a future Agenda.

9. ADJOURNMENT

APPEAL PROCEDURES

Any final determination by the Planning Commission may be appealed to the City Council, and must be done so in writing at the Development Services Department, within ten (10) business days after the Planning Commission decision. The appeal must include a statement specifically identifying the portion(s) of the decision with which the appellant disagrees and the basis in each case for the disagreement, accompanied by an appeal fee of $1,101.00 (resident)/ $2,349.00 (non-resident) in accordance with Los Alamitos Municipal Code Section 17.60 and Fee Resolution No. 2022-11.

I hereby certify under penalty of perjury under the laws of the State of California, that the foregoing Agenda was posted at the Los Alamitos City Hall, 3191 Katella Ave. and online at www.cityoflosalamitos.org not less than 72 hours prior to the meeting.

MINUTES OF PLANNING COMMISSION/SUBDIVISION COMMITTEE MEETING OF THE CITY OF LOS ALAMITOS

REGULAR MEETING – August 28, 2024

1. CALL TO ORDER

The Planning Commission/Subdivision Committee met in Regular Session at 7:00 p.m., Wednesday, August 28, 2024, in the Council Chamber located at 3191 Katella Avenue, Los Alamitos, CA 90720, Chair Cuilty presiding.

2. ROLL CALL

Present: Commissioners: Chair Cuilty
Zellmer (late 7:05 p.m.), DeBolt, Grose, Loe, Hastie, Legere

Staff: Gabriela Martinez, Department Secretary
Irving Montenegro Jr., Development Services Manager
Michael Daudt, City Attorney
Tom Oliver, Associate Planner

3. PLEDGE OF ALLEGIANCE

Vice Chair Cuilty led the Pledge of Allegiance.

4. ORAL COMMUNICATIONS

Chair Cuilty opened oral communication.

Chair Cuilty closed oral communication.

5. CONSENT CALENDAR

All Consent Calendar items may be acted upon by one motion unless a Planning Commissioner requests separate action on a specific item.

A. Approve the Minutes of the Special Meetings of May 7, 2024

Motion/Second:
Carried 6/0 (Grose/Legere) Zellmer absent: The Planning Commission approved the Special Meeting minutes of May 7, 2024.

6. PUBLIC HEARING

A. Conditional Use Permit (CUP) 24-02 Commercial Recreation – Indoors at 10842 Noel St., #103, in the Planned Light Industrial (P-L-I) Zoning District

Development Services Manager Montenegro Jr. introduced the Public Hearing item.

Associate Planner Oliver summarized the staff report.

Commissioner Zelmer arrived late to the meeting at 7:05pm.

Commissioner Loe inquired if there was other Conditional Use Permits in place for the same building.

Associate Planner Oliver shared insight on other similar businesses in the same building that were smaller than 2,500 square feet requirement, therefore they do not have one in place.

Chair Cuilty opened the public hearing.

Applicant Lee took to the podium and shared the following:

- 41 years in the golfing business.
- Does not currently have a hitting bay in his current location and elected to expand into a larger location to accommodate 3 hitting bays.
- Explained his family connection to the City of Los Alamitos.
- Not intended to run as a 9-5 business. Private 1 on 1 lessons.

Commissioner Zellmer inquired about the custom fittings for clubs to individuals and asked if a special CUP is needed.

Applicant Lee responded with insight on how fittings work then shared the actual purchase of products will be through his other location. The Los Alamitos location will not be a retail business.

Associate Planner Oliver clarified that it is ancillary to the proposed business, and it does not require a special CUP

Commissioner Grose inquired on the number of club companies listed in the report.

Applicant Lee shared he only listed companies that provided fitting equipment at this moment. The list could change if other companies reach out wanting to provide the Applicant fitting equipment.

Commissioner Grose inquired if clients bring personal golf clubs or if they can rent.

Applicant Lee shared insight on lessons and the individuals bringing in their own gold clubs. However, they would offer clubs for rent for novice players.

Commissioner Legere asked what the hitting bays will predominantly be used for and the size of lessons.

Applicant Lee stated that the use will be for custom fittings and private 1 on 1 lessons.

Commissioner DeBolt shares his experience with a similar facility and then asked if there would be open hours to the public to make an appointment to come in and practice their swing aside from the private 1 on 1 lessons.

Applicant Lee shared that only he and his wife on occasion will be conducting the private lessons. Currently there is no plan to offer appointment only open practice.

Chair Cuilty closed the public hearing.

Motion/Second:
Carried 7/0 (Grose/Zellmer): The Planning Commission approved the Conditional Use Permit (CUP) 24-02 Commercial Recreation – Indoors at 10842 Noel St., #103, in the Planned Light Industrial (P-L-I) Zoning District.

9. ITEMS FROM THE DEVELOPMENT SERVICES DIRECTOR

Development Services Manager Montenegro Jr. briefly discussed the following:

- Lampson Park Place Project is aiming tentatively to come to the Planning Commissions September 25th meeting.
- Touched on street projects and park projects within the City.
- Nites on Pine event.
- Grand Re-Opening of the Community Center to showcase all the renovations and upgrades taking place on October 4th.

10. COMMISSIONER REPORTS

Commissioner Grose shared her joy for business expansion in the city.

Commissioner Hastie shared his appreciation on the individual meetings to discuss details for big Planning commission topics.

Commissioner Zellmer asked if a limit could be placed before hand for the next Planning Commission meeting to limit the amount of public hearing speakers.

City Attorney Daudt shared that encouragement is best for speakers to fill out the Public Hearing speaking forms to keep organization, but a limit cannot be placed on the quantity of speakers. It is the communities right to come up and speak if they choose to do so.

Chair Cuilty inquired about the time limit per person to speak.

City Attorney Daudt shared that is at the pleasure of the commission, but that the Planning Commission does have the ability to limit time per speaker.

Commissioner Hastie shared his insight on the Planning Commission setting a speaking time limit due to having a large turn out of speakers.

City Attorney Daudt shared his opinion to handle the speaking time limits at the beginning of the meeting and this topic is not agendized to continue speaking on.

Commissioner DeBolt shared his desire to agendize an item for a future meeting to discuss the joint and shared parking for commercial condos.

Chair Cuilty inquired if the Planning Commission has a say over that kind of item.

Development Services Manager Montenegro Jr. asked for clarification on what Commissioner DeBolt is asking for.

City Attorney Daudt stated due to this topic not being agendized, it is best to just allow staff to receive your comments at the moment.

Development Services Manager Montenegro Jr. touched on the binder and how each commissioner will have their own containing the zoning laws making it easier to reference for future meetings.

11. ADJOURNMENT

The Planning Commission adjourned the meeting at 7:26 p.m. to September 25, 2024.

ATTEST: _____ Maty Anne Cuilty, Chair

_____
Gabriela Martinez, Department Secretary

City of Los Alamitos

PLANNING COMMISSION/SUBDIVISION COMMITTEE AGENDA REPORT

MEETING DATE: September 25, 2024 **ITEM NUMBER: 6A**

To: **Chair Cuilty & Members of the Planning Commission**

Presented By: **Ron Noda, Development Services Director**

Subject: **Site Development Permit 22-02 Lampson Project**

SUMMARY

The Planning Commission will consider resolutions for recommendations to the City Council Regarding certification of an Environmental Impact Report pursuant to the California Environmental Quality Act, Adoption of a Statement of Overriding Considerations, Adoption of a Mitigation Monitoring and Reporting Plan, Approval of a Tentative Parcel Map 2022-133 (For Finance and Conveyance Purposes), Approval of a Vesting Tentative Tract Map No. 19263 (For Condominium Purposes), Approval of an Affordable Housing Unit Application, and Approval of a Site Development Permit – Major for the 4665 Lampson Project Located at 4665 Lampson Avenue (APN 130-012-35) to Allow Redevelopment of the Project Site with 246 Residential Units consisting of a variety of housing product types, including 55 single-family detached homes, 114 townhomes, and 77 for-rent multifamily apartment homes comprised of 76 units restricted to lower income and one unrestricted manager's unit (the "Project").

RECOMMENDATION

1. Open the Public Hearing;

2. Take testimony; and,

3. If appropriate,

4. Adopt Resolution No. 2024-06, entitled "A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF LOS ALAMITOS, CALIFORNIA, RECOMMENDING THE CITY COUNCIL CERTIFY THE FINAL ENVIRONMENTAL IMPACT REPORT, ADOPT A STATEMENT OF OVERRIDING CONSIDERATIONS, AND ADOPT A MITIGATION MONITORING AND REPORTING PLAN FOR THE 4665 LAMPSON PROJECT LOCATED AT 4665 LAMPSON AVENUE (APN 130-012-35) TO ALLOW REDEVELOPMENT OF THE PROJECT SITE WITH 246 RESIDENTIAL UNITS (APPLICANT: LAMPSON PARK PLACE, LLC)"

5. Adopt Resolution No. 2024-07, entitled "A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF LOS ALAMITOS, CALIFORNIA, RECOMMENDING THE CITY COUNCIL APPROVE TENTATIVE PARCEL MAP 2022-133 (FOR FINANCE AND CONVEYANCE PURPOSES) AND VESTING TENTATIVE TRACT MAP NO. 19263 (FOR CONDOMINIUM PURPOSES) FOR THE 4665 LAMPSON PROJECT LOCATED AT 4665

LAMPSON AVENUE (APN 130-012-35) TO ALLOW REDEVELOPMENT OF THE PROJECT SITE WITH 246 RESIDENTIAL UNITS (APPLICANT: LAMPSON PARK PLACE, LLC)"

6. Adopt Resolution No. 2024-08, entitled "A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF LOS ALAMITOS, CALIFORNIA, RECOMMENDING THE CITY COUNCIL APPROVE AN AFFORDABLE HOUSING UNIT APPLICATION FOR THE 4665 LAMPSON PROJECT LOCATED AT 4665 LAMPSON AVENUE, IN THE MULTI-FAMILY RESIDENTIAL (R-3) ZONING DISTRICT (APN 130-012-35) TO ALLOW REDEVELOPMENT OF THE PROJECT SITE WITH 246 RESIDENTIAL UNITS, INCLUDING 77 AFFORDABLE MULTI-FAMILY APARTMENT HOMES (APPLICANT: LAMPSON PARK PLACE, LLC)"

7. Adopt Resolution No. 2024-09, entitled "A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF LOS ALAMITOS, CALIFORNIA, RECOMMENDING THE CITY COUNCIL APPROVE A SITE DEVELOPMENT PERMIT – MAJOR FOR THE 4665 LAMPSON PROJECT LOCATED AT 4665 LAMPSON AVENUE, IN THE MULTI-FAMILY RESIDENTIAL (R-3) ZONING DISTRICT (APN 130-012-35) TO ALLOW REDEVELOPMENT OF THE PROJECT SITE WITH 246 RESIDENTIAL UNITS (APPLICANT: LAMPSON PARK PLACE, LLC)"

BACKGROUND

Applicant:	Lampson Park Place, LLC
Project Location:	4665 Lampson Avenue, APN 130-012-35
Notice:	On September 11, 2024, a Notice of Public Hearing was posted at City Hall. It was also published in the Event News Enterprise and public notices were mailed out to all property owners and tenants within 500 feet of the property on this same date.
Environmental:	The City has complied with the California Environmental Quality Act (CEQA). Pursuant to the provisions of the CEQA, an Environmental Impact Report ("EIR") was prepared, which led to the conclusion that a Statement of Overriding Considerations be prepared for the Project due to potentially significant and unavoidable impacts related to transportation.

As stated by the CEQA Guidelines §15002, the basic purpose of CEQA is to:

- Inform governmental decision-makers and the public about the potential significant environmental effects of proposed activities involving discretionary government actions

(including the approval of development projects);
- Identify the ways that environmental damage can be avoided or significantly reduced;
- Prevent significant, avoidable damage to the environment by requiring changes in projects by alternatives or mitigation measures when the governmental agency finds the changes to be feasible and;
- Disclose to the public the reasons why a governmental agency approved the project in the manner the agency chose if significant environmental effects are involved.

An EIR is an informational document prepared in compliance with CEQA that informs government decision-makers and the public in general about potentially significant environmental impacts that could result from a project. The final EIR represents the independent judgment of the City of Los Alamitos (as the CEQA Lead Agency) and presents an objective evaluation of the physical environmental effects that could result from the construction and operation of the proposed 4665 Lampson Avenue Project.

The purpose of an environmental impact report is to identify potential effects on the environment of the Project and to indicate the manner in which those potentially significant effects can be avoided or mitigated. A primary function of the environmental impact report is to disclose and evaluate Project impacts and inform decision makers for the Project. To meet the 45-day circulation requirement, a notice of availability regarding the draft EIR was published on April 24, 2024, and the draft EIR was circulated from April 24 to June 10, 2024 (SCH#2022090476).

Together, the draft Environmental Impact Report (“DEIR”), the revisions to the DEIR, the comments of persons and organizations commenting on the DEIR and a list of all such persons and organizations, the responses to the comments, and other information added by the City constitute the final Environmental Impact Report (“FEIR”) on the Project.

The EIR prepared for the Project demonstrates that the proposed Project will not cause any significant onsite environmental damage as this is a Project on property that has already been designated as an area for residential units and there is no sensitive fish or wildlife habitat on site. The site was previously graded for the construction of the existing commercial building.

Regarding potential off-site traffic or transportation impacts, project components and mitigation measures available to reduce vehicle miles traveled (VMT) include developing pedestrian network improvements and implementing travel demand model (TDM) measures such as those listed in Mitigation Measure MM 4.15-1. Even where the TDM measures are implemented to their maximum effectiveness of 10%, the Project would still not be able to reduce its VMT impact to a level of less than significant, which requires a 31.8% reduction for baseline (2022) conditions and 27.7% for buildout (2045) conditions. Therefore, the Project is found to have a significant and unavoidable VMT impact on a direct and cumulatively considerable basis. All feasible mitigation measures were incorporated to reduce VMT impacts per measures identified in the 2021 California Air Pollution Control Officers Association (CAPCOA) Handbook; however, even with the incorporation of all feasible mitigation measures, impacts would remain significant and unavoidable.

As described above, even with the incorporation of mitigation measures from the EIR into the

conditions of project approval, this potential VMT impact remains significant and unavoidable and would not be mitigated to a less than-significant level. Per Public Resources Code section 21081(a)(3) and CEQA Guidelines Section 15093, specific economic, legal, social, technological, or other considerations make infeasible additional mitigation. Pursuant to the CEQA, with respect to the identified significant unavoidable environmental effects of the Project, the Planning Commission would weigh the economic, legal, social, technological, and other benefits, including region-wide and statewide environmental benefits, of the Project against its unavoidable significant environmental impacts in determining whether to recommend approval of the Project. The Planning Commission would need to find that the benefits of the Project outweigh its unavoidable adverse environmental effects such that the adverse environmental effects may be considered “acceptable.”

Despite the potentially significant impacts, it is the City's considered judgment that the benefits offered by the proposed 4665 Lampson Avenue Project outweigh the potentially adverse effects. Each of the overriding considerations and Project benefits identified below separately and individually outweighs the unavoidable adverse environmental effect (VMT) identified in the EIR, and the City, therefore, finds the impact to be acceptable. Substantial evidence in the record demonstrates that approval and implementation of the Project will provide the benefits as described in detail in the Statement of Overriding Considerations, which is incorporated by reference herein. Each of the separate benefits listed below provides a separate and independent ground for the City’s decision that the Project’s benefits outweigh the significant and unavoidable environmental impact identified in the EIR:

- The Project furthers the City's housing goals and contributes to the City's RHNA requirements in accordance with State Housing Law. The Project site is identified within the City's 2021-2029 Housing Element, and the Project would provide 246 units (including 76 affordable), approximately 32% of the City's total RHNA allocation of 769 units and 24.6% of the City's affordable housing allocation. This would also be the first affordable housing Project that the City has approved in approximately 30 years.
- The Project would reduce commute travel and in turn reduce VMT and GHG Emissions consistent with SCAG Connect SoCal and the City’s General Plan Goals and Policies.
- The Project implements green and sustainable building practices, including the installation of solar photovoltaic rooftops (generating up to 1,229,520 kWh/annually).
- The Project will provide community and social benefits. In addition to the high-quality architectural design, site programming, and on-site amenities for residents, the Project includes the dedication or granting of an easement area of approximately 10,000 sf of the Project site to provide parking for Arbor Park and Arbor Dog Park.
- The Project will provide economic benefits, including a positive net fiscal impact on the City's annual General Fund operating budget and an increase in local and regional tax revenues, including sales and property taxes.

If approved, a Notice of Determination will be prepared for the proposed Project in accordance with the CEQA.

Prior CEQA Review:
The Project site is located within the geographical limits of the City of Los Alamitos and is covered by the City’s 2035 General Plan Update (GPU), which provides the fundamental basis

for the City's land use and development policies. The City's GPU was the subject of a review under CEQA (State Clearinghouse Number 2013121055). The City of Los Alamitos approved the GPU and certified its Final Program EIR on March 23, 2015. The Program EIR contains information relevant to the Project site. Thus, the Program EIR for the City's GPU is herein incorporated by reference pursuant to CEQA Guidelines Section 15150 and is available for public review at the City of Los Alamitos, Planning Division, 3191 Katella Avenue, Los Alamitos, CA 90720.

On February 21, 2023, the Los Alamitos City Council adopted the comprehensive update of the City's Housing Element for the reporting period of 2021-2029 (Resolution No. 2023-02). Upon adoption of the City's 2021-2029 Housing Element Update, the City Council adopted Resolution No. 2023-01 approving General Plan Amendment (GPA) 22-02 to ensure that the zoning code updates in Ordinance 2023-1 will maintain internal consistency with the actions, goals, objectives, and policies of the General Plan and will not create any inconsistencies therein. A Negative Declaration was prepared for the 2021-2029 Housing Element Update pursuant to the provisions of CEQA, and the record of the approval is available to the general public at the address stated above.

On March 20, 2023, the City Council adopted Ordinance 2023-01 which approved a Multi-Family Residential - 36 Zone (R-4) Zoning District in the City, amended the Town Center Mixed Use Zone, and rezoned certain properties to the R-3 and new R-4 Districts. Following adoption of the resolution and ordinance in connection with the 2021–2029 Housing Element update, the Project site land use designation was changed from General Office to Multi-Family Residential-25 and was rezoned from C-F (Community Facilities) to Multi-Family Residential-25 Zone (R-3).

Project and Applications Summary:
Lampson Park Place, LLC, has submitted applications for a Tentative Parcel Map (TPM 2022-133), a Vesting Tentative Tract Map (VTTM No. 19263), Affordable Housing Units, and a Site Development Permit – Major for the 4665 Lampson Project located at 4665 Lampson Avenue (APN 130- 12- 35) to allow redevelopment of the Project site with 246 residential units (see attached site plan).

The Project Applicant, Lampson Park Place, LLC, proposes to demolish the existing office building and surface parking lot on the 12.3-acre property and redevelop the Project site with a residential development consisting of a variety of housing product types, including single-family homes, townhomes, and apartments. The unit mix proposes 55 single family detached homes, 114 townhomes in 18 buildings, and 77 for rent multi-family apartment homes in three buildings comprised of 76 units restricted to lower income and one unrestricted manager's unit. The Project would include a total of 246 units and the overall density for the Project would be 20 dwelling units per acre. Vehicle access to the Project site would be provided via two driveways on Lampson Avenue, one for the apartment entry on the western side and one for the primary neighborhood entry central to the site. The Project would provide 577 parking spaces (475 spaces for the single-family detached and townhomes and 102 for the apartments) in exceedance of the 441 parking spaces that would be required pursuant to the State's Density Bonus Law.

DISCUSSION

Project Location

The Project site is located at 4665 Lampson Avenue, in the City of Los Alamitos, County of Orange (Assessor Parcel Number 130-012-35). Specifically, the 12.3-acre Project site is north of and adjacent to Lampson Avenue and northwest of the intersection of Lampson Avenue and Rose Street.

Aerial View of Site (DEIR Figure 3-3)

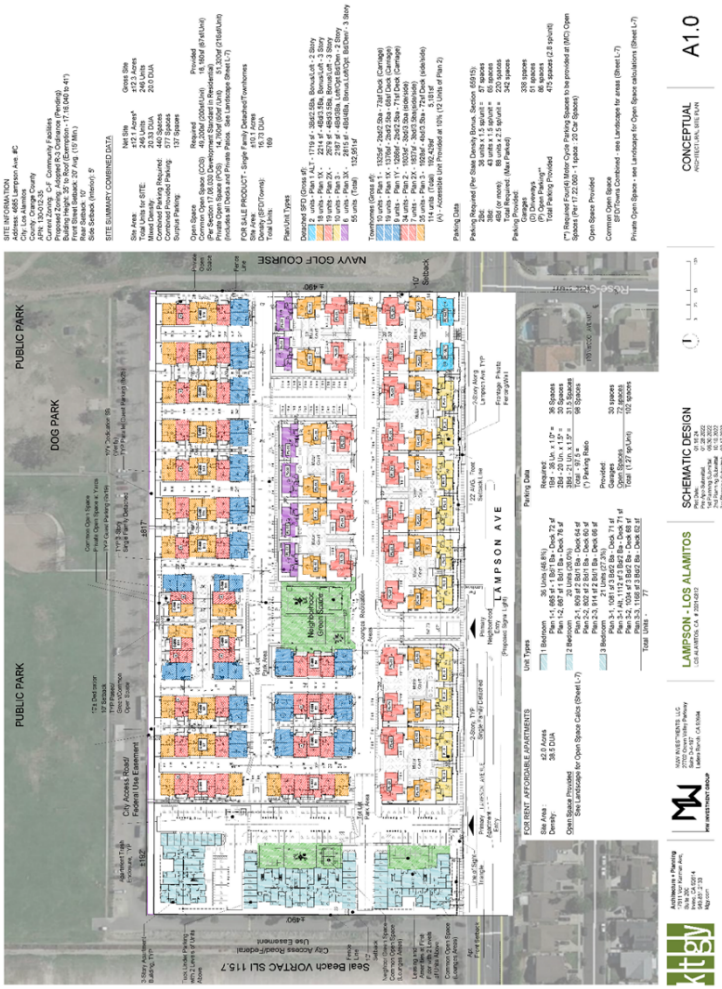
Figure 3-3

Existing Site Conditions

In 1971, the Project site was developed with the existing commercial structure on the central portion, a parking lot on the west portion, and landscaped areas on the remainder. The site has remained in this configuration through the present. Under existing conditions, the Project site is currently developed with a vacant two-story, 88,000-square-foot commercial office building located centrally within the Project site and a surface parking lot located within the western portion of the Project site. A boat storage area that is fenced off and a shipping container is located in the northwest corner of the property. AYSO uses the abutting Arbor Park (north of the Project) on weeknights and weekends for soccer practice and games, utilizing the existing paved parking lot on the Project site for overflow parking.

Site Land Use Designation and Zoning Classification

The Project site's land use designation is "Multi-Family Residential-25," which is defined as single-family detached and attached residences, including all development permitted in other residential categories, stacked flats, and other building types with 4 or more units. Other uses,



such as convalescent hospitals, churches, and mobile home parks, are also permitted, subject to special procedures.

The Project site's zoning classification is "Multi-Family Residential (R-3)". The R-3 zone applies to lots intended to provide multifamily housing. Housing types permitted include those permitted in the R-1 and R-2 zones, as well as structures containing four or more dwelling units. The maximum permitted density is 20 to 25 dwelling units per net acre. The R-3 zone implements the General Plan Multi-Family Residential land use designation.

Surrounding Designations and Uses

Direction from Project Site	Existing Land Use & Jurisdiction	General Plan Land Use Designation	Zoning
North	Arbor Park & Los Alamitos Joint (JFTB)	Community & Institutional/JFTB	C-F (Community Facilities)
South	Residential College Park East City of Seal Beach	Residential Low Density (RLD)	RLD-9
West	JFTB	Community & Institutional/JFTB	C-F (Community Facilities)
East	Navy Golf Course, JFTB	Community & Institutional/ JFTB	C-F (Community Facilities)

Below is the Site Plan for this proposed project (plans are attached/linked to this report).

Parks, Open Space, Landscaping, and Amenities

There is a total of 316.83 acres of park and recreation facilities in Los Alamitos and 35.05 acres of park and recreational facilities in Rossmoor, for a total of 351.8 acres to meet the recreational needs of the City's residents. As proposed, the Project would provide a total of 58,027 square feet (sf) or 1.33 acres of open space in the Project site, including 16,508 sf of usable common open space, 41,519 sf of private open space (homeowner maintained). The usable common open space areas would include amenities such as a tot-lot with rubberized play surface, shade surface with BBQ Island and dining furniture, lawn area with cornhole, ping pong table, and lounge seating with fire-pit. There are also 4,620 sf of multifamily private decks and 5,181 sf of townhomes private decks that would be provided onsite. The Project has been designed with these enhanced recreational amenities to meet the needs of its future residents.

Although the designed neighborhood open space areas are anticipated to meet many of the park and recreation needs of Project residents, Project residents are also anticipated to utilize existing off-site park and recreation facilities in the City of Los Alamitos and nearby Rossmoor and City of Seal Beach Park system. Future residents of the Project site would also have access to (within walking distance) the following public park and recreational facilities, which comprise just over 14 acres of usable parkland and open space:

- Arbor Park, located directly north of the Project site, includes baseball fields leased by

LAYB within its approximately 9.60-acre site.

- Arbor Dog Park, located directly north of the Project site, includes a dog park that is currently leased by the City of Seal Beach from the JFTB for its residents within its approximately 1.40-acre site.
- Orville Lewis Park, located approximately 1 mile northwest of the Project site, includes a grass area, baseball backstop, basketball court, play area, barbecue, picnic shelter and tables, and drinking fountain within its approximately 1.65-acre site.
- Heather Park, located approximately 350 feet southwest of the Project site, includes two lit tennis courts, one tot lot/play structure, one swing set, and four picnic tables within its approximately 1.6-acre site.

The Project also includes a dedication or easement for the northerly 10-foot strip of land abutting Arbor Park and Arbor Dog Park for purposes of public access and parking, which comprises an area of approximately 10,000 sf of the Project site (Condition No. 14).

Based on the Project's Parks Impact Analysis, it is anticipated that a negligible amount of Project residents will regularly visit parks near the Project site. Specifically, a total of 178 Project residents would visit the designed neighborhood open spaces within the Project site and 131 Project residents would visit Arbor Park, Arbor Dog Park, and Heather Park as the parks they visit most often.

Open Space Plan

Landscape Plan

The carrying capacity of Arbor Park and Heather Park would be 337 visitors, and there is no calculation for carrying capacity for Arbor Dog Park. Because the projected number of Project visitors to these parks are well within the carrying capacity, there is sufficient capacity at existing nearby neighborhood parks to accommodate the Project residents. With full occupancy of the Project, the designed neighborhood open spaces within the Project site, the capacity and existing maintenance and usage of existing parks, and the estimated visitation of the Project residents to the existing parks; the Project is not anticipated to increase the use of the existing parks such that substantial additional use or physical deterioration of the existing parks would occur or be accelerated.

Additionally, the Project Applicant will be required to pay in-lieu fees in accordance with the City's park dedication requirements under Chapter 16.18 (Dedication of Land for Park Facilities and Payment of In Lieu Fees) of the City of Los Alamitos Municipal Code (Condition No. 29).

Also, a variety of trees, shrubs, accent plants, and ground cover are proposed along the perimeter of the Project site, in common areas, recreational amenities, open space areas, and parking areas. Landscaping will feature drought-tolerant plant materials.

LAMC Section 17.08.030, Table 2-03 requires a minimum of 200 square feet of common area and 60 square feet of private space per unit. The Project will be able to comply with the minimum private space requirement, yet the Project will not be able to comply with the common area requirement. Pursuant to the Density Bonus Law, the Applicant is requesting a reduction from 200 to 150 square feet per unit. (Government Code Section 65915).

Parking

The Project would provide 577 parking spaces (475 spaces for the single family detached and townhomes and 102 for the apartments) in exceedance of the 441 parking spaces that would be required pursuant to the State's Density Bonus Law.

As part of the Project, Walker Consultants prepared a parking analysis (*Technical Appendix P* of the Draft EIR) to determine the appropriate amount of parking needed for the Project. Based on the City's off-street parking requirements in the Municipal Code, the Project would be required to provide 679 parking spaces. However, because the Project includes an affordable housing component, it is entitled to the reduced parking ratios set forth in the State Density Bonus Law (Government Code Section 65915), which would reduce the Project's minimum off-street parking requirement to 441 parking spaces. The Project is proposing to provide 557 parking spaces, 26% above what is required under the State Density Bonus Law. Moreover, the City of Seal Beach has lower parking requirements for multi-family dwelling units than the City of Los Alamitos. Under the City of Seal Beach's Municipal Code Section 11.4.20.015, a total of 472.29 parking spaces would be required, inclusive of guest parking.

As discussed above, the Project would provide 577 parking spaces and would therefore exceed the City of Seal Beach's parking standards (by 84 spaces). Therefore, the Project would provide more than adequate parking based on nationally recognized Urban Land Institute/National Parking Association Standards for market-rate residential development and would meet the minimum parking requirements of the City of Seal Beach, the adjacent jurisdiction. Based on the analysis conducted in the parking analysis, the Project's proposed parking supply is appropriate to serve the potential parking needs of the Project. As a result, Project residents would have adequate parking on-site and would not park on streets in the adjacent neighborhood.

Table 3, 4665 Parking Requirements Based on State Density Bonus Law
Appendix P, Draft EIR (Walker Consultants; January 30, 2023)

Land Use	Vehicle Parking Requirement	Proposed # of Units	Number of Spaces Required	Number of Spaces Provided
Single-Family Dweling	2.50 spaces per unit	55	137.50 spaces	*183.00 spaces*
Multi-Family Dwelling				
2 bedroom	1.50 spaces per unit	38	57.00 spaces	
3 bedroom	1.50 spaces per unit	41	61.50 spaces	
4 bedrooms	2.50 spaces per unit	35	87.50 spaces	
Guest parking	Included in Above			
	Subtotal Multi-Family Dwelling		*206.00 spaces*	*276.00 spaces*
Affordable Housing				
1 bedroom	1.00 spaces per unit	36	36.00 spaces	
2 bedroom	1.50 spaces per unit	20	30.00 spaces	
3 bedroom	1.50 spaces per unit	21	31.50 spaces	
Guest parking	Included in Above			
	Subtotal Affordable Housing		*97.50 spaces*	*98.00 spaces*
		Grand Total	**441.00 spaces**	**557.00 spaces**

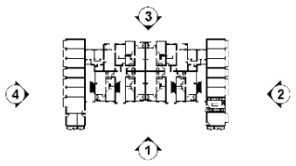
Architectural Features and Materials

The proposed residential buildings would range from two to three stories, and the maximum building height for the Project is 41 feet. Los Alamitos Municipal Code (LAMC) Sections 17.08.030 and 17.16.040 govern maximum building height, height measurement, and exceptions. According to LAMC Section 17.16.040.B certain building elements may exceed the allowed height of the zone in which they are located, up to an additional 6 feet above the maximum height limit (maximum height limit of 41 ft). These building elements include

plumbing vents and chimneys, fire and parapet walls, roof structures for the housing of air conditioners, elevators, stairways, tanks, ventilating fans, and similar equipment, and skylights. As proposed, the typical single-family dwelling ranges from 25.9 feet to 36 feet in height, the typical townhomes are approximately 35.5 to 37 feet in height, and the typical multifamily building is approximately 37 to 39 feet in height.

Architectural materials of the typical single-family dwelling units include composite shingle roof (no rake tile), metal roof (standing seam), faux wood, French door, vinyl windows, decorative fiberglass entry door, and cantilever built-up deck/balcony.

Typical Single-Family Dwelling Elevations



Architectural materials of the typical townhome unit include composite shingle roof, stucco light sand finish, faux wood trim, decorative faux vent, barge board, decorative gable end outlooker, vinyl windows, wood railing, decorative fiberglass entry door, and metal utility door.

Typical Townhome Elevations

Architectural materials of the typical multifamily units include stucco, vertical siding, composite shingle roof, decorative gable end outlooker, vinyl windows, metal sectional garage door, and stone veneer.

Typical Multi-Family Elevations

Building Key Plan N.T.S.

ktgy Architecture + Planning 7911 Van Karman Ave Suite 202 Irvine, CA 92614 949.851.2133 ktgy.com

LAMPSON - LOS ALAMITOS
LOS ALAMITOS
AFFORDABLE APARTMENTS SITE

CONCEPTUAL DESIGN
JANUARY 11TH, 2023

BUILDING ELEVATIONS

AA2.0

Public views of the townhomes and clustered homes from Lampson Avenue would consist of two-story to three-story buildings, parked cars, landscaping, and residents.

Lampson Street Scene

Walls and Fencing

Wall and fencing would be provided throughout the Project site to provide visual and physical privacy, sight lines for views, buffering between different uses, and to allow for privacy and security in residential areas. As shown in EIR Figure 3-20, *Wall and Fence Plan (see below)*, a 7-foot-high concrete wall would be constructed around the Project's perimeter and between the apartments and single-family detached homes/townhomes. Vinyl fencing (5'-6" high) would be constructed around the single-family detached homes and a 3'-6" high stucco concrete patio wall would be constructed around the patio areas of the townhomes. Additionally, a 4-foot-high combo metal guard-rail fencing would be constructed on the northern portion of the eastern boundary of the Project site.

Wall and Fence Plan

Water

Golden State Water Company (GSWC) would provide potable water service to the Project site. Water demand associated with the Project would consist of interior plumbing devices (i.e., showers, sinks, toilets, faucets), outdoor landscape irrigation, washers, and other uses similar to that of a residential development. Based on the water supplies available and the estimated water demand, there are sufficient water supplies available to serve the Project during average, single dry, and multiple dry years. The Project would not require the construction of new or expanded water facilities, nor would the Project require the relocation of water facilities. The Project would include the installation of new water lines within the Project site, connecting to existing facilities within Lampson Avenue, including a 1,200-foot watermain extension between the eastern driveway and the existing GSWC watermain at the intersection of Lunar and Lampson.

Wastewater (Sewer Infrastructure)

The results from the Sanitary Sewer Analysis (refer to *Technical Appendix O* of the Draft EIR) demonstrate that the proposed flows, in addition to the observed flows, create a proposed depth of flow that would not impact the existing surrounding sanitary sewer systems. Based on sewer monitoring data collected in preparation of the Sanitary Sewer Analysis, the sewer systems in all three locations indicated good flow, along with hydraulics and relatively low depths. Wastewater volumes produced by the proposed development would not significantly impact or exceed the existing sewer capacity in the public system, and that the existing sewer system has adequate capacity for the proposed development.

Stormwater Drainage

The Hydrology Study (*Technical Appendix I3* of the Draft EIR) prepared for the Project demonstrated that the Project's peak hour flows would not exceed the existing condition flows. As proposed, the Project site's stormwater runoff would be conveyed by roof downspouts or street surface flow to the proposed gutters and collected by thru-curb inlet bio-filtration devices

or catch basin inlets for water quality treatment. The bio-filtration devices include internal overflow bypass that direct flows via on-site underground storm drain system to an underground detention system located under parking areas at the southwest portion of the Project site. From the detention system, a stormwater sump pump located in the southwest corner of the Project site would outlet flow into the existing 18" outlet storm drainpipe at the southwest corner of the site, which conveys stormwater runoff to Los Alamitos Joint Forces Training Base (JFTB) property directly west of the site. The detention system and pump would be sized so that the outlet flows from the developed site will be equal to, or less than, existing conditions for all storm events. In the event the stormwater pump fails, or the outlet pipe becomes clogged, the emergency overflow for the site will be conveyed through a parkway drain discharging flow onto Lampson Avenue, matching historical drainage patterns.

WQMP

Pursuant to the LAMC Chapter 8.44, the Project Applicant would be required to implement a Water Quality Management Plan (WQMP) to demonstrate compliance with the City's National Pollutant Discharge Elimination System (NPDES) municipal stormwater permit, and to minimize the release of potential waterborne pollutants, including pollutants of concern for downstream receiving waters. The WQMP is a site-specific post-construction water quality management program designed to address the pollutants of concern of a development project via BMPs, implementation of which ensures the on-going protection of the watershed basin. The Project's preliminary WQMP is included as *Technical Appendix I2* appended to the EIR.

As identified in the Project's preliminary WQMP, the proposed Project is designed to include evapotranspiration, rainwater harvesting BMPs, biotreatment BMPs, non-structural source control BMPs, and structural source control BMPs. The Project site would be divided into seven (7) Drainage Management Areas (DMA). Each drainage area would have an area drain system to convey runoff from landscape and roof drainage along curb inlet Modular Wetlands Systems to intercept surface runoff from surrounding walkways and drive aisles. The area drain system design would be determined during final engineering and would connect directly to the proposed water quality treatment devices. Non-structural source control BMPs include education for property owners, tenants and occupants, activity restrictions, common area landscape management, BMP maintenance, title 22 CCR compliance, uniform fire code implementation, common area litter control, employee training, common area catch basin inspection, and street sweeping private streets and parking lots. Structural source control BMPs include storm drain system stenciling and signage, trash and waste storage areas, efficient irrigation systems & landscape design, water conservation, smart controllers, and source control.

Solar & KW hours

The City of Los Alamitos receives electrical service from the Southern California Edison Company (SCE), and the Project operational energy demands would be supplied by SCE. The Project does not propose uses that are inherently energy intensive and the energy demands in total would be comparable to other residential uses of similar scale and configuration. No new or expanded off-site dry utilities are required to serve the Project.

As summarized in EIR Table 4.5-2, *Project Annual Operational Energy Demand Summary*, operations for the Project would result in approximately 1,131,132 kWh of electricity annually and would offset the demand through the use of on-site photovoltaic solar power which is

expected to generate 1,229,520 kWh of electricity annually (PDF-GHG-1), resulting in a net electricity demand of 98,388 kWh/year of electricity. This is consistent with General Plan Policy 4.9, Renewable Energy, to promote the use of renewable energy sources to serve public and private sector development.

Noise

To address the proximity of the Los Alamitos JFTB, the Project will implement sound attenuation methods to ensure the interior CNEL does not exceed 45 dB. For example, the Project will provide mechanical ventilation (e.g. air conditioning) in all units. In addition, with implementation of PDF-N-2, which includes the use of windows with a STC rating of 29 on all second-floor facades adjacent to Lampson Avenue and JFTB Los Alamitos, the Project would be designed to achieve a 25 dBA reduction and meet the 45 dBA CNEL interior noise standard. As designed, the Project would not expose people residing or working in the Project area to excessive noise levels from airport or aircraft operations. Furthermore, as conditioned, the Applicant will be required to notify purchasers and renters that the Project site is within an airport influence area and may experience annoyances or inconveniences associated with proximity to airport operations (Condition No. 15).

Condominiums

The Project includes Tentative Parcel Map No. 2022-133 and Vesting Tentative Tract Map No. 19263. Tentative Parcel Map No. 2022-133 (for finance and conveyance purposes) would subdivide the property into two parcels: 1) Parcel 1 (2.204 acres) for the affordable housing component and 2) Parcel 2 (10.163 acres) for the single family detached and townhome component. The 77-unit apartment home component, including 76 units reserved for lower income households, will be established on Parcel 1, and the Vesting Tentative Tract Map would be proposed on the Parcel 2 and would be used for condominium purposes. Therefore, the Project would not conflict with General Plan Policy 4.10 related to subdivisions of land. Under this policy, the City encourages further land divisions resulting in parcel sizes that facilitate multifamily development affordable to lower income households. The City offers incentives for land division encouraging the development of affordable housing including but not limited to: priority to processing subdivision maps that include affordable housing units, expedited review for subdivision of larger sites, and financial assistance. The objective of this policy is to facilitate land subdivisions for affordable housing development.

Pursuant to LAMC section 17.28.110, *Condominiums – Residential and Residential Conversions*, the proposed Project furthers the goals of the General Plan, provides a balanced mix of housing, and ensures the form of ownership and occupancy complies with applicable laws for the general health, safety, and welfare of the public. This section allows new residential condominium projects in all residential zones at densities applicable to the zone in which the project is located, subject to the approval of tentative and final tract or parcel maps as may be required by law and any development permits required for multi-family housing in the zone in which the new project is located.

As proposed, the Project complies with the requirements of this section, with the requirements of LAMC Title 16 (Subdivisions), and with the basic purpose of the State Subdivision Map Act. The Project would also comply with applicable building and fire codes in effect at the time of construction. Furthermore, the Project incorporates Project Design Feature (PDF) N-2 that would reduce potential noise impacts for future residents.

Pursuant to the Density Bonus Law, the Applicant has requested concessions and waivers regarding the Condominium and/or zoning district requirements for the setback distance between structures, building step-back requirements, minimum storage space, common area requirements, and reduced parking ratio. See Affordable Housing Units and State Density Bonus Law below for additional details.

Affordable Housing Units

As proposed and conditioned (Condition Nos. 16 - 23), the Project would include 77 multi-family units which would be comprised of seventy-six (76) units restricted to lower income and with one unrestricted manager's unit. The affordable units would be rented to lower income households as defined in Section 50079.5 of the California Health and Safety Code for a period of no less than 55 years at rents that do not exceed the maximum rent for 80% income level units for that size unit in Orange County.

State Density Bonus Law

The State Density Bonus Law (Government Code Section 65915 et seq.) (collectively, "Density Bonus Law" or "DBL") and Los Alamitos Municipal Code (LAMC) Section 17.28.050 (Affordable Housing) entitles applicants to a density bonus, incentives or concessions, waivers or reductions of development standards, and reduced parking ratios to encourage the construction of affordable housing units. The Project qualifies for three incentives/concessions and unlimited waivers or reductions of development standards by providing 76 units for lower-income households.

1. Density Bonus

A maximum base density of 25 units per acre is allowed in the Multi-Family Residential R-3 zone pursuant to Section 17.08.030 of the LAMC, which yields 308 multi-family units for the 0.23-acre lot. With the inclusion of 76 units for lower-income households, the Project is providing 24% of its base density for affordable housing. Thus, pursuant to the Density Bonus Law, the Applicant is entitled to a Density Bonus of up to 50%, or up to 154 additional units, for a total development potential of 462 units. While entitled to the aforementioned Density Bonus, the Applicant is proposing a total of 246 residential units, less than the maximum 308-unit base density.

2. Concessions and Waivers

A "concession or incentive" includes a reduction in site development standards or a modification of zoning code requirements or architectural design requirements, approval of mixed-use zoning in conjunction with a housing project, and other regulatory incentives or concessions that result in a reduction in affordable housing costs. The DBL provides that a city must grant a proposed concession or incentive unless it makes a written finding, based upon substantial evidence, that the concession or incentive: (1) does not result in identifiable and actual cost reductions to provide for affordable housing costs for the targeted units; (2) would have a specific, adverse impact upon public health and safety or on any real property that is listed in the California Register of Historical Resources and for which there is no feasible method to satisfactorily mitigate or avoid the specific, adverse impact without rendering the development unaffordable to low-income and moderate-income households; or (3) would be contrary to state or federal law. The DBL provides that an applicant is entitled to three "incentives or concessions" if it offers to restrict at least 24% of the housing units for lower

households. The Project would provide 76 units for lower-income households, or 24% of the base density, making the Project eligible for three incentives/concessions. The Applicant, however, is proposing only two concessions, as follows:

a. Exception for building step-back requirements. LAMC Section 17.08.045.A.1 requires that for buildings higher than two stories, the third story must have a minimum 5-foot step back from the story below to minimize building bulk and create façade articulation. This requirement appears to govern regardless of building location within a project site or surrounding land uses. While the City interprets this requirement as applying only to perimeter buildings (i.e., buildings that are located along the perimeter of a Project site), given the requirement's ambiguity, the Applicant is requesting an exception from the required minimum 5-foot step back requirement for those structures identified on the site plan.
b. Reduction in minimum storage space. LAMC Section 17.08.030, Table 2-03, requires a minimum storage space in a garage or carport of 200 cubic feet per unit. For certain units within the Project, this storage space requirement will be difficult to satisfy because of limitations in garage and carport space. As such, the Applicant is requesting that the minimum storage space requirement be reduced to 175 cubic feet per unit for market rate units and 50 cubic feet per unit for affordable units identified on the site plan.

3. Waivers or Reductions in Development Standards

The DBL provides that, in addition to a density bonus and concessions or incentives, an applicant may propose waivers or reductions of development standards that will have the effect of physically precluding the construction of the proposed development, with the required density bonus and concessions or incentives permitted by the DBL. Similar to a concession or incentive, a city must waive or reduce a development standard that would physically preclude construction of the proposed development unless the waiver or reduction: (1) would have a specific, adverse impact upon health or safety, and for which there is no feasible method to satisfactorily mitigate or avoid the specific adverse impact; (2) would have an adverse impact on any real property that is listed in the California Register of Historical Resources; or (3) would be contrary to state or federal law. The proposed project incorporates the following two (2) waivers or reductions of development standards, which the applicant contends would physically preclude construction of the project as proposed:

a. Reduced common area requirement. LAMC Section 17.08.030, Table 2-03 requires a minimum 200 square feet of common area and 60 square feet of private space per unit. The Project will be able to comply with the minimum private space requirement, but the Project will not be able to comply with the common area requirement. This is due to the proposed dedication or grant of an easement related to the northerly 10 feet strip of land abutting Arbor Park and Arbor Dog Park, which comprises an area of approximately 10,000 square feet of property. When this area is dedicated to the City, then the Project will be unable to comply with the common area requirement because compliance with this requirement would physically preclude construction of the Project at the densities allowed and with the concessions described above. Therefore, the Applicant is requesting a reduction in the common area requirement from 200 to 150 square foot per unit.
b. Reduction in setback distance between structures. LAMC Section 17.08.030, Table 2-

03 requires a 10-foot minimum distance between structures. Though most of the Project's single-family residential setback distances between structures meet or exceed the minimum distances, the setback distance is reduced to 6 feet at certain locations within the Project site plan. Meeting the required 10-foot minimum setback distance would require a significant change to the site plan and likely result in a reduction of residential units.

4. Parking Reduction Request

The Project would provide 577 parking spaces (475 spaces for the single-family detached and townhomes and 102 for the apartments), the DBL specifies that for housing developments that qualify for a density bonus the local government shall not require a vehicular parking ratio, inclusive of parking for persons with a disability and guests, that exceeds the following ratios: (A) zero to one bedroom: one onsite parking space; (B) two to three bedrooms: one and one-half onsite parking spaces; and (C) four and more bedrooms: two and one-half parking spaces. The Applicant requests that the City require no more than 2.35 spaces per unit for a total of 577 parking spaces for the Project, which is significantly more than the 441 parking spaces that would be required pursuant to the State's Density Bonus Law.

The Project Applicant would be required to provide proof of recording, prior to final map approval, that the 76 affordable units are required to be maintained as affordable units for a period not less than 55 years. This is in accordance with the State Density Bonus Law and described further in the Conditions.

The Applicant would be required to enter into a Regulatory Agreement with the City to memorialize the provision of lower income housing and the granting of the requested Density Bonus Law concessions and waivers. Among other things, the Regulatory Agreement will require that households that include veterans of the United States military and/or households that include person(s) who are currently employed in or reside in the City of Los Alamitos be given preference in leasing the affordable units.

Findings

To recommend approval of a Tentative Parcel Map and Vesting Tentative Tract Map, the Planning Commission must consider the following findings (LAMC § 16.10.100 and § 16.10.110). Staff responds to each of these findings below.

1. The proposed maps are consistent with the City's General Plan:

Staff Response: The proposed maps allow for the site redevelopment with 246 residential units at a density of 20 dwelling units an acre which is within the General Plan multi-family residential land use designation of 20 – 25 units per acre. The proposed design of the Project subdivision is consistent with the applicable General Plan goals, policies, and implementation measures.

2. The design and improvement of the proposed subdivisions is consistent with the City's General Plan:

Staff Response: The design and improvement of the 246-unit project is suitable for

residential development in the R- 3 Multi-Family Residential Zone and the subdivisions can be developed in compliance with the General Plan.

3. The site is physically suitable for the proposed type of development:

Staff Response: The site is physically suitable for a residential subdivision because the site is generally flat and will require minimal grading.

4. The site is physically suitable for the proposed density of development:

Staff Response: The 12.3-acre site is capable of supporting the development of the proposed 246 residential units. The proposed Project is at 20 dwelling units per acre, within the maximum that the City' s R- 3 zoning district allows at 25 dwelling units per acre under multi-family development.

5. The requirements of the California Environmental Quality Act (CEQA) have been satisfied:

Staff Response: Pursuant to the provisions of the CEQA, an Environmental Impact Report ("EIR") was prepared which led to the conclusion that a Statement of Overriding Considerations be prepared for this Project. The purpose of an EIR is to identify potential effects on the environment of the Project and to indicate the manner in which those potential significant effects can be avoided or mitigated. A primary function of the EIR is to disclose and evaluate Project impacts and inform decision makers for the Project. In order to meet the 45-day circulation requirement, a notice regarding the draft EIR was circulated from April 24 to June 10, 2024 (SCH#2022090476).

6. The design of the subdivisions and proposed improvements are not likely to cause substantial environmental damage or substantial and avoidable injury to fish or wildlife in their habitat:

Staff Response: The proposed subdivisions will not cause environmental damage as this is an infill project on property that already has been designated as an area for residential units and there are no fish or wildlife habitat on the site. The site was previously graded for construction of the existing commercial building.

7. The design of the subdivisions and the proposed improvements are not likely to cause serious public health problems:

Staff Response: The proposed subdivisions design and improvements will not adversely affect the public health of the citizens of the City of Los Alamitos as the project is the type of use which is planned for in this area; the residential project will be compatible with the single-family and multi-family residential uses in the area. The mitigations required by the CEQA document will ensure the safety of the inhabitants of the Project and will contribute to the health of the community as a whole.

8. The design of the subdivisions and improvements will not conflict with public access easement(s) through the property:

Staff Response: The design of the subdivisions and the proposed improvements will not conflict with any existing telephone, street, and/or public utility easements. There are no public access easements through the property.

9. The design and improvements of the proposed subdivisions are suitable for the uses proposed, and the subdivisions can be developed in compliance with the applicable zoning regulations:

Staff Response: As conditioned, the Project will comply with applicable zoning regulations. Pursuant to the State's Density Bonus legislation, minor incentives, concessions, waivers, and/or reductions in development standards have been requested for reduction in setback distance between structures, exception for building step back requirements, reduction in minimum storage space, reduced common area requirement, and reduced parking requirement.

10. The discharge of waste into an existing community sewer system will not result in or add to a violation of existing requirements prescribed by the Regional Water Quality Control Board.

Staff Response: The discharge of wastewater from the subdivision into the sewer system will not result in a violation of existing requirements prescribed by the Regional Water Quality Control Board.

To recommend approval of a Site Development Permit, the Planning Commission must consider the following findings (LAMC § 17.44.060). Staff responds to each of these findings, below.

1. The proposed project is allowed within the subject zone:

Staff Response: The property is designated and zoned for this type of development. The Project site has a land use designation of Multi-Family Residential - 25 and a zoning classification of Multi-Family Residential (R-3).

2. The proposed project complies with all of the applicable criteria identified in 17.44.030(B) (Application Processing, Filing, and Review—Generally):

Staff Response: The design and layout of the proposed residential units at 4665 Lampson Avenue is efficient, consistent with applicable City regulations and policies, and would not interfere with the use and enjoyment of neighboring residential developments, as the surrounding residential uses are comprised of single-family and multi-family. The location is appropriate for a 246-unit residential development that would be constructed in an architectural style that complements nearby homes. The Project will retain beautiful landscaping through the strength of a Homeowner's Association that will hire and maintain a maintenance crew. The Homeowner's Association will have regulations that are more exacting than the City' s Code concerning maintenance and parking. The location of the driveway ingress/egress access to the site would not create traffic or pedestrian hazards. The design and layout of the 246 residential units at 4665 Lampson Avenue, as conditioned, is consistent with the development and design standards/guidelines. Pursuant

to the State's Density Bonus legislation and LAMC 17.28.050, minor incentives, concessions, waivers, and/or reductions in development standards have been requested for reduction in setback distance between structures, exception for building step back requirements, reduction in minimum storage space, reduced common area requirement, and reduced parking requirement.

3. The proposed project is in keeping with the character of the neighborhood in terms of the structure(s) general appearance:

Staff Response: The design of the 246 residential units would be in keeping with the neighborhood character and enhance the attractive, harmonious, and orderly development of the property. The design is in harmony with surrounding development and improves upon the City's architecture with quality detached single-family, townhome, and multi-family residential building design, extensive landscaping, and maintenance requirements.

4. The design of the proposed development will provide a desirable environment for its occupants and the visiting public as well as its neighbors through good aesthetic use of materials, texture, and color, and will remain aesthetically appealing and retain an appropriate level of maintenance:

Staff Response: The design of the 246 residential units would provide a desirable environment for its occupants, the visiting public, and its neighbors through good aesthetic use of materials, texture, landscaping, and color as described in the plan set. Site redevelopment would continue the attractive environment that the existing property previously enjoyed for years and maintain an appropriate level of maintenance, through the implementation of a homeowners' association and the use of covenants, conditions, and restrictions (see Condition Nos. 24 – 28).

5. The proposed development would not be detrimental to the public health, safety, or welfare or materially injurious to the properties or improvements in the vicinity. (Ord. 19-03 § 3, 2019):

Staff Response: The 246 residential units provide for public health, safety, and welfare of the residential and business communities by providing more living options to the City rather than causing sprawl at the fringes of this metropolitan area. The buildings will meet all building code requirements. The mitigation measures identified in the Environmental Impact Report prepared for the project would ensure the safety of the inhabitants of the project as well as other residents of Los Alamitos. Also, the 246 residential units would not depreciate property values in the vicinity, as the area is zoned for this type of use and it will improve the aesthetics of this residential neighborhood area (formerly a commercial and now vacant property).

FISCAL IMPACT

None.

PC RESOLUTION NO. 2024-06

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF LOS ALAMITOS, CALIFORNIA, RECOMMENDING THE CITY COUNCIL CERTIFY THE FINAL ENVIRONMENTAL IMPACT REPORT, ADOPT A STATEMENT OF OVERRIDING CONSIDERATIONS, AND ADOPT A MITIGATION MONITORING AND REPORTING PLAN FOR THE 4665 LAMPSON PROJECT LOCATED AT 4665 LAMPSON AVENUE (APN 130-012-35) TO ALLOW REDEVELOPMENT OF THE PROJECT SITE WITH 246 RESIDENTIAL UNITS (APPLICANT: LAMPSON PARK PLACE, LLC)

WHEREAS, Lampson Park Place, LLC ("Applicant") proposes to demolish the existing office building and surface parking lot on the 12.3-acre property located at 4665 Lampson Avenue (APN 130-012-35) and redevelop the site with a 246-unit residential development consisting of a variety of housing product types, including 55 single-family detached homes, 114 townhomes, and 77 for-rent multi-family apartment homes comprised of 76 units restricted to lower income households and one unrestricted manager's unit (the "Project"); and,

WHEREAS, an Environmental Impact Report ("EIR") for the Project, incorporated by reference herein, has been completed in compliance with the California Environmental Quality Act ("CEQA"), the guidelines promulgated by the State Secretary for Natural Resources, and the procedures for review as set forth in the 2007 City of Los Alamitos Guidelines for Implementation of the CEQA (Local CEQA Guidelines); and,

WHEREAS, notice regarding the EIR for the Project was sent to neighboring property owners pursuant to the City's CEQA Guidelines, concerning the review period commencing April 24, 2024; and,

WHEREAS, copies of the EIR have been made available for a 45-day review period to pertinent agencies and interested members of the public, commencing on April 24, 2024; and,

WHEREAS, all written comment letters received within the 45-day public review period have been noted in the record, responded to by Staff, and none of the comments alter the conclusions in the EIR; and,

WHEREAS, changes to the EIR have been made that amplify and clarify the analysis; and,

WHEREAS, it has been determined that the Project may potentially have significant effects on the environment, and revisions in the Project proposal would mitigate most of the effects to a point where clearly no significant effect would occur; and,

WHEREAS, potential off-site impacts related to vehicle miles travelled (VMT) result in a significant and unavoidable VMT impact on a direct and cumulatively considerable basis, and the City has prepared a Statement of Overriding Considerations to demonstrate that the Project's benefits outweigh the significant and unavoidable VMT impact identified in the EIR; and,

WHEREAS, the Planning Commission considered the EIR, the Statement of Overriding Considerations, and the Mitigation Monitoring and Reporting Plan ("MMRP"), incorporated by reference herein, at a duly noticed public hearing on September 25, 2024, at which hearing it considered all the evidence presented, both written and oral; and,

WHEREAS, the Applicant, Applicant's representatives and members of the public were provided the opportunity to present written and oral testimony.

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF LOS ALAMITOS DOES RESOLVE AS FOLLOWS:

SECTION 1. The Planning Commission of the City of Los Alamitos, California, finds that the above recitals are true and correct and are incorporated by reference herein.

SECTION 2. The Planning Commission has reviewed and considered the environmental documentation as well as the conditions cited in Exhibit "A," for the Project prior to taking action. Based on the analysis contained in the EIR and the accompanying environmental information, in compliance with CEQA (Public Resources Code Section 21000, et seq., the State CEQA Guidelines (California Code of Regulations, Title 14, Sections 15000, et seq.), and the City's Local CEQA Guidelines, the Planning Commission hereby recommends the City Council certify the EIR and adopt the Statement of Overriding Considerations and MMRP, incorporated by reference herein. In making the recommendation to the City Council to certify the EIR and adopt the Statement of Overriding Considerations, the Planning Commission finds as follows:

A. The EIR was prepared in accordance with all legal requirements, including all public notice and comment period requirements.

B. The CEQA requires preparation of an environmental impact report if there is substantial evidence in light of the whole record that the Project may have a potentially significant environmental effect on the environment. An environmental impact report was prepared which demonstrates that the proposed Project will not cause any significant onsite environmental damage as this is a Project on property that already has been designated as an area for residential units and there are no fish or wildlife habitat on site. The site was previously graded for the construction of the existing commercial building.

Regarding potential off-site impacts, Project components and mitigation measures available to reduce vehicle miles travelled (VMT) include developing pedestrian network improvements and implementing travel demand model (TDM) measures

such as those listed in Mitigation Measure MM 4.15-1. Even where the TDM measures are implemented to their maximum effectiveness of 10%, the Project would still not be able to reduce its VMT impact to a level of less than significant which requires a 31.8% reduction for baseline (2022) conditions and 27.7% for buildout (2045) conditions. Therefore, the Project is found to have a significant and unavoidable VMT impact on a direct and cumulatively considerable basis. All feasible mitigation measures were incorporated to reduce VMT impacts per measures identified in the 2021 California Air Pollution Control Officers Association (CAPCOA) Handbook; however, even with incorporation of all feasible mitigation measures, VMT impacts would remain significant and unavoidable.

C. The Project is consistent with the General Plan objectives, policies and programs. The proposed Project allows for the development of 246 residential units at a density of 20 dwelling units an acre which is within the General Plan multi-family residential land use designation of 20 – 25 units per acre. The proposed design and improvements of the 246 residential unit Project are consistent with the applicable General Plan goals, policies, and implementation measures.

D. The Project will not adversely affect the public health, safety and welfare. The proposed Project design and improvements will not adversely affect the public health of the citizens of the City of Los Alamitos as the Project is the type of use which is planned for in this area; the residential Project will be compatible with the single-family and multifamily residential uses in the area. The mitigation measures required by the CEQA document, along with the recommended Conditions of Approval, will ensure the safety of the inhabitants of the Project and will contribute to the health of the community as a whole.

E. The EIR identified potentially significant impacts to VMT which could result from the Project. Mitigation measures have been identified which reduce some of these impacts yet not to a level of less than significant. Even with incorporation of mitigation measures from the EIR into the conditions of Project approval, this impact is significant and unavoidable and would not be mitigated to a less than significant level. Per Public Resources Code section 21081(a)(3), specific economic, legal, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, make infeasible additional mitigation. Pursuant to the CEQA, with respect to the identified significant unavoidable environmental effects of the Project, the Planning Commission has weighed the economic, legal, social, technological, and other benefits, including region-wide and statewide environmental benefits, of the Project against its unavoidable significant environmental impacts in determining whether to recommend approval of the Project. The Planning Commission finds that the benefits of the Project outweigh its unavoidable adverse environmental effects such that the adverse environmental effects may be considered “acceptable.” A Statement of Overriding Considerations, incorporated by reference herein, was prepared and each of the separate benefits listed provides

a separate and independent ground for the City's decision that the Project's benefits outweigh the significant and unavoidable environmental impact identified in the EIR.

F. The City has complied with the CEQA. Pursuant to the provisions of the CEQA, an EIR was prepared which led to the conclusion that a Statement of Overriding Considerations be prepared for this Project. The purpose of an environmental impact report is to identify potential effects on the environment of the Project and to indicate the manner in which those potential significant effects can be avoided or mitigated. A primary function of the environmental impact report is to disclose and evaluate Project impacts and inform decision makers for the Project. To meet the 45-day circulation requirement, a notice regarding the EIR was circulated from April 24 to June 10, 2024 (SCH#2022090476).

G. Together, the draft Environmental Impact Report ("DEIR"), the revisions to the DEIR, the comments of persons and organizations commenting on the DEIR and a list of all such persons and organizations, the responses to the comments, and other information added by the City constitute the final Environmental Impact Report ("FEIR") on the Project.

H. No new significant information has been added to the EIR since circulation of the DEIR that would require recirculation of the EIR. Recirculation of the draft EIR is not required where the new information merely clarifies, amplifies or makes minor modifications to an adequate EIR. The information provided since the draft EIR meets those criteria. All the text revisions to the draft EIR provide clarification and additional detail. After considering all comments received on the draft EIR, the City of Los Alamitos has determined that the changes do not result in a need to recirculate the draft EIR.

I. The final EIR reflects the City of Los Alamitos' independent judgement and analysis.

SECTION 3. Based on the entire record before the Planning Commission, including the written and oral record and the findings set forth in the Resolution, the Planning Commission hereby recommends the City Council certify the Environmental Impact Report, and adopt the Statement of Overriding Considerations and Mitigation Monitoring and Reporting Plan, incorporated by reference herein, for the 4665 Lampson Project at 4665 Lampson Avenue, APN 130-012-35.

SECTION 4. The Secretary of the Planning Commission shall forward a copy of this Resolution to the City Council, the Applicant, and any person requesting the same.

PASSED, APPROVED, AND ADOPTED this 25th day of September 2024.

PC RESOLUTION NO. 2024-07

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF LOS ALAMITOS, CALIFORNIA, RECOMMENDING THE CITY COUNCIL APPROVE A TENTATIVE PARCEL MAP 2022-133 (FOR FINANCE AND CONVEYANCE PURPOSES) AND VESTING TENTATIVE TRACT MAP NO. 19263 (FOR CONDOMINIUM PURPOSES) FOR THE 4665 LAMPSON PROJECT LOCATED AT 4665 LAMPSON AVENUE (APN 130-012-35) TO ALLOW REDEVELOPMENT OF THE PROJECT SITE WITH 246 RESIDENTIAL UNITS (APPLICANT: LAMPSON PARK PLACE, LLC)

WHEREAS, Lampson Park Place, LLC ("Applicant") proposes to demolish the existing office building and surface parking lot on the 12.3-acre property located at 4665 Lampson Avenue (APN 130-012-35) and redevelop the site with a 246-unit residential development consisting of a variety of housing product types, including 55 single-family detached homes, 114 townhomes, and 77 for-rent multi-family apartment homes comprised of 76 units restricted to lower income households and one unrestricted manager's unit (the "Project"); and,

WHEREAS, a completed application for a Tentative Parcel Map and a Vesting Tentative Tract Map was submitted by Lampson Park Place, LLC, on November 18, 2023, requesting to subdivide the Project site; and,

WHEREAS, the Project would include a total of 246 units and the overall density for the Project would be 20 dwelling units per acre. The Project would provide 577 parking spaces (475 spaces for the single-family detached and townhomes and 102 for the apartments) exceeding the 441 parking spaces that would be required pursuant to the State's Density Bonus Law; and,

WHEREAS, the application included a tentative parcel map and a vesting tentative tract map as required by Section 16.06.030 (Tentative Parcel Maps) and Section 16.06.020 (Tentative Tract Maps) of the Los Alamitos Municipal Code (LAMC); and,

WHEREAS, the Applicant shall offer a dedication in fee or an easement to the City of a 10-foot-wide strip of land (approximately 10,000 square feet) adjacent to Arbor Park for the purpose of public ingress, egress and access by vehicles and pedestrians and the parking of vehicles; and,

WHEREAS, the Planning Commission reviewed and considered the proposed Project and application, including the Tentative Parcel Map and the Vesting Tentative Tract Map, attached hereto as Exhibits "B" and "C" and incorporated by reference herein, at a duly noticed public hearing on September 25, 2024, at which hearing it considered all the evidence presented, both written and oral; and,

WHEREAS, the Applicant, Applicant's representatives and members of the public were provided the opportunity to present written and oral testimony.

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF LOS ALAMITOS DOES RESOLVE AS FOLLOWS:

SECTION 1. The Planning Commission of the City of Los Alamitos, California, finds that the above recitals are true and correct and are incorporated by reference herein.

SECTION 2. The Planning Commission hereby makes the following findings as set forth in the Subdivision Map Act as well as those required by Los Alamitos Municipal Code (LAMC) Sections 16.10.100 and 16.10.110:

1. *The proposed maps are consistent with the City' s General Plan.* The proposed maps allow for the site redevelopment with 246 residential units at a density of 20 dwelling units an acre which is within the General Plan multi-family residential land use designation of 20 – 25 units per acre. The proposed design of the Project subdivision is consistent with the applicable General Plan goals, policies, and implementation measures.

2. *The design and improvement of the proposed subdivisions is consistent with the City's General Plan.* The design and improvement of the 246-unit Project is suitable for residential development in the R- 3 multi-family residential zone and the subdivisions can be developed in compliance with the General Plan.

3. *The site is physically suitable for the proposed type of development.* The site is physically suitable for a residential subdivision because the site is generally flat and will require minimal grading.

4. *The site is physically suitable for the proposed density of development.* The 12.3-acre site is capable of supporting the development of the proposed 246 residential units. The proposed Project is at 20 dwelling units per acre, within the maximum that the City's R- 3 zoning district allows at 25 dwelling units per acre under multi-family development.

5. *The requirements of the California Environmental Quality Act (CEQA) have been satisfied.* Pursuant to the provisions of the CEQA, an Environmental Impact Report ("EIR") was prepared which led to the conclusion that a Statement of Overriding Considerations be prepared for the Project. The purpose of an EIR is to identify potential effects on the environment of the Project and to indicate the manner in which those potential significant effects can be avoided or mitigated. A primary function of the EIR is to disclose and evaluate Project impacts and inform decision makers for the Project. To meet the 45-day circulation requirement, a notice regarding the draft EIR was circulated from April 24 to June 10, 2024 (SCH#2022090476).

6. *The design of the subdivisions and proposed improvements are not likely to cause substantial environmental damage or substantial and avoidable injury to fish or wildlife in their habitat.* The proposed subdivisions will not cause any onsite environmental damage as this is an infill project on property that already has been designated as an area for residential units and there are no fish or wildlife habitat on the site. The site was previously graded for construction of the existing commercial building.

7. *The design of the subdivisions and the proposed improvements are not likely to cause serious public health problems.* The proposed subdivisions design and improvements will not adversely affect the public health of the citizens of the City of Los Alamitos as the Project is the type of use which is planned for in this area; the residential Project will be compatible with the single-family and multi-family residential uses in the area. The mitigations required by the CEQA document will ensure the safety of the inhabitants of the Project and will contribute to the health of the community as a whole.

8. *The design of the subdivisions and improvements will not conflict with public access easement(s) through the property.* The design of the subdivisions and the proposed improvements will not conflict with any existing telephone, street, and/or public utility easements. There are no public access easements through the property.

9. *The design and improvements of the proposed subdivisions are suitable for the uses proposed and the subdivisions can be developed in compliance with the applicable zoning regulations.* As conditioned, the Project will comply with applicable zoning regulations. Pursuant to the State's Density Bonus legislation, minor incentives, concessions, waivers, and/or reductions in development standards have been requested for reduction in setback distance between structures, exception for building step back requirements, reduction in minimum storage space, reduced common area requirement, and reduced parking requirement.

10. *The discharge of waste into an existing community sewer system will not result in or add to a violation of existing requirements prescribed by the Regional Water Quality Control Board.* The discharge of wastewater from the subdivision into the sewer system will not result in a violation of existing requirements prescribed by the Regional Water Quality Control Board.

SECTION 3. Based upon such findings and determinations, the Planning Commission hereby recommends the City Council approve Tentative Parcel Map 2022-133 and Vesting Tentative Tract Map No. 19263 attached as Exhibits "B" and "C" and incorporated by reference herein, subject to the conditions located in Exhibit "A."

SECTION 4. The Secretary of the Planning Commission shall forward a copy of this Resolution to the City Council, the Applicant and any person requesting the same.

PASSED, APPROVED, AND ADOPTED this 25th day of September 2024.

PC RESOLUTION NO. 2024-08

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF LOS ALAMITOS, CALIFORNIA, RECOMMENDING THE CITY COUNCIL APPROVE AN AFFORDABLE HOUSING UNIT APPLICATION FOR THE 4665 LAMPSON PROJECT LOCATED AT 4665 LAMPSON AVENUE, IN THE MULTI-FAMILY RESIDENTIAL (R-3) ZONING DISTRICT (APN 130-012-35) TO ALLOW REDEVELOPMENT OF THE PROJECT SITE WITH 246 RESIDENTIAL UNITS, INCLUDING 76 AFFORDABLE MULTI-FAMILY APARTMENT HOMES (APPLICANT: LAMPSON PARK PLACE, LLC)

WHEREAS, Lampson Park Place, LLC ("Applicant") proposes to demolish the existing office building and surface parking lot on the 12.3-acre property located at 4665 Lampson Avenue (APN 130-012-35) and redevelop the site with a 246-unit residential development consisting of a variety of housing product types, including 55 single-family detached homes, 114 townhomes, and 77 for-rent multi-family apartment homes comprised of 76 units restricted to lower income households and one unrestricted manager's unit (the "Project"); and,

WHEREAS, a completed Affordable Housing Unit Application for the Project was submitted by Lampson Park Place, LLC, on October 11, 2022, requesting approval for 246 residential units, including 76 affordable multi-family apartment homes; and,

WHEREAS, pursuant to the State's Density Bonus Law, the application also included requests for incentives, concessions and waivers for the following: reduction in setback distance between structures, exception for building step back requirements, reduction in minimum storage space, reduced common area requirement, and reduced parking requirement; and,

WHEREAS, pursuant to Government Code Section 65915, the verified application constitutes a request as required by Section 17.28.050 (Affordable Housing) of the Los Alamitos Municipal Code; and,

WHEREAS, the State Density Bonus Law codified in Government Code Section 65915 to 65918 provides a mechanism that allows housing developers to increase density on a property above the maximum allowed under a jurisdiction's General Plan or zoning and to request relief from development standards in exchange for offering to build or donate land for affordable or senior housing units. A developer who meets the requirements of the State law is entitled to receive the density bonus and other benefits (i.e., incentives, concessions, waivers, and reduction of development standards) as a matter of right; and,

WHEREAS, California Government Code Section 65589.5, also known as the Housing Accountability Act, prohibits a local agency from disapproving, or conditioning approval in a manner that renders infeasible, a housing development project for very low, low-, or moderate-income households or an emergency shelter unless the local agency makes specified written findings based on a preponderance of the evidence in the record; and,

WHEREAS, the receipt of a density bonus, incentive, concession, waiver, or reduction of development standards pursuant to Section 65915 shall not constitute a valid basis on which to find a proposed housing development project inconsistent, not in compliance, or not in conformity, with an applicable plan, program, policy, ordinance, standard, requirement, or other similar provision; and,

WHEREAS, the Planning Commission considered the Affordable Housing Unit Application, incorporated by reference herein, at a duly noticed Public Hearing on September 25, 2024, at which hearing it considered all the evidence presented, both written and oral; and,

WHEREAS, the Applicant, Applicant's representatives and members of the public were provided the opportunity to present written and oral testimony.

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF LOS ALAMITOS DOES RESOLVE AS FOLLOWS:

SECTION 1. The Planning Commission of the City of Los Alamitos, California, finds that the above recitals are true and correct and are incorporated by reference herein.

SECTION 2. The Planning Commission hereby makes the following findings or determinations made in accordance with Section 17.28.050 of the LAMC, which is based on all the evidence presented, both written and oral;

The design and layout of the proposed development are consistent with the development and design standards/guidelines of the applicable zoning district: The design and layout of the 246 residential units at 4665 Lampson Avenue, as conditioned, is consistent with the development and design standards/guidelines of the Multiple Family (R-3) Residential Zoning District as well as with the requirements for residential development set forth in Section 17.34.060. The development meets, or will be conditioned to meet, all requirements. Each proposed unit and the entire Project meets the development standards for the R-3 zone including parcel area, parcel depth, maximum density, minimum dwelling area, and site coverage. Pursuant to the State's Density Bonus legislation, minor incentives, concessions, waivers, and/or reductions in development standards have been requested for reduction in setback distance between structures, exception for building step back requirements, reduction in minimum storage space, reduced common area requirement, and reduced parking requirement as described below:

Reduction in setback distance between structures. LAMC Section 17.08.030, Table 2-03 requires a 10-foot minimum distance between structures. Though most of the Project's single-family residential setback distances between structures meet or exceed the minimum distances, the setback distance is reduced to 6 feet at certain locations within the Project site plan. Meeting the required 10-foot minimum setback distance would require a significant change to the site plan and likely result in a reduction of residential units.

Exception for building step back requirements. LAMC Section 17.08.045.A.1 requires that for buildings higher than two stories, the third story must have a minimum 5-foot step back from the story below to minimize building bulk and create façade articulation. This requirement appears to govern regardless of building location within a project site or surrounding land uses. While the City interprets this requirement as applying only to perimeter buildings (i.e., buildings that are located along the perimeter of a Project site), given the requirement's ambiguity, the Applicant is requesting an exception from the required minimum 5-foot step back requirement for those structures identified on the site plan.

Reduction in minimum storage space. LAMC Section 17.08.030, Table 2-03, requires a minimum storage space in a garage or carport of 200 cubic feet per unit. For certain units within the Project, this storage space requirement will be difficult to satisfy because of limitations in garage and carport space. As such, the Applicant is requesting that the minimum storage space requirement be reduced to 175 cubic feet per unit for market rate units and 50 cubic feet per unit for affordable units identified on the site plan.

Reduced common area requirement. LAMC Section 17.08.030, Table 2-03 requires a minimum 200 square feet of common area and 60 square feet of private space per unit. The Project will be able to comply with the minimum private space requirement, but the Project will not be able to comply with the common area requirement. This is due to the proposed dedication or grant of an easement related to the northerly 10-foot strip of land abutting Arbor Park and Arbor Dog Park, which comprises an area of approximately 10,000 square feet of property. When this area is dedicated or granted to the City, then the Project will be unable to comply with the common area requirement because compliance with this requirement would physically preclude construction of the Project at the densities allowed and with the concessions described above. Therefore, the Applicant is requesting a reduction in the common area requirement from 200 to 150 square feet per unit.

Parking Reduction Request. The Project would provide 577 parking spaces (475 spaces for the single-family detached and townhomes and 102 for the apartments), which is below the City's required 679 parking spaces pursuant to LAMC Section 17.22.030, Required Parking Spaces. The State's Density Bonus Law specifies that for housing developments that qualify for a density bonus the local government

shall not require a vehicular parking ratio, inclusive of parking for persons with a disability and guests, that exceeds the following ratios: (A) zero to one bedroom: one onsite parking space; (B) two to three bedrooms: one and one-half onsite parking spaces; and (C) four and more bedrooms: two and one-half parking spaces. (Gov't Code Section 65915(p)(1).) The Applicant requests that the City require no more than 2.35 spaces per unit for a total of 577 parking spaces for the Project, which is significantly more than the 441 parking spaces that would be required pursuant to the State's Density Bonus Law.

SECTION 3. Prior to final map approval, the applicant shall record covenants with the County Recorder for the low and/or very low affordability requirements of said 76 units to remain affordable for a period no less than 55 years in accordance with Government Code Section 65915 and Los Alamitos Municipal Code Section 17.28.050, as described in Condition Nos. 16 - 23.

SECTION 4. Pursuant to the provisions of the California Environmental Quality Act (CEQA) an Environmental Impact Report ("EIR") was prepared which led to the conclusion that a Statement of Overriding Considerations be prepared for this project. The purpose of an EIR is to identify potential effects on the environment of the project and to indicate the manner in which those potential significant effects can be avoided or mitigated. A primary function of the EIR is to disclose and evaluate project impacts and inform decision makers for the project. To meet the 45-day circulation requirement, a notice regarding the draft EIR was circulated from April 24 to June 10, 2024 (SCH#2022090476).

SECTION 5. Based upon such findings and determinations, the Planning Commission hereby recommends the City Council approve an Affordable Housing Unit Application, including the requested incentives, concessions, waivers, and reductions in development standards, as represented by the plans and elevations incorporated by reference herein, and subject to the conditions located in Exhibit "A."

SECTION 6. The Secretary of the Planning Commission shall forward a copy of this Resolution to the City Council, the Applicant, and any person requesting the same.

PASSED, APPROVED, AND ADOPTED this 25th day of September 2024.

PC RESOLUTION NO. 2024-09

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF LOS ALAMITOS, CALIFORNIA, RECOMMENDING THE CITY COUNCIL APPROVE A SITE DEVELOPMENT PERMIT – MAJOR FOR THE 4665 LAMPSON PROJECT LOCATED AT 4665 LAMPSON AVENUE, IN THE MULTI-FAMILY RESIDENTIAL (R-3) ZONING DISTRICT (APN 130-012-35) TO ALLOW REDEVELOPMENT OF THE PROJECT SITE WITH 246 RESIDENTIAL UNITS (APPLICANT: LAMPSON PARK PLACE, LLC)

WHEREAS, Lampson Park Place, LLC ("Applicant") proposes to demolish the existing office building and surface parking lot on the 12.3-acre property located at 4665 Lampson Avenue (APN 130-012-35) and redevelop the site with a 246-unit residential development consisting of a variety of housing product types, including 55 single-family detached homes, 114 townhomes, and 77 for-rent multi-family apartment homes comprised of 76 units restricted to lower income households and one unrestricted manager's unit (the "Project"); and,

WHEREAS, a completed application for a Site Development Permit – Major was submitted for the Project by Lampson Park Place, LLC, on November 18, 2023; and,

WHEREAS, the Project would include a total of 246 units and the overall density for the Project would be 20 dwelling units per acre. The Project would provide 577 parking spaces (475 spaces for the single family detached and townhomes and 102 for the apartments) in exceedance of the 441 parking spaces that would be required pursuant to the State's Density Bonus Law; and,

WHEREAS, the verified application constitutes a request as required by Section 17.44.040 and Section 17.08.020 Table 2-02 (Allowed Uses and Permit Requirements for Residential Zoning Districts) of the Los Alamitos Municipal Code (LAMC); and,

WHEREAS, the Planning Commission reviewed and considered the application for the Site Development Permit – Major, incorporated by reference herein, at a duly noticed public hearing on September 25, 2024, at which hearing it considered all the evidence presented, both written and oral; and,

WHEREAS, the Applicant, Applicant's representatives and members of the public were provided the opportunity to present written and oral testimony.

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF LOS ALAMITOS DOES RESOLVE AS FOLLOWS:

SECTION 1. The Planning Commission of the City of Los Alamitos, California, finds that the above recitals are true and correct and are incorporated by reference herein.

SECTION 2. The Planning Commission hereby makes the following findings made in accordance with Section 17.44.060 of the LAMC, which is based on all of the evidence presented, both written and oral; the Staff report and final Environmental Impact Report are incorporated by reference herein:

1. *The proposed project is allowed within the subject zone:* The property is designated and zoned for this type of development. The Project site has a land use designation of Multi-Family Residential - 25 and a zoning classification of Multi-Family Residential - 25 (R-3).

2. *The proposed project complies with all of the applicable criteria identified in 17.44.030(B) (Application Processing, Filing, and Review—Generally):* The design and layout of the proposed residential units at 4665 Lampson Avenue is efficient, consistent with applicable City regulations and policies, and would not interfere with the use and enjoyment of neighboring residential developments, as the surrounding residential uses are comprised of single-family and multi-family. The location is appropriate for a 246-unit residential development that would be constructed in an architectural style that complements nearby homes. The Project will retain beautiful landscaping through the strength of a Homeowner's Association that will hire and maintain a maintenance crew. The Homeowner's Association will have regulations that are more exacting than the City' s Code concerning maintenance and parking. The location of the driveway ingress/egress access to the site would not create traffic or pedestrian hazards. The design and layout of the 246 residential units at 4665 Lampson Avenue, as conditioned, is consistent with the development and design standards/guidelines. Pursuant to the State’s Density Bonus legislation and LAMC 17.28.050, minor incentives, concessions, waivers, and/or reductions in development standards have been requested for reduction in setback distance between structures, exception for building step back requirements, reduction in minimum storage space, reduced common area requirement, and reduced parking requirement.

3. *The proposed project is in keeping with the character of the neighborhood, in terms of the structure(s) general appearance:* The design of the 246 residential units would be in keeping with the neighborhood character and enhance the attractive, harmonious, and orderly development of the property. The design is in harmony with surrounding development and improves upon the City's architecture with quality detached single-family, townhome, and multi-family residential building design, extensive landscaping, and maintenance requirements.

4. *The design of the proposed development will provide a desirable environment for its occupants and visiting public as well as its neighbors through good aesthetic use of materials, texture, and color, and will remain aesthetically appealing and retain an appropriate level of maintenance:* The design of the 246 residential units would provide a desirable environment for its occupants, visiting public, and its neighbors through good aesthetic use of materials, texture, landscaping, and color

as depicted in the plan set incorporated by reference herein. Site redevelopment would continue the attractive environment that the existing property previously enjoyed for years and maintain an appropriate level of maintenance, through the implementation of a homeowners' association and the use of covenants, conditions, and restrictions.

5. *The proposed development would not be detrimental to the public health, safety, or welfare or materially injurious to the properties or improvements in the vicinity:* The 246 residential units provide for public health, safety, and welfare of the residential and business communities by providing more living options to the City rather than causing sprawl at the fringes of this metropolitan area. The buildings will meet all building code requirements. The mitigation measures identified in the Environmental Impact Report prepared for the Project would ensure the safety of the inhabitants of the Project as well as other residents of Los Alamitos. Also, the 246 residential units would not depreciate property values in the vicinity, as the area is zoned for this type of use and it will improve the aesthetics of this residential neighborhood area (formerly a commercial and now vacant property).

6. The proposed Project would assist the City of Los Alamitos in providing for the State mandated units identified in the General Plan for moderate, low and/or very low-income categories as described in the Regional Housing Needs Assessment. Remaining sites identified in the housing element are adequate to meet the requirements of Government Code Section 65583.2 and to accommodate the jurisdiction's share of the regional housing need pursuant to Section 65584.

   The City's Regional Housing Needs Allocation (RHNA) for the 6th Cycle Housing Element Update is a total of 769 units, which is comprised of 313 lower income units, 145 moderate income units, and 311 above moderate-income units. The City's Housing Element identified that the City's residential capacity is 817 total units, which exceeds the City's RHNA obligation of 769 units by 48 units. This surplus, or "buffer," of 48 units is comprised of 19 surplus lower income units, 14 moderate income units, and 15 surplus above moderate-income units.

   The Housing Sites Inventory identifies the total number of units for the proposed Project site as 246 units, and those units are projected to consist of 77 lower income units, zero moderate income units, and 169 above moderate-income units. The proposed residential Project proposes 76 lower income units, zero moderate income units, and 170 above moderate-income units

   As such, approval of the Project on the site identified in the Housing Sites Inventory will result in the need for the City to deduct one lower income unit from the City's surplus "buffer" of 19 lower income units, resulting in a remaining surplus "buffer" of 18 lower income units. Accordingly, even after approval of the Project, the remaining sites identified in the City's Housing Element are adequate to meet the requirements of Section 65583.2 and to accommodate the jurisdiction's share of the regional housing need pursuant to Section 65584.

SECTION 3. Pursuant to the provisions of the California Environmental Quality Act (CEQA) an Environmental Impact Report ("EIR") was prepared which led to the conclusion that a Statement of Overriding Considerations be prepared for this Project. The purpose of an EIR is to identify potential effects on the environment of the Project and to indicate the manner in which those potential significant effects can be avoided or mitigated. A primary function of the EIR is to disclose and evaluate Project impacts and inform decision makers for the Project. To meet the 45-day circulation requirement, a notice regarding the draft EIR was circulated from April 24 to June 10, 2024 (SCH#2022090476).

SECTION 4. Based upon such findings and determinations, the Planning Commission hereby recommends the City Council approve a Site Development Permit – Major, as represented by the plans and elevations incorporated by reference herein, and subject to the conditions located in Exhibit "A."

SECTION 5. The Secretary of the Planning Commission shall forward a copy of this Resolution to the City Council, the Applicant and any person requesting the same.

PASSED, APPROVED, AND ADOPTED this 25th day of September, 2024.

Parking Data

Parking Required (Per State Density Bonus, Section 65915):

2Bd:	38 units x 1.5 sp/unit =	57 spaces
3Bd:	43 units x 1.5 sp/unit =	65 spaces
4Bd (or more):	88 units x 2.5 sp/unit =	220 spaces
Total Required: (Max Parked)		342 spaces

Parking Provided:

Garages	338 spaces
(D) Driveways	51 spaces
(P) Open Parking**	86 spaces
Total Parking Provided	475 spaces (2.8 sp/unit)

(**) Required Four(4) Motor Cycle Parking Spaces to be provided at (MC) Open Spaces (Per 17.22.060 - 1 space : 20 Car Spaces)

Open Space Provided

Common Open Space
SFD/Towns Combined - see Landscape for areas (Sheet L-7)

Private Open Space - see Landscape for Open Space calculations (Sheet L-7)

ENERGY CODE NOTES

1. The Project will include solar photovoltaic panels with the capability to generate up to 1,229,520 kWh/annually.
2. The Project will be 100% electric and will not include natural gas.
3. The Project's parking areas will be designed to provide electric vehicle (EV) charging stations. At minimum, the number of EV charging stations will equal the Tier 2 Residential Voluntary Measures of the California Green Building Standards Code, Section A4.106.8.2.1.

FOR RENT AFFORDABLE APARTMENTS

Site Area : ±2.0 Acres
Density: 38.5 DUA

Open Space Provided

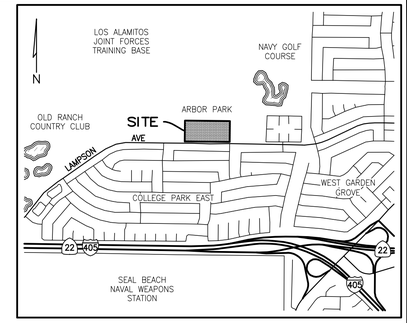
TENTATIVE PARCEL MAP NO. 2022-133



FOR FINANCE AND CONVEYANCE PURPOSES

IN THE CITY OF LOS ALAMITOS, COUNTY OF ORANGE, STATE OF CALIFORNIA

SCALE: 1" = 60'

VICINITY MAP
SCALE: NONE

LEGAL DESCRIPTION:

BEING A SUBDIVISION OF A PORTION OF THE NORTHEAST QUARTER OF SECTION 32, TOWNSHIP 4 SOUTH, RANGE 11 WEST, IN THE RANCHO LOS ALAMITOS, AS PER MAP FILED IN DECREE OF PARTITION IN THE SUPERIOR COURT OF LOS ANGELES COUNTY, STATE OF CALIFORNIA, CASE NO. 13527, A CERTIFIED COPY OF THE FINAL DECREE OF SAID CASE HAVING BEEN RECORDED FEBRUARY 2, 1891, IN BOOK 14, PAGE 31 OF DEEDS OF SAID ORANGE COUNTY
APN: 130-012-35

SITE ADDRESS:

4665 LAMPSON AVENUE, LOS ALAMITOS, CALIFORNIA

VESTED OWNER:

LAMPSON PARK PLACE, LLC, A CALIFORNIA LIMITED LIABILITY COMPANY

BASIS OF BEARINGS:

THE BEARINGS SHOWN HEREON ARE BASED ON THE BEARING N28°33'38.9"W BETWEEN CALIFORNIA SPATIAL REFERENCE CENTER, (CSRC), CONTINUOUSLY OPERATING REFERENCE STATIONS, (CORS), "BLSA" AND "FVPK".

DATUM STATEMENT:

ALL COORDINATES SHOWN HEREON ARE GRID VALUES BASED ON THE CALIFORNIA COORDINATE SYSTEM OF 1983, CCS83, ZONE VI, NORTH AMERICAN DATUM OF 1983 (NAD83), 2017.50 EPOCH OCS GPS ADJUSTMENT, IN ACCORDANCE WITH THE CALIFORNIA PUBLIC RESOURCES CODE SECTIONS 8801-8819. ALL DISTANCES SHOWN HEREON ARE GROUND VALUES IN U.S. SURVEY FEET UNLESS OTHERWISE NOTED. A GENERALIZED COMBINATION SCALE FACTOR OF 0.99998924 WAS USED FOR THIS PROJECT AT NORTHING 2233124.607, EASTING 6015398.692. TO OBTAIN GRID DISTANCES, MULTIPLY GROUND DISTANCES BY THE COMBINATION SCALE FACTOR.

BLSA N: 2239164.39, E: 6021324.82
FVPK N: 2188769.57, E: 6048756.26

BENCHMARK STATEMENT:

COUNTY OF ORANGE BENCHMARK NO. GG-113
ELEV: 23.116 (NAVD88, LEVELED 2012)
DESCRIBED AS: FOUND 2 ½" BRONZE CITY OF GARDEN GROVE BENCHMARK DISK WITH PUNCH IN TRIANGLE, SET IN THE NORTHWEST CORNER OF A 6.5 FT. BY 4.5 FT. CONCRETE CATCH BASIN. MONUMENT IS LOCATED IN THE NORTHWEST CORNER OF THE INTERSECTION OF LAMPSON AVE. AND MANLEY AVE. 13 FT., NORTH OF THE B.C.R. AND 4 FT. WEST OF THE CURB FACE. (TABLE A-5)

FLOOD NOTE:

THE SUBJECT PROPERTY FALLS WITHIN "ZONE D – AREAS IN WHICH FLOOD HAZARDS ARE UNDETERMINED, BUT POSSIBLE" PER FEMA MAP NO. 06059C0116J, A PRINTED PANEL, EFFECTIVE DECEMBER 3, 2009

LAND USE SUMMARY:

GROSS AREA: 12.367 ACRES
TOTAL PROPOSED PARCELS: 2

NOTES:
1. Irrigation (including spray and/or drip) will be provided, in the Construction Document phase, and to be installed per local California water regulations (AB1881) .
2. Transformers, back-flow preventers & other above-ground utilities to be screened with landscape as permitted per local codes & regulations.
3. Landscape lighting (landscape up-lights, path lights/bollards, etc.) to be coordinated with Electrical Engineer in future phase.
4. The plant palette listed provides a list of plant material to select from when preparing final landscape construction documents for this project. However, substitutions may be required due to availability, soils tests, or other conditions.
5. All trees within 5' of hardscape to be to be installed with deep root barriers.

PROJECT INFORMATION REQUIREMENTS

PROJECT LOCATION: 4665 LAMPSON AVE., LOS ALAMITOS, CA 90720
PARCEL MAP NUMBER: 2022-133 PARCELS 1 & 2
TRACT NUMBER: VESTING TENTATIVE TRACT MAP NO. 19263
LOT NUMBER: 1

● EMERGENCY ACCESS EASEMENTS

DETAILED SCOPE OF WORK

THIS PRELIMINARY FIRE MASTER PLAN HAS BEEN PREPARED FOR THE LAMPSON PARK PLACE PROJECT IN THE CITY OF LOS ALAMITOS AS PART OF THE ENTITLEMENT REVIEW AND APPROVAL BY THE CITY. THIS PROJECT CONSISTS OF SINGLE FAMILY DETACHED UNITS, TOWN HOME WALK-UP UNITS, AND MULTI-FAMILY APARTMENT BUILDINGS. THE CONDOMINIUM SINGLE FAMILY DETACHED AND TOWN HOME WALK-UP BUILDINGS WILL BE A SEPARATE DEVELOPMENT THAN THE MULTI-FAMILY APARTMENT BUILDINGS AFTER ENTITLEMENT, AT WHICH TIME, A PRECISE FIRE MASTER PLAN FOR EACH DEVELOPMENT SITE SHALL BE SUBMITTED AND APPROVED BY OCFA AND SHALL INCLUDE RECIPROCAL EMERGENCY ACCESS EASEMENTS FOR EACH OF THE DEVELOPMENT SITES AS INDICATED ON THE VESTING TENTATIVE TRACT MAP PROVIDED AS REFERENCE ONLY WITH THIS PRELIMINARY FIRE MASTER PLAN SUBMITTAL.

NUMBER OF UNITS OR HOMES IN DEVELOPMENT

169 SINGLE FAMILY DETACHED AND MULTI-PLEX WALK-UP TOWN HOME UNITS (R-3 OCCUPANCY)
77 UNITS WITHIN 3 MULTIFAMILY ATTACHED APARTMENT BUILDINGS (R-2 OCCUPANCY)

SPECIAL CONDITIONS

○ FIRE HAZARD SEVERITY ZONE ○ STATE RESPONSE AREA ○ LOCAL RESPONSE AREA
○ STATE LICENSED FACILITY
○ AM&M ○ PENDING ○ COMPLETE SR:
○ METHANE MITIGATION

○ VOICE EVACUATION

FIRE FLOW REQUIREMENT PER OCFA GUIDELINE B-01 ATTACHMENT 4

FLOW (IN GPM @ 20 PSI): 1,750 GPM @ 20PSI DURATION: 3 HOURS

WATER AVAILIBILITY

*PROVIDE COPY OF OCFA WATER AVAILABILITY FORM
COMPLETED BY WATER DISTRICT ON FIRE MASTER PLAN*
FLOW: 1,937 GPM
PRESSURE: CALC'D AT 20PSI BY GOLDEN STATE WATER COMPANY

● ON SITE FIRE HYDRANTS
TOTAL NUMBER: EIGHT (8)

EMERGENCY RESPONDER RADIO COVERAGR (BDA)

○ THIS BUILDING SHALL BE EQUIPPED WITH AN EMERGENCY RESPONDER DIGITAL RADIO SYSTEM PER THE REQUIREMENTS OF THE ORANGE COUNTY SHERIFF'S DEPARTMENT-COMMUNICATIONS & TECHNOLOGY DIVISION. FOR THE INITIAL SUBMITTAL, OCSD/COMM REQUIRES THE ERRCS/BDA/DAS SYSTEM DESIGNER TO PROVIDE THE FOLLOWING FOR PRE-EVALUATION: A. PROJECT NAME. B. SITE ADDRESS. C. PROJECT DESCRIPTION. D. CONTRACTOR CONTACT INFORMATION. E. BDA MODEL (S/N IF AVAILABLE). F. PROPOSED MODE OF OPERATION (CLASS A/B). G. PROPOSED PROJECT TIMELINE. THIS INFORMATION IS TO BE SUBMITTED BY THE DESIGNER VIA EMAIL TO ERRCS@OCSD.ORG AND BDACERT@OCFA.ORG. CFC 510

OCFA STANDARD FIRE MASTER PLAN NOTES

INSPECTION REQUIREMENTS

1. OCFA SITE INSPECTIONS ARE REQUIRED FOR THIS PROJECT. PLEASE SCHEDULE ALL FIELD INSPECTIONS AT LEAST 48 HOURS IN ADVANCE. INSPECTIONS CANCELED AFTER 1 P.M. ON THE DAY BEFORE THE SCHEDULED DATE WILL BE SUBJECT TO A RE-INSPECTION FEE. CALL OCFA INSPECTION SCHEDULING AT (714) 573-6150.
2. A LUMBER DROP INSPECTION SHALL BE PERFORMED PRIOR TO BRINGING COMBUSTIBLE MATERIALS (OR COMBUSTIBLE FIXTURES AND FINISHES FOR STRUCTURES OF NON-COMBUSTIBLE CONSTRUCTION). ALL-WEATHER ACCESS ROADS CAPABLE OF SUPPORTING 94,000 LBS., TOPPED WITH ASPHALT, CONCRETE, OR EQUIVALENT SHALL BE IN PLACE AND HYDRANTS OPERATIONAL AT TIME OF LUMBER DROP INSPECTION.
3. FOR PROJECTS WITH FUEL MODIFICATION, A VEGETATION CLEARANCE INSPECTION IS REQUIRED PRIOR TO A LUMBER DROP INSPECTION. USE THE FUEL MODIFICATION PLAN SERVICE REQUEST NUMBER TO SCHEDULE THE VEGETATION CLEARANCE INSPECTION.
4. PHASED INSTALLATION OF FIRE ACCESS ROADS REQUIRES ADDITIONAL INSPECTIONS NOT COVERED BY THE FEES PAID AT PLAN SUBMITTAL. CONTACT INSPECTION SCHEDULING TO ARRANGE FOR ADDITIONAL INSPECTIONS THAT MAY BE NEEDED AND ANY FEES THAT MAY BE DUE.
5. AN ORIGINAL APPROVED, SIGNED, WET-STAMPED OCFA FIRE MASTER PLAN SHALL BE AVAILABLE ON-SITE AT TIME OF INSPECTION.
6. ACCESS ROADS AND HYDRANTS SHALL BE MAINTAINED AND REMAIN CLEAR OF OBSTRUCTIONS AT ALL TIMES DURING AND AFTER CONSTRUCTION. AREAS WHERE PARKING IS NOT PERMITTED SHALL BE CLEARLY IDENTIFIED AT ALL TIMES. OBSTRUCTION OF FIRE LANES AND HYDRANTS MAY RESULT IN CANCELLATION OR SUSPENSION OF INSPECTIONS.
7. TEMPORARY FUEL TANKS OF 60 OR MORE GALLONS SHALL BE REVIEWED, INSPECTED, AND PERMITTED BY THE OCFA PRIOR TO USE.
8. THE PROJECT ADDRESS SHALL BE CLEARLY POSTED AND VISIBLE FROM THE PUBLIC ROAD DURING CONSTRUCTION.
9. ALL GATES IN CONSTRUCTION FENCING SHALL BE EQUIPPED WITH EITHER A KNOX OR BREAKAWAY PADLOCK.
10. BUILDINGS OF FOUR OR MORE STORIES SHALL BE PROVIDED WITH STAIRS AND A STANDPIPE BEFORE REACHING 40 FEET IN HEIGHT.

GENERAL REQUIREMENTS

11. FIRE LANE WIDTHS SHALL BE MEASURED FROM TOP FACE OF THE CURB TO TOP FACE OF THE CURB FOR FIRE LANES WITH STANDARD CURBS AND GUTTERS AND FROM FLOW-LINE TO FLOW-LINE FOR FIRE LANES WITH MODIFIED CURB DESIGNS (E.G., ROLLED, RAMPED, ETC.). THE DEVELOPER IS RESPONSIBLE TO VERIFY THAT ALL APPROVED PUBLIC WORKS OR GRADING DEPARTMENT STREET IMPROVEMENT PLANS OR PRECISE GRADING PLANS CONFORM TO THE MINIMUM STREET WIDTH MEASUREMENTS PER THE APPROVED OCFA FIRE MASTER PLAN AND STANDARDS IDENTIFIED IN OCFA GUIDELINE B-09 FOR ALL PORTIONS OF THE FIRE ACCESS ROADS.
12. PERMANENT, TEMPORARY, AND PHASED EMERGENCY ACCESS ROADS SHALL BE DESIGNED AND MAINTAINED TO SUPPORT AN IMPOSED LOAD OF 94,000 LBS. AND SURFACED TO PROVIDE ALL-WEATHER DRIVING CAPABILITIES.
13. FIRE LANE SIGNS AND RED CURBS SHALL MEET THE SPECIFICATIONS SHOWN IN OCFA GUIDELINE B-09 AND SHALL BE INSTALLED AS DESCRIBED THEREIN. ADDITIONAL FIRE LANE MARKINGS MAY BE REQUIRED AT THE TIME OF INSPECTION DEPENDING ON FIELD CONDITIONS.
14. ALL FIRE HYDRANTS SHALL HAVE A "BLUE REFLECTIVE PAVEMENT MARKER" INDICATING THEIR LOCATION PER THE OCFA STANDARD. ON PRIVATE PROPERTY MARKERS ARE TO BE MAINTAINED IN GOOD CONDITION BY THE PROPERTY OWNER.
15. ADDRESS NUMBERS SHALL BE LOCATED AND BE OF A COLOR AND SIZE SO AS TO BE PLAINLY VISIBLE AND LEGIBLE FROM THE ROADWAY FROM WHICH THE BUILDING IS ADDRESSED IN ACCORDANCE WITH OCFA GUIDELINE B-09. WAYFINDING SIGNS, WHEN REQUIRED BY THE LOCAL AHJ, SHALL COMPLY WITH THE STANDARDS OF THAT AGENCY. WHEN WAYFINDING SIGNS ARE ALSO REQUIRED BY THE OCFA, THEY MAY BE DESIGNED TO LOCAL AHJ REQUIREMENTS PROVIDED THAT SUCH STANDARDS FACILITATE LOCATION OF STRUCTURES, SUITES, AND DWELLING UNITS BY EMERGENCY PERSONNEL.
16. ACCESS GATES SHALL BE APPROVED PRIOR TO INSTALLATION AND SHALL BE IN COMPLIANCE WITH CHAPTER 5 OF THE CFC AND OCFA GUIDELINES.
17. APPROVED ACCESS WALKWAYS SHALL BE PROVIDED TO ALL REQUIRED OPENINGS AND ALL RESCUE WINDOWS.
18. VEGETATION SHALL BE SELECTED AND MAINTAINED IN SUCH A MANNER AS TO ALLOW IMMEDIATE ACCESS TO ALL HYDRANTS, VALVES, FIRE DEPARTMENT CONNECTIONS, PULL STATIONS, EXTINGUISHERS, SPRINKLER RISERS, ALARM CONTROL PANELS, RESCUE WINDOWS, AND OTHER DEVICES OR AREAS USED FOR FIREFIGHTING PURPOSES. VEGETATION OR BUILDING FEATURES SHALL NOT OBSTRUCT ADDRESS NUMBERS OR INHIBIT THE FUNCTIONING OF ALARM BELLS, HORNS, OR STROBES.
19. DUMPSTERS AND TRASH CONTAINERS LARGER THAN 1.5 CUBIC YARDS SHALL NOT BE STORED IN BUILDINGS OR PLACED WITHIN 5 FEET OF COMBUSTIBLE WALLS, OPENINGS OR COMBUSTIBLE ROOF EAVE LINES UNLESS PROTECTED BY AN APPROVED SPRINKLER SYSTEM.
20. ANY FUTURE MODIFICATION TO THE APPROVED FIRE MASTER PLAN OR APPROVED SITE PLAN, INCLUDING BUT NOT LIMITED TO ROAD WIDTH, GRADE, SPEED HUMPS, TURNING RADII, GATES OR OTHER OBSTRUCTIONS, SHALL REQUIRE REVIEW, INSPECTION, AND APPROVAL BY THE OCFA.
21. APPROVAL OF THIS PLAN SHALL NOT BE CONSTRUED AS APPROVAL OF ANY INFORMATION OR PROJECT CONDITIONS OTHER THAN THOSE ITEMS AND REQUIREMENTS IDENTIFIED IN OCFA GUIDELINE B-09 AND RELATED PORTIONS OF THE 2022 CFC AND CBC. THIS PROJECT MAY BE SUBJECT TO ADDITIONAL REQUIREMENTS NOT STATED HEREIN UPON EXAMINATION OF ACTUAL SITE AND PROJECT CONDITIONS OR DISCLOSURE OF ADDITIONAL INFORMATION.

PROJECT-SPECIFIC REQUIREMENTS

22. AN UNDERGROUND PIPING PLAN IS REQUIRED FOR THE INSTALLATION OF AN AUTOMATIC FIRE SPRINKLER SYSTEM OR FOR A PRIVATE FIRE HYDRANT SYSTEM. A SEPARATE PLAN SUBMITTAL IS REQUIRED.
23. AN ARCHITECTURAL PLAN IS REQUIRED TO BE SUBMITTED TO THE OCFA FOR REVIEW AND APPROVAL FOR PROJECTS CONTAINING A, C, E, F, H, I, L, AND R-4 OCCUPANCIES. A PLAN MAY ALSO BE REQUIRED FOR R-1 AND R-2 OCCUPANCIES OVER TWO STORIES OR THOSE UTILIZING SPRINKLERS OR FIRE WALLS TO INCREASE THE MAXIMUM BUILDING SIZE ALLOWED–SEE OCFA INFO BULLETIN 02-13.
24. AN AUTOMATIC FIRE SPRINKLER SYSTEM SHALL BE INSTALLED IN ACCORDANCE WITH APPLICABLE CODES AND LOCAL ORDINANCES, AMENDMENTS, AND GUIDELINES. SPRINKLER SYSTEMS, OTHER THAN THOSE LISTED IN CFC 903.4, SHALL BE MONITORED BY AN APPROVED CENTRAL STATION. SEPARATE PLAN SUBMITTALS FOR THE SPRINKLER AND MONITORING SYSTEMS ARE REQUIRED.
25. A FIRE ALARM SYSTEM SHALL BE INSTALLED IN ACCORDANCE WITH APPLICABLE CODES AND LOCAL ORDINANCES, AMENDMENTS, AND GUIDELINES. A SEPARATE PLAN SUBMITTAL IS REQUIRED.

GATES

○ MANUAL ○ ELECTRIC

OCFA NOTES FOR ELECTRIC VEHICLE GATES

1. A REMOTE OPENING DEVICE IS REQUIRED. THE REMOTE GATE OPENING DEVICE THAT WILL BE INSTALLED IS (CHECK ONE):

○ 3M OPTICOM
○ CLICK2ENTER* (SINGLE-PULSE MODE WITH 1.5 SECOND TRANSMISSION WINDOW)
○ FIRE STROBE ACCESS PRODUCTS, INC.
○ TOMAR

2. IN THE EVENT OF LOSS OF NORMAL POWER TO THE GATE OPERATING MECHANISM, IT SHALL BE AUTOMATICALLY TRANSFERRED TO A FAIL-SAFE MODE ALLOWING THE GATE TO BE PUSHED OPEN BY A SINGLE FIREFIGHTER WITHOUT ANY OTHER ACTIONS, KNOWLEDGE, OR MANIPULATION OF THE OPERATING MECHANISM BEING NECESSARY.
   A) A BATTERY MAY ONLY BE USED IN PLACE OF FAIL-SAFE MANUAL OPERATION WHEN THE GATE OPERATOR HAS A FAIL-OPEN MODE THAT WILL AUTOMATICALLY, IMMEDIATELY, AND COMPLETELY OPEN THE GATE AND KEEP IT OPEN UPON REACHING A LOW POWER THRESHOLD, REGARDLESS OF THE PRESENCE OF NORMAL POWER. SHOULD THE GATE BE TOO LARGE OR HEAVY FOR A SINGLE FIREFIGHTER TO OPEN MANUALLY, A SECONDARY SOURCE OF RELIABLE POWER BY MEANS OF AN EMERGENCY GENERATOR OR A CAPACITOR WITH ENOUGH RESERVE TO AUTOMATICALLY, IMMEDIATELY, AND COMPLETELY OPEN THE GATE UPON LOSS OF PRIMARY POWER SHALL BE PROVIDED FOR FAIL-OPEN OPERATION.
   B)
3. IN ADDITION TO THE REMOTE OPERATOR, THE GATE CONTROL SHALL BE OPERABLE BY A KNOX EMERGENCY OVERRIDE KEY SWITCH EQUIPPED WITH A DUST COVER. UPON ACTIVATION OF THE KEY SWITCH, THE GATE SHALL OPEN AND REMAIN OPEN UNTIL RETURNED TO NORMAL OPERATION BY MEANS OF THE KEY SWITCH. WHERE A GATE CONSISTS OF TWO LEAVES, THE KEY SWITCH SHALL OPEN BOTH SIMULTANEOUSLY IF OPERATION OF A SINGLE LEAF ON THE INGRESS SIDE DOES NOT PROVIDE FOR THE WIDTH, TURNING RADII, OR SETBACKS NECESSARY FOR FIRE APPARATUS TO NAVIGATE THE VEHICLE ENTRY POINT.
4. THE KEY SWITCH SHALL BE PLACED BETWEEN 42" AND 48" ABOVE THE ROADWAY SURFACE AT THE RIGHT SIDE OF THE ACCESS GATE WITHIN TWO FEET OF THE EDGE OF THE ROADWAY. IN IRVINE, THE SWITCH SHALL BE ON THE LEFT SIDE IN ACCORDANCE WITH IRVINE'S UNIFORM SECURITY ORDINANCE.
5. THE KEY SWITCH SHALL BE READILY VISIBLE AND UNOBSTRUCTED FROM THE FIRE LANE LEADING TO THE GATE.
6. THE KEY SWITCH SHALL BE LABELED WITH A PERMANENT RED SIGN WITH NOT LESS THAN ½" CONTRASTING LETTERS READING "FIRE DEPT" OR WITH A "KNOX" DECAL.

PREMISES IDENTIFICATION & ADDRESSING

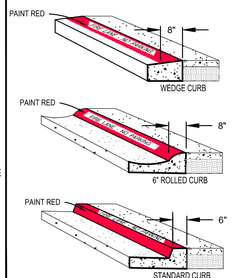
PREMISES IDENTIFICATION CBC 501.2, CFC 505.1
THREE POSSIBLE CONFIGURATIONS OF BUILDINGS OR UNITS WITHIN A BUILDING MAY EXIST AND ARE IDENTIFIED AS FOLLOWS: FREESTANDING BUILDINGS, MULTI-UNIT BUILDINGS, OR MULTI-BUILDING CLUSTERS. COMMON TO ALL CONFIGURATIONS ARE THE REQUIREMENTS LISTED IN SECTIONS A THROUGH E BELOW. PROJECTS MAY ALSO BE SUBJECT TO SPECIFIC ADDRESS AND WAYFINDING SIGNAGE REQUIREMENTS CONTAINED IN THE LOCAL JURISDICTION'S MUNICIPAL ORDINANCE OR SECURITY CODE, WHICH MAY BE MORE RESTRICTIVE THAN THE REQUIREMENTS LISTED IN THIS GUIDELINE. FOR PROJECTS LOCATED IN THE CITY OF IRVINE, PLEASE SEE IRVINE UNIFORM SECURITY CODE, SECTIONS 5-9-515.B & C AND SECTION 5-9-517L. FOR PROJECTS LOCATED IN SRA LAND, PLEASE SEE FSR ARTICLE 3 IN GUIDELINE B-09A FOR ADDITIONAL ADDRESSING REQUIREMENTS.

A. APPROVED NUMBERS OR ADDRESSES SHALL BE PLACED ON THE FRONT ELEVATION OF ALL NEW OR EXISTING BUILDINGS IN SUCH A POSITION THAT IS PLAINLY VISIBLE AND LEGIBLE FROM THE STREET OR ROAD ON WHICH THE PROPERTY IS ADDRESSED. ADDRESSES SHALL NOT BE LOCATED WHERE THEY HAVE THE POTENTIAL OF BEING OBSTRUCTED BY SIGNS, AWNINGS, VEGETATION, OR OTHER BUILDING/SITE ELEMENTS. AN ADDRESS MONUMENT AT THE VEHICLE ENTRANCE OR OTHER LOCATION CLEARLY VISIBLE AND LEGIBLE FROM THE PUBLIC ROAD MAY BE PROVIDED IN LIEU OF AN ADDRESS ON THE STRUCTURE WHERE ONLY A SINGLE BUILDING WITH A SINGLE STREET ADDRESS IS PRESENT AND NO OTHER STRUCTURES ARE ACCESSIBLE FROM THE FIRE LANE SERVING THAT STRUCTURE.

B. THE NUMBERS SHALL CONTRAST WITH THEIR BACKGROUND.

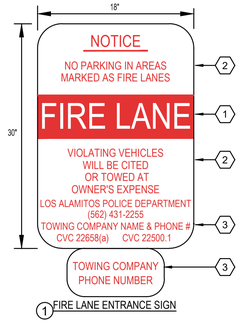
C. THE NUMBERS SHALL BE A MINIMUM OF 4 INCHES OR MORE IN HEIGHT FOR SINGLE-FAMILY RESIDENTIAL STRUCTURES/DUPLEXES, OR INDIVIDUAL UNIT NUMBERS IN MULTI-FAMILY RESIDENTIAL STRUCTURES AND 6 INCHES OR MORE FOR COMMERCIAL STRUCTURES OR THE PRIMARY BUILDING ADDRESS OR ADDRESS RANGE POSTED ON MULTI-FAMILY RESIDENTIAL STRUCTURES. THE 6-INCH NUMBERS SHALL HAVE A ONE-INCH STROKE AND THE 4-INCH NUMBERS SHALL HAVE A ½-INCH STROKE, OR AS REQUIRED BY LOCAL ORDINANCE, WHICHEVER IS MORE RESTRICTIVE. BUILDING SETBACKS, ELEVATION, AND LANDSCAPING CAN AFFECT THESE MINIMUM SIZE REQUIREMENTS.

D. ADDRESS NUMBERS MAY BE REQUIRED TO BE INTERNALLY OR EXTERNALLY ILLUMINATED BY THE LOCAL JURISDICTION'S SECURITY CODE. WHILE NOT REQUIRED BY THE OCFA, ILLUMINATION OF ADDRESSES IS RECOMMENDED TO FACILITATE RAPID LOCATION OF A SITE OR BUILDING.



E. WHERE IT IS UNCLEAR AS TO WHICH STREET A BUILDING IS ADDRESSED TO (E.G., A BUILDING IS ACCESSED ONLY FROM A STREET OTHER THAN THE ONE IT IS ADDRESSED TO; MULTIPLE MAIN ENTRANCES TO THE SITE, OR BUILDING ITSELF, FRONT DIFFERENT STREETS), THE NAME OF THE STREET SHALL ALSO BE IDENTIFIED AS PART OF THE POSTED ADDRESS.

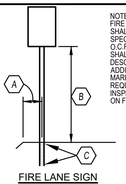
F. MULTI-UNIT BUILDINGS - SUITE/APARTMENT NUMBERS SHALL BE PLACED ON OR ADJACENT TO THE PRIMARY ENTRANCE FOR EACH SUITE/APARTMENT AND ANY OTHER DOOR PROVIDING ACCESS TO FIRE DEPARTMENT PERSONNEL DURING AN EMERGENCY. MULTIPLE RESIDENTIAL AND COMMERCIAL UNITS HAVING ENTRANCE DOORS NOT VISIBLE FROM THE STREET OR ROAD SHALL, IN ADDITION, HAVE APPROVED NUMBERS GROUPED FOR ALL UNITS WITHIN EACH STRUCTURE AND POSITIONED TO BE PLAINLY VISIBLE FROM THE STREET OR ROAD.



G. MULTI-BUILDING CLUSTERS - APPROVED NUMBERS OR ADDRESSES SHALL BE PLACED ON THE FRONT ELEVATION(S) OF ALL BUILDINGS THAT FORM THE CLUSTER. IF ALL BUILDING ADDRESSES ARE NOT CLEARLY VISIBLE OR LEGIBLE FROM THE PUBLIC ROAD SERVING THE STRUCTURES, AN ADDRESS MONUMENT SHALL ALSO BE PROVIDED AT THE ENTRY POINT(S) TO THE SITE INDICATING THE RANGE OF ADDRESSES ACCESSIBLE FROM THAT ENTRANCE.

RED CURB DETAILS

NOTE: CURBS ALONG ACCESS LANES SHALL BE PAINTED OSHA SAFETY RED OR EQUIVALENT. "FIRE LANE NO PARKING" SHALL BE PAINTED ON TOP OF CURB IN WHITE LETTERING 3 INCHES HIGH AND SHALL BE SPACED 30'-0" ON CENTER OR PORTION THEREOF.



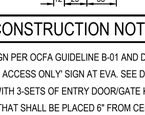
FIRE LANE ENTRY SIGN AND EMERGENCY VEHICULAR ACCESS SIGN

1 FIRE LANE ENTRANCE SIGN

2 EMERGENCY VEHICULAR ACCESS SIGN

FIRE LANE SIGN MOUNTING DETAIL

NOTE:
FIRE LANE SIGNS AND SHALL MEET SPECIFICATIONS PER O.C.F.A GUIDELINES AND SHALL BE INSTALLED AS DESCRIBED THEREIN. ADDITIONAL FIRE LANE MARKINGS MAY BE REQUIRED AT THE TIME OF INSPECTION DEPENDING ON FIELD CONDITIONS.



FIRE LANE SIGN MOUNTING LEGEND

1. THE WORDS "FIRE LANE" SHALL BE BOLD WHITE REFLECTIVE ON RED BACKGROUND, (2-3/4) INCHES IN HEIGHT.
2. LETTERING SHALL BE BOLD RED ON WHITE REFLECTIVE BACKGROUND, (1-3/8) INCHES IN HEIGHT.
3. LETTERING SHALL BE RED ON WHITE REFLECTIVE BACKGROUND, (1) INCHES IN HEIGHT.
4. LETTERING SHALL BE BOLD, CONDENSED WHITE REFLECTIVE LETTERING ON RED BACKGROUND, (2) INCHES IN HEIGHT.

A. DEPTH OF SIGN SHALL BE 18 INCHES FROM STANDARD CURB AND 24 INCHES WITH ROLLED CURB TO CENTER OF POST.
B. HEIGHT OF SIGN IN SIDEWALK OR PEDESTRIAN AREA SHALL BE 7'-0", AND 5'-0" IN ALL OTHER AREAS.
C. BURY DEPTH SHALL BE A MINIMUM OF 24 INCHES AND REBAR, A CONCRETE FOOTING, OR ANOTHER METHOD TO PREVENT REMOVAL OF THE SIGN IS RECOMMENDED. FOOTINGS FOR SIGNS LOCATED IN THE PUBLIC RIGHT-OF-WAY SHALL BE PER THE LOCAL JURISDICTION'S REQUIREMENTS.

LEGEND

- PROPOSED FIRE HYDRANT WITH BLUE REFLECTIVE FIRE HYDRANT MARKER. MARKER SHALL BE PLACED 6" FROM CENTERLINE OF HYDRANT SIDE OF STREET.
- PAINT CURB RED WITH 'NO PARKING FIRE LANE' STENCIL AT 30' O.C. PER DETAILS HEREON AND OCFA GUIDELINE B-01
- 150' MAXIMUM HOSE PULL DISTANCE
- 300' MAXIMUM HOSE PULL DISTANCE
- PROPOSED FIRE LANE ENTRY SIGN
- PROPOSED EMERGENCY VEHICULAR ACCESS (EVA) ENTRY SIGN
- INDICATES APPROXIMATE LOCATION OF KNOX BOX WITH 3-SETS OF ENTRY DOOR/GATE KEYS.
- PROPERTY LINES
- 6" MIN. BUILDING ADDRESSING (SEE ARCHITECTURAL PLAN FOR FINAL DESIGN AND LOCATIONS)
- 4" MIN. UNIT ADDRESSING (SEE ARCHITECTURAL PLAN FOR FINAL DESIGN AND LOCATIONS)
- LOCATION OF WAYFINDING SIGN PER CITY STANDARDS. SEE ARCHITECTURAL PLAN FOR FINAL DESIGN AND LOCATIONS
- INDICATES PROPOSED 3-STORY APARTMENT BUILDING (RESIDENTIAL AND INTERIOR COMMON USE)
- INDICATES PROPOSED 3-STORY TOWNHOME BUILDING
- INDICATES PROPOSED 3-STORY SINGLE FAMILY DWELLING UNIT
- INDICATES NOT A PART OF FIRE ACCESS
- PROPOSED PAVED ACCESS ROADS SHALL BE DESIGNED AND MAINTAINED TO SUPPORT AN IMPOSED LOAD OF 94,000 LBS. PER OCFA REQUIREMENTS.
- PROPOSED EVA ENTRY ALL WEATHER DECORATIVE PAVING OR PAVERS THAT SHALL BE DESIGNED AND MAINTAINED TO SUPPORT AN IMPOSED LOAD OF 94,000 LBS. PER OCFA REQUIREMENTS.
- PROPOSED ALTERNATIVE DRIVABLE PAVERS OR PAVED SURFACE. NOT A PART OF FIRE ACCESS
- INDICATES FIRE APPARATUS TURNING RADII: 20' WIDE PATH WITH 20' INSIDE AND 40' OUTSIDE
- INDICATES GROUND LADDERING ACCESS POINT TO RESCUE LOCATIONS AT 2ND AND 3ND LEVELS. SEE DETAIL SHT. F-1 FOR SETBACKS AND NOTES. FINAL LOCATIONS SHALL PER BE PART OF THE PRECISE FIRE MASTER PLAN.
- NOTE: ALL FIRE DEPARTMENT ACCESS ROADS INCLUDING STREETS NOT A PART OF FIRE ACCESS SHALL BE INSTALLED TO MEET OCFA REQUIREMENTS TO SUPPORT VEHICULAR LOADS OF 94,000 LBS.

CONSTRUCTION NOTES

1. INSTALL FIRE LANE ENTRANCE SIGN PER OCFA GUIDELINE B-01 AND DETAIL SHT. F-2.
2. INSTALL 'EMERGENCY VEHICULAR ACCESS ONLY' SIGN AT EVA. SEE DETAIL SHT. F-2.
3. INSTALL SUB- KEYED KNOX BOX WITH 3-SETS OF ENTRY DOOR/GATE KEYS PER OCFA GUIDELINE B-01.
4. INSTALL FIRE HYDRANT MARKER THAT SHALL BE PLACED 6" FROM CENTERLINE ON HYDRANT SIDE OF STREET.
5. INSTALL HAMMERHEAD TURNAROUND PER OCFA GUIDELINE B-01.
6. INSTALL RED CURB PER OCFA GUIDELINE B-01 AND DETAILS SHT. F-2.
7. INSTALL WAYFINDER SIGN.
8. INSTALL EVA ENTRY ALL WEATHER DECORATIVE PAVING OR PAVERS THAT SHALL BE DESIGNED AND MAINTAINED TO SUPPORT AN IMPOSED LOAD OF 94,000 LBS. PER OCFA REQUIREMENTS.
9. PROPOSED ALTERNATIVE DRIVABLE PAVERS OR PAVED SURFACE NOT A PART OF FIRE ACCESS.
10. INSTALL 4" DROP CURB THAT SHALL BE PAINTED RED.

PARKING ENFORCEMENT LETTER

APRIL 8, 2024

PLANNING AND DEVELOPMENT SERVICES SECTION
ORANGE COUNTY FIRE AUTHORITY
1 FIRE AUTHORITY ROAD
IRVINE, CA. 92602

RE: PARKING ENFORCEMENT PLAN - OCFA SERVICE REQUEST NUMBER 538311
LAMPSON PARK PLACE -TRACT MAP NO.19263
4665 LAMPSON AVENUE
LOS ALAMITOS, CA 90720

THE FIRE LANE PARKING ENFORCEMENT PLAN FOR THE ABOVE REFERENCED PROJECT IS STATED AS FOLLOWS:

ALL FIRE LANES WITHIN PROJECT SHALL BE MAINTAINED AND IN NO EVENT SHALL PARKING BE PERMITTED ALONG ANY PORTION OF A STREET OR DRIVE THAT REQUIRED FIRE LANES OR ANY AREA DESIGNATED AS A FIRE LANE FOR TURN-AROUND OR DRIVE THROUGH PURPOSES.

PROJECT HOMEOWNER'S ASSOCIATION SHALL ADOPT REASONABLE RULES AND REGULATIONS REGARDING THE PARKING OF VEHICLES ALONG THE STREETS, ROADS AND OR DRIVES WITHIN THE PROJECT THAT ARE NOT IN CONFLICT WITH APPLICABLE LAW.

IN FURTHERANCE THEREOF, PROJECT HOMEOWNER'S ASSOCIATION, THROUGH ITS OFFICERS, COMMITTEES AND AGENTS WILL ESTABLISH THE "PARKING" AND "NO PARKING" AREAS WITHIN THE PROPERTY IN ACCORDANCE WITH SECTION 22658.2 OF THE CALIFORNIA VEHICLE CODE AND THE RANCH FIRE PROTECTION PROGRAM. THE LAW SHALL BE ENFORCED THROUGH SUCH RULES AND REGULATIONS BY ALL LAWFUL MEANS, INCLUDING, WRITTEN WARNINGS, CITING, LEVYING FINES AND TOWING VEHICLES IN VIOLATION.

PROJECT HOMEOWNER'S ASSOCIATION WILL CONTRACT WITH A CERTIFIED PATROL AND TOWING COMPANY TO REMOVE VEHICLES THAT VIOLATE NO PARKING RESTRICTIONS. FIRST TIME VIOLATORS WILL RECEIVE A WRITTEN WARNING AND WITH SUBSEQUENT VIOLATIONS, THE VEHICLE SHALL BE SUBJECT TO TOWING. THE VEHICLE OWNER SHALL BE RESPONSIBLE FOR ALL COSTS INCURRED IN REMEDYING SUCH VIOLATION, INCLUDING WITHOUT LIMITATION TOWING COST, CITATIONS AND LEGAL FEES.

COMBUSTIBLE CONSTRUCTION LETTER

APRIL 8, 2024

ORANGE COUNTY FIRE AUTHORITY
1 FIRE AUTHORITY ROAD
IRVINE, CA 92502-0125

SUBJECT: COMBUSTIBLE CONSTRUCTION LETTER - OCFA SERVICE REQUEST NUMBER 538311 LAMPSON PARK PLACE -TRACT MAP NO.19263
4665 LAMPSON AVENUE
LOS ALAMITOS, CA 90720

THE PURPOSE OF THIS LETTER IS TO NOTIFY YOU THAT THIS PROJECT SHALL INSTALL ALL REQUIRED PAVED FIRE ACCESS ROADS THAT MEET O.C.F.A. GUIDELINES PER THE APPROVED PLANS. ALL FIRE HYDRANTS AND WATER SUPPLY FOR FIREFIGHTING PURPOSES SHALL BE INSTALLED PER THE APPROVED PLANS AND SHALL MEET ALL FIRE FLOWS REQUIREMENTS, PRIOR TO ANY COMBUSTIBLE CONSTRUCTION MATERIALS BEING DELIVERED FOR CONSTRUCTION.

BUILDING INFORMATION AND DATA

BUILDING	STORIES	TOP OF HIGHEST ROOF	CONSTRUCTION TYPE	AUTOMATIC FIRE SPRINKLERS	SQUARE FOOTAGE
SINGLE FAMILY	2 & 3	36'-0" ★	VB	NFPA 13D	2,815SF
TOWNHOUSE	3	37'-6" ★	VB	NFPA 13D	12,091SF
MULTI-FAMILY	3	37'-0" ★	V-A	NFPA 13	38,700SF

★NOTE THAT BUILDING HEIGHT TO EAVE SHALL NOT EXCEED 29'-11" AT DESIGNATED GROUND LADDERING AREAS.

FIRE FLOW INFORMATION & HYDRANT SPACING REQUIREMENTS PER 2023 OCFA GUIDELINE B-01

SINGLE FAMILY
FIRE FLOW OF 500GPM /1 HOUR FOR THE LARGEST BUILDING OF 2,815 SF WITH TYPE V-B CONSTRUCTION SHALL BE PROVIDED BY THE PROPOSED WATER SYSTEM. HYDRANT SPACING REQUIREMENT IS 600' MAXIMUM BETWEEN HYDRANTS ON A THRU ROAD.

TOWNHOUSE
FIRE FLOW OF 1,500GPM / 3 HOURS FOR THE LARGEST BUILDING OF 12,091 SF WITH TYPE V-B CONSTRUCTION SHALL BE PROVIDED BY THE PROPOSED WATER SYSTEM. HYDRANT SPACING REQUIREMENT IS 500' MAXIMUM BETWEEN HYDRANTS ON A THRU ROAD.

MULTI-FAMILY
FIRE FLOW OF 1,750GPM / 3 HOURS FOR THE LARGEST BUILDING OF 38,700 SF WITH TYPE V-A CONSTRUCTION SHALL BE PROVIDED BY THE PROPOSED WATER SYSTEM. HYDRANT SPACING REQUIREMENT IS 500' MAXIMUM BETWEEN HYDRANTS ON A THRU ROAD.

FIRE FLOW REPORT

OCFA WATER AVAILABILITY FORM

SECTION A: To be completed by customer

Project Name: Lampson Park Place — OCFA SR #: ASSIGNED UPON PLAN SUBMITTAL

Project Address: 4665 Lampson Ave — City: Los Alamitos

Applicant Phone #: (949)916-3800 — Fax #: (_____) _____

Area of largest building 38,700 ft²; Construction type? (check one): [ ] IA [ ] IB [ ] IIA [ ] IIB [ ] IIIA [ ] IIIB [ ] IV [ ] VA [✓] VB

Is this building sprinklered throughout? (check one) [ ] N [✓]

SECTION B: To be completed by local water department/district

Customer to provide results to OCFA

Water Department/District: Golden State Water Company

Test location (indicate address or cross-streets & provide reference map): _____

Hydrant number(s) (if applicable): NA

Elevation of test hydrant: _____ feet above sea level

Date of Test[1]: 2/22/24 — Time of test[1]: hydraulic model [ ] am [ ] pm

[1] Test to be performed as close as possible to the time that the lowest flows and pressures are expected (e.g., M-F, 6:00 – 9:00 am and 5:00 - 9:00 pm)

FLOW TEST RESULTS

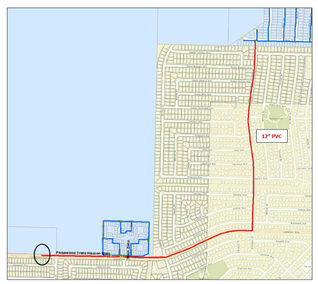
TEST INFORMATION IS VALID FOR 6 MONTHS FROM DATE TEST IS PERFORMED

Static pressure:	95	psi	**Residual pressure:**		psi
Observed flow:		gpm	**Flow calc'd at 20 psi:**	1,937	gpm

[✓] Check the box if the test information above was obtained in a manner other than an actual flow test (i.e. by computer modeling).

Based on fluctuations known to exist at the site of the test, provide estimated values for the following:

Maximum static pressure	psi	**Minimum static pressure**	psi
Minimum residual pressure	psi	**Minimum residual flow**	gpm



I have witnessed and/or reviewed this water flow information and by personal knowledge and/or on-site observation certify that the above information is correct.

Name: Melynda Holm — Company/Agency: Golden State Water Company

TYPICAL TOWNHOUSE ELEVATIONS

NOT TO SCALE

GROUND LADDERING REQUIREMENTS TO SLEEPING AREAS PER OCFA GUIDELINE B-01

6.4. **Rescue Openings** - Group-R occupancies that are required by CBC 1031.1 to have rescue openings shall have a walkable path free of obstructions between the fire lane and each rescue opening.

6.4.1. An approved access walkway must be provided to enable firefighters to easily and safely reach a clear, flat space beneath each rescue opening. Obstructions including but not limited to shrubs, trees, trellises, carports, raised planters, walls, fences, pools, steeply sloped roofs, overhangs, vegetation, and similar building and site elements shall not impede the use of or access to the walkway or rescue opening.

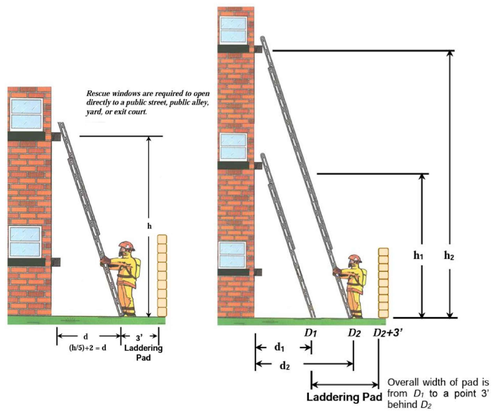
6.4.2. Walkways may consist of hardscape, decomposed granite, grass, or other similar walkable material that does not inhibit access to or use of the area.

6.4.3. Trees that encroach on walkways shall provide a minimum 7-foot clearance underneath to allow unhindered passage by firefighters, however, trees and shrubs shall not encroach on areas outside the rescue opening.

6.5. **Laddering Pad and Setback at Rescue Openings of Group R-1, R-2, and R-2.1 Occupancies** - A clear, flat space for laddering rescue openings shall be provided beneath each rescue opening. The distance between the nearest edge of this laddering pad and the structure is based on standardized operational procedures and safe practice to achieve a proper laddering angle (next page, Figure 17). The plan provided must demonstrate that the vegetation (at fully-grown sizes), buildings, and site features will not obstruct the access walkways or laddering operations. It is incumbent upon the developer, architect, landscape architect, and facility maintenance personnel to collaborate on a design and plant palette that complies with these requirements through the *life of the building*.

6.5.1. Proper laddering angle calculation: ***d = (h/5) + 2***

Where **h** = The height of the window sill or balcony railing



d = The distance in feet from the edge of the pad nearest the building to a point on the ground directly beneath the rescue window sill or balcony edge.

6.5.2. Dimensions for placement of ladders:

Placement of Ladders

Sill Height (h)	Distance (d)	Sill Height (h)	Distance (d)	Sill Height (h)	Distance (d)
35'	9'-0"	25'	7'-0"	15'	5'-0"
34'	8'-10"	24'	6'-10"	14'	4' to 5'
33'	8'-7"	23'	6'-7"	13'	4' to 5'
32'	8'-5"	22'	6'-5"	12'	3' to 5'
31'	8'-2"	21'	6'-2"	11'	3' to 4'
30'	8'-0"	20'	6'-0"	10'	2' to 4'
29'	7'-10"	19'	5'-10"	9'	2' to 4'
28'	7'-7"	18'	5'-7"	8'	2' to 3'
27'	7'-5"	17'	5'-5"	7'	1' to 3'
26'	7'-2"	16'	5'-2"	<7'	1' to 2'

1.0 INTRODUCTION

In accordance with Section 15088 of the California Environmental Quality Act (CEQA) Guidelines, the City of Los Alamitos, as the Lead Agency, has evaluated the comments received on the Draft Environmental Impact Report (Draft EIR) for the 4665 Lampson Avenue Project (Project) (SCH No. 2022090476) and has prepared written responses to these comments. This document has been prepared in accordance with CEQA and represents the independent judgment of the lead agency.

Public Resources Code Section 21082.1(a) authorizes lead agencies, such as the City of Los Alamitos here, to prepare an EIR either directly by its own staff or under contract with a public or private entity. More specifically, Section 15084(d) of the CEQA Guidelines provides that:

> *The lead agency may choose one of the following arrangements or a combination of them for preparing a draft EIR.*
>
> *(1) Preparing the draft EIR directly with its own staff.*
>
> *(2) Contracting with another entity, public or private, to prepare the draft EIR.*
>
> *(3) Accepting a draft prepared by the applicant, a consultant retained by the applicant, or any other person.*
>
> *(4) Executing a third party contract or memorandum of understanding with the applicant to govern the preparation of a draft EIR by an independent contractor.*
>
> *(5) Using a previously prepared EIR.*

DRAFT

Pursuant to Public Resources Code Section 21082.1 and CEQA Guidelines 15084(e), to the extent a lead agency authorizes a consultant to prepare an EIR, the lead agency shall subject the draft to the agency's own review and analysis. The EIR must reflect the independent judgment of the lead agency, and the lead agency remains responsible for the adequacy and objectivity of the EIR.

This document has been prepared in accordance with CEQA and represents the independent judgment of the lead agency.

According to State CEQA Guidelines Section 15132, the Final EIR shall consist of:

> *(a) The Draft EIR or a revision of the draft;*
>
> *(b) Comments and recommendations received on the Draft EIR either verbatim or in summary;*
>
> *(c) A list of persons, organizations, and public agencies commenting on the Draft EIR;*
>
> *(d) The responses of the Lead Agency to significant environmental points raised in the review and consultation process; and*

(e) Any other information added by the Lead Agency.

The City of Los Alamitos will consider certification of the EIR, adoption of a Mitigation Monitoring and Reporting Program, Findings and Facts, and a Statement of Overriding Considerations as part of the approval process for the Project.

This Final EIR document is organized as follows:

Section 1 provides a brief introduction to this document, a summary of the public review process, and a list of commenters.

Section 2 provides master responses for comments that were made by many commenters on the same issue.

Section 3 provides responses to the public comments received on the Draft EIR during the public review period. Responses are provided in the form of individual responses to comment letters received. Comment letters are followed immediately by the responses to each letter.

Section 4 contains revisions and clarifications to the Draft EIR as a result of the comments received from agencies and interested persons as well as errata to clarify, amplify, or make insignificant modifications to the EIR as authorized under CEQA. This information does not constitute significant new information pursuant to CEQA, and therefore recirculation of the EIR for further review pursuant to CEQA Guidelines Section 15088.5 is not required.

1.1 Public Review Process

In compliance with Section 15201 of the State CEQA Guidelines, the City of Los Alamitos (City) has taken steps to provide opportunities for public participation in the environmental review process. A Notice of Preparation (NOP) was distributed on October 3, 2022 to responsible agencies, local government agencies, and interested parties for a 30-day public review period (from October 3, 2022 to November 2, 2022) in order to solicit responses that would help the City identify the full scope and range of potential environmental concerns associated with the Project so that these issues could be fully examined in this EIR. The NOP was also distributed to the State of California Office of Planning and Research, State Clearinghouse (SCH) for distribution to State agencies. The Project was described; potential environmental effects associated with Project implementation were identified; and agencies and the public were invited to review and comment on the NOP. A copy of the NOP and comments received are included in Appendix A of the Draft EIR. The City received comment letters from eight (8) agencies and organizations and 201 individuals in response to the NOP. Substantive issues raised in response to the NOP and during the Scoping Meeting are summarized in Table 1-1, *Summary of NOP Comments*, and Table 1-2, *Summary of Scoping Meeting Comments* of the Draft EIR.

CEQA requires that a Draft EIR have a review period lasting at least 45 days for projects that have been submitted to the SCH for review (State CEQA Guidelines, Section 15105[a]). The Draft EIR was distributed to various public agencies, organizations, and individuals on April 24, 2024; the EIR was available for public review and comment for a period of 45 days. The review period ended on June 10,

DRAFT

2024. The City used several methods to elicit comments on the Draft EIR. A Notice of Availability (NOA) and the Draft EIR was distributed to the SCH for distribution to State agencies and was posted on the City's website. The NOA was also posted at the Orange County Clerk's office on April 24, 2024. The NOA was mailed to responsible agencies, local government agencies, and interested parties that received the NOP, to individuals who had previously requested the NOA or EIR, and to individuals who provided NOP comments on April 24, 2024. The NOA was also published in the Event News Enterprise which started the week of April 22 through the week of May 6; the NOA and Draft EIR were made available for review, on the City's web site at: https://cityoflosalamitos.org/203/Planning-Commission-Projects.

The Planning Commission and City Council, are scheduled to hold public hearings on September 25, 2024 and Month ##, 2024 to consider whether to approve the proposed Project and associated actions and whether to certify the Final EIR for the Project.

1.2 List of EIR Commenters

In accordance with Section 15132 of the State CEQA Guidelines, the following includes a list of the agencies, organizations, and individuals that submitted comments on the Draft EIR and indicates the environmental topics raised by each commenter regarding the Draft EIR. The City received a total of 6 comments from agencies and organizations and 74 comments from individuals and interested parties on the Draft EIR during the public review period.

Section 2.0 provides Master Responses in response to environmental topical areas that were raised by several of the commenters. The use of master responses by lead agencies is a well-accepted means of responding to issues frequently raised in comments on a draft EIR. (S. Kostka & M. Zischke, Practice Under the California Environmental Quality Act (rev. 2023) Section 16.9.) Responses to each comment are in Section 3.0. The agency and organization comment letters have been assigned a letter (i.e., A, B, C) and the individual comment letters have been assigned a number (i.e., 1, 2, 3). Each comment within the transmittal is divided into sequential numbered comments (i.e., A-1, A-2, A-3; or 1-1, 1-2, 1-3).

DRAFT

2.0 Master Responses to Comments Received During the Public Review Period

All of the comment letters received by the City have been included and responded to in this Final Environmental Impact Report (Final EIR). Comments that raise significant environmental concerns have been thoroughly addressed. Comments that do not require a response are indicated below and include those that (1) do not address the adequacy or completeness of the Draft EIR (i.e., are outside the scope of CEQA); (2) do not raise significant environmental issues; (3) do not address the Project; or (4) request the incorporation of additional information not relevant to environmental issues.

CEQA Guidelines Section 15204(a) outlines the parameters for public agencies and interested parties to submit comments and the Lead Agency's responsibility for responding to specific comments. Per CEQA Guidelines Section 15204(a), comments should be related to:

> *[T]he sufficiency of the document in identifying and analyzing possible impacts on the environment and ways in which the significant effects of the project might be avoided or mitigated. Comments are most helpful when they suggest additional specific alternatives or mitigation measures that would provide better ways to avoid or mitigate the significant environmental effects. At the same time, reviewers should be aware that the adequacy of an EIR is determined in terms of what is reasonably feasible…CEQA does not require a lead agency to conduct every test or perform all research, study, and experimentation recommended or suggested by commenters. When responding to comments, lead agencies need only respond to significant environmental issues and do not need to provide all information requested by reviewers, as long as a good faith effort at full disclosure is made in the EIR.*

CEQA Guidelines Section 15204(c) further advises that, "[r]eviewers should explain the basis for their comments, and should submit data or references offering facts, reasonable assumptions based on facts, or expert opinion supported by facts in support of the comments. Pursuant to CEQA Guidelines Section 15064, an effect shall not be considered significant in the absence of substantial evidence." Additionally, CEQA Guidelines Section 15204(d) notes that, "[e]ach responsible agency and trustee agency shall focus its comments on environmental information germane to that agency's statutory responsibility;" but, pursuant to CEQA Guidelines Section 15204(e), "[t]his section shall not be used to restrict the ability of reviewers to comment on the general adequacy of a document or of the lead agency to reject comments not focused as recommended by this section [CEQA Guidelines Section 15204]."

Section 15088 of the California Environmental Quality Act (CEQA) Guidelines, Evaluation of and Response to Comments, states:

a) *The lead agency shall evaluate comments on environmental issues received from persons who reviewed the draft EIR and shall prepare a written response. The lead agency shall*

DRAFT

respond to comments raising significant environmental issues received during the noticed comment period and any extensions and may respond to late comments.

b) The lead agency shall provide a written proposed response, either in a printed copy or in an electronic format, to a public agency on comments made by that public agency at least 10 days prior to certifying an environmental impact report.

c) The written response shall describe the disposition of significant environmental issues raised (e.g., revisions to the proposed project to mitigate anticipated impacts or objections). In particular, the major environmental issues raised when the Lead Agency's position is at variance with recommendations and objections raised in the comments must be addressed in detail giving reasons why specific comments and suggestions were not accepted. There must be good faith, reasoned analysis in response. Conclusory statements unsupported by factual information will not suffice. The level of detail contained in the response, however, may correspond to the level of detail provided in the comment (i.e., responses to general comments may be general). A general response may be appropriate when a comment does not contain or specifically refer to readily available information, or does not explain the relevance of evidence submitted with the comment.

d) The response to comments may take the form of a revision to the draft EIR or may be a separate section in the final EIR. Where the response to comments makes important changes in the information contained in the text of the draft EIR, the lead agency should either:

1. *Revise the text in the body of the EIR; or*
2. *Include marginal notes showing that the information is revised in the response to comments.*

DRAFT

As further discussed in Section 4.0 of this document, the Draft EIR revisions and information presented in the responses to comments do not result in any of the conditions set forth in CEQA Guidelines Section 15088.5; therefore, the EIR does not need to be recirculated prior to its certification.

This section presents detailed responses to comments that were made by many commenters on the same environmental issue. The master responses provide a means of giving a broader context to the response than may be possible in individual responses and eliminates unnecessary duplication in the responses In some cases, one or more master responses may be responsive to an individual comment.

2.1 MASTER RESPONSE

2.1.1 TRANSPORTATION AND TRAFFIC CONGESTION

Several commenters raised concerns regarding the Project's traffic increases in areas that are currently congested during peak hours. As discussed in Section 4.15, *Transportation*, of the Draft EIR, pursuant to Senate Bill (SB) 743, changes to the CEQA Guidelines were adopted in December 2018, which

require all lead agencies to adopt Vehicle Miles Travelled (VMT) as the measure for identifying transportation impacts for land use projects under CEQA. This Statewide mandate went into effect July 1, 2020. The issue of congestion is no longer a CEQA issue and for this reason is not addressed in the Draft EIR (refer to Page 4.15-1 of the Draft EIR). With the California Natural Resources Agency's certification and adoption of the changes to the CEQA Guidelines, automobile delay, as measured by "level of service" and other similar metrics, no longer constitute a significant environmental effect under CEQA. (Pub. Resources Code, § 21099, subd. (b)(3)). Transportation analysis under CEQA is now based on VMT rather than impacts to automobile delay-based level of service (LOS) (traffic congestion).

Nonetheless, a Traffic Analysis (TA; *Technical Appendix N1* of the Draft EIR [Updated TA is also included as *Attachment G* to the Final EIR]) was prepared for the Project to evaluate the Project's traffic impacts with respect to congestion, the potential circulation system deficiencies that may result from the development of the proposed Project, and where necessary to recommend improvements to achieve acceptable operations consistent with General Plan level of service goals and policies. This TA was primarily prepared for non-CEQA purposes, although it does provide information (e.g. trip generation) to support the analyses in other technical reports (e.g., air quality, etc.).

A. Non-CEQA Topic for Informational Purposes

Although the Project is located in the City of Los Alamitos, access to the site via Lampson Avenue lies within the City of Seal Beach's jurisdiction. The Project's traffic study has been prepared in accordance with the City of Los Alamitos' requirements and the City of Seal Beach's Transportation Analysis Guidelines (June 2020, referred to as City Guidelines) as the study area intersections lie within the City of Seal Beach. The Project traffic study scoping agreement, provided in Appendix 1.1 of the TA, was provided for review and approval by the cities of Los Alamitos, Seal Beach, and Garden Grove.

Based on consultation with the City of Los Alamitos and the City of Seal Beach, ten study area sections were selected for analysis in the TA, shown in Table 1-1 in the TA. Additionally, a total of nine study area roadway segments were selected for evaluation based on City of Seal Beach's Guidelines which require analysis of any roadway segment where a project contributes 1% or more of the total traffic on the segment. Pursuant to comments received on the Draft EIR and TA from the City of Seal Beach (see Comment Letter D in Section 3.0 of this Final EIR) and the City of Garden Grove (see Comment Letter C in Section 3.0 of this Final EIR), an updated TA was prepared and included as *Attachment G* to this Final EIR.

In the TA, Seal Beach Boulevard & Lampson Avenue was identified as a deficient intersection under Opening Year Cumulative (2026) and under General Plan Buildout traffic conditions. Restriping the number two westbound left turn lane as a shared left-right turn lane would improve the intersection operations to an acceptable LOS D. The Project Applicant's responsibility for the Project's contributions towards the deficient intersection would be addressed by payment of fair share fees to the jurisdiction that would construct the recommended improvement.

DRAFT

Moreover, as discussed in Section 3.0, *Project Description*, of the Draft EIR, according to the City of Seal Beach General Plan, Lampson Avenue is a divided roadway with a raised median and designed to accommodate a maximum of 37,500 daily vehicle trips. The City of Seal Beach's General Plan identifies two roadway segments that generally comprise the portion of Lampson Avenue fronting the Project site: Rose Street to Tulip (east of the Project) and Rose Street to Heather Street (adjacent and West of the Project). The Project is anticipated to generate 1,658 daily trips. At General Plan Buildout with the Project, these two segments of Lampson Avenue would carry between 15,350 and 15,750 daily trips (see *Technical Appendix N1* of the EIR), below the maximum of 37,500 daily trips. Therefore, the Project's anticipated trip generation is well within the capacity of Lampson Avenue even at General Plan Buildout (refer to Page 3-17 of the Draft EIR).

Many commenters also expressed concerns regarding U-turns on Lampson Avenue at Heather Street. As discussed in the Project's Traffic Analysis, there are existing westbound U-turns occurring at the intersection of Heather Street and Lampson Avenue, however, the intersection operates at an acceptable LOS with the inclusion of these existing peak hour U-turns. Additionally, Project traffic is not anticipated to utilize Heather Street for U-turns along Lampson Avenue as all components of the Project would have access to the full access driveway at the primary neighborhood entry on Lampson Avenue for making southbound left turns.

Many commenters also expressed concerns on cut-through traffic into existing neighborhoods. Project traffic would utilize Lampson to access either Seal Beach Boulevard or Valley View to access the regional freeway system. There would be no reason for Project traffic to use roads within the existing neighborhoods to the south since they do not provide direct access or a shorter route to Seal Beach Boulevard or Valley View. The existing surrounding residential neighborhoods do not provide any direct connection to these facilities. Therefore, internal residential streets, including College Park East, are not a desirable alternative route to the regional roadway network. Minimal travel may occur within the adjacent neighborhood to access public parks, since there is an existing park directly adjacent to the Project site.

DRAFT

B. CEQA-Related Topic

As discussed in Section 4.15, *Transportation*, of the Draft EIR, the Project would result in significant VMT impacts with the implementation of Mitigation Measure MM 4.15-1. Even where the TDM measures are implemented to their maximum effectiveness, the Project would still not be able to reduce its VMT impact to a level of less than significant which requires a 31.8% reduction for baseline (2022) conditions and 27.7% for buildout (2045) conditions. Therefore, the Draft EIR identified a significant and unavoidable VMT impact for the Project on a direct and cumulatively considerable basis (refer to Page 4.15-20 of the Draft EIR).

2.1.2 ROADWAY SAFETY ON LAMPSON AVENUE

Many commenters expressed concerns regarding vehicle and pedestrian safety on Lampson Avenue due to the potential for decreased visibility and an increase in traffic. A Safety Evaluation was prepared for the Project (see *Attachment H* of this Final EIR) which analyzed collision data, pedestrian and

bicycle safety, and site access management (e.g. driveway sight distance, driveway spacing, project access and queuing, multimodal conflict points, and pedestrian/bicycle connections). A summary of the main findings are presented below.

Additionally, several comments were made regarding the proposed traffic signal at the primary neighborhood entry on Lampson Avenue. The Project's Traffic Analysis (see *Attachment G* of this Final EIR) evaluated this issue and determined that the primary neighborhood entry is not anticipated to meet peak hour or planning level (daily volume) based traffic signal warrants and no traffic signal at this location is needed or required. However, due to public comments received during the Notice of Preparation and scoping period, the Project initially proposed to install a traffic signal at the primary neighborhood to alleviate neighborhood concerns related to safety. Subsequent public comments received on the Draft EIR during the 45-day public review period expressed concern with installing a traffic signal and after further traffic signal warrant and safety analyses, it was determined that the proposed traffic signal is not warranted (see *Attachment G* of this Final EIR). Therefore, the Project no longer proposes a traffic signal at this entryway. However, to address the public comments expressing concerns related to safety in this area, a Safety Evaluation was prepared for the Project (see *Attachment H* of this Final EIR). Based on the Safety Evaluation and for the reasons summarized below, the Project would not result in a safety impact or substantially increase hazards due to a geometric design feature.

A. Collision

As discussed in the Safety Evaluation (see *Attachment H* of this Final EIR), collision data was gathered by California Highway Patrol (CHP) Statewide Integrated Traffic Records System (SWITRS). The collision data includes 5 years of collision data gathered by CHP staff and members of its allied agencies throughout California (including the City of Los Alamitos). Table 1 of the Safety Evaluation provides a summary of the types of collisions by intersection for eight intersections. Table 2 of the Safety Evaluation provides a summary of the crash rate compared to the statewide average. The results indicated the following:

- **Basswood Street & Lampson Avenue** had a total of 1 reported collision in a 5-year period. The common collision included a sideswipe collision. Sideswipe collisions are commonly caused by failure to yield or impaired/distracted driving. The intersection of Basswood St. & Lampson Av. has a lower crash rate than the state average for similar facilities.

- **Candleberry Avenue & Lampson Avenue** had a total of 1 reported collision in a 5-year period. The common collisions included a broadside collision. Broadside collisions are commonly caused by failure to yield, failure to stop, or impaired/distracted driving. The intersection of Candleberry Av. & Lampson Av. has a lower crash rate than the state average for similar facilities.

- **Rose Street & Lampson Avenue** had a total of 2 reported collisions in a 5-year period. The common collisions included broadside and overturn collisions. Overturned vehicles are commonly caused by unsafe speeds, improper maneuvers, or loss of vehicle control.

DRAFT

The intersection of Rose St. & Lampson Av. has a lower crash rate than the state average for similar facilities.

- **Tulip Street & Lampson Avenue** had a total of 1 reported collision in a 5-year period. The common collision included a broadside collision. The intersection of Tulip St. & Lampson Av. has a lower crash rate than the state average for similar facilities.

- **Valley View St. & Lampson Avenue** had a total of 14 reported collisions in a 5-year period. The common collisions included rear-end and broadside collisions. Rear-end collisions are commonly caused by failure to yield, failure to stop, or impaired/distracted driving. The intersection of Valley View St. & Lampson Av. has a lower crash rate than the state average for similar facilities.

The existing crash rates for the study area intersections are lower than the statewide average crash rates. A Project would have the potential to create an increase in collision rate if it introduced a geometric design feature that did not meet safety standards or incompatible uses (e.g. farm equipment). As demonstrated in the analysis below in Master Response 2.1.2C through 2.1.2E, implementation of Project improvements (within the public right-of-way) per Los Alamitos and Seal Beach standards ensures all that sight distance requirements, pedestrian crossing requirements, and street design requirements are met. Additionally, the Project vehicle mix is consistent with the adjacent land uses, including the residential neighborhood to the south. Therefore, it is not anticipated that the Project will result in a significant change in collision rates or result in an accident rate higher than the statewide average.

B. Bicycle and Pedestrian Facilities

As discussed in Section 4.7, *Transportation*, of the Draft EIR, existing sidewalks are present on both the westbound and eastbound side of Lampson Avenue, adjacent to the Project site. Crosswalks are present at the intersections of Lampson Avenue/Heather Street and Lampson Avenue/Rose Street (refer to Page 4.15-3 of the Draft EIR). Frontage improvements for the Project would include median improvements, sidewalks, driveway modifications needed to accommodate site access, and landscaping improvements as required by City standards (refer to Page 3-4 of the Draft EIR).

As discussed in the Safety Evaluation (*Attachment H* of this Final EIR), there are existing Class II (on-street, striped) bike lanes on the north and south sides of Lampson Avenue from Basswood Street to the east. In addition, there is a Class I bike/pedestrian path on Seal Beach Boulevard north of Lampson Avenue and a Class II bike lane south of Lampson Avenue. The Project would not remove any existing bike/pedestrian paths and would maintain the existing Class II bike lane on Lampson Avenue along its frontage to maintain bicycle safety. The existing sidewalks adjacent to the Project met design standards and the Americans with Disabilities Act (ADA) standards at the time they were constructed.

As stated, the sidewalks along the Project frontage will be improved as part of the Project. Frontage improvements include sidewalks, driveway modifications to accommodate site access, median modifications, and landscaping improvements as required by City standards. The proposed sidewalk

DRAFT

along the Project's frontage on the north side of Lampson Avenue will provide connectivity with proposed sidewalks and paths internal to the Project.

The intersections at Lampson Avenue at Heather Avenue and Lampson Avenue at Rose Avenue are currently signalized and both have pedestrian crosswalks for Lampson Avenue. The wheelchair ramp on the north side of Lampson Avenue at Heather Avenue does not meet current ADA standards. However, the wheelchair ramp on the north side of Lampson Avenue at Rose Avenue does meet ADA standard requirements.

All Project driveways will be designed to meet current City standards and accommodate pedestrian crossing per current ADA standards. These improvements will ensure the Project meets all compliance requirements.

C. Intersection Sight Distance

Intersection sight distance at the primary neighborhood entry was evaluated by identifying limited use areas pursuant to Orange County Standard Plan 1117 – Intersection Sight Distance. The limited use areas determine the necessary sight distance to allow 7 ½ seconds for the driver on the crossroad (or left turn pocket) to safely cross the main roadway or turn left while the approach vehicle travels at the assumed design speed of the main roadway. All Project driveways are required to meet these sight distance requirements. Exhibit 3 of the Safety Evaluation shows that the primary neighborhood entry will meet the sight distance requirements, and that the Project would not create any new sight distance issues or contribute to decreased visibility along Lampson Avenue.

D. Stopping Sight Distance

According to the Highway Design Manual (HDM), stopping sight distance is the minimum sight distance for a given design speed to be provided on multilane highways and on 2-lane roads when passing sight distance is not economically obtainable. Stopping sight distance also is to be provided for all users, including motorists and bicyclists, at all elements of interchanges and intersections at grade, including private road connections. Lampson Avenue has a posted speed limit of 45 miles per hour (mph). As stated in HDM Table 201, a stopping sight distance of 360 feet is the standard for a design speed of 45 mph. Therefore, the Project does not introduce any new stopping sight distance issues to Lampson Avenue.

E. On-Site Vehicle Circulation

The Project does not involve freight operations because the Project is a residential project. Since the proposed use is residential, a limited number of trucks would travel to the Project site (e.g. trash trucks, emergency vehicles, delivery vans). Therefore, congestion from freight trucks to and from the Project site would be negligible and there will be no conflicts between freight trucks and passenger vehicles.

Attachment D of the Safety Evaluation identifies the on-site circulation for the site. The exhibits identify various vehicle paths (front-loading garbage trucks, fire trucks, delivery trucks, etc.) for various internal drive aisles, which allow for two-way traffic. Access to and from the site will be

DRAFT

accommodated via driveways on Lampson Avenue. As shown in Attachment D of the Safety Evaluation, the vehicle turning templates show acceptable turning movements for the various vehicles and trucks anticipated to access the site. Therefore, there will be no conflicts between garbage trucks, fire trucks, and delivery trucks and passenger vehicles.

F. Conclusion

A review of available collision data indicates that the study area intersections have lower crash rates than the statewide average of intersections with similar configuration and settings. The addition of Project traffic is not anticipated to increase the crash rates by a significant margin. As discussed throughout this evaluation, the implementation of Project improvements (within the public right of way) per Los Alamitos, Seal Beach, Orange County Public Works, Highway Design Manual (HDM), and American with Disabilities Act (ADA) standards ensures all sight distance requirements, pedestrian crossing requirements, and street design requirements are met. Additionally, the Project TA, *Attachment G* of the Final EIR, indicates the highest peak hour volume along Lampson Avenue at Driveway 2 is 561 vehicles (Refer to Exhibit 3-8 of the TA). The highest Project peak hour volume of 50 vehicles occurs at Driveway 2 in the evening (Refer to Exhibit 4-2 of the TA). The Project contributes 9% of the additional vehicles to the evening peak hour ([50/561]*100=9%). Therefore, the addition of Project-related traffic is not anticipated to cause any new or exacerbate any existing safety deficiencies along Lampson Avenue or in the vicinity of the Project's interface with Lampson Avenue. The City will impose upon the Project a condition of approval that will ensure that the intersection sight distance, pedestrian/bike facilities, and street facilities satisfy CA MUTCD, ADA, City of Los Alamitos, and City of Seal Beach standards.

2.1.3 PARKING

As of 2010, the CEQA Guidelines Appendix G, no longer requires an evaluation of parking for a project. This elimination of the requirement to analyze parking was in response to case law holding that the inconvenience resulting from a parking shortage is a social impact; pursuant to these cases, a parking shortage is not an environmental impact necessary for analysis under CEQA unless secondary indirect environmental impacts may result from any such parking shortage as indirect environmental impacts. Moreover, a condition of approval has been included which requires the parking garages onsite be used for primarily parking purposes. Nevertheless, due to previous comments received during the NOP period related to concerns about parking, two technical studies were prepared for the Project and incorporated into the Draft EIR to analyze the Project's onsite parking supply (*Technical Appendix P* of the Draft EIR) and potential parking impacts to nearby parks (*Technical Appendix Q* of the Draft EIR). A summary of the findings from these technical studies is further discussed below.

A. Arbor Park/Arbor Dog Park Parking

Many commenters expressed concerns regarding parking for Arbor Park and Arbor Dog Park. As discussed in Section 4.15, *Transportation*, of the Draft EIR, Walker Consultants prepared an analysis to evaluate the parking need at Arbor Park and Arbor Dog Park, including American Youth Soccer Organization (AYSO) Region 159 uses at Arbor Park for soccer practices on weeknights and soccer

DRAFT

games on weekends (see *Technical Appendix Q* of the Draft EIR). AYSO parking demand is highest during Saturday soccer games with a parking demand that fluctuates between 97 to 339 spaces between the hours of 8:00 AM and 2:00PM and a peak parking demand of 339 spaces at noon. AYSO currently uses parking spaces on the Project site on an informal basis (i.e., the owner of the Project site does not have a formal arrangement with AYSO) for soccer games, many of which would not be available upon Project implementation.

Walker was engaged to evaluate options to assist AYSO in resolving its parking needs following Project buildout. Two options were considered: 1) a voluntary commitment by the Project to provide a 10-foot strip of land along the north boundary of the Project site, or 2) a voluntary commitment by the Project to provide a 10-foot strip of land in addition to improvements 2'-10" to 4'- 3" in width on the north side of the Arbor Park parking lot (see Figures 1 and 4 *of Technical Appendix Q* of the Draft EIR for the proposed parking layouts). The Project's voluntary commitment to either of these options would allow for up to 154 or 200 parking spaces for users of Arbor Park, respectively.

Following implementation of these options, if an inadequate amount of parking still remained to accommodate an AYSO soccer game event, vehicles would have the option of dropping off players/visitors at the park and/or seeking available parking off-site and walking to the park. Ultimately, Walker concludes that to resolve any parking shortages related to these soccer events, the AYSO could re-program its event schedule to ensure that these events are distributed throughout the day in such a way as to accommodate simultaneous arrivals of attendees for these events. Additionally, any change in vehicle trip distance over time would be negligible, as it would only occur on Saturdays during soccer season,[1] which typically lasts from 8AM to 2PM. Moreover, attendees in vehicles would arrive at certain appointed times to watch or participate in these events, and therefore these vehicles are not expected to circle or idle in the parking lot to wait until a parking space became available.

The potential for parking in adjacent neighborhoods would not cause any indirect environmental impacts. Attendees for these events who are unable to find parking even with these additional parking spaces voluntarily provided by the Project could search for parking elsewhere, such as the nearby College Park East or West Garden Grove neighborhoods. The final destination for these attendees and the number of attendees seeking parking elsewhere is unknown given the potential for existing or future parking regulatory controls (e.g. neighborhood permitted parking) in these neighborhoods, the possibility that AYSO may ultimately re-program its event schedule, and the inherent variations in the number of attendees and participants from season to season.

DRAFT

[1] *Parking demand is low on weeknights for AYSO practices. As documented in Technical Appendix Q of the Draft EIR: "On the weekday, parking demand related to the AYSO leagues was low and could have been entirely accommodated within the existing gravel parking area, if needed. Over the course of the observations, a small number of soccer-related parking occurred in the 4665 Lampson parking lot.*

Nonetheless, the need for attendees to seek parking in nearby neighborhoods would not constitute additional new vehicle trips or vehicle miles traveled attributable to the Project because soccer events at Arbor Park are not an element of the Project. Additionally, any change in vehicle trip distance over time would be negligible, as it would only occur on Saturdays during soccer season, which typically lasts from 8AM to 2PM. Moreover, attendees in vehicles would arrive at certain appointed times to watch or participate in these events, and therefore these vehicles are not expected to circle or idle in the parking lot to wait until a parking space became available. As such, vehicles unable to find adequate parking would not result in any significant transportation impacts related to congestion at the site (which is a level of service concept no longer considered a significant impact under CEQA in any event) or air quality impacts related to emissions (refer to Pages 4.15-15 through 4.15-16 of the Draft EIR).

B. On-site Parking

Many commenters expressed concerns regarding the lack of proposed onsite parking and the potential for overflow parking from the Project to nearby streets and Arbor Park. As discussed in Section 3.0, *Project Description*, of the Draft EIR, the Project would provide 577 parking spaces (475 spaces for the single family detached and townhomes and 102 for the apartments). These 577 spaces exceed the 441~~0~~ parking spaces that would be required pursuant to the State's Density Bonus Law (refer to Page 3-4 of the Draft EIR).

As part of the Project, Walker Consultants prepared a parking analysis (*Technical Appendix P* of the Draft EIR) to determine the appropriate amount of parking needed for the Project. Based on the City's off-street parking requirements in the Municipal Code, the Project would be required to provide 679 parking spaces. The Project qualifies for a density bonus and parking concessions under the State Density Bonus Law (Government Code Section 65915) which would reduce the Project's minimum off-street parking requirement to 441 parking spaces. The Project is proposing to provide 577 parking spaces, approximately 15% fewer than City code requirements, but 30.8% above what is required under Government Code Section 65915(p).

Therefore, the Project would provide more than adequate parking based on nationally recognized Urban Land Institute/National Parking Association Standards for market-rate residential development and would meet the minimum parking requirements of the City of Seal Beach, the adjacent jurisdiction.

Based on the analysis conducted in the parking analysis, the Project's proposed parking supply is appropriate to serve the potential parking needs of the Project. As a result, Project residents would have adequate parking on-site and would not park on streets in the adjacent neighborhood or Arbor Park. Moreover, a condition of approval would be included which requires the parking garages onsite be used for primarily parking purposes.

2.1.4 HYDROLOGY AND WASTEWATER INFRASTRUCTURE ANALYSIS

A number of residents expressed concern that the Project would exacerbate flooding conditions in College Park East and stated that the Project would add additional flows down Lampson to Ironwood

DRAFT

and Hazelnut Avenues. A Hydrology Study (*Technical Appendix I3* of the Draft EIR) was prepared for the Project, which demonstrated that the Project's peak hour flows would not exceed the existing condition flows.

Based on comments received from the City of Seal Beach (Comment Letter D, herein), the Hydrology Study was updated and included as *Attachment E* of this Final EIR. The updated analysis expanded the hydrologic analysis and street capacity analysis for the Lampson Avenue downstream tributary area to the existing sump catch basin within Lampson Avenue. The peak flow rates were reduced based on the detention routing analysis and incorporation of the storm water sump pump system onsite which controls the outflow, mitigating the peak flow discharge rate. The updated analysis resulted in the following changes to the Draft EIR.

1. Pages 3-9, 3-10 of the Draft EIR are revised as follows:

D. Stormwater Drainage Infrastructure

1. Preferred Stormwater Drainage

The proposed Project site's stormwater runoff would be conveyed by roof downspouts or street surface flow to the proposed gutters and collected by thru-curb inlet bio-filtration devices or catch basin inlets for water quality treatment. The bio-filtration devices include internal overflow bypass that direct flows via on-site underground storm drain system to an underground detention system located under parking areas at the southwest portion of the Project site. From the detention system, a stormwater sump pump located in the southwest corner of the Project site would outlet flow into the existing 18" outlet storm drain pipe at the southwest corner of the site, which conveys stormwater runoff to ~~match the historical flow pattern across~~ the Los Alamitos Joint Forces Training Base (JFTB) property directly west of the site. The detention system and pump will be sized so that the outlet flows from the developed site will be equal to, or less than, existing conditions for all storm events. In the event the stormwater pump fails or the outlet pipe becomes clogged, the emergency overflow for the site will be conveyed through a parkway drain discharging flow onto Lampson Avenue, matching historical overflow drainage patterns.

2. Alternate Stormwater Drainage

An alternate plan for stormwater conveyance is proposed in the event the preferred route (historical flow) across the JFTB, as described above, is not available. The alternate would include stormwater outflow onto Lampson Avenue, which would subsequently flow west to an existing stormwater catch basin approximately 2,200 feet west of the Project site. Due to existing flooding concerns on Lampson Avenue, the onsite pump system would allow for low flows to enter Lampson Avenue up until the time that the flows begin to exceed the allowed 25-year storm event in Lampson Avenue. At that point, peak flows would be detained onsite. Once the flows are no longer above the allowed 25-year storm event in Lampson Avenue, onsite flows to Lampson Avenue would resume. Under the Alternate Off-Site Storm Drain

DRAFT

plan, stormwater will be detained and mitigated onsite such that Lampson Avenue meets OC Hydrology flooding standards. Approximately 33,106 ~~32,300~~ cf of water would need to be detained onsite to ensure that offsite 25-year flows are not exceeded. Detained volumes would be discharged from the site via a pump system at flow rates that do not exceed the existing condition flow rates.

2. Pages 4.9-17 and 4.9-19 are hereby modified as follows to reflect the changes made in the updated Hydrology Study.

1. Storm Drain Facilities – Preferred Route

The preferred treatment of stormwater runoff for the Project would be conveyance by roof downspouts or street surface flow to proposed gutters and collected by thru-curb inlet bio-filtration devices or catch basin inlets for water quality treatment. The bio-filtration devices include internal overflow bypass that direct flows via onsite underground storm drain system to an underground detention system located under parking areas at the southwest portion of the site. From the detention system, a stormwater sump pump located in the southwest corner of the site will outlet flows into the existing 18" storm drain pipe at the southwest corner of the site to outlet to the JFTB. The detention system and pump will be sized so that the outlet flows from the developed site will be equal to, or less than, existing flows. In the event the stormwater pump fails or the outlet pipe becomes clogged, the emergency overflow for the site will flow onto Lampson Avenue matching historical overflow drainage patterns.

The combined, total 100-year peak flow rate for the Project site is 31.51~~40.28~~ cfs under existing conditions. The combined, total 100-year peak flow rate for the Project Site is approximately 42.15~~44.31~~ cfs under the proposed conditions without improvements. Figure 4.9-4, *Proposed Conditions Hydrology Map* illustrates the post development drainage conditions of the Project site. The proposed drainage design would follow the existing drainage pattern with surface flows to on-site drainage facilities that would ultimately outlet into the existing storm drain pipe at the southwest corner of the Project site. The results from the hydrology study demonstrate that the proposed conditions of the Project site of 42.15~~44.31~~ cfs would generate a higher peak runoff flowrate than the existing condition of the site of 31.51~~40.28~~ cfs.

Due to increased peak runoff flows created from the proposed change in land use and increased impervious coverage by 48%, stormwater would need to be detained and minimized ~~mitigated~~ on-site to match existing conditions. ~~By matching the maximum flows conveyed by the outlet pipe and providing a 20 percent factor for safety for preliminary sizing, approximately 10,000 cubic feet (cf) would be required to be detained on-site based on a conservative 100-year storm event.~~ To prevent overflow into Lampson Ave, the detention system will be sized to match the maximum flows conveyed by the outlet pipe, approximately 33,106 cubic feet. In addition, a proposed stormwater pump system with upstream detention storage has been incorporated into the onsite drainage design to provide onsite peak flow and volume detention for the development for all storm events. The pump system will control the outflow discharge rate

DRAFT

matching the existing 2-year peak flow at approximately 8.9 cfs. As such, the proposed on-site detention facilities will be designed to detain ~~a minimum volume of 10,000 cf and detained~~ volumes that would be discharged from the site via a pump system at flow rates that do not exceed the existing condition flow rates. As such, downstream facilities would not be hydrologically impacted by the proposed Project. Impacts would be less than significant and no mitigation is required.

2. Alternate Drain Facilities

In the event the preferred route (historical flow across the JFTB) is not available, an alternate treatment of stormwater runoff for the Project would be conveyance to offsite storm drain facilities. Figure 4.9-5, *Proposed Alternate Conditions Hydrology Map* illustrates the post-development drainage conditions for this drainage and detention alternate. The proposed site's stormwater runoff would be conveyed by roof downspouts or street surface flow to proposed gutters and collected by thru-curb inlet bio-filtration devices or catch basin inlets for water quality treatment. The bio-filtration devices include internal overflow bypass that direct flows via on-site underground storm drain system to an underground detention system located under parking areas at the southwest portion of the site. From the detention system, a stormwater sump pump located in the southwest corner of the site will outlet flows onto Lampson Avenue via a parkway culvert. Due to existing flooding concerns on Lampson Avenue, the onsite pump system would allow for low flows to enter Lampson Avenue up until the time that the flows begin to exceed the pre-development ~~allowed~~ 25-year storm event in Lampson Avenue. At that point, peak flows would be detained onsite. Once the flows are no longer above the pre-development ~~allowed~~ 25-year storm event in Lampson Avenue, onsite flows would continue pumping to Lampson Avenue normally.

Under the Alternate Storm Drain plan, stormwater will need to be detained and minimized ~~mitigated~~ onsite such that Lampson Avenue meets OC Hydrology flooding standards. Onsite and offsite small unit hydrographs were analyzed using AES Rational Method Analysis to identify the time that the flows exceed the allowed offsite 25-year storm event flows to prevent flooding of one travel lane of the half-street per the OC Local Drainage Manual. Approximately 33,106 ~~32,300~~ cf of water would need to be detained onsite to ensure that offsite 25-year flows are not exceeded. By matching the maximum flows and providing an additional 20 percent factor of safety for preliminary sizing, approximately 38,800 cf of water would be detained onsite. Detained volumes would be discharged from the site via a pump system at flow rates that do not exceed the existing condition flow rates. Downstream facilities would not be hydrologically impacted by the proposed improvements. Additionally, the proposed finished floor elevations for the onsite buildings would be set 1-foot minimum above the 100-year storm event water surface elevation in accordance with Orange County Flood Protection Requirements.

3. Page 4.9-21 of the Draft EIR is hereby modified as follows to reflect the changes made in the updated Hydrology Study.

DRAFT

3. Outlet Runoff to Arbor Park to North: Arbor Park is within the JFTB and drains south to the same earthen channel outlet as the project site. If the proposed flows from the Project are not allowed to outlet to the JFTB at the southwest corner of the site, proposed flows from the Project would not be allowed to outlet to the JFTB to the north of the site either since they are essentially the same outlet location. In addition, the existing site does not flow in the northerly Arbor Park/ JFTB area as the site drains in the southwesterly direction, therefore directing stormwater runoff to the north would change the historic drainage pattern which can potentially cause downstream flooding.

4. Outlet Runoff to Golf Course to East: The golf course to the east is within the JFTB and drains east, ultimately ~~outletting~~ to the Bolsa Chica Channel. ~~Outletting~~Discharging to the east does not match the historical drainage pattern and the Bolsa Chica Channel was not designed to accommodate flows from the Project site; therefore, runoff to the golf course to the east would potentially cause downstream flooding. In addition, the golf course and Bolsa Chica Channel are upstream from the site, therefore, this option would not be feasible due to elevation differences.

5. Construct storm drain pipe under Lampson Avenue to east: ~~Outletting~~Discharging to the east does not match the historical drainage pattern and the Bolsa Chica Channel was not designed to accommodate flows from the site. Additionally, installation of underground storm drain pipe within Lampson Avenue is infeasible due to conflicts with existing utilities, maintenance concerns, and head losses as described above (see #1). Similarly to item #4, changing the historical drainage pattern may potentially cause unforeseen drainage impacts.

4. Page 4.9-23 of the Draft EIR is hereby modified as follows to reflect the changes made in the updated Hydrology Study.

1. On-Site Drain Facilities

The results from the hydrology report demonstrate that the proposed drainage conditions would generate a higher peak runoff flowrate than the existing conditions on the Project site due to an increase in impervious area and change in land use. The preferred detention facilities would be designed to detain the increased peak flow between the existing outlet pipe flows and proposed conditions. Detained volumes would be discharged from the site via a pump system at flow rates that do not exceed the existing condition flow rates. Downstream facilities would not be hydrologically impacted by the proposed Project site improvements (C&V, 2024a).

2. Alternative Storm Drain Facilities

A second hydrology report was prepared for the alternate stormwater conveyance plan. The results from the report demonstrated that the proposed condition of the alternate would generate a ~~10 percent (44.31 cfs proposed/40.28 cfs existing)~~ higher 100-year storm event peak runoff flowrate than the existing condition of the site due to an increase in impervious area and change

DRAFT

in land use. The proposed underground detention facilities would be designed to detain the increased flows under the proposed conditions, which would be discharged from the site via a pump station at flow rates that would not exceed the existing condition flow rates. Downstream facilities would not be hydrologically impacted by the proposed Project site improvements. ~~(C&V, 2023)~~ (C&V, 2024a).

2.1.5 FLOODING

Many commenters expressed flooding and storm drainage concerns on Lampson Avenue and impacts to College Park East. As shown in Figure 4.9-3, *Existing Flood Hazard Zone*, according to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) No. 06059C0116J (effective 12/03/2009), the Project site is located within FEMA Flood Zone D. Flood Zone D is correlated with a possible risk of flooding, but the probability has not been determined. It may be noted that the area south of the Project site, including adjacent Lampson Avenue, is located within FEMA Flood Zone X (areas determined to be outside the 0.2% annual chance floodplain) according to the FEMA FIRM No. 06059C0118J (effective 12/03/2009). According to the Hydrology Report for the proposed storm drain facilities, during a peak 100-year storm event, stormwater flows would be detained within the on-site underground detention basin. Detained volumes will be discharged from the site via a pump system at flow rates that do not exceed the existing condition flow rates. Additionally, the Project's proposed finished floor elevations would be set at least 1 foot above the peak 100-year storm event water surface elevation in accordance with Orange County Flood Protection requirements.

Similarly, according to the Hydrology Report for the alternate stormwater conveyance plan, during a peak 100- year storm event, stormwater flows would be detained with the proposed detention facilities. Detained volumes would be discharged from the site via a pump system at flow rates that do not exceed the existing condition flow rates. Downstream facilities would not be hydrologically impacted by the proposed improvements. Additionally, proposed floor elevations for the onsite buildings would be set at least 1 foot above the peak 100-year storm event water surface elevation in accordance with Orange County Flood Protection requirements (refer to Page 4.9-24 of the Draft EIR).

As discussed in Section 4.9, *Hydrology and Water Quality*, of the Draft EIR, the Project would not substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff. The Project's preferred storm drain system and alternate storm drain system would be sized and designed in accordance with the City's drainage requirements and Orange County Hydrology Manual to ensure that off-site flows are conveyed through the Project site and flows originating off-site are discharged from the site at a volume and rate that can be accommodated by existing and planned downstream storm drain facilities. Additionally, the Project's storm drainage infrastructure would adequately detain 100-year flows, discharge detained flows at rate that do not exceed existing flows, and the Project's finish floor elevations would be at least 1 foot above the water surface elevation. Accordingly, the Project is not

DRAFT

anticipated to risk the release of pollutants due to project inundation. Impacts would be less than significant and no mitigation is required (refer to Pages 4.9-23 through 4.9-25 of the Draft EIR).

Cumulative development such as Old Ranch Country Club Specific Plan development would be required to comply with federal, State, and local regulations and applicable regional and local master drainage plans in order to mitigate flood hazards both on- and off-site. Compliance with federal, State, and local regulations and applicable drainage plans would require development sites to be protected from flooding during peak storm events (i.e., 100-year storm) and also would not allow development projects to expose downstream properties to increased flooding risks during peak storm events. In addition, future development proposals within the San Gabriel-Coyote Creek Watershed would be required to prepare hydrologic and hydraulic calculations, subject to review and approval by the responsible City Engineer, to demonstrate that substantial on- and/or off-site flood hazards would not occur. Accordingly, the construction and operation of the Project would not contribute to cumulatively considerable flooding impacts (refer to Pages 4.9-27 of the Draft EIR).

2.1.6 SEWER

Many commenters expressed concerns with the increase in wastewater to the existing system and the old age of the infrastructure.

As discussed in Section 4.17, *Utilities and Service Systems*, of the Draft EIR, the existing sewer mains of three manholes (Basswood and Aster Street [Manhole A-16]; Candleberry Avenue and Aster Street [Manhole A-21]; and Elder Avenue [Manhole A-25]) were analyzed. Flow monitoring was conducted under the existing conditions of the three manholes. The existing Project site peak flow was subtracted from the projected Project site flow. The delta flow was then added to the existing monitored peak flows to obtain the proposed development conditions. The results from the Sanitary Sewer Analysis (refer to *Technical Appendix O* of the Draft EIR) demonstrate that the proposed flows, in addition to the observed flows, create a proposed depth of flow that would not impact the existing surrounding sanitary sewer systems. Based on sewer monitoring data collected in preparation of the Sanitary Sewer Analysis, the sewer systems in all three locations indicated good flow, along with hydraulics and relatively low depths. Wastewater volumes produced by the proposed development would not exceed the existing sewer capacity in the public system, and the existing sewer system has adequate capacity for the proposed development. Accordingly, impacts would be less than significant, and no mitigation is required (refer to Pages 4.17-17 to 4.17-19).

Many commenters also expressed concerns regarding the increase in cost for utility infrastructure improvements that may be needed due to the increase in capacity to existing systems and aging infrastructure. The Project is subject to connection and service fees to offset increased demand and assist in facility expansion and service (at the time of need). Additionally, the Project Applicant would be required to pay development impact fees which will be used for any future needed improvements on the infrastructure systems.

DRAFT

2.1.7 EMERGENCY VEHICLE ACCESS

Several commenters raised concerns regarding potential impacts to emergency access and evacuations.

In the event of an evacuation in the nearby area, Lampson Avenue has adequate capacity to handle vehicle evacuations. As described above, Lampson Avenue is a divided roadway with a raised median and designed to accommodate a maximum of 37,500 daily vehicle trips. The City of Seal Beach's General Plan identifies two roadway segments that generally comprise the portion of Lampson Avenue fronting the Project site: Rose Street to Tulip (east of the Project) and Rose Street to Heather Street (adjacent and West of the Project). At General Plan Buildout with the Project, these two segments of Lampson Avenue would carry between 15,350 and 15,750 daily trips (see *Technical Appendix N1* of the EIR), below the maximum of 37,500 daily trips. Therefore, the Project's anticipated trip generation is well within the capacity of Lampson Avenue even at General Plan Buildout (refer to Page 3-17 of the Draft EIR). Additionally, in the event of an evacuation, traffic would be controlled by local law enforcement and vehicles would be directed away from the area.

As discussed in Section 4.15, *Transportation*, of the Draft EIR, the Project would provide adequate emergency access for emergency vehicles via Lampson Avenue. A restricted emergency vehicle access point with Lampson Avenue would be provided at the eastern end of the site. The Project also includes a fire master plan (see *Attachment J* of this Final EIR) to ensure proper installation and maintenance of fire access roadways, proper siting of hydrants, adequate water supply, and access to the structures. The Project would be required to comply with all applicable fire codes and ordinances for construction, access, water mains, fire flows, and fire hydrants.

The effectiveness of emergency response and firefighting operations is directly related to the proper installation and maintenance of fire access roadways, the proper sitting of hydrants, adequate water supply, and access to structures. In accordance with OCFA Guideline B-09, Fire Master Plans for Commercial & Residential Development, Firesafe Planning Solutions prepared a Fire Master Plan for the Project (see Figure 4.8-3, *Fire Master Plan*, of the Draft EIR). The Fire Master Plan demonstrates the Project's compliance with the California Fire and Building Codes and other regulations regarding emergency access to the Project site, including but not limited to required fire access and roadway design, fire lane identification, and access to structures. Compliance with OCFA Guidelines ensures that the Project is designed and constructed to provide adequate emergency access for emergency vehicles.

Furthermore, the Project would be required to comply with all applicable fire code and ordinances for construction, access, water mains, fire flows, and fire hydrants. For example, site plans would be submitted to OCFA to ensure compliance with OCFA standard conditions, including fire flow requirements based upon the tenant type, building size, and building type. Access to and around structures would meet OCFA and CFC requirements. Additionally, pursuant to LAMC Section 12.08, the Project would be required to provide adequate emergency access along abutting roadways during temporary construction activities within the public right-of-way. Specifically, the Project's compliance with LAMC 12.08.200 would ensure adequate access for all vehicles during temporary lane closures (refer to Pages 4.15-17 through 4.15-18 of the Draft EIR).

DRAFT

2.1.8 PUBLIC SAFETY

Many commenters raised concerns regarding public safety due to the Project's increase in population. As discussed in Section 4.13, *Public Services*, the Los Alamitos Police Department was contacted to document the existing and planned police protection facilities and to determine whether the Project would require the construction or expansion of new facilities. Buildout of the Project would increase demands for police protection services in the City, including the potential need for parking enforcement. During the construction and operation of the Project, the need for police services is expected to grow due to the increase in population. Crime and safety issues during Project construction may include theft of building materials and construction equipment, malicious mischief, graffiti, and vandalism. After construction, the Project is anticipated to generate a typical range of police service calls as similar developments. Additionally, it should be noted that an increase in crime is not an environmental impact on the physical environment unless it leads to an increase in services or decrease in response times resulting in the need for construction of additional facilities.

However, per correspondence with Los Alamitos Police Department, the anticipated increase in demands on police services resulting from the implementation of the Project would not adversely impact Los Alamitos Police Department's existing resources. There are currently no staffing or equipment deficiencies in the service area. The increase in potential services needed would not require the construction of a new police station or improvements to the existing station that serves the Project site. The existing resources would be adequate to meet the additional demands generated by the Project. The Los Alamitos Police Department has not indicated the need for a new police station or expansion of existing facilities due to the Project. Responses times and service ratios would be met and would not require the construction of new facilities.

The Seal Beach Police Department indicated that the Project site is within the City of Los Alamitos and serviced by Los Alamitos Police Department. The Seal Beach Police Department provides service to Lampson Avenue and requested that the Draft EIR address traffic flow and safety, which were addressed in the Draft EIR and Master Responses 2.1.1, Transportation and Traffic Congestion, and 2.1.2 *Roadway Safety on Lampson Avenue*, above.

Moreover, Project development would result in increased property tax and, indirectly, sales tax revenue proportionally increasing the City's General Fund revenue, providing funding for police protection services, equipment, and/or personnel. Because the Project does not include construction of new police facilities and does not generate a need for additional facilities, increases in demands for police protection resulting from implementation of the Project impacts would be less than significant. No mitigation is required (refer to Pages 4.13-8 through 4.13-10 of the Draft EIR).

As discussed in Section 4.13, *Public Services* of the Draft EIR, considering the existing firefighting resources available in the City, implementation of the Project is not expected to result in the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impact. Per correspondence with the OCFA, there are currently no deficiencies in fire protection service provided to the Project site. In order to maintain acceptable service ratios, OCFA uses a fair share approach to mitigate fire service response impacts and facility/equipment needs.

DRAFT

Project development would occur in an area of the City already served by OCFA; therefore, the Project would not result in an expansion of OCFA's service area. In the event of an emergency within the Project site that requires more resources than the primary fire stations that serve the area could provide, OCFA would direct resources to the site from other OCFA stations nearby (refer to Page 4.13-8 through 4.13-10 of the Draft EIR). As a result, response times would not decrease to necessitate the construction of a new fire station.

2.1.9 PROXIMITY TO THE LOS ALAMITOS JOINT FORCES TRAINING BASE (JFTB)

A. Safety

Many commenters expressed concerns related to safety hazards based on the Project's proximity to the Los Alamitos JFTB and stated that two State Agencies, Cal Trans Division of Aeronautics and the California Airport Land Use Commission, had issued warnings that projects within close proximity to the JFTB have safety and health issues. As discussed in Section 2.4.3, *Airport Environs Land Use Plan for The Joint Forces Training Base Los Alamitos*, the Airport Land Use Commission's (ALUC) previous finding that the City's Housing Element, including the Project site, was inconsistent with the Airport Environs Land Use Plan for the Joint Forces Training Base Los Alamitos, was overruled by the Los Alamitos City Council on December 11, 2023, pursuant to Public Utilities Code Sections 21670 and 21676.

As discussed in Section 4.8, *Hazards and Hazardous Materials*, of this EIR, the Project site is not located within the CZs or APZ (refer to Figure 4.8-1, *JFTB Impact Zones*) for the JFTB. Therefore, the Project does not concentrate people in areas susceptible to aircraft accidents. Moreover, the FAA issued Determinations of No Hazard to Air Navigation (*Technical Appendix J2* of the Draft EIR) after its aeronautical study of the Project determined that the structures would not exceed obstruction standards and would not be a hazard to air navigation on January 26, 2022. Military safety areas are intended to protect people on the ground from airplanes and the FAA airspace determinations are intended to protect airplanes from structures and interference on the ground. As such, the Project would not result in a safety hazard for people residing at the Project site (refer to Page 4.8-18 of the Draft EIR).

Additionally, as shown in Figure 4.8-2, *Los Alamitos JFTB Flight Patterns*, the Project site is not located within any of the flight patterns in the JFTB. As discussed in Section 4.10, *Land Use and Planning*, of the Draft EIR, the ALUC mandates the provision of the State's real estate disclosure regarding buyer and renter notification for new residential land uses within an airport influence area even if these state laws were to be revised or rescinded. The ALUC also requires that signs providing these disclosures and notices be "prominently posted" in real estate sales offices and within the new development depicting overflight areas and helicopter traffic patterns. Buyer awareness is required as part of the City's approval process for the Project. The buyer awareness notification process is built into the real estate disclosure laws of the State to ensure that potential buyers are fully informed before buying a home near an airport if they are sensitive to the types of annoyances or disruptions that may come with the location (refer to Page 4.10-18 of the Draft EIR).

DRAFT

Many comments also provided suggested mitigation measures to be included in the Draft EIR. However, based on the preceding information, the Project would not result in significant impacts related to any safety hazards associated with the JFTB. Therefore, additional mitigation measures related to safety hazards are not warranted.

B. Noise Impacts and Noise Insulation

Many commenters expressed concerns regarding noise impacts for Project residents due to the proximity of the Los Alamitos JFTB. Additionally, commenters expressed concerns regarding the need for noise insultation in walls, windows, and ceilings for the Project's structures. As discussed in Section 4.11, *Noise*, of the Draft EIR, an on-site exterior aircraft noise impact analysis has been completed to determine the noise exposure levels that would result from adjacent JFTB Los Alamitos aircraft noise sources in the Project study area, and to identify environmental impacts from the proposed Project and potential noise abatement measures for the proposed Project that would achieve acceptable Project noise levels, if required.

The JFTB Los Alamitos is located adjacent to, and northwest of the Project. Figure 4.11-4, *APHC 2020 Airport Noise Level Contour Boundaries*, of the Draft EIR shows the Project site in relation to the airport's projected noise level contour boundaries, as provided by the 2020 Noise Assessment for Los Alamitos Airfield, Joint Forces Training Base Los Alamitos. As shown on Figure 4.11-5, *On-Site Aircraft Noise Level Contours*, of the Draft EIR, the northwestern portion of the Project site would locate residential uses between the 60 and 65 dBA CNEL noise level contours. Residential land uses exposed to noise levels less than 60 dBA CNEL are "normally consistent." Residential uses exposed to noise levels between 60 and 65 dBA CNEL are considered "conditionally consistent" with AELUP Noise limitations, requiring that sound attenuation as identified by the California Noise Insulation Standards, Title 25, California Code of Regulations is implemented to ensure that the interior CNEL does not exceed 45 dBA.

The interior noise level is the difference between the predicted exterior noise level at the building facade and the noise reduction of the structure. Typical building construction would provide a Noise Reduction (NR) of approximately 12 dBA with "windows open" and a minimum 25 dBA noise reduction with "windows closed." However, sound leaks, cracks and openings within the window assembly can greatly diminish its effectiveness in reducing noise. Several methods are used to improve interior noise reduction, including: (1) weather-stripped solid core exterior doors; (2) upgraded dual glazed windows; (3) mechanical ventilation/air conditioning; and (4) exterior wall/roof assembles free of cut outs or openings.

The Project will implement sound attenuation methods to ensure the interior CNEL does not exceed 45 dB. For example, the Project will provide mechanical ventilation (e.g. air conditioning) in all units. In addition, with implementation of PDF-N-2, which includes the use of windows with a STC rating of 29 on all second floor facades adjacent to Lampson Avenue and JFTB Los Alamitos, the Project would be designed to achieve a 25 dBA reduction and meet the 45 dBA CNEL interior noise standard. Accordingly, the Project would not expose people residing or working in the Project area to excessive

DRAFT

noise levels from airport or aircraft operations, and impacts would be less than significant. No mitigation is required (refer to Page 4.11-31 of the Draft EIR).

2.1.10 Loss of Existing Open Space and Provision of On-Site Amenities

Many commenters expressed concerns regarding loss of existing open space and failure to provide on-site amenities for Project residents. As discussed in Section 2.0, *Environmental Setting*, under existing conditions, the Project site is currently developed with a vacant two-story, 88,000 sf commercial office building (most recently occupied by WestEd, California Department of Fish and Wildlife, National Comfort Institute, Inc., and James J. Mentas Attorney at Law) located centrally within the Project site and surface parking lot located within the western portion of the Project site. The remainder of the Project site consists of undeveloped/vacant land, which includes approximately 5.97 acres of developed/ornamental land and approximately 6.40 acres of disturbed/ornamental land (refer to Pages 2-6 through 2-7 of the Draft EIR) which provides very little value as open space or for recreation as the site was used for commercial uses and existing trees appear to be in declining health from possibly a variety of reasons including but not limited to an unknown disease and stress from drought.

The Project would provide a variety of common open space amenities, as well as a variety of privately maintained open space and decks. The Project would provide a total of 58,027 square feet (sf) or 1.33 acres of open space on the Project site, including 16,508 sf of usable common open space and 41,519 sf of private open space (homeowner maintained). The Project would result in an increase in residents; however, as explained in the following paragraph, the Project is not anticipated to increase the use of the existing parks such that substantial additional use or physical deterioration of the existing parks would occur or be accelerated.

Based on the Project's Parks Impact Analysis (*Technical Appendix M* of the Draft EIR), it is anticipated that a negligible amount of Project residents will regularly visit parks in close proximity to the Project site specifically, Arbor Park, Arbor Dog Park, and Heather Park. Specifically, it is anticipated that a total of 178 Project residents would visit the designed neighborhood open spaces within the Project site and 131 Project residents would visit Arbor Park, Arbor Dog Park, and Heather Park as the parks they visit most often. Project residents are anticipated to visit (frequent) Arbor Park and Heather Park as follows: approximately 22 users 2 times per week, 18 users once per week, 27 users once or twice per month, 32 users several times per year, and 20 users once or twice per year (see Table 2, *Technical Appendix M* of this Draft EIR). Project residents' dogs are anticipated to visit (frequent) Arbor Dog Park 147 times once per week. (sees Tables 3 and 4, *Technical Appendix M* of this Draft EIR).

The carrying capacity of Arbor Park and Heather Park is 270 and 67 visitors, respectively, and there is no calculation for carrying capacity for Arbor Dog Park due to the nature of a dog park. Carrying capacity (referring to the number of visitors that can be accommodated in a park without unacceptable impacts to the quality of the visitor experience) can be calculated for a park utilizing the amenities, such as playgrounds, baseball fields, and open lawn areas present in the park. Because the projected number of Project visitors to these parks are well within the carrying capacity stated above, there is sufficient capacity at existing nearby neighborhood parks to accommodate the Project residents. With full occupancy of the Project, the designed neighborhood open spaces within the Project site, the

DRAFT

capacity and existing maintenance and usage of existing parks, and the anticipated visitation of the Project residents to the existing parks; the Project is not anticipated to increase the use of the existing parks such that substantial additional use or physical deterioration of the existing parks would occur or be accelerated.

Based on the Project's Parks Impact Analysis (*Technical Appendix M* of this EIR), there is sufficient capacity at existing neighborhood parks to accommodate the Project residents and impacts would be less than significant. Refer to Section 4.14, *Recreation*, of the Draft EIR for further discussion (refer to Pages 4.14-8 to 4.14-9 of the Draft EIR).

DRAFT

3.0 RESPONSES TO COMMENTS RECEIVED DURING THE PUBLIC REVIEW PERIOD

This section includes responses to substantive Draft EIR comments received by the City. With respect to comment letters received, aside from certain courtesy statements, introductions, and closings, individual comments within the body of each letter have been identified and numbered. A copy of each comment letter and the City's responses to each applicable comment are included in this section. Brackets delineating the individual comments and a numeric identifier have been added to the right margin of the letter. Responses to each comment identified are included on the page(s) following each comment letter. Responses to comments are being sent to the agencies and organizations that provided comments at least 10 days prior to the City's consideration of the Project and EIR.

Revisions to the Draft EIR have been prepared to make minor corrections and clarifications to the Draft EIR as a result of City review, and comments received during the public review period (refer to Section 4.0, *Draft EIR Clarifications and Revisions*, of this document). Therefore, this Response to Comments section, and the Draft EIR Clarifications and Revisions section, are included as part of this Final EIR along with the Draft EIR for consideration by the City prior to a vote to certify the EIR.

DRAFT

COMMENT LETTER A

AIRPORT LAND USE COMMISSION
FOR ORANGE COUNTY
3160 Airway Avenue • Costa Mesa, California 92626 • 949.252.5170 fax: 949.252.6012

June 10, 2024

Tom Oliver, Associate Planner
City of Los Alamitos Planning Division
3191 Katella Avenue
Los Alamitos, CA 90720

Subject: Draft Environmental Impact Report for 4665 Lampson Avenue Project

Dear Mr. Oliver:

Thank you for the opportunity to review the Draft Environmental Impact Report (DEIR) for the 4665 Lampson Avenue Project in the context of the Airport Land Use Commission's (ALUC) *Airport Environs Land Use Plan for Joint Forces Training Base Los Alamitos.* The proposed project would redevelop the existing office building on the 12.3-acre site with a residential development consisting 246 residential units including: 55 single family homes, 114 townhomes, and 77 affordable multi-family apartment homes. The proposal also includes 21,000 square feet of common open space and 557 parking spaces. The proposed discretionary approvals include a General Plan Amendment, Zone Change, Specific Plan and Tentative Tract Map. A-1

The proposed project site was included in the City's Housing Element Update which was submitted to ALUC for a consistency review. On January 19, 2023, the ALUC found the Los Alamitos Housing Element Update to be inconsistent with the *Airport Environs Land Use Plan (AELUP) for Joint Forces Training Base Los Alamitos* (*JFTB Los Alamitos)* due in part to the subject site (Site 6), along with other sites in the City, being changed from non-residential uses to residential. The inconsistent finding was based on: A-2

1. AELUP Section 2.1.1 Aircraft Noise, that the "aircraft noise emanating from airports may be incompatible with general welfare of the inhabitants within the vicinity of an airport." A-3

2. PUC Section 21674, (as referenced in Section 1.2 of the *AELUP for JFTB Los Alamitos*) which states that the Commission is charged by PUC Section 21674(a) "to assist local agencies in ensuring compatible land uses in the vicinity of …existing airports to the extent that the land in the vicinity of those airports is not already devoted to incompatible uses," and PUC Section 21674(b) "to coordinate planning at the state, regional and local levels so as to provide for the orderly development of air transportation, while at the same time protecting the public health, safety and welfare." A-4

3. AELUP General Land Use Policies in Section 3.2.1 which states that "within the boundaries of the AELUP, and land use may be found to be Inconsistent with the AELUP which (1) Places people so that they are affected adversely by aircraft noise and (2) Concentrates people in areas susceptible to aircraft accidents."

A-5

While the City overruled ALUC on December 11, 2023, in accordance with PUC 21676(b), ALUC has the following comments.

Section 4.11 Noise of the DEIR indicates that there would be a less-than-significant impact and no mitigation is required for "Threshold c: For a project located within the vicinity of … an airport land use plan..., would the Project expose people residing or working in the project area to excessive noise levels?" The project site is within the airport land use plan area for JFTB Los Alamitos, and within the 60 dB noise contour for JFTB Los Alamitos. Sites within the AELUP noise contours must use sound attenuation as required by the California Noise Insulation Standards, Title 25, California Code of Regulations. Residential use sound attenuation is required to ensure that the interior CNEL does not exceed 45 dB.

A-6

In addition, for noise sensitive uses, the Commission recommends a posting of: "NOTICE OF AIRPORT IN VICINITY: This property is presently located in the vicinity of an airport, within what is known as an airport influence area. For that reason, the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example: noise, vibrations, or odors). Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associated with the property before you complete your purchase and determine whether they are acceptable to you."

A-7

Thank you again for the opportunity to comment on the initial study. Please contact me at (949) 252-5170 or via email at jfitch@ocair.com should you have any questions related to the Airport Land Use Commission for Orange County.

A-8

Sincerely,

Julie Fitch

Julie Fitch
Interim Executive Officer

Responses to Comment A

Airport Land Use Commission (ALUC) for Orange County, dated June 10, 2024.

A-1 The commenter provides introductory remarks and a summary of the Project. For clarification regarding the proposed open space, the Project would provide 58,027 sf of open space, including approximately 16,508 sf of usable common open space, approximately 41,519 sf of private open space, and approximately 78,038 sf of planting area (refer to Page 3-7 of the Draft EIR).

A-2 The commenter states the Project site was included in the City's Housing Element Update and ALUC had previously found the updated Housing Element to be inconsistent with the Airport Environs Land Use Plan (AELUP) for JFTB for reasons listed in the comment. The Draft EIR acknowledges that ALUC previously found the Housing Element to be inconsistent with the AELUP. As provided in Section 2.0, *Environmental Setting*, of the Draft EIR, City's Housing Element received certification from the State Housing and Community Development Department (HCD). However, the Housing Element received an inconsistent finding from ALUC on January 19, 2023. On February 21, 2023, the City Council adopted Resolution 2023-04, providing notice of the City's intent to overrule ALUC's determination. The City Council conducted a Study Session and reviewed information related to ALUC's finding of inconsistency on July 17, 2023. A Public Hearing was held on August 21, 2023, where the City Council considered the adoption of a resolution overruling the ALUC's determination but failed to receive the required two-thirds affirmative vote (four affirmative votes were required). On September 21, 2023, the ALUC voted to require the City to submit all discretionary actions related to Housing Element Sites 6 (4655 Lampson Avenue), 7 (Laurel Park), and 10 (5030-5084 Katella) to ALUC for review until such time as the General Plan is revised, or the City overrules ALUC's determination. On December 11, 2023, the City received a four/fifths vote from the Los Alamitos City Council to overrule ALUC's finding and adopt the City's Housing Element pursuant to the State Aeronautics Act. Accordingly, approval from ALUC is not required for the Project because the Project site is listed as a Housing Opportunity Site in the City's Housing Element, which was included in the City Council's vote to overrule the ALUC (refer to Page 2-6 of the Draft EIR).

Refer to Response to Comment A-3 through A-5 related to the inconsistency reasoning.

A-3 The commenter states that the Housing Element inconsistency finding was based on AELUP Section 2.1.1 – "aircraft noise emanating from airports may be incompatible with the general welfare of inhabitants in the vicinity of an airport." The commenter merely restates the text of this section and does not provide further information to evaluate the assertion that the Project is inconsistent or explain why the Project would be inconsistent with this finding. Refer to Response to Comment A-6 related to noise impacts from aircrafts.

DRAFT

A-4 The commenter states that the Housing Element inconsistency finding was also based on Public Utilities Code (PUC) Section 21674, which states that the Commission is charged to assist local agencies in ensuring compatible land uses in the vicinity of existing airports. The commenter merely restates the text of this section and does not provide further information to evaluate the assertion that the Project is inconsistent or to assess why the commenter believes the Project would be inconsistent with this finding. The Draft EIR documented the proper procedural requirements with respect to ALUC input as described in Response to Comment A-2.

A-5 The commenter states that the Housing Element inconsistency finding was based on AELUP General Land Use Policies in Section 3.2.1, which states that Land uses may be found to be inconsistent with the AELUP if it 1) places people so that they are affected adversely by aircraft noise and 2) concentrates people in areas susceptible to aircraft accidents. Refer to Response to Comment A-3 regarding aircraft noise impacts. As discussed in Section 4.10, *Land Use and Planning*, of the Draft EIR, the Project site is not located within the clear zones or accident potential zone (refer to Figure 4.8-1, JFTB Impact Zones) for the JFTB. Therefore, the Project does not concentrate people in areas susceptible to aircraft accidents and would not result in a safety hazard for people residing at the Project site (refer to Page 4.10-15 of the Draft EIR). The commenter does not provide additional information related to aircraft accidents that would affect the finding documented in the Draft EIR.

A-6 The commenter states while the City overruled ALUC on December 11, 2023, the commenter has additional comments regarding the Project. The commenter summarizes threshold c in Section 4.11, *Noise*, of the Draft EIR, and states that projects within the 60 dB noise contour must use sound attenuation as required by the California Noise Insulation Standards, Title 25, California Code of Regulations. The Draft EIR acknowledges that the Project is near JFTB and evaluates noise emanating from the airport in Section 4.11, *Noise*, of the Draft EIR. An on-site exterior aircraft noise impact analysis has been completed to evaluate the potential noise exposure levels that would result from adjacent JFTB Los Alamitos aircraft noise sources in the Project study area, and to identify environmental impacts from the proposed Project and potential noise abatement measures for the proposed Project that would achieve acceptable Project noise levels, if required. As shown on Figure 4.11-5, *On-Site Aircraft Noise Level Contours*, the northwestern portion of the Project site would locate residential uses between the 60 and 65 dBA CNEL noise level contours. Residential land uses exposed to noise levels less than 60 dBA CNEL are "normally consistent." Residential uses exposed to noise levels between 60 and 65 dBA CNEL are considered "conditionally consistent" with AELUP Noise limitations, requiring that sound attenuation as identified by the California Noise Insulation Standards, Title 25, California Code of Regulations is implemented to ensure that the interior CNEL does not exceed 45 dBA.

The Project will implement sound attenuation methods to ensure the interior CNEL does not exceed 45 dBA. For example, the Project will provide mechanical ventilation (e.g. air conditioning) in all units. In addition, with implementation of PDF-N-2, which includes the

DRAFT

use of windows with a STC rating of 29 on all second floor facades adjacent to Lampson Avenue and JFTB Los Alamitos, the Project would be designed to achieve a 25 dBA reduction and meet the 45 dBA CNEL interior noise standard. Accordingly, the Project would not expose people residing or working in the Project area to excessive noise levels from airport or aircraft operations, and impacts would be less than significant. No mitigation is required (refer to Page 4.11-31 of the Draft EIR).

Refer also to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*, related to noise impacts. A portion of the Project is within the 60 dBA noise contour, and as such, the Project will implement PDF-N-2, which includes the use of windows with a STC rating of 29 on all second floor facades adjacent to Lampson Avenue and JFTB Los Alamitos, ensuring the Project is designed to achieve a 25 dBA reduction and meet the 45 dBA CNEL interior noise standard. Thus, no further response is required.

A-7 The commenter also recommends a posting of "NOTICE OF AIRPORT IN VICINITY". The commenter's recommendation is already addressed in Section 4.10, *Land Use and Planning*, of the Draft EIR (refer to Page 4.10-18 of the Draft EIR). As discussed in Section 4.10, *Land Use and Planning of the Draft EIR*, the buyer awareness notification process is built into the real estate disclosure laws of the State to ensure that potential buyers are fully informed before buying a home near an airport if they are sensitive to the types of annoyances or disruptions that may come with the location. Buyer awareness is required as part of the City's approval process for the Project including the statement "NOTICE OF AIRPORT IN VICINITY". Refer also to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*, related to buyer awareness. Thus, no further response is required.

A-8 The commenter provides concluding remarks, and the City acknowledges Julie Fitch as the contact person for ALUC. No further response is required.

12-ORA-2022-02577
I-405, PM 21.086
SR 22, PM R0.668
SR-39, PM 9.279

Dear Mr. Oliver,

Thank you for including the California Department of Transportation (Caltrans) in the review of the Draft Environmental Impact Report (EIR) for the 4665 Lampson Avenue Project. The Project Applicant proposes to redevelop the existing office building with a residential development consisting of a variety of different product types, including: cluster homes, townhomes, and apartments. The unit mix would include 55 cluster homes, 114 townhomes, and 77 affordable multi-family apartment homes. The mixed density for the Project would be 20 dwelling units per acre (DUA). The Project would provide approximately 21,000 sf of common open space, which includes a central 14,000 sf neighborhood open space area. Under the City's R-3 development standards, the maximum building height for the Project is 35 feet. The Project would provide a total of 557 parking spaces: 459 parking spaces for the cluster homes and townhomes and 98 parking spaces for the affordable multifamily apartment homes. Vehicle access to the Project site would be provided via one driveway on Lampson Avenue.

The 4655 Lampson Avenue Project (Project) site is located in the City of Los Alamitos, Orange County, California. The 12.3-acre Project site is located north of Lampson Avenue and northwest of the intersection of Lampson Avenue and Rose Street. The project is located less than a half mile from Interstate 405 (I-405), The project is also two and a quarter mile from Interstate 605 (I-605), two miles from State Route (SR) SR-39 and almost a mile from SR-22. All four State Routes are owned and operated by Caltrans. Caltrans is a responsible agency on this project, and has the following comments:

B-1

DRAFT

City of Los Alamitos
June 10, 2024
Page 2

1. To ensure safe operations, please assess the capacity(s) (storage length) of the off-ramps at Valley View St./Bolsa Chica Rd. This assessment should determine if the ramp(s) is/are able to accommodate the demand(s) and will not create a back-up onto the freeway mainline. B-2

2. Regional access to the project is through the I-405, I-605, and SR 22 freeway. Therefore, the document should include a discussion on any potential impacts of this project I-405, I-605, and SR 22 ramps and mainline. B-3

3. In the Traffic Impact Analysis, please include HCM intersection analysis along with current and projected capacities of local street, and state highways or freeways including ramps that might be impacted. B-4

4. If impact analysis leads to findings of significance on State facilities, please coordinate with Caltrans District 12 Local Development on development of a Traffic Mitigation Agreement or similar effort. B-5

5. Caltrans encourages the design of Complete Streets that include high-quality pedestrian, bicycle, and transit facilities that are safe and comfortable for users of all ages and abilities. Improvements may include providing secure bicycle parking, pedestrian-oriented LED lighting, and comfortable connections to nearby active transportation and/or transit facilities. Complete Streets improvements also promote regional connectivity, improve air quality, reduce congestion, promote improved first-/last-mile connections, and increase safety for all modes of transportation. B-6

6. New residential infill development offers an opportunity to encourage multimodal transportation options. Caltrans encourages the project to look at opportunities to include Complete Streets improvements in the project, and/or to improve bicycle, pedestrian, and transit access and connectivity to nearby bikeway, sidewalk, and transit facilities. B-7

7. Encourage the use of transit among future residents, visitors, and workers of the development. Increasing multimodal transportation may lead to a reduction to congestion, Vehicle Miles Traveled, and improve air quality. Provide adequate wayfinding signage and related amenities to the transit stops within the project vicinity. B-8

8. There is an existing Class II bike lane on Lampson Avenue. Consider adding signage for drivers to watch for bicyclists and pedestrians near driveways on Lampson Avenue. Also, consider green conflict zone paint on the Class II near driveways. B-9

"Provide a safe and reliable transportation network that serves all people and respects the environment"

DRAFT

9. During project construction, if there are any impacts to the existing bike lanes on Lampson Avenue, please ensure that appropriate temporary detours are provided to maintain safe bicycle access to Lampson Ave. B-10

10. Please ensure that truck parking, ingress and egress, and staging will not interfere with vehicle parking, pedestrian paths, or bicycle lanes/bicycle parking. B-11

11. Establish freight pick up and drop off times that do not coincide with peak commute hours to reduce passenger vehicle conflicts and congestion for freight. Consider designating on-street freight-only parking and delivery time windows so trucks will not resort to double parking, thus causing street traffic congestion. B-12

Caltrans' mission is to provide a safe, sustainable, equitable, integrated, and efficient transportation system to enhance California's economy and livability. Please continue to coordinate with Caltrans for any future developments that could potentially impact State transportation facilities. If you have any questions, please do not hesitate to contact Julie Lugaro at: Julie.lugaro@dot.ca.gov. B-13

Sincerely,

Scott Shelley
Branch Chief, Regional-LDR-Transit Planning
Caltrans, District 12

DRAFT

"Provide a safe and reliable transportation network that serves all people and respects the environment"

Responses to Comment B

California Department of Transportation (Caltrans), dated June 10, 2024.

B-1 The commenter provides an introductory statement and summarizes the Project and states that Caltrans is a responsible agency on the project. For clarification regarding the proposed common open space, the Project would provide 58,027 sf of open space, including approximately 16,508 sf of usable common open space, approximately 41,519 sf of private open space, and approximately 78,038 sf of planting area (refer to Page 3-7 of the Draft EIR). Additionally, vehicle access to the Project site would be provided via two driveways on Lampson Avenue, one for the apartment entry on the western side and one for the primary neighborhood entry central to the site. Furthermore, a restricted emergency vehicle access point with Lampson Avenue would be provided at the eastern end of the site (refer to Page 3-4 of the Draft EIR). There are no expected discretionary or administrative actions needed from Caltrans on this Project; therefore, Caltrans is not considered a responsible agency for this Project.

B-2 The commenter requests an analysis of the capacities (storage length) of off-ramps at Valley View Street and Bolsa Chica Road to determine if the ramps are able to accommodate the demand and will not create a back-up onto the freeway mainline. Although the Caltrans guidelines have been updated and no longer include guidelines related to level of service, Caltrans used to require an analysis of capacities at State facilities when a Project contributes 50 or more peak hour trips to a State off-ramp or intersection. However, this is still a reasonable metric to determine whether a Project would have a measurable impact on State facilities. As shown in Exhibit 4-2 of the Traffic Analysis (*Attachment G* of this Final EIR), the Project would send less than 50 peak hour trips to the off-ramps at Valley View Street and Bolsa Chica Road (25 AM and 42 PM peak hour trips, respectively). As a result, since the Project would contribute less than 50 peak hour trips to a State off-ramp, and industry standard recognizes that any contribution less than 50 peak hour trips does not cause a significant increase in delay or create a safety hazard; therefore, an analysis of capacities of off-ramps at Valley View Street and Bolsa Chica Road is not needed or required.

B-3 The commenter states that the document should include a discussion on any potential impacts of the Project on I-405, I-605, and SR-22 freeway ramps and mainline. For the reasons stated above, the Project would not have measurable impact to these State facilities, including ramps or mainline facilities. Refer to Response to Comment B-2. Specifically, the peak hour trips at the freeway ramps at I-405, I-605, and SR-22 are listed below and the Project would contribute less than 50 peak hour trips to these ramps, and industry standard recognizes that any contribution less than 50 peak hour trips does not cause a significant increase in delay.

- I-405/I-605 via Seal Beach Boulevard: 35 AM and 45 PM peak hour trips
- SR-22/I-405 via Valley View/Bolsa Chica: 25 AM and 42 PM peak hour trips

DRAFT

B-4 The commenter states that the Project's Traffic Analysis (*Technical Appendix N1* of the Draft EIR) should include HCM intersection analysis along with current and projected capacities of local street, and state highways or freeways including ramps that might be impacted. As discussed previously, transportation analysis under CEQA is now based on VMT rather than impacts to automobile delay-LOS based on intersection analysis (traffic congestion).

The intersection analysis methodology complies with the traffic guidelines of the jurisdiction where the study area intersections are located. The study area intersections (see Table 1-1 of *Attachment G* of this Final EIR) are within the jurisdictions of Los Alamitos, Seal Beach, and Garden Grove; and not Caltrans. The cities of Los Alamitos, Seal Beach, and Garden Grove require Intersection Capacity Utilization (ICU) analysis and not HCM per their respective Traffic Study Guidelines. Because Caltrans does not have jurisdiction over study area intersections, HCM intersectional analysis is not required.

B-5 The commenter states that if the impact analysis leads to findings of significance on State facilities, to coordinate with Caltrans District 12 Local Development on development of a Traffic Mitigation Agreement or similar effort. This comment is noted. Please refer to responses to Comments B-2 through B-4 regarding Project's impacts on State facilities. No further response is required.

B-6 The commenter states that Caltrans encourages the design of Complete Streets that include high-quality pedestrian, bicycle, and transit facilities that are safe and comfortable for users of all ages and abilities. The Project has been designed to incorporate pedestrian improvements and tie into regional bicycle facilities. Frontage improvements would include sidewalk improvements, driveway modifications to accommodate site access, and landscaping improvements as required by City standards, which would improve the safety and comfort of pedestrian and bicycle crossings. As discussed in Section 3.0, *Project Description*, of the Draft EIR, non-motorized circulation would include pedestrian connectivity with existing sidewalks along Lampson Avenue, including an existing signalized pedestrian connection to the south at Rose Street and Lampson Avenue and pedestrian "paseo" connections with Arbor Park and the Arbor Dog Park to the north. The Project would provide pedestrian gates to be controlled by the Homeowners' Association to restrict residents from entering Arbor Park and Arbor Dog Park outside of hours specified by JTFB. The Project would also promote the use of bicycles as an alternative means of transportation by providing short-term and/or long-term bicycle parking accommodations (refer to Pages 3-4 and 3-5 of the Draft EIR). Refer also to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, related to Pedestrian and Bicycle Facilities. Refer also to Response to Comment B-7.

B-7 The commenter encourages the Project to look at opportunities to encourage multimodal transportation options, to include Complete Streets improvements in the Project, and/or to improve bicycle, pedestrian, and transit access and connectivity to nearby bikeway, sidewalk, and transit facilities. As discussed in Table 4.15-1, *Consistency with the General Plan Mobility and Circulation Element*, of the Draft EIR, the Project facilitates multimodal mobility. An off-

DRAFT

site pedestrian circulation system would be available in proximity to the Project site with an interconnected paved sidewalk system with the roadway right-of-way separated from vehicular travel lanes by a landscaped parkway. There are existing Class II (on-street, striped) bike lanes on the north and south sides of Lampson Avenue from Basswood Street to the east. Additionally, there is a Class I bike/pedestrian path along Seal Beach Boulevard, north of Lampson Avenue and a Class II bike lane south of Lampson Avenue. The Project would maintain the existing Class II bike lane on Lampson Avenue along the Project site's frontage. Moreover, bike lane improvements are currently ongoing on Lampson Avenue between Basswood Street and Seal Beach Boulevard, which will connect to the existing Class I bike lane on Lampson Avenue (refer to Page 4.15-10 of the Draft EIR). Refer also to Response to Comment B-6.

B-8 The commenter encourages the use of transit among future residents, visitors, and workers of the Project to reduce congestion, Vehicle Miles Traveled and improve air quality. The commenter also encourages the provision of adequate wayfinding signage and related amenities to the transit stops within the Project vicinity. There is currently no transit service to the Project site or within a 0.25 mile radius. The nearest OCTA bus stop from the Project site is Route 123, approximately 1.2 miles at the intersection of Valley View Street and Lampson Avenue. As discussed in Section 4.15, *Transportation* of the Draft EIR, however, Mitigation Measure MM 4.15-1 includes implementing CAPCOA strategies such as coordination with OCTA to provide new or re-routing existing transit services to the site, as determined to be feasible by OCTA pursuant to OCTA's standards (refer to Page 4.15-19 of the Draft EIR). Additionally, regarding air quality impacts, as discussed in Section 4.2, *Air Quality*, of the Draft EIR, the Project would not exceed criteria pollutant thresholds established by the South Coast AQMD for emissions of any criteria pollutant and impacts would be less than significant (refer to Pages 4.2-24 and 4.2-25 of the Draft EIR).

B-9 The commenter states that there is an existing Class II bike lane on Lampson Avenue and recommends adding signage for drivers to watch for bicyclists and pedestrians near driveways on Lampson Avenue and green conflict zone paint on the Class II bike lane near driveways. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, related to sight distance and other safety measures implemented by the Project. As demonstrated, the Project would not result in a safety hazard. However, this comment will be taken under consideration; the City Engineer will evaluate the need for signage and/or green conflict zone paint during review of the Project's construction drawings. Thus, no further response is required.

B-10 The commenter requests that appropriate temporary detours are provided to maintain safe bicycle access to Lampson Avenue if there are encroachments to existing bike lanes during construction. As discussed in 4.8, *Hazards and Hazardous Materials*, of the Draft EIR, during construction, the Project would result in roadway improvements along Lampson, including replacement of the existing median curb and construction of the two proposed driveways. Construction on Lampson will require an encroachment permit and approval from the City Engineer. Lane closures that may be required for median improvements would be temporary

DRAFT

and require a permit and compliance with LAMC 12.08.200, Safety precautions–Obstruction of traffic. Compliance with LAMC 12.08.200 would ensure safe crossing and access for all vehicles and pedestrians/bicyclists at all times (refer to Pages 4.8-21 of the Draft EIR).

B-11 The commenter requests to ensure that truck parking, ingress and egress, and staging will not interfere with vehicle parking, pedestrian paths, or bicycle lanes/bicycle parking. During construction all staging will occur on the Project site to ensure that there are no conflicts with vehicle parking, pedestrian paths, or bicycle lanes/parking. Refer also to Response to Comment B-10 above regarding temporary closures during construction. Operationally, since the proposed use is residential, a limited number of trucks would travel to the Project site (e.g. trash trucks, emergency vehicles, delivery vans). Figure 4.8-3, *Fire Master Plan*, demonstrated adequate turning radii for emergency vehicles to access the Project site. A Safety Evaluation was prepared for the Project (*Attachment H* of this Final EIR), which evaluated on-site vehicle circulation. The Safety Evaluation identifies the on-site circulation for the site, including various vehicle paths (front-loading garbage trucks, fire trucks, delivery trucks, etc.) for various internal drive aisles, which allow for two-way traffic. Access to and from the site will be accommodated via driveways on Lampson Avenue. The vehicle turning templates show acceptable turning movements for the various vehicles and trucks anticipated to access the site (see Attachment D of *Attachment H* of this Final EIR). Therefore, truck parking, ingress and egress, and construction staging would not interfere with vehicle parking, pedestrian paths, or bicycle lanes/bicycle parking.

B-12 The commenter requests that the Project establish freight Pick up and drop off times that do not coincide with peak commute hours to reduce passenger vehicle conflicts and congestion for freight. The Project does not involve freight operations as it is a residential project. As it relates to delivery trucks refer to Response to Comment B-11. There would be no conflicts between delivery trucks and passenger cars and congestion is not an impact evaluated under CEQA (see Master Response 2.1.2, *Roadway Safety on Lampson Avenue*). However, this comment is noted for the record.

B-13 The commenter provides concluding remarks, and the City acknowledges Julie Lugaro as the contact person for Caltrans. Thus, no further response is required.

COMMENT LETTER C

CITY OF GARDEN GROVE

May 29, 2024

City of Los Alamitos
Attn: Tom Oliver, Associate Planner
3191 Katella Avenue
Los Alamitos, CA 90720
toliver@cityoflosalamitos.org

RE: Notice of Availability of Draft Environmental Impact Report for the 4665 Lampson Avenue Project

Dear Tom,

Thank you for providing the Notice of Availability of Draft Environmental Impact Report for the 4665 Lampson Avenue Project. Department staff of the City of Garden Grove have reviewed the available documents. The following comments are provided for your consideration:

- Please see attached redlines, by the City of Garden Grove Public Works Department, Traffic Engineering Division, on the Traffic Analysis Report by Urban Crossroads, dated June 1, 2023.

C-1

If you have any questions, please contact me at (714) 741-5314 or chrisc@ggcity.org.

Sincerely,

Chris Chung
Senior Planner

URBAN | CROSSROADS

CITY OF GARDEN GROVE ENGINEERING COMMENTS 5 10 24

4665 LAMPSON AVENUE

TRAFFIC ANALYSIS

PREPARED BY: Charlene So, PE | cso@urbanxroads.com
Aric Evatt | aevatt@urbanxroads.com

Reference Number	Agency	Date
14501-07 TA Report	City of Los Alamitos	June 1, 2023

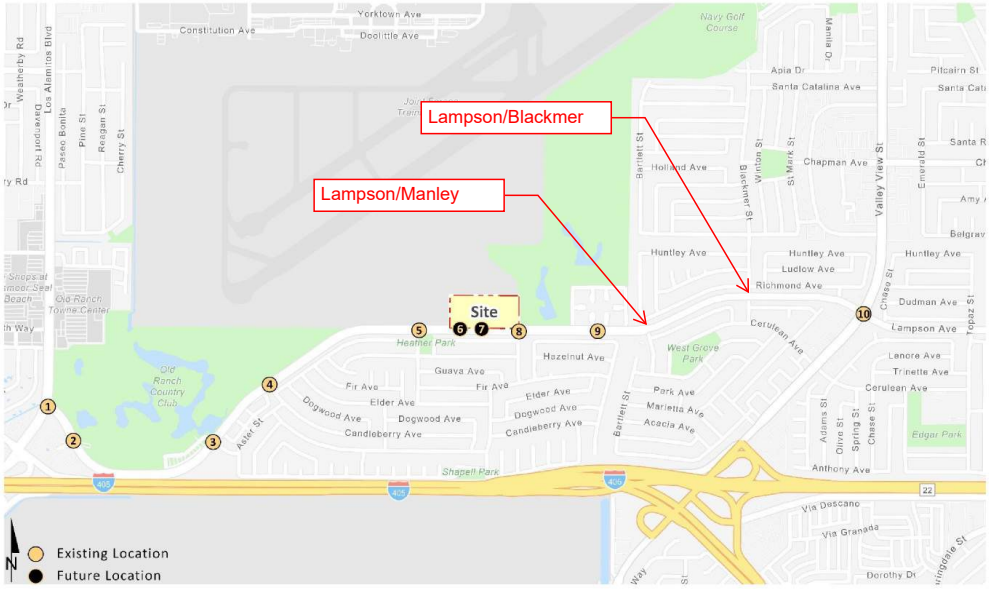
1.4 STUDY AREA

To ensure that this TA satisfies the City of Los Alamitos and City of Seal Beach's traffic study requirements, Urban Crossroads, Inc. prepared a Project traffic study scoping package for review by both agencies prior to the preparation of this report. This agreement provides an outline of the Project study area, trip generation, trip distribution, and analysis methodology. The agreement approved by both Cities is included in Appendix 1.1 of this TA.

The 10 study area intersections shown on Exhibit 1-3 and listed in Table 1-1 were selected for evaluation in this TA based on consultation with both agencies during the scoping process. The intent of a Congestion Management Program (CMP) is to more directly link land use, transportation, and air quality, thereby prompting reasonable growth management programs that will effectively utilize new transportation funds, alleviate traffic congestion and related deficiencies, and improve air quality. The Orange County CMP became effective with the passage of Proposition 111 in 1990 and most recently updated in 2021. The Orange County Transportation Authority (OCTA) adopted the 2021 CMP for the County of Orange in November 2021. (5) There are no CMP intersections within the study area.

TABLE 1-1: INTERSECTION ANALYSIS LOCATIONS

#	Intersection	Jurisdiction	CMP?
1	Seal Beach Bl. & Lampson Av.	Seal Beach	No
2	Old Ranch Plaza & Lampson Av.	Seal Beach	No
3	Basswood St. & Lampson Av.	Seal Beach	No
4	Candleberry Av. & Lampson Av.	Seal Beach	No
5	Heather St. & Lampson Av.	Seal Beach/Los Alamitos	No
6	Driveway 1 & Lampson Av.	Seal Beach/Los Alamitos	No
7	Driveway 2 & Lampson Av.	Seal Beach/Los Alamitos	No
8	Rose St. & Lampson Av.	Seal Beach/Los Alamitos	No
9	Tulip St. & Lampson Av.	Seal Beach/Los Alamitos	No
10	Valley View St. & Lampson Av.	Garden Grove	No



C-2

Why were the following intersections not studied?

11. Lampson/Manley
12. Lampson/Blackmer

URBAN CROSSROADS 4665 Lampson Avenue Traffic Analysis

14501-07 TA Report 6

C-2 (CONT.)

elaborate on HCM and ICU methodology and why HCM is appropriate to use at Valley View/Lampson.

Although the intersection of Valley View Street at Lampson Avenue is anticipated to operate at a deficient LOS based on the ICU methodology, a more detailed peak hour intersection operations assessment based on the HCM methodology indicates acceptable peak hour operations. As such, no intersection improvements have been recommended at the intersection of Valley View Street and Lampson Avenue. The intersection operations analysis worksheets for Opening Year Cumulative (2026) Without and With Project traffic conditions are included in Appendix 5.1 and Appendix 5.2 of this TA, respectively.

C-3

TABLE 5-1: INTERSECTION ANALYSIS FOR OPENING YEAR CUMULATIVE (2026) CONDITIONS

who provided the timing sheet?

C-4

* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

[1] Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

ICU is reported in volume-to-capacity (v/c). ICU analysis conducted for signalized intersections only.

[2] CSS = Cross-street Stop; TS = Traffic Signal; **CSS** = Improvement

review comments in appendices, which I've attached at the end of this document and update values.

C-5

5.5 TRAFFIC SIGNAL WARRANTS ANALYSIS

All existing study area intersections are currently signalized. As such, no traffic signal warrant analysis has been conducted for Opening Year Cumulative (2026) Without Project traffic conditions. The intersection of Driveway 2 at Lampson Avenue is not anticipated to warrant a peak hour or planning-level (ADT) based warrant under Opening Year Cumulative (2026) With Project traffic conditions. The traffic signal warrant analysis worksheets for Opening Year Cumulative (2026) With Project traffic conditions are included in Appendix 5.3 of this TA.

Perform left turn queuing analysis to determine if left turn pockets are adequate.

C-6

Who provided timing sheet to you?
AM/PM cycle length: 130 seconds.

Responses to Comment C

City of Garden Grove, dated May 29, 2024.

C-1 The commenter provides redlines to the Project's Traffic Analysis (*Technical Appendix N1* of the Draft EIR). Pursuant to the commenter's request, the Project's Traffic Analysis has been revised and included as *Attachment G* to this Final EIR. Additionally, responses to each redline/comment bubble on the TA pages provided by the commenter are addressed below.

C-2 The commenter inquires why Lampson/Manley and Lampson/Blackmer were not studied. Both Manley and Blackmer are not identified as City General Plan roadways. However, both Manley and Blackmer are signalized intersections that provide access into existing residential neighborhoods to the north and south. Similar to the signalized intersections at Rose and Tulip, it is anticipated these intersections would also operate at acceptable LOS and would have similar affects to the intersections due to added eastbound and westbound through traffic from the Project, and therefore no further study of these intersections was required. Additionally, the Project scoping agreement was provided to the City of Garden Grove on August 24, 2022 requesting a review of the scoping agreement and applicable cumulative project information. The City did not identify these intersections for inclusion at the time of scoping, and for that reason as well these intersections were not included.

C-3 The commenter inquires why HCM methodology is appropriate to use at Valley View/Lampson. Pursuant to the commenter's request and the City of Garden Grove's traffic study guidelines, the HCM analysis for the intersection of Valley View and Lampson has been removed. Only ICU methodology has been utilized to evaluate the signalized intersection.

C-4 The commenter inquires about who provided the timing sheet and AM/PM cycle length of 130 seconds. The timing sheet was requested from each applicable agency at the time of scoping but was not responded to by Garden Grove. However, Pursuant to the commenter's request, the revised Traffic Analysis (*Attachment G* to this Final EIR) has been updated to reflect the 130-second cycle length denoted by City of Garden Grove staff for the intersection of Valley View and Lampson. This revision has been made to both peak hours for all study area intersections.

C-5 The commenter requests review of the comments made in the appendices and update values. Pursuant to the commenter's request, applicable cycle length, clearance time, and saturation flow rates have been updated as denoted, consistent with the City of Garden Grove's Guidelines. Consistent with the City's Guidelines the clearance or lost time has been updated to 5% of the cycle length which is rounded up to 7 seconds. The revised Traffic Analysis is included in *Attachment G* to this Final EIR.

C-6 The commenter requests to perform left turn queuing analysis to determine if left turn pockets are adequate at the intersection of Valley View/Lampson. Pursuant to the commenter's request, a queuing analysis has been performed for General Plan Buildout With Project traffic

DRAFT

conditions to verify the queuing needs for the left turn pockets and results are reported in Table 6-3 of the updated Traffic Analysis (see *Attachment G* to this Final EIR).

C-7 The commenter requests to review the City's TIA Guidelines regarding Minimum Green. Note that minimum green is not an applicable input parameter for the ICU methodology. However, consistent with the City's Guidelines the clearance or lost time has been updated to 5% of the cycle length which is rounded up to 7 seconds (see *Attachment G* to this Final EIR).

C-8 The commenter inquires about the ideal flow and that lane capacities of 1700 per hour per lane for through and turn lanes shall be used per the City of Garden Grove's TIA Guidelines. This comment is no longer applicable as the HCM based analysis for Valley View/Lampson has been removed. However, all of the ICU analysis for the intersection of Valley View/Lampson has been revised to assume 1700 vehicle per hour per lane per the City's Guidelines as noted in the comment.

DRAFT

COMMENT LETTER D

City of Seal Beach
CITY HALL 211 EIGHTH STREET
SEAL BEACH, CALIFORNIA 90740

VIA U.S. MAIL AND E-MAIL

June 10, 2024

Tom Oliver, Associate Planner
City of Los Alamitos – Planning Department
3191 Katella Avenue
Los Alamitos CA 90720

SUBJECT: 4665 LAMPSON AVENUE PROJECT – DRAFT EIR
City of Seal Beach Comments

Dear Mr. Oliver:

Thank you for the opportunity to comment on the Draft Environmental Impact Report ("DEIR") as a Responsible Agency for the 4665 Lampson Avenue Project, dated April 2024. The Proposed Project ("Project") would demolish the existing site improvements and redevelop with 246 residential units, consisting of 55 single-family detached homes, 114 townhomes, and 77 affordable multi-family apartment homes. The Project site, while within the City of Los Alamitos, is situated on the City of Seal Beach ("Seal Beach") city limits where public access, infrastructure, and other services would likely be impacted. D-1

A series of comments follows, but in broad terms, we believe the DEIR should more thoroughly disclose the regulatory powers of the City of Seal Beach that apply to this Project, as well as impacts to the City of Seal Beach.

Section 1.0 INTRODUCTION

1. Section 1.6 (Responsible and Trustee Agencies) – The City of Seal Beach should be listed as a Responsible Agency as it has discretionary approval of the inter-jurisdictional sewer service agreement and other Project improvements. D-2

Section 3.0 PROJECT DESCRIPTION

1. Section 3.3.2 (Vehicle Access & Circulation) – Seal Beach did not request a traffic signal to be installed at the primary neighborhood, instead this was a traffic D-3

DRAFT

facilitation discussion topic that the Applicant considered. Please revise the text for accuracy.

We suggest the DEIR disclose that should the Applicant pursue a traffic signal, it must be applied for, approved, and permitted by Seal Beach. We further recommend mitigation measures be included to fund the capital and maintenance costs of the signal, as Seal Beach does not have identified revenue resources to assume these costs to serve the Project.

D-3 (CONT.)

2. Section 3.3.7 (Infrastructure Improvements – Water Infrastructure) – The document should disclose that the proposed Water Infrastructure is not in place and is contingent upon receiving a Seal Beach City Council-approved agreement with the proposed water purveyor.

D-4

3. Section 3.3.7 (Infrastructure Improvements – Sanitary Sewer Infrastructure) – The document should disclose that Seal Beach sanitary sewer service is contingent upon receiving a Seal Beach City Council-approved agreement for service outside the Seal Beach service area boundaries, and (as applicable) LAFCO approval.

   The DEIR assumes Seal Beach will approve an inter-jurisdictional sewer service agreement; however, discussion of alternatives should be provided should the agreement not be approved.

D-5

4. Section 3.3.7 (Infrastructure Improvements – Alternate Stormwater Drainage) – The document should disclose that the proposed alternative drains into Seal Beach right-of-way, which is contingent upon approval from the City of Seal Beach.

D-6

5. Section 3.4.3 (Parking Reduction Request) – The Project is proposing 102 on-site parking spaces less than the City of Los Alamitos' municipal code requires, although more than the minimum 441 required spaces, based on State Density Bonus (SB 1818). Please explain whether the provided parking will have any parking impacts on Seal Beach; and if there are impacts, how those impacts will be mitigated.

D-7

6. Table 3-6 (Project-Related Approvals/Permits) – Recommend expansion of the list to include approvals and permits from Seal Beach, including review and approvals for:

   a. SWPPP & Dewatering Plan
   b. Water Quality Management Plan
   c. Traffic Impact Study

D-8

DRAFT

d. Approval of infrastructure plans directly/indirectly related to Seal Beach. D-8 (CONT.)

Section 4.0 ENVIRONMENTAL ANALYSIS

1. Table 4.0-1 – Old Ranch Country Club Development is proposed to have 167 multi-family housing units, 25,340 square feet of medical office, and a 109,015 square foot expansion to the existing clubhouse which will include a 150-room hotel. Please clarify if all proposed components are included in the cumulative impact modeling. D-9

Section 4.9 HYDROLOGY AND WATER QUALITY

1. Section 4.9.1 B. Site Hydrology - It is stated that per field observation, flows may overflow onto Lampson Avenue from the existing on-site concrete channel. Please disclose any documentation of overflows onto Lampson Avenue due to clogging of the outlet pipe. D-10

2. Section 4.9.1 B. Site Hydrology: DEIR states contributing 25-year storm event street flows are contained below the top of curb along Lampson Avenue. This is inconsistent with field observations of multiple instances where the curb has been overtopped during storm events. Please explain the discrepancy and revise analysis as appropriate. D-11

3. Section 4.9.6.A – DEIR mentions that a SWPPP would be prepared for construction-related activities. The SWPPP shall also be submitted to Seal Beach for concurrence. As groundwater would likely be encountered during construction, a separate dewatering plan shall be submitted to Seal Beach for review and approval prior to Los Alamitos grading permit issuance. D-12

4. Section 4.9.6.B - As drainage could potentially affect Seal Beach, Seal Beach approval and acceptance of the WQMP shall be required. Applicant shall be responsible for monitoring, maintaining and reporting to Seal Beach, as code or otherwise required. D-13

5. Threshold C - There are flooding issues along Lampson Avenue under existing conditions. This condition is not consistent with the listed Level of Significance Before Mitigation of "Less than Significant Impact". The DEIR should clarify the analysis and explain the basis for this conclusion. D-14

6. Threshold C.A.1 – The DEIR assumes Seal Beach approval of emergency overflow onto Lampson Avenue in certain unforeseen circumstances. This Preferred Route has not been approved by Seal Beach. D-15

DRAFT

7. Clogged pipes should not take place provided that proper WQMP monitoring and maintenance are in place (see Comment #4, above), please explain why this scenario is discussed. D-16

8. The DEIR should analyze all potential drainage resulting from the site and address potential impacts. Please disclose any agreements where Seal Beach accepts Los Alamitos stormwater conveyance of any volume. D-17

9. Threshold C.A.2 – The DEIR provides an Alternate Storm Drain Facilities scenario. This scenario assumes drainage onto Lampson Avenue (Seal Beach jurisdiction), which would be contingent upon approvals from the City of Seal Beach. D-18

10. Other Storm Drain Facilities were considered; however, please substantiate the following: (1) the DEIR's conclusion that drainage to the north (JFTB/Arbor Park) is not allowable for use as detention, (2) Bolsa Chica Channel's capacity, and (3) the DEIR's conclusion of the inability to construct underground storm drain facility within the Lampson Avenue right-of-way. D-19

11. Sections 3-C-1 and 3-C-2 – Please disclose what thresholds were used to determine downstream hydrological impacts and how the determination of no impact was arrived at. D-20

12. Appendix I1 (Hydrology Study, Section 4.0) - If the northerly 10-foot proposed dedication is not included in the hydrology calculation, where will it be included? Please advise of the roles and responsibilities of this 10-foot dedication. D-21

13. Appendix I1 Preliminary Hydrology Report: Appendix C.1: The provided hydrograph calculations represent the unit hydrograph only. Please refer to the example problem under Section J.1.1 in the Orange County Hydrology Manual to complete the small-area runoff hydrograph calculation. D-22

Section 4.10 LAND USE PLANNING

1. Discussion should be expanded to include the City of Seal Beach within the regulatory framework, given the number of discretionary approvals from Seal Beach that are required to implement the Project. D-23

Section 4.14 RECREATION

1. Table 4.14-1 – The parks closest to the Project, and therefore likely to be most used by Project residents, are Seal Beach parks. Arbor Dog Park, Arbor Park D-24

DRAFT

Fields, and Heather Park are currently operated and maintained by Seal Beach and should be included in the table. D-24 (CONT.)

2. Section 4.14.5 (Impact Analysis) – The closest parks to the Proposed Project site are owned and/or operated by Seal Beach. DEIR speaks to the Applicant paying in-lieu fees to the City of Los Alamitos; however, the impacts are largely on Seal Beach parks. Deterioration and maintenance impacts to Seal Beach are not addressed. D-25

3. Appendix M (Park Impact Analysis) – The Arbor Park usage assumption is understated compared to what was observed and documented in Appendix Q (Arbor Park Parking Study & Layout). Please explain how this would change the Park Impact Analysis findings. D-26

Section 4.15 TRANSPORTATION

1. Section 4.15.4 – As the Proposed Project takes access off Lampson Avenue (Seal Beach jurisdiction), the basis for determining significance should be based on Seal Beach's guidelines. D-27

2. Table 4.15-1, Policy 1.7 – DEIR speaks to fair share requirements to the City of Los Alamitos; however, the surrounding roadway network serving the proposed Project site is within Seal Beach jurisdiction. Please clarify how the fair share would be used to benefit the Project site's surrounding roadway network within the City of Seal Beach. D-28

3. Table 4.15-1, Policy 4.3 – Site access modifications to the Proposed Project site are within Seal Beach jurisdiction; therefore, improvements shall require compliance with Seal Beach requirements and Seal Beach approval. D-29

4. Special Considerations – Section states "vehicles would have the option of …. and/or driving a short distance to available parking off-site and walking to the park." Please clarify where the intended off-site parking is, and if this would impact Seal Beach parking supply; and discuss how those potential impacts would be mitigated. D-30

5. Special Consideration – Construction traffic impacts shall be confirmed with Seal Beach. A Seal Beach approved permit is required. D-31

6. Appendix N1 (Traffic Impact Analysis, Section 1.1) - Please clarify whether a traffic signal would be provided at the main Project site access. D-32

DRAFT

7. Appendix N1 (Traffic Impact Analysis, Section 1.7) - Indicate that the queuing analysis conducted for the site driveway was for the unsignalized case. D-33

8. Appendix N1 (Traffic Impact Analysis, Section 3.3) - Title should be "City of Seal Beach" D-34

9. Appendix N1 (Traffic Impact Analysis, Exhibit 3-3) Show the location of the site on the map for context. D-35

10. Appendix N1 (Traffic Impact Analysis, Exhibit 3-4) Show the city boundaries to indicate Los Alamitos and Seal Beach. D-36

11. Appendix N1 (Traffic Impact Analysis, Exhibit 3-5) Show the location of the site on the map for context. D-37

12. Appendix N1 (Traffic Impact Analysis, Section 5.6) - Please show feasibility documentation of how recommended mitigation measure can be achieved within the geometric configuration without sacrificing westbound left-turn storage. D-38

13. Per City of Seal Beach Traffic Impact Study Guidelines, June 2020 (Guidelines) "intersections or roadway links having five or more reported accidents within the most recent 12-month period within significant influence of the project shall be analyzed and will require mitigation". No crash analysis was provided. D-39

14. Per Guidelines, "link analysis shall be performed on all sections of arterial highways and collector streets within the project area where the daily project traffic after distribution to the street system represents 1% or more of the total directional volume." No link analysis was performed. D-40

15. Appendix P (On-Site Parking Analysis, Local Project Precedents) - Consultant uses Los Alamitos Luxury Apartments parking requirements as a precedence for parking reduction from Code. Please explain how this reduction has impacted surrounding on/off street parking, if at all. D-41

16. Appendix Q (Arbor Park Parking Study) - The study references an AYSO peak parking demand of about 339 spaces. Does the Project include overflow provisions; and if so, explain those provisions. D-42

17. Appendix Q (Arbor Park Parking Study) - What would happen with the Caltrans park-and-ride? Are there requirements to provide a substitute location? D-43

DRAFT

18. Appendix Q (Arbor Park Parking Study, Option 2) - Seal Beach requests a Condition of Approval requirement to work with the American Youth Soccer Organization (AYSO) and Seal Beach to address the remaining parking shortfall. D-44

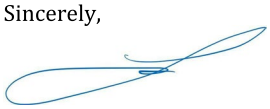
19. Seal Beach requests that all mitigation measures identified in this letter be incorporated into a Mitigation Monitoring and Reporting Program (MMRP) and that all project design features that avoid or reduce impacts and all mitigation measures also be incorporated into the project Conditions of Approval. Further, the City reserves the right to provide comments on the MMRP following its release. D-45

Section 4.17 UTILITIES AND SERVICE SYSTEMS

1. Section 4.17.5 (Impact Analysis – Water Facilities) – The document should disclose that the proposed Water Infrastructure is not in place and is contingent upon receiving a Seal Beach City Council-approved agreement with the proposed water purveyor. D-46

2. Section 4.17.5 (Impact Analysis – Wastewater and Wastewater Treatment Facilities) – The document should disclose that Seal Beach sanitary sewer service is contingent upon receiving a Seal Beach City Council-approved agreement for service outside the Seal Beach service area boundaries, and (as applicable) LAFCO approval.

   The DEIR assumes Seal Beach will approve an inter-jurisdictional sewer service agreement; however, discussion of alternatives should be provided should the agreement not be approved. D-47



3. Section 4.17.5 (Impact Analysis – Stormwater Drainage Facilities) – The document should disclose that the proposed alternative drains into Seal Beach right-of-way, which is contingent upon approval from the City of Seal Beach. D-48

4. Section 4.17.5 (Impact Analysis) - It appears that GSWC will be expanding water facilities to serve the Proposed Project site; however, please confirm that the effort would be reviewed under a separate environmental assessment. D-49

Seal Beach looks forward to coordinating with the City of Los Alamitos in identifying and mitigating Project impacts. If you have questions regarding this letter, please contact me at ilee@sealbeachca.gov. D-50

Responses to Comment D

City of Seal Beach, dated June 10, 2024.

D-1 The commenter provides introductory remarks and summarizes the Project. The commenter states that the Draft EIR should more thoroughly disclose the regulatory powers of the City of Seal Beach that apply to this Project and impacts to the City of Seal Beach. The City acknowledges the City of Seal Beach's concerns related to its approval authority and impacts of the Project on Seal Beach services and infrastructure. Revisions to the Draft EIR have been made to address these concerns. Specific responses and revisions to the Draft EIR have been provided in responses to Comments D-2, D-4, D-5, and D-8, below.

D-2 The commenter states that the City of Seal Beach should be listed as a Responsible Agency as it has discretionary approval of the inter-jurisdictional sewer service agreement and other Project improvements. Please note that the City of Seal Beach was acknowledged as a responsible agency in the Draft EIR in Table 3-6, *Project-Related Approvals/Permits*. Pursuant to the commenter's request, the City of Seal Beach has also been added to the summary of responsible agencies in Section 1.0, *Introduction*, of the Draft EIR. Page 1-37 of the Draft EIR has been revised as shown below and in Section 4.0 of this Final EIR.

> For the Project, the <u>City of Seal Beach,</u> Orange County Airport Land Use Commission (ALUC), Regional Water Quality Control Board (RWQCB), Orange County Sanitation District (OCSD), Southern California Gas Company (SoCalGas), Southern California Edison (SCE), and the South Coast Air Quality Management District (SCAQMD) are identified as Responsible Agencies. Regardless, this EIR can be used by any Trustee Agency or Responsible Agency, whether identified in this EIR or not, as part of their decision-making processes in relation to the proposed Project.

D-3 The commenter states that the City of Seal Beach did not request a traffic signal to be installed at the primary neighborhood access and that the text be revised to reflect the change. Additionally, the commenter recommends that the proposed traffic signal should be applied for, approved, and permitted by the Seal Beach and mitigation measures be included to fund the capital and maintenance cost of the signal.

The City acknowledges that the City of Seal Beach did not request that a traffic signal be installed at the primary neighborhood entry. As demonstrated in Section 6.5 of the Traffic Analysis (*Attachment G* of this Final EIR), the traffic signal does not meet peak hour or planning level warrant criteria. As a result, the Project no longer proposes a traffic signal in this location. Additionally, refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for a detailed discussion of the traffic signal warrant analysis and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding the Project's safety impacts.

DRAFT

Page 3-4 of the Draft EIR has been revised as shown below and in Section 4.0 of this Final EIR.

> Vehicle access to the Project site would be provided via two driveways on Lampson Avenue, one for the apartment entry on the western side and one for the primary neighborhood entry central to the site. Additionally, a restricted emergency vehicle access point with Lampson Avenue would be provided at the eastern end of the site. The Project would implement stop controls for the southbound approach at all driveways on Lampson Avenue. The driveway for the apartment entry would be restricted to right-in/right-out only. Vehicular circulation would be unrestricted throughout the Project site. The primary neighborhood entry is not anticipated to meet a peak hour or planning level (daily volume) based traffic signal warrants. ~~However, per the request of the City of Seal Beach and in response to public comments during scoping, the Project will install a traffic signal at the primary neighborhood entry in coordination with both the City of Los Alamitos and City of Seal Beach~~.

D-4 The commenter states that the Draft EIR should disclose that the proposed water infrastructure is not in place and is contingent upon receiving a Seal Beach City Council-approved agreement with the proposed water purveyor.

Golden State Water Company (GSWC) is currently installing a public 12" water main from the intersection of Blackmer Street and Apia Drive to Lampson Avenue and Lunar Drive, approximately 600' east of the site, which provides adequate water services to support the development. As directed by GSWC, a New Business Application is required to request a main line extension on Lampson Avenue at Lunar Drive to the site, including in-tract public improvements. This would include the main line, water meters, and public fire hydrants to service the Project site. A separate encroachment permit from the City of Seal Beach and Agreement of Franchise Facilities between GSWC and the City of Seal Beach is required.
Pursuant to the commenter's request, Page 3-9 and Table 3-6 on Page 3-18 of the Draft EIR have been revised as shown below and in Section 4.0 of this Final EIR.

> Golden State Water Company would provide water service to the Project. Domestic water lines would be provided as shown in Figure 3-23, *Utility Plan*. In addition, the Project would include a 1,200 feet watermain extension between the eastern driveway and the existing GSWC watermain at the intersection of Lunar and Lampson. The Project would include, at a minimum, an 8" watermain size for the extension. <u>The proposed water infrastructure would require an encroachment permit from the City of Seal Beach and Agreement of Franchise Facilities between GSWC and the City of Seal Beach.</u>

City of Seal Beach	• Issuance of Public Works Permit (encroachment permit) for infrastructure

DRAFT

	improvements within the Lampson Ave. right-of-way. • Agreement of Franchise Facilities between GSWC and the City of Seal Beach • Agreement between the Rossmoor/Los Alamitos Area Sewer District and the City of Seal Beach for Inter-Jurisdictional Wastewater Services. • Approval of stormwater discharge/conveyance. • Approval Water Quality Management Plan • Approval of infrastructure plans directly/indirectly related to Seal Beach

D-5 The commenter states that the Draft EIR should disclose that Seal Beach sanitary sewer service is contingent upon receiving a Seal Beach City Council-approved agreement for service outside the Seal Beach service area boundaries and LAFCO approval, if required. Additionally, the commenter states that the Draft EIR should include an alternative that addresses what would occur if Seal Beach does not approve an inter-jurisdictional sewer service agreement.

The Project site is located within Rossmoor/Los Alamitos Area Sewer District's (RLAASD) sewer service area boundaries. RLAASD does not, however, have sewer lines that connect to the Project site. As a result, since approximately January 1975, the City of Seal Beach has been providing sewer services to the Project site.

It is expected that the proposed agreement for Inter-Jurisdictional Wastewater Services (Wastewater Agreement) between the City of Seal Beach and RLAASD is exempt from review and/or approval by LAFCO pursuant to California Government Code §56133. This statute generally states that a city or district may provide new or extended services by contract or agreement outside its jurisdictional boundary only if it first requests and receives written approval from LAFCO in which the affected territory is located (Cal. Gov. Code §56133(a)). A subsection of this statute, §56133(e), however, provides limited exceptions to where LAFCO approval is not required for new or extended services. First, §56133(e)(1) states that the section does not apply to, "(1) Two or more public agencies where the public service to be provided is an alternative to, or substitute for, public services already being provided by an existing public service provider." (Cal. Gov. Code §56133(e)(1)). The Wastewater Agreement between the City of Seal Beach and RLAASD represents a straightforward substitution of one service provider (Seal Beach) for another (RLAASD), and no third party service provider will be displaced by the agreement. Second, §56133(e)(4) states that the section does not apply to, "(4) An extended service that a city or district was providing on or before January 1, 2001." (Cal. Gov. Code §56133(e)(4)). The City of Seal Beach began providing sewer service to the Project site on or about January 1975. Therefore, it is anticipated that the agreement will be exempt from review and approval by LAFCO. Nevertheless, the Project Applicant will follow all

DRAFT

applicable and required LAFCO processes and procedures related to sanitary sewer service. Additionally, the Project Applicant would be required to pay connection or service fees to the City of Seal Beach to provide service.

The Project site is within the Rossmoor-Los Alamitos Area Sewer District service area, however there are limited to no feasible alternative sanitary sewer connection options within the surrounding area in the event the City of Seal Beach does not approve an inter-jurisdictional sewer service agreement[2]. Any other option would require prohibitively expensive construction, as well as difficult to resolve engineering issues related to crossing conflicts, elevations changes, and potential downstream capacity concerns because the existing site is not currently oriented to discharge to this area. Furthermore, the existing site (when the office use was previously occupied) discharged to the City of Seal Beach public sanitary sewer system and therefore the site is currently configured such that discharges to Seal Beach sanitary sewer service would be most efficient and logical.

Pursuant to the commenter's request, Page 3-9 of the Draft EIR has been revised as shown below and in Section 4.0 of this Final EIR.

> Although the Project site is in the City of Los Alamitos, sanitary sewer will be served by the City of Seal Beach via the Rossmoor-Los Alamitos Area Sewer District. The Rossmoor/Los Alamitos Sewer District would provide wastewater conveyance and treatment services to the Project. A lift station and force main is proposed at the southeast corner of the Project site (refer to Figure 3-23, *Utility Plan*). The Project would connect the force main to the existing 8-inch sanitary sewer line at the southeast corner of the site. All connections to existing sanitary sewer lines require approval by the City of Seal Beach and would be constructed in accordance with the City of Seal Beach standards. Additionally, an agreement between the Rossmoor/Los Alamitos Area Sewer District and the City of Seal Beach would be required for Inter-Jurisdictional Wastewater Services.

D-6 The commenter states that the Draft EIR should disclose that the proposed alternate stormwater drainage would flow onto Seal Beach right-of-way and requires approval from the City of Seal Beach.

[2] *The City of Seal Beach has indicated that the inter-jurisdictional sewer service agreement requires Seal Beach City Council approval and therefore is considered a discretionary action. This EIR is intended to provide the environmental clearance for future discretionary and ministerial actions relating to this Project, including the inter-jurisdictional sewer service agreement.*

DRAFT

The preferred treatment of stormwater runoff for the Project would flow to the existing 18" storm drain, located near the southwest corner of the site, that ultimately discharges to the existing JFTB drainage facilities consistent of at-grade depressed basins and hydraulically connected pipes. However, it is noted in Section 4.9, *Hydrology and Water Quality*, of the Draft EIR and in the updated Hydrology Study (*Attachment E* of this Final EIR), that in the event the existing 18" pipe is clogged or the existing at-grade depressed basins reach capacity, stormwater runoff from the site overflows onto Lampson Avenue in the existing condition based on field survey topographic findings and photographic evidence. Therefore, a parkway drain is proposed on Lampson Avenue, near the southwest corner of the site, to provide proper emergency overflow, matching the historic drainage condition. Any proposed improvements and/or stormwater runoff tributary to Lampson Avenue is subject to the City of Seal Beach's review and approval.

Pursuant to the commenter's request, Page 3-10 of the Draft EIR has been revised as shown below and in Section 4.0 of this Final EIR.

> An alternate plan for stormwater conveyance is proposed in the event the preferred route (historical flow) across the JFTB, as described above, is not available. The alternate would include stormwater outflow onto Lampson Avenue within Seal Beach right-of-way, which would subsequently flow west to an existing stormwater catch basin approximately 2,200 feet west of the Project site. Stormwater outflow onto Lampson Avenue would require approval and/or an encroachment permit from the City of Seal Beach. Due to existing flooding concerns on Lampson Avenue, the onsite pump system would allow for low flows to enter Lampson Avenue up until the time that the flows begin to exceed the allowed 25-year storm event in Lampson Avenue. At that point, peak flows would be detained onsite. Once the flows are no longer above the allowed 25-year storm event in Lampson Avenue, onsite flows to Lampson Avenue would resume. Under the Alternate Off-Site Storm Drain plan, stormwater will be detained and mitigated onsite such that Lampson Avenue meets OC Hydrology flooding standards. Approximately 32,300 cf of water would need to be detained onsite to ensure that offsite 25-year flows are not exceeded. Detained volumes would be discharged from the site via a pump system at flow rates that do not exceed the existing condition flow rates.

D-7 The commenter states that the Project is proposing 102 on-site parking spaces less than the City of Los Alamitos Municipal Code requirements. The commenter requests an analysis to determine whether provided parking will have any parking impacts on Seal Beach. A parking evaluation was included in the Draft EIR and a Parking Analysis was provided as *Technical Appendix P* of the Draft EIR. Refer also to Master Response 2.1.3, *Parking*, for a detailed discussion on parking impacts. As concluded, the Project's proposed parking supply is appropriate to serve the potential parking needs of the Project. As a result, Project residents

DRAFT

would have adequate parking on-site and would not park on streets in the adjacent neighborhood in the City of Seal Beach.

D-8 The commenter recommends including the Stormwater Pollution Prevention Plan (SWPPP) & Dewatering Plan, Water Quality Management Plan, Traffic Impact Study, and approval of infrastructure plans directly/indirectly related to Seal Beach in the list of approvals and permits required from Seal Beach.

The City of Los Alamitos, as Lead Agency, is ultimately responsible for review and approval of the Project's Traffic Analysis and Water Quality Management Plan per the County of Orange MS4 Permit requirements. The City acknowledges that the City of Seal Beach, as a Responsible Agency, has review and approval authority for infrastructure plans directly and indirectly related to Seal Beach. However, the SWPPP and Dewatering Plan is a State-reviewed and permitted document, therefore the State Water Resources Control Board (SWRCB) is also noted as a Responsible Agency for the SWPPP.

Pursuant to the commenter's request, Page 3-8 of the Draft EIR has been revised as shown in Response to Comment D-4 and in Section 4.0 of this Final EIR.

D-9 The commenter asked for clarification as to whether all proposed components of the Old Ranch Country Club Development were included in the Project's cumulative analysis. The development capacity for the Old Ranch Country Club Development identified in the cumulative impact modeling was based on the City of Seal Beach's Housing Element Sites Inventory capacity identified for this site. To ensure the cumulative impact modeling is as accurate as possible, the modeling was updated, where appropriate, to include the additional development capacities identified by the commenter. Specifically, the Traffic Analysis (*Attachment G* to this Final EIR) has been updated to include all proposed components of the Old Ranch Country Club for cumulative traffic impact analysis related to congestion or automobile delay. Except with respect to projects specific to transportation improvements, the CEQA Guidelines specify that a project's effects on automobile delay shall not constitute a significant environmental impact. As such, the updated Traffic Analysis does not change the findings of the Draft EIR, since LOS is not a significant impact under CEQA.

With respect to noise impacts (off-site traffic) related to this update in the modeling, there was a slight cumulative increase from existing conditions of 71.6 CNEL dBA to General Plan Buildout conditions of 73.2 CNEL dBA along a portion of Lampson Avenue. Without the additional development capacity at Old Ranch Country Club, the General Plan Buildout conditions with Project were 72.8 CNEL dBA. As a result, the General Plan Buildout with Project, including building of Old Ranch Country Club results in a cumulative increase of 0.4 CNEL dBA. However, the Project's cumulative contribution to the General Plan Buildout condition, including with the inclusion of the additional development capacities at the Old Ranch Country Club is 0.2 dBA (see Segment #1, Table 8-9 in *Attachment F* to this Final EIR).

DRAFT

Because the cumulative incremental noise level threshold is 1.5 dBA, the Project's cumulative contribution of 0.2 dBA is not a significant cumulatively considerable impact under CEQA. Therefore, adjusting the cumulative impact modeling to include this additional development capacity at Old Ranch Country Club does not result in a new significant environmental impact resulting from the Project or a substantial increase in the severity of an impact requiring recirculation of the draft EIR. The Project's Noise Impact Analysis has been updated accordingly and included as *Attachment F* to this Final EIR.

D-10 The commenter requests disclosure of any documentation of overflows onto Lampson Avenue due to clogging of the outlet pipe. Per field survey topographic findings and photographic evidence, existing stormwater runoff from the site ponds within the existing concrete channel and overflows on to Lampson Avenue near the southwest corner and through existing driveways along the property frontage. A Ponding Exhibit (*Attachment E* to this Final EIR) has been prepared for the existing conditions based on the tributary 100-year storm event which shows the water ponding based on the primary overflow elevation near the southwest corner of the site. Because water ponding currently exists even with the existing JFTB stormwater conveyance facilities, it can be reasonably assumed that the downstream, existing JFTB facilities are clogged.

D-11 The commenter requests clarification on the discrepancy related to the 25-year storm event street flows being contained below the top of curb along Lampson Avenue. A hydrologic analysis and street capacity analysis per Orange County Hydrology & Hydraulics Manuals were prepared for Lampson Avenue along the site frontage. Calculation results indicate that Lampson Avenue flooding does not occur along the Project site, but rather downstream at the sump condition near the Old Ranch Country Club. The hydrologic analysis and street capacity analysis for Lampson Avenue has been expanded downstream to determine the depth of flow (see *Attachment E* to this Final EIR). Two areas were analyzed; Section A-A is located near the southwest corner of the site and Section B-B at the existing low-point sump catch basin approximately 2,100 linear feet from the site near the Old Ranch Country Club. Both street capacity analysis indicate that the 100-year water surface elevation is held within the street and less than the existing top of curb elevations.

D-12 The commenter requests that the Project's SWPPP be submitted to City of Seal Beach for concurrence, and that a separate dewatering plan be submitted to the City of Seal Beach for review and approval prior to the City of Los Alamitos issuing grading permits. The Project would comply with state requirements related to the submittal of a SWPPP. The SWPPP and Dewatering Plan will be made available as referenced to the City of Seal Beach, however these are State-reviewed documents that will be processed, approved and permitted by the State Water Resources Control Board (SWRCB) as appropriate. Both documents shall be approved by the SWRCB prior to issuance of grading permit by the City of Los Alamitos.

DRAFT

D-13 The commenter requests that the Project's Water Quality Management Plan (WQMP) require approval from the City of Seal Beach and the Project Applicant shall be responsible for monitoring, maintaining, and reporting to the City of Seal Beach. The Project's Water Quality Management Plan will be reviewed and approved by the City of Los Alamitos and Seal Beach, as may be required. If required, a maintenance covenant/agreement will be executed by the property owner for monitoring, maintenance, and operation of all privately installed water quality facilities per City of Los Alamitos code requirements and to the satisfaction of the City of Seal Beach. It should be noted that City of Los Alamitos is ultimately the responsible agency for review/ approval of the Water Quality Management Plan per the County of Orange MS4 Permit requirements. Refer to Response to Comment D-8.

D-14 The commenter states that flooding issues along Lampson Avenue under existing conditions is not consistent with the listed level of significance before mitigation of "Less than Significant Impact." The commenter requests clarification of the analysis under threshold c in Section 4.9, *Hydrology and Water Quality*, of the Draft EIR, and an explanation of the basis for the conclusion.

The Draft EIR documented the existing hydrological conditions in Section 4.9 of the Draft EIR. As stated, based on field observations from C&V, the existing concrete channel along the site's southerly property line currently ponds back to the existing driveway and overflows onto Lampson Avenue. Based on the existing topography of the site, in the event the outlet pipe was to become clogged, the existing overflows from the property would flow onto Lampson Avenue at the low point at the southwest corner of the site (refer to Page 4.9-1 of the Draft EIR). As required by CEQA, in determining whether the Project's impacts are significant, the Draft EIR evaluated the Project's impacts compared to existing environmental conditions. The analysis provided under Threshold c demonstrates that the Project has been designed (under two stormwater drainage facility options) to detain peak runoff flows on-site to ensure that increased flow rates do not exceed the existing condition flow rates. As such, downstream facilities would not be hydrologically impacted by the proposed Project. Impacts would be less than significant and no mitigation is required (refer to Pages 4.9-18 to 4.9-19).

Refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, related to flooding impacts. Thus, no further response is required.

D-15 The commenter states that the preferred route for emergency overflow onto Lampson Avenue has not been approved by the City of Seal Beach. Emergency overflow in the existing condition is based on field survey topographic elevations and photographic evidence when stormwater runoff that cannot discharge through the existing 18" storm drain pipe to existing JFTB facilities will overflow on to Lampson Avenue. This is a historic condition. Refer to Ponding Exhibit (*Attachment E* to this Final EIR) prepared for the existing condition identifying the inundation area during the 100-year storm event in the existing condition. As stated in Response to Comment D-4, an encroachment permit may be required to implement the

DRAFT

preferred drainage route. However, there are no required agreements to allow for drainage overflow onto Lampson Avenue, as this is a historic, existing drainage condition. Lampson Avenue is considered a public right-of-way and can accept stormwater runoff from adjacent sites. The existing topography identifies that stormwater runoff in the historic condition overflows onto Lampson Avenue near the southwest corner of the site.

D-16 The commenter states that clogged pipes should not take place provided that proper WQMP monitoring and maintenance are in place and requests explanation of why this scenario is discussed. Page 4.9-17 of the Draft EIR states that in the event the stormwater pump fails or the outlet pipe becomes clogged, the emergency overflow for the site will flow onto Lampson Avenue matching historical drainage patterns. Although proper maintenance would ensure that clogged pipes should not take place, this has occurred historically as observed and documented in the existing conditions (refer to Page 4.9-1 of the Draft EIR).

Appropriate maintenance and frequency information is part of the Project's Water Quality Management Plan and recorded maintenance covenant/agreement as required per the County of Orange. However, in the remote event that proposed water quality and/or drainage facilities fail, become clogged, and/or are not maintained properly, emergency overflow through the Project site is provided and incorporated into the grading/drainage design. This ensures that the proposed building finish floor elevations are set at minimum 1' higher than the 100-year water surface elevation for the tributary area and a safe vehicular path of travel is being maintained for emergency vehicles and proper maneuvering throughout the site. As part of the County of Orange's MS4 Permit requirements, the responsible reviewing agency, such as the City of Los Alamitos is obligated to conduct yearly inspections of installed water quality facilities and report to the County.

D-17 The commenter states that the Draft EIR should analyze all potential drainage resulting from the site and disclose any agreements where Seal Beach accepts Los Alamitos stormwater conveyance of any volume. Refer to Response to Comment D-14. The Draft EIR demonstrates that the Project has been designed (under two stormwater drainage facility options) to detain peak runoff flows on-site to ensure that increased flow rates do not exceed the existing condition flow rates. As such, downstream facilities would not be hydrologically impacted by the proposed Project. Impacts would be less than significant and no mitigation is required (refer to Pages 4.9-18 to 4.9-19).

The existing site generally flows in a north to south direction into an existing westerly flowing concrete channel along the site's southerly property line. The westerly flowing channel is collected via an offsite 18-inch corrugated metal pipe (CMP) that flows under the offsite driveway to Arbor Park and discharges into an offsite earthen channel on the west side of the driveway. Runoff flows within this earthen channel are then collected by an existing 24-inch CMP that flows westerly, discharges into a westerly flowing earthen channel within the JFTB, and then drains to the Old Ranch Country Club to the south. Runoff is ultimately conveyed

DRAFT

downstream into the San Gabriel River. There is currently not an agreement in place that Seal Beach accept Los Alamitos stormwater conveyance of any volume. Additionally, there are no required agreements to allow for drainage overflow onto Lampson Avenue, as this is considered a historic, existing drainage condition. Lampson Avenue is considered a public right-of-way, therefore can accept stormwater runoff from adjacent sites. Based on the existing topography, stormwater runoff in the existing historic condition overflows onto Lampson Avenue near the southwest corner of the site.

D-18 The commenter states that the Alternate Storm Drain Facilities scenario would be contingent upon approval from the City of Seal Beach. Refer to Response to Comment D-6 for the revised language in the Draft EIR related to approval from City of Seal Beach. The Project Applicant will be required to seek approvals from Seal Beach, as applicable. As stated in Response to Comment D-4, an encroachment permit may be required to implement the preferred drainage route. There are no required agreements to allow for drainage overflow onto Lampson Avenue, as this is a historic, existing drainage condition. Lampson Avenue is considered a public right-of-way and can accept stormwater runoff from adjacent sites.

D-19 The commenter requests that the Draft EIR substantiate that drainage to the north is not allowable for use as detention, Bolsa Chica Channel's capacity, and the conclusion of the inability to construct an underground storm drain facility within the Lampson Avenue right-of-way.

Option #3 to outlet runoff to Arbor Park/ JFTB north of the site was evaluated, however based on topography and existing surface drainage facilities, stormwater runoff from Arbor Park drains south to the same downstream discharge location near the southwest corner of the site and Lampson Avenue. If JFTB does not allow for discharge at the southwest corner of the site, then JFTB is unlikely to allow a northerly discharge offsite. In addition, the existing site does not flow northerly to the Arbor Park/ JFTB area, as the site drains in the southwesterly direction. Therefore, directing stormwater runoff to the north would change the historic drainage pattern which can potentially cause downstream flooding because it would add additional flows to this area that do not currently occur.

Option #4 to outlet to the Golf Course, east of the site which conveys stormwater runoff to the Bolsa Chica Channel was evaluated, however similar to Option #3, the golf course is considered JFTB property, therefore requires JFTB approval for discharge and the site is not tributary to these existing facilities. Regardless of whether the Bolsa Chica Channel has capacity to accept stormwater runoff from the site, discharging to the Golf Course and subsequent Bolsa Chica Channel would change the historic drainage pattern which can potentially cause downstream flooding because it would add additional flows to this area that do not currently occur.

DRAFT

Option #5 to construct a public storm drain system within Lampson Avenue that drains east to the Bolsa Chica Channel was evaluated and as with Option #4 the site does not historically drain to this facility, therefore a direct connection to the channel would change the historic drainage pattern which may potentially cause downstream flooding, since it would add additional flows to an area that do not currently occur within the channel or site. In addition, there are existing public facilities such as gas, water, sewer mains located within Lampson Avenue which will prevent a feasible gravity fed storm drain system from being installed.

D-20 The commenter requests disclosure of what threshold was used to determine downstream hydrological impacts and how the determination of no impact was arrived at. Per methods identified within the Orange County Hydrology Manual, the proposed increased peak flow/volume generated by the Project will be contained with an upstream onsite detention and pump system with a controlled outflow to match the existing historic overflow condition; therefore, no downstream impact is anticipated. The downstream junction structure will be equipped with a Connector Pipe Screen (CPS) device for full trash capture of the 1-yr, 1-hr peak flow rate sized for the entire site to ensure trash collection prior to overflow.

D-21 The commenter inquires whether the northerly 10-foot proposed dedication was included in the hydrology calculation and, if not, where will it be included. Additionally, the commenter inquires about the roles and responsibilities of the 10-foot dedication. The Project's Preliminary Hydrology Study (*Attachment E* of this Final EIR) has been revised providing additional information regarding the 10' wide dedication area along the northerly property line. To summarize those revisions, the 10' wide dedication area is outside the proposed residential development and will not be tributary to the Project site's proposed storm drain system. Existing conditions show that this area of the site currently drains in the northerly direction. Page 3-4 of the Draft EIR has been revised as shown below and in Section 4.0 of this Final EIR.

The Project Applicant proposes to dedicate or grant an easement for the northern 10 feet of property abutting Arbor Park and Arbor Dog Park to the City of Los Alamitos<u>, or other entity,</u> with authority over the two parks.

D-22 The commenter states that the provided hydrograph calculations from the Project's Preliminary Hydrology Report (*Technical Appendix I1* of the Draft EIR) represent the unit hydrograph only and refers to the example problem in the Orange County Hydrology Manual to complete the small-area runoff hydrograph calculation.

Pursuant to the commenter's request, the Small Unit Hydrograph and detention routing calculations for the onsite proposed condition have been updated as part of the revised Preliminary Hydrology Report (*Attachment E* of this Final EIR) which utilizes the requirements set forth in Orange County Hydrology Manual and confirms the required upstream detention and outflow mitigation discharge rate compared to the existing condition.

DRAFT

Existing historic drainage patterns will be maintained without causing the potential increase of tributary flooding; therefore, impacts would be less than significant.

D-23 The commenter states that the discussion in Section 4.10, *Land Use and Planning*, of the Draft EIR, should be expanded to include the City of Seal Beach within the regulatory framework, given the number of discretionary approvals from Seal Beach that are required to implement the Project. The City acknowledges that the Project would need approval from the City of Seal Beach for certain off-site infrastructure improvements and agreements. Pursuant to the Commenter's request, Page 4.10-33 of the Draft EIR has been revised as shown below and in Section 4.0 of this Final EIR.

4. City of Seal Beach General Plan

Table 4.10-3, *Seal Beach General Plan Consistency Analysis*, provides an analysis of the Project's consistency with all applicable General Plan goals and policies that were adopted for the purpose of avoiding or mitigating an environmental effect. As shown in Table 4.10-3, the Project would not conflict with any of the applicable General Plan goals and policies. Accordingly, the Project would have a less-than-significant impact with respect to a conflict with the City of Los Alamitos General Plan and mitigation is not required.

Table 4.10-3 Seal Beach General Plan Consistency Analysis

General Plan Policy	**Consistency**
Circulation Element	
Objective: Provide a citywide system of safe, efficient, and attractive bicycle and pedestrian routes for commuter, school, and recreational use.	
Policy: Maintain existing pedestrian facilities and require new development to provide pedestrian walkways between developments, schools, and public facilities.	**No Conflict.** The Project would promote future residents of the Project to walk, bike, or ride the bus to and from developments, schools, and public facilities. Project frontage improvements such as sidewalk improvements, the existing bike lanes on Lampson Avenue adjacent to the Project site, and bike storage would promote residents and students to utilize these facilities. Therefore, the Project would not conflict with this policy.
Growth Management Element	

DRAFT

General Plan Policy	Consistency
Goal 3: Cooperate with Neighboring Jurisdictions and the County of Orange and County of Los Angeles to Achieve Reduction in Regional Traffic Congestion.	
Policy 3.1 - The City shall participate in inter-jurisdictional planning forums within its established growth management areas as adopted by the Regional Advisory Planning Council and will continue to participate in forums with neighboring or affected jurisdictions to address transportation or other planning issues.	**No Conflict.** The City of Seal Beach is a responsible agency for the Project. Table 3-6, *Project-Related Approval/Permits*, lists all approvals and decisions required by the City of Seal Beach for the Project. Additionally, the City of Los Alamitos and City of Seal Beach have been in coordination throughout the planning process for this Project including the preparation of the Traffic Analysis. Therefore, the Project would not conflict with this policy.

D-24 The commenter states that Arbor Dog Park, Arbor Park Fields, and Heather Park which are currently operated and maintained by Seal Beach should be included in Table 4.14-1, *Existing Parks and Recreation Facilities*, of the Draft EIR. The purpose of Table 4.14-1 is to identify parks and recreational facilities that are located within the City of Los Alamitos and its sphere of influence and as presented in the City's General Plan. As such, Arbor Dog Park and Arbor Park Fields were identified in Table 4.14-1 of the Draft EIR (refer to Page 4.14-2 of the Draft EIR), because they are located in Los Alamitos, while Heather Park was not included in this table. Details on the City of Seal Beach Park system and parks closest to the Project site operated by Seal Beach, including Arbor Park, Arbor Dog Park, and Heather Park, are described on Pages 4.14-4 through 4.14-6 of the Draft EIR. Accordingly, no corrections or revisions to the Draft EIR are required.

D-25 The commenter states that the closest parks to the Project are owned and operated by the City of Seal Beach and that while the Draft EIR includes a discussion of the Project applicant paying in-lieu fees to the City of Los Alamitos, it does not address impact on the deterioration and maintenance on Seal Beach. Section 4.14, *Recreation*, of the Draft EIR analyzes the Project's impact on existing neighborhood and regional parks, including those closest to the Project site. The Draft EIR concluded that implementation of the Project would not result in significant impacts related to the physical deterioration of recreational facilities and impacts would be less than significant. (refer to Pages 4.14-9 and 4.14-10).

D-26 The commenter states that the Arbor Park usage assumption is understated in the Park Impact Analysis (*Technical Appendix M* of the Draft EIR) compared to what was observed and documented in the Arbor Park Parking Study and Layout (*Technical Appendix Q* of the Draft EIR).

DRAFT

A direct comparison of the two reports mentioned by the commenter cannot be made because each report was prepared for a separate and distinct purpose and each analysis was based on conservative assumptions for the issue being addressed (i.e., impacts to parks and impacts of parking to AYSO events, respectively). The purpose of the Park Impact Analysis (*Technical Appendix M*) is to evaluate the potential impact of future Project residents' regular use of parks in close proximity to the Project site, including Arbor Park, Arbor Dog Park, and Heather Park. On the other hand, the purpose of the Arbor Park Parking Study and Layout (*Technical Appendix Q*) is to specifically address parking needs for AYSO 150 events and observed peak parking demand during AYSO events with all nine soccer fields in use concurrently.

Nevertheless, the Park Impact Analysis (*Technical Appendix M*) acknowledges the AYSO events. Specifically, Pages 2 and 3 of *Technical Appendix M* states:

> *Arbor Park is primarily a permitted park, which means groups/organizations/individuals must apply to the City of Seal Beach for approval for requested dates and times to utilize the park. Applicants provide information including, but not limited to, the type of activity and must follow the rules and regulations set forth by the City of Seal Beach. Arbor Park is primarily permitted to AYSO Region 159, serving the Los Alamitos, Rossmoor, and Seal Beach area. AYSO Region 159 was permitted to use Arbor Park for 1,052 hours in each calendar year 2022 and 2023. No other groups received permits. Typically, Arbor Park is permitted on Saturdays and weekday afternoons for AYSO Region 159 games and practices. Arbor Park's permitted use is comparable to other similar active parks in the City of Seal Beach system.*
>
> *Although Arbor Park is primarily a permitted park, the park is available and used by others outside of permitted times. Residents participate in allowable nonpermitted/passive uses such as informal/family sports activities (i.e., soccer, ultimate frisbee, playing catch with the football/baseball) and walking. In accordance with "Recreation Areas, Their Design and Equipment," a carrying capacity (referring to the number of visitors that can be accommodated in a park without unacceptable impacts to the quality of the visitor experience) can be calculated for a park utilizing the amenities, such as playgrounds, baseball fields, and open lawn areas present in the park. In general, a carrying capacity is not calculated for a community park that an agency can monitor for usage through a permitting process. However, for the purpose of this analysis, during non-permitted times, it is estimated at full capacity that 270 visitors can be accommodated at Arbor Park. Based upon City of Seal Beach staff monitoring and observations, Arbor Park is currently not at full capacity usage.*

DRAFT

Therefore, the Park Impact Analysis (*Technical Appendix M*) identifies that Arbor Park is a permitted park and also identifies the number of AYSO games and practices in the 2022 and 2023 calendar years. The analysis calculates carrying capacity in accordance with "Recreation Areas, Their Design and Equipment,"[3] prepared for the National Recreation Association, and therefore, the analysis utilizes an appropriate industry standard and does not understate the usage of Arbor Park. Accordingly, no corrections or revisions to the Draft EIR are required.

D-27 The commenter states that as the Project takes access off Lampson Avenue, the basis for determining significance should be based on Seal Beach's guidelines. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, this traffic study has been prepared in accordance with the City of Los Alamitos' requirements (as the Lead Agency for the Project) and the City of Seal Beach's Transportation Analysis Guidelines (June 2020, referred to as City Guidelines) as the study area intersections are located within the City of Seal Beach. The recommendations for off-site roadway improvements within the jurisdiction of the City of Seal Beach were made in compliance with Seal Beach Guidelines. As stated previously, the CEQA Guidelines specify that a project's effects on automobile delay shall not constitute a significant environmental impact.

D-28 The commenter requests clarification on how the fair share requirements would be used to benefit the Project's site's surrounding roadway network within the City of Seal Beach. As stated in the Traffic Analysis (*Attachment G* of this Final EIR), transportation improvements are funded through a combination of improvements constructed by the Project or fair share contributions. When off-site improvements are identified with a minor share of responsibility assigned to proposed development, the approving jurisdiction may elect to collect a fair share contribution or require the development to construct improvements. The Project's fair share contribution to Seal Beach Boulevard and Lampson Avenue is 3.8% in the AM peak hour and 5.1% in the PM peak hour (see Table 7-1 of *Attachment G* of this Final EIR). As stated previously, the CEQA Guidelines specify that a project's effects on automobile delay shall not constitute a significant environmental impact. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

D-29 The commenter states that site access modifications to the Project site are within Seal Beach jurisdiction and improvements shall require approval and compliance with Seal Beach. The City acknowledges and agrees with the commenter. Table 3-6, *Project-Related Approvals/Permits*, of the Draft EIR acknowledges that the Project would require an

[3] *"Recreation Areas, Their Design and Equipment" – second edition, George D. Butler, The Ronald Press Company, New York, copyright 1958, by National Recreation Association Incorporated, pg. 96*

DRAFT

encroachment permit for infrastructure improvements within the Lampson Avenue right-of-way.

D-30 The commenter requests clarification on where the intended off-site parking is with respect to AYSO events and whether it would impact Seal Beach's parking supply.

Parking shortfalls relative to parking demand during AYSO Saturday games are not considered a significant environmental impact under CEQA. As discussed in the Draft EIR, there is a potential for inadequate parking during AYSO Saturday games as it currently operates (see Pages 4.2-25 and 4.2-26). If there is inadequate parking, visitors to the AYSO games would have the option of dropping off players or parking off-site. It is expected that any off-site parking would occur in available parking spaces and within walking distance (0.25 to 0.5 mile radius) of Arbor Park.

D-31 The commenter states that construction traffic impacts shall be confirmed with Seal Beach and an approval permit from Seal Beach is required. The City acknowledges that the Project would require an encroachment permit for infrastructure improvements, including construction, within the Lampson Avenue right-of-way. Refer to Response to Comment D-29.

D-32 The commenter requests for clarification on whether a traffic signal would be provided at the main Project site access. As evaluated and determined in the Project's Traffic Analysis (see *Attachment G* of this Final EIR), the primary neighborhood entry is not anticipated to meet a peak hour or planning level (daily volume) based traffic signal warrants. Therefore, the Project does not propose installation of a traffic signal. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*.

D-33 The commenter requests that Traffic Analysis indicate that the queuing analysis conducted for the site driveway was for the unsignalized case. As provided in the updated Traffic Analysis (*Attachment G* of this Final EIR), both Project driveways on Lampson Avenue were evaluated assuming cross-street stop-controlled intersections for the purposes of the queuing assessment.

D-34 The comment requests that the title in Section 3.3 of the Project's Traffic Analysis (*Technical Appendix N1* of the Draft EIR) to be revised to the City of Seal Beach. Pursuant to the commenter's request, the Project's Traffic Analysis has been updated accordingly and included as *Attachment G* to this Final EIR.

D-35 The commenter requests Exhibit 3-3 of the Traffic Analysis to show the location of the Project site for context. Pursuant to the commenter's request, the Project's Traffic Analysis has been updated accordingly and included as *Attachment G* to this Final EIR.

DRAFT

D-36 The commenter requests that Exhibit 3-4 of the Traffic Analysis show city boundaries to indicate Los Alamitos and Seal Beach. Pursuant to the commenter's request, the Project's Traffic Analysis has been updated accordingly and included as *Attachment G* to this Final EIR.

D-37 The commenter requests Exhibit 3-5 of the Traffic Analysis to show the location of the Project site for context. Pursuant to the commenter's request, the Project's Traffic Analysis has been updated accordingly and included as *Attachment G* to this Final EIR.

D-38 The commenter requests feasibility documentation of how the recommended mitigation measure can be achieved within the geometric configuration without sacrificing westbound left-turn storage.

Pursuant to the commenter's request, the Traffic Analysis has been revised to include a queuing analysis to demonstrate the feasibility of the recommended improvement at Seal Beach Boulevard and Lampson Avenue. Additionally, a queuing analysis was performed at the intersection of Valley View Street and Lampson Avenue. The updated Traffic Analysis is included in *Attachment G* to this Final EIR. The queuing analysis was conducted for General Plan Buildout Without and With Project traffic conditions since these analysis scenarios have the highest traffic volumes and would result in the most conservative analysis (see Table 6-4 of *Attachment G*) As shown, there are no queuing issues in the turn lanes anticipated at Seal Beach Boulevard and Lampson Avenue. The intersection of Valley View Street and Lampson Avenue is anticipated to have the same queuing issues under both Without and With Project traffic conditions where the addition of Project traffic would not add more than one vehicle length to any of the deficient turning movements (approximately 25-feet). Therefore, the recommended improvement at Seal Beach Boulevard and Lampson Avenue is feasible and the Project's fair share contribution would be 5.1% (see Table 7-1 of the Traffic Analysis in *Attachment G*). As stated previously, the CEQA Guidelines specify that a project's effects on automobile delay shall not constitute a significant environmental impact; therefore, the recommended improvement is not mitigation measure.

D-39 The commenter states the City of Seal Beach Traffic Impact Study Guidelines state that intersections or roadway links with more than five or more reported accidents within the most recent 12-month period within significant influence of the project shall be analyzed and will require mitigation. Further, the commenter states that no crash analysis was provided in the Draft EIR. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, and *Attachment H, Safety Evaluation*. Thus, no further response is required.

D-40 The commenter states that no link analysis was provided pursuant to the City of Seal Beach Traffic Impact Study Guidelines. As discussed previously, transportation impacts under CEQA is now based on VMT rather than automobile delay- LOS (traffic congestion). However, the LOS analysis was prepared pursuant to the City of Los Alamitos and Seal Beach Transportation Guidelines.

DRAFT

The following roadway segments, in boldface, were evaluated. since the Project would represent 1% or more of the total direction volume under General Plan Buildout traffic conditions:

#	Roadway	Segment Limits	Project	2045 WP	Project %
1	Seal Beach Bl.	North of Lampson Av.	308	48,860	0.6%
2	**Seal Beach Bl.**	**South of Lampson Av.**	**538**	**47,018**	**1.1%**
3	**Lampson Av.**	**Seal Beach Bl. to Old Ranch Plaza**	**846**	**23,220**	**3.6%**
4	**Lampson Av.**	**Old Ranch Plaza to Basswood St.**	**846**	**20,854**	**4.1%**
5	**Lampson Av.**	**Basswood St. to Candleberry Av.**	**846**	**16,825**	**5.0%**
6	**Lampson Av.**	**Candleberry Av. to Heather St.**	**846**	**15,012**	**5.6%**
7	**Lampson Av.**	**Heather St. to Rose St.**	**846**	**15,287**	**5.5%**
8	**Lampson Av.**	**Rose St. to Tulip St.**	**692**	**15,686**	**4.4%**
9	**Lampson Av.**	**Tulip St. to Valley View St.**	**692**	**16,878**	**4.1%**
10	**Lampson Av.**	**East of Valley View St.**	**230**	**12,915**	**1.8%**
11	Valley View St.	North of Lampson Av.	154	50,882	0.3%
12	Valley View St.	North of Lampson Av.	308	49,969	0.6%

The roadway segment analysis indicates that all study area roadway segments would operate at an acceptable LOS under all analysis scenarios. As such, no roadway segment widening is recommended.

D-41 The commenter requests clarification on how the reduction in parking from the Los Alamitos Luxury Apartment project impacts surrounding on/off street parking.

The discussion of the Los Alamitos Luxury Apartment project in the Parking Analysis (*Technical Appendix P* of the Draft EIR) is presented to demonstrate a precedent for a reduction in parking standards in the City of Los Alamitos, which is a jurisdiction that has a high parking standard in comparison to neighboring Seal Beach parking requirements. The analysis demonstrates that the Project would provide adequate parking for future residents and visitors of the Project and therefore, would not require any off-site parking. Refer to Response to Comment D-7 and Master Response 2.1.3, *Parking*, for a discussion of parking impacts.

D-42 The commenter inquires whether there will be overflow provisions during AYSO peak parking demand. The Arbor Park Parking Study and Layout (*Technical Appendix Q* of the Draft EIR) considers options for parking overflow that would be voluntarily provided by the Project if there is a parking shortage. For non-CEQA informational purposes, Walker Consulting found that any parking shortages at AYSO events could be eliminated in their entirety if AYSO spread out its soccer events and eliminated the large number of overlapping games. Refer to Response to Comment D-30 and Master Response 2.1.3, *Parking*, for a discussion of parking impacts. Thus, no further response is required.

D-43 The commenter inquires about the Caltrans park-and-ride and whether there are requirements for a substitute location. The park-and-ride that previously occupied the Project site has not

DRAFT

been in operation for the past 18 months and when in operation had limited usage. There are no requirements or proposal to provide a substitute park-and-ride location.

D-44 The commenter requests a condition of approval requirement to work with the American Youth Soccer Organization (AYSO) and Seal Beach to address the remaining parking shortfall. Parking shortfalls relative to parking demand during AYSO Saturday games are not considered a significant environmental impact under CEQA; therefore, the City has no legal authority under CEQA to impose a condition to this effect. However, the Project Applicant has agreed to coordinate with the City of Seal Beach and AYSO to help coordinate usage of Arbor Park, as needed.

D-45 The commenter requests that all mitigation measures identified in this letter be incorporated into a Mitigation Monitoring and Reporting Program (MMRP) and that all project design features that avoid or reduce impacts and mitigation measures also be incorporated into the Project's conditions of approval. Additionally, the commenter states the City of Seal Beach reserves the right to provide comments on the MMRP following its release. The City acknowledges that all mitigation measures identified in the Draft EIR will be incorporated into the MMRP and that project design features that reduce environmental impacts will be incorporated as conditions of approval. The MMRP will identify all Project Design Features and Mitigation Measures incorporated into the Project and is incorporated as *Attachment O* of this Final EIR. Pursuant to CEQA Guidelines Section 15088, the Final EIR will be distributed to the City of Seal Beach a minimum of 10-days prior to the City's hearing on the Project.

D-46 The commenter states that the Draft EIR should disclose that the proposed water infrastructure is not in place and is contingent upon receiving a Seal Beach City Council-approved agreement with the proposed water purveyor. This comment is duplicative of Comment D-4; refer to Response to Comment D-4.

D-47 The commenter states that the Draft EIR should disclose that Seal Beach sanitary sewer service is contingent upon receiving a Seal Beach City Council-approved agreement for service outside the Seal Beach service area boundaries and discussion of alternatives should be provided should the agreement not be approved. This comment is duplicative of Comment D-5; refer to Response to Comment D-5.

D-48 The commenter states that the Draft EIR should disclose the proposed alternative drains into Seal Beach right-of-way, which is contingent upon approval from the City of Seal Beach. This comment is duplicative of Comment D-6; refer to Response to Comment D-6.

D-49 The commenter requests confirmation of whether Golden State Water Company (GSWC) will be expanding water facilities to serve the Project site under a separate environmental assessment. GSWC has indicated that it has adequate water supply to serve the Project site (see *Attachment K, Will-Serve Letters*). The expansion of water infrastructure is identified as part

DRAFT

of the Project and analyzed in the Draft EIR. As described in Section 3.0, *Project Description*, of the Draft EIR, GSWC would provide water service to the Project. Domestic water lines would be provided as shown in Figure 3-23, *Utility Plan*, of the Draft EIR, and include a 1,200 feet watermain extension between the eastern driveway and the existing GSWC watermain at the intersection of Lunar and Lampson. The Draft EIR analyzed impacts associated with the connection to GSWC infrastructure and the extension of the 1,200 foot off-site watermain. Potential impacts related to installation of the off-site water main are addressed under construction-related impacts throughout the Draft EIR, and no significant impacts have been identified. Therefore, a separate environmental assessment is not required or anticipated to provide water service to the Project.

D-50 The commenter makes concluding remarks and the City acknowledges Iris Lee as the contact person for the City of Seal Beach. Thus, no further response is required.

RE: DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE 4665 LAMPSON RESIDENTIAL PROJECT DATED APRIL 24, 2024, STATE CLEARINGHOUSE NUMBER 2022090476

Dear Tom Oliver,

The Department of Toxic Substances Control (DTSC) received a Draft Environmental Impact Report (DEIR) for the 4665 Lampson Residential Project (Project). The Project would demolish the existing office building and surface parking lot on the 12.3-acre property and redevelop the Project site with 246 residential units consisting of a variety of different product types. These housing types include 55 single family detached homes, 114 townhomes, and 77 for rent affordable multi-family apartment homes. After reviewing the project, DTSC recommends and requests consideration of the following comments: E-1

1. Based on the Limited Phase II Environmental Site Assessment (ESA), there was no evidence of a significant release of potential chemicals of E-2

DRAFT

concern to the subsurface in the area investigated, which included in the diesel above ground storage tank (AST), elevator equipment room, and parking lot. Although low levels of total petroleum hydrocarbons (TPHd), lead and select organochlorine pesticides (OCPs) were detected in Site soils, the concentrations were well below residential screening levels, and thus, are de minimis in nature and do not warrant further investigation or mitigation.

Also, the Phase II ESA states: "Although the detected concentrations of arsenic found at the Site exceed the residential screening level, no levels are less than the DTSC upper bound background concentration of 12 mg/kg. Therefore, the on-site detections of arsenic are de minimis in nature and do not warrant further investigation or mitigation. Based on the results of the assessment activities detailed herein, the potential chemicals of concern detected in soil in the areas assessed (e.g., diesel AST, elevator equipment room, parking lot release area, and Site wide historical agricultural use) are not indicative of a significant subsurface chemical release has occurred. The detected concentrations found during this investigation are considered to be de minimis in nature for the proposed residential redevelopment, and it is EFI Global's opinion that no further assessment is warranted at this time with respect to the RECs (recognized environmental conditions) identified."

Since potential chemicals of concerns were found in the Phase II ESA and the detected concentrations of arsenic found at the site exceed the residential screening level and remain in excess of DTSC's upper bound background concentration of 12 mg/kg, DTSC recommends that all constituent concentrations meet screening levels in accordance with DTSC's Preliminary Endangerment Assessment (PEA) Guidance Manual. If the constituent concentrations do not meet screening levels in accordance with DTSC guidance, the following comments are also recommended:

E-2
(CONT.)

DRAFT

2. The City of Los Alamitos enter into DTSC's Standard Voluntary Agreement (SVA) program or seek oversight with your Certified Local Agency - Orange County Health Care Agency - so a proper evaluation of the Project is completed. If entering into an SVA with DTSC, the FLUXX portal link is provided and the page also has a link to the Fluxx User Guide that can help you navigate the system. You will need to create a new profile and once in the system, click "Start a Request for Lead Agency Oversight Application." DTSC recommends that once the SVA is signed, a Preliminary Endangerment Assessment Report (PEA Report) be submitted for DTSC review. The PEA Report shall summarize all existing data and provide an evaluation of the possible risk to current and future users of the site. If you have any questions about the application portal, please contact the DTSC Brownfield Coordinator Gregory Shaffer or contact the Application Portal Inbox. E-3

3. If buildings or other structures are to be demolished on any project sites included in the proposed project, surveys should be conducted for the presence of lead-based paints or products, mercury, asbestos containing materials, and polychlorinated biphenyl caulk. Removal, demolition, and disposal of any of the above-mentioned chemicals should be conducted in compliance with California environmental regulations and policies. In addition, sampling near current and/or former buildings should be conducted in accordance with DTSC's Preliminary Endagngerment Assessment (PEA) Guidance Manual. E-4

4. All imported soil and fill material should be tested to ensure any contaminants of concern are within DTSC's and U.S. Environmental Protection Agency (USEPA) Regional Screen Levels (RSLs) for the intended land use. To minimize the possibility of introducing contaminated soil and fill material there should be documentation of the origins of the soil or fill material and, if applicable, sampling be conducted to ensure that the imported soil and fill material meets screening levels outlined in the PEA for the intended land use. E-5

DRAFT

The soil sampling should include analysis based on the source of the fill and knowledge of the prior land use. Additional information can be found by visiting DTSC's Human and Ecological Risk Office (HERO) webpage.

E-5 (CONT.)

DTSC appreciates the opportunity to comment on the DEIR for the Project. Thank you for your assistance in protecting California's people and environment from the harmful effects of toxic substances. If you have any questions or would like any clarification on DTSC's comments, please respond to this letter or via email for additional guidance.

Responses to Comment E

Department of Toxic Substances Control (DTSC), dated June 5, 2024.

E-1 The commenter provides introductory remarks and summarizes the Project. Responses to comments are provided in responses to Comments E-1 to E-6, below; thus, no further response is required.

E-2 The commenter summarizes results from the Phase II Environmental Site Assessment (ESA; *Technical Appendix H2* of the Draft EIR), which stated that there was no evidence of a significant release of potential chemicals of concern to the subsurface in the area investigated. Although there were low levels of total petroleum hydrocarbon, lead and select organochlorine pesticides detected in the soil, the concentrations were well below residential screening levels, and thus do not warrant further investigation. The commenter recommends that all constituent concentrations meet screening levels in accordance with DTSC's Preliminary Endangerment Assessment (PEA) Guidance Manual since the detected arsenic remains in excess of DTSC's upper bound background concentration of 12 mg/kg.

As to the comment regarding arsenic concentrations, this comment references text in the original Phase II ESA that included a typographical error. The Phase II ESA (see Section 4.0 and *Attachment C1* to this Final EIR) has been updated to correct this typographical error and to more accurately reflect the fact that the detected arsenic concentrations found at the Project site are all *below the upper bound concentration of 12 mg/kg*, and thus, they are trace or background concentrations that do not warrant further investigation or mitigation. The corrected Phase II ESA now reads: "Although the detected concentrations of arsenic found at the site exceed the residential screening level, all levels are less than the DTSC upper bound background concentration of 12 mg/kg."

E-3 The commenter provides information on procedures related to DTSC's Standard Voluntary Agreement (SVA) program and PEA Report. Refer to Response to Comment E-2 related to the constituent concentrations meeting screening levels in accordance with DTSC guidance. Due to the change made in the Phase II ESA (see Section 4.0 and *Attachment C1* to this Final EIR), all constituent concentrations are lower than the screening levels. As such, the commenter's recommendation to enter into DTSC's Standard Voluntary Agreement program or seek oversight with the Certified Local Agency – Orange County Health Care Agency is not required.

E-4 The commenter states that lead-based paints (LBP) or products, mercury, asbestos containing materials (ACM), and polychlorinated biphenyl (PCB) caulk surveys should be conducted if there are buildings or structures that will be demolished. Additionally, removal, demolition, and disposal should be conducted in compliance with California environmental regulations and policies. As discussed in Section 4.8, *Hazards and Hazardous Materials*, of the Draft EIR, the use of asbestos-containing materials (ACM, a known carcinogen) and lead-based paint (LBP)

DRAFT

(a known toxic), both of which are considered hazardous materials, was a common building construction method prior to 1978 and may be present in the existing building. All proposed demolition activities would be required to comply with all applicable federal, State, and local hazardous materials regulation, which includes mandatory provisions for the safe removal, transport, and disposal of PCBs, ACMs and LBP. Additionally, the Project is required to comply with South Coast AQMD Rule 1403 (Asbestos Emissions) and Title 17 of the CCR, Division 1, Chapter 8: Accreditation, Certification, and Work Practices for Lead-Based Paint and Lead Hazards applies. Compliance with the above regulatory requirements would ensure that removal of ACMs or LBPs would not result in a significant hazard to the public or the environment through routine transport, use, or disposal of hazardous materials, and impacts would be less than significant (refer to Page 4.8-16 of the Draft EIR).

Moreover, EFI prepared a Phase II ESA for the Project site dated September 22, 2022 based on a geological survey and soil sampling conducted on August 16, 2022. Select soil samples were collected and analyzed for Total Petroleum Hydrocarbons (TPH) as gasoline (TPHg), TPH as diesel (TPHd), TPH as oil (TPHo), volatile organic compounds (VOCs), PCBs, organochlorine pesticides (OCPs), arsenic, and lead (Pb). Analytical results for PCBs indicated concentrations were not detected above the laboratory reporting limits in any of the soil samples analyzed (refer to Page 4.8-5 of the Draft EIR). However, caulk containing PCBs were used in buildings in the 1950s through the 1970s and may be present in the existing building. Therefore, the Project would be required to comply with all applicable federal, State, and local hazardous materials regulation, which includes mandatory provisions for the safe removal, transport, and disposal of PCBs including Title 40, Code of Federal Regulations, Part 761.

There is also a potential for mercury containing products at the existing buildings. When a mercury-containing product breaks and the mercury is released, the exposed mercury can evaporate and become an invisible, odorless toxic vapor. Mercury-containing products exhibit hazardous characteristics as described in the California Code of Regulations, Title 22, chapter 11 and are classified as a type of hazardous waste called “universal waste.” Universal wastes are hazardous wastes that pose a lower immediate risk to people and the environment when handled properly. Due to this lower risk, universal wastes can be handled and transported under more relaxed rules compared to other hazardous wastes.[4] The Project would be required to comply with all applicable federal, State, and local hazardous materials regulations including California Health and Safety Code Section 25214.8.16 to prevent mercury releases.

DRAFT

[4] *https://dtsc.ca.gov/toxics-in-products/mercury-waste/*

Pursuant to the commenter's request, Page 4.8-16 of the Draft EIR has been revised as shown in Section 4.0 of this Final EIR to include the above discussion regarding the potential of PCBs and mercury.

E-5 The commenter states that all imported soil and fill material should be tested to ensure any contaminants of concern are within DTSC's and U.S. Environmental Protection Agency (USEPA) Regional Screening Levels (RSLs) for the intended land use. As stated in Section 3.0, *Project Description*, of the Draft EIR, approximately 6,280 cubic yards of soil import would be required. As a condition of approval, prior to importation onsite, the Project Applicant shall submit evidence to the Planning Department that all imported fill materials have been tested and meet the regulatory screening levels. Thus, no further response is required.

E-6 The commenter provides concluding remarks. The City acknowledges Tamara Purvis as the contact person for DTSC for the Project. Thus, no further response is required.

Subject: Notice of Availability (NOA) of a Draft Environmental Impact Report – 4665 Lampson Avenue Project

Dear Mr. Oliver:

The Orange County Transportation Authority (OCTA) appreciates the opportunity to review and comment on the 4665 Lampson Avenue Project. The following comments are provided for you:

- On page 2-11, Section 2.5.9 (Transportation), please remove any reference of the project area being served by OCTA Routes 42 and 123. Neither route has stops within 0.5 miles the project area, the OCTA transit accessibility standard. F-1
- On page 4.10-27, Policy 4.7 (Transit stops), please note that the nearest OCTA bus stop from the project site is 1.2 miles for Route 123 (located at the intersection of Valley View Street and Lampson Avenue) and 1.6 miles for Route 42 (located at the intersection of Seal Beach Boulevard and Lampson Avenue). Please revise the document to reflect the correct distances. F-2
- On page 4.15-1, Section B (Existing Transit Services), please remove any mention of the project site being served by OCTA bus routes. OCTA considers properties within a 0.5-mile radius of a bus stop to be served by that stop/route. The nearest OCTA routes (42, 56, 123) have stops that are between 1.2 and 1.6 miles from the project site, which is greater than the 0.5-mile OCTA transit accessibility standard. Therefore, the project site is not served by these routes. F-3
- On page 4.15-13, in the table, Policy 4.7 (Transit stops), the nearest stop for Route 123 is 1.2 miles away from the project site, and the nearest stop for Route 42 is 1.6 miles away from the project site. Please revise to reflect the correct distances. F-4

We also have the following comment for Appendix N1 (Traffic Analysis): F-5

Orange County Transportation Authority

DRAFT

Orange County Transportation Authority
550 South Main Street / P.O Box 14184 / Orange / California 92863-1584 / (714) 560-OCTA (6282)

Responses to Comment F

Orange County Transporation Authority (OCTA), dated June 5, 2024.

F-1 The commenter requests that the Draft EIR remove any reference of the Project area being served by OCTA Routes 42 and 123 and that neither route has stops within 0.5 miles the project area, the OCTA transit accessibility standard. Pursuant to the commenter's request, Page 2-11 of the Draft EIR has been revised as shown below and in Section 4.0 of this Final EIR.

~~The Project site is currently served by~~ Orange County Transit Authority (OCTA) ~~with~~ currently provides bus service along Seal Beach Boulevard, Valley View Street, and Lampson Avenue (east of Valley View Street). ~~The Project site is served by OCTA bus routes 42 and 123.~~ The nearest OCTA bus stops to the Project site are Route 123, located at the intersection of Valley View Street and Lampson Avenue (approximately 1.2 miles from the Project site) and Route 42, located at the intersection of Seal Beach Boulevard and Lampson Avenue (approximately 1.6 miles from the Project site).

F-2 The commenter provides the distance to the nearest OCTA bus stops and requests revisions to the Draft EIR to reflect the correct distances. Pursuant to the commenter's request, Page 4.10-27 of the Draft EIR has been revised as shown below and in Section 4.0 of this Final EIR.

Policy 4.7 **Transit stops.** Improve and maintain safe, clean, comfortable, well-lit, and rider friendly transit stops that are well marked and visible to motorists.	**Not Applicable.** The nearest OCTA Route 123 bus stop from the Project site is approximately 1.2~~1.6~~ miles walking distance at the intersection of Valley View Street and Lampson~~Champman~~ Avenue. The nearest OCTA Route 42 bus stop from the Project site is approximately 1.6~~3.5~~ miles walking distance at the intersection of Seal Beach Boulevard and Lampson Avenue.~~Katella Avenue and Los Alamitos Boulevard~~ Therefore, this policy is not applicable to the Project.

F-3 The commenter requests to removal of any mention of the Project site being served by OCTA bus routes. Pursuant to the commenter's request, Page 4.15-1 of the Draft EIR has been revised as shown below and in Section 4.0 of this Final EIR.

As shown in Figure 4.15-1, *Existing Transit Routes*, ~~the Project site is currently served by the~~ Orange County Transportation Authority (OCTA) ~~with~~ currently provides bus service along Seal Beach Boulevard, Valley View Street, and Lampson Avenue (east of Valley View Street). OCTA route 42 runs along Seal Beach Boulevard and serves Seal Beach to Orange with an

DRAFT

existing stop provided at the intersection of Seal Beach Boulevard and Lampson Avenue ~~Katella Avenue and Los Alamitos Boulevard~~. The existing stop is approximately 1.6~~3.5~~ miles ~~walking distance~~ from the Project site. Bus service frequency is approximately 20-minute intervals during the peak commute hours and 40 minutes during other times of the day during a typical weekday. OCTA Route 123 serves the city of Anaheim to city of Huntington Beach via Malvern Avenue, Valley View Street, and Bolsa Chica. There are existing stops along Valley View Street with an existing stop at Chapman Avenue. The nearest OCTA Route 123 existing stop is located approximately 1.2~~1.6~~ miles ~~walking distance~~ from the Project site to the intersection of Lampson~~Champman~~ Avenue and Valley View Street. Bus service frequency is approximately 60-minute intervals on a typical weekday for OCTA Route 123.

F-4 The commenter requests revisions to the Draft EIR to reflect the correct distances of the Project site's proximity to the nearest bus stops. Pursuant to the commenter's request, Page 4.15-13 of the Draft EIR has been revised as shown below and in Section 4.0 of this Final EIR.

Policy 4.7 **Transit stops.** Improve and maintain safe, clean, comfortable, well-lit, and rider friendly transit stops that are well marked and visible to motorists.	**Not Applicable.** The nearest OCTA Route 123 bus stop from the Project site is approximately 1.2~~1.6~~ miles walking distance at the intersection of Valley View Street and Lampson~~Champman~~ Avenue. The nearest OCTA Route 42 bus stop from the Project site is approximately 1.6~~3.5~~ miles walking distance at the intersection of Seal Beach Boulevard and Lampson Avenue.~~Katella Avenue and Los Alamitos Boulevard~~ Therefore, this policy is not applicable to the Project.

F-5 The commenter requests removal of any reference of the Project area being served by OCTA in the Project's Traffic Analysis (*Technical Appendix N1* of the Draft EIR). Pursuant to the commenter's request, the Project's Traffic Analysis has been updated accordingly and revisions have been included in Section 4.0 and *Attachment G* to this Final EIR.

F-6 The commenter provides concluding remarks The City acknowledges Dan Phu as the contact person for OCTA. Thus, no further response is required.

IRONSCALES couldn't recognize this email as this is the first time you received an email from this sender tankwh@gmail.com

I strongly approve this project site to build more housing on Lampson. Selfish NIMBYs who want to protect their property values at the expense of limiting housing availability for millenials and gen z are absolutely disgusting and are parasitic to our community. There is a culture of fear mongering and hatred of "poor people" who will move into losal and the boomers who live here use that to stop necessary development and modernization for our community.

Boomers dont get to ruin the future of young people. Millenials are the first generation who are poorer than their parents. Boomers have already ruined so much - the environment, the economy, and now housing. Boomers have lived lavish and excessive lives.

Build housing and let young people have a chance at living a good life!!!

Hello,

Please convey to those who are making the decisions:

Of the items listed regarding concerns and comments about this project, this is the one that caught my most attention:

2-1

"7. This area is a lovely and relatively quiet community where most households are families where we feel safe and it's not congested by traffic, pollution or too much housing squeezed into a small area.

2-2

This project causes a HUGE loss to the hundreds of families calling College Park East and the surrounding area “home”. **Only a win for the developer."**

Please listen to the COMMUNITY, not the developer.

Thank you.

2-3

Kindly,
Lelisa

Rossmoor resident

Responses to Comment 3

Balderama, Lelisa, dated April 30, 2024.

3-1 The commenter expresses concerns related to ALUC and Caltrans Division of Aeronautics findings related to the Project site. Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*.

3-2 The commenter opposes the Project based on the ALUC and Caltrans Division of Aeronautics findings, increased traffic and pollution. The City acknowledges the commenter's concerns and will be forwarded to decision makers.

Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns. As discussed in Section 4.2, *Air Quality*, of the Draft EIR, the Project would not exceed the South Coast AQMD localized significance thresholds for assessing localized health impacts from criteria air pollutants during construction. Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations during Project construction. Further, Project traffic would not create or result in a CO "hotspot." Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations due to the Project, and impacts would be less than significant (refer to Pages 4.2-26 through 4.2-29 of the Draft EIR).

3-3 The commenter expresses concerns with ALUC and Caltrans Division of Aeronautics findings as to the Project site. This comment is duplicative of Comment 3-1; refer to Response to Comment 3-1 and refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*.

3-4 The commenter opposes the Project due to increased traffic and pollution. This comment is duplicative of Comment 3-2; refer to Response to Comment 3-2.

Comment Letter 4

May 13, 2024

Tom Oliver, Associate Planner
City of Los Alamitos
Planning Department
3191 Katella Avenue
Los Alamitos, CA 90720

Mr. Oliver,

I have been a resident of Seal Beach for 38 years. I live in College Park East (CPE) which is the neighborhood right across the street from the proposed Lampson Park Place development. I strongly oppose the development of this project. There is a shortage of housing in California but growth should not negatively impact the quality of life of current residents. If this plan is approved, the quality of life for the residents in my neighborhood and the surrounding neighborhoods, will forever change for the worse. These are some of the specific areas of concern I have: 4-1

#1 TRAFFIC

Your *Notice of Availability of a Draft Environmental Impact Report* states "impacts would remain significant and unavoidable." The residents of CPE, Parkewood-Los Alamitos, West Garden Grove and anyone else who must travel on Lampson Avenue is already well aware of the traffic problems we currently face. The additional traffic from Lampson Park Place, and possibly the Old Ranch Golf Course project, will create massive traffic delays and more accidents. The stretch of Lampson Avenue between Heather Street and Candleberry Avenue is called "Dead Man's Curve" due to the numerous accidents, some with fatalities, that have occurred there. Very recently, a driver lost control and flipped her car at Lampson and Rose Street. The intersection at Lampson and Manley, just east of your proposed development, has also been the scene of accidents, some resulting in death. Lampson Avenue is the only way to get anywhere because the JFTB is to the north and the Naval Weapons Station is to the south! 4-2

Currently, cars on Lampson waiting to turn north onto Seal Beach Boulevard during peak hours are sometimes backed up all the way to Basswood Avenue. Cars

DRAFT

heading east on Lampson from Seal Beach Boulevard also experience traffic. When there are large events with many cars arriving at the Old Ranch Golf Course at the same time, the left turn lane into that facility cannot accommodate all the cars and they back up and impede the smooth flow of traffic. Cars traveling in the left lane must suddenly stop or quickly change lanes to avoid collisions. This creates very hazardous situations. Similarly, drivers turning left into the Lampson Park Place neighborhood could face similar issues.

The addition of another light between Heather and Rose Streets will also affect the flow of traffic. The homes in CPE that back up to Lampson at that signal will be subjected to noise and light pollution which they currently do not experience and certainly never expected to when they purchased their homes.

4-2 (CONT.)

#2 – HYDROLOGY REPORT

The Hydrology report states that your representatives did converse with City of Seal Beach staff so you should be aware of the major flooding issues CPE experiences from Heather Street all the way to the very west end of the tract. This problem has existed since the neighborhood's inception due to improper grading by the developer. Over the years, and even more so during these most recent storms in January and February of this year, flooding has caused significant distress and damage to property. Many cars were flooded and sustained electrical damage for a total loss. The flood waters went into garages and even into homes. Some sunken living rooms were substantially flooded and residents had to worry about mold and how to thoroughly dry the walls. People could not even leave their homes. Some residents with large trucks had to rescue people who could not get home because their cars stalled in the deep waters. One such truck owner helped a mother whose car stalled on Ironwood when driving her children home from school. He pulled the children out of her car windows, secured them in his truck, and drove over the curb and onto the grass to deliver them safely to their front door. The storm drain at Elder and Ironwood had no grate and the water was so deep that it formed a vortex which could have easily swept a child away!

4-3

According to the 2008 and 2019 studies done for the City of Seal Beach by AKM Consulting Engineers, they stated that in addition to the inadequate drainage capabilities in CPE which hinder our storm water runoff from making it over to the Old Ranch Golf Course, when the lake has reached its capacity, the storm water

DRAFT

flows back into our neighborhood creating an even bigger problem. Your Hydrology report states that the stormwater from your project will also flow through the JFTB to the Old Ranch Country Club. If the Golf Course cannot currently accommodate the stormwater from CPE, how will it be able to take even more from your proposed development? Or will your project's runoff make it to the golf course first, causing even less water from CPE making it onto the golf course? That would create an even more treacherous situation with deeper flood waters on our affected streets.

Your report further states that if the JFTB does not allow stormwater flows from your project to outlet to their property, then the alternate design is to outlet the flows onto Lampson Avenue near Heather Street. Your report even states that the outlet pipe could clog and create emergency overflow. In a heavy storm, the runoff could be so deep on Lampson that it rises above the curb and floods the backyards of the homes on Ironwood and even further exacerbates the flooding on Ironwood. As you are aware, the City of Seal Beach currently has no timeline to install any capital improvements to alleviate the flooding in CPE.

4-3 (CONT.)

#3 – SANITARY SEWER ANALYSIS

The City of Seal Beach is in the process of proposing a Water/Sewer rate increase. The original proposal was for a 140% increase over the next five years. During the presentation, Staff stated that the increase was necessary as many of the pipes in the city are over 100 years old and others may have significant deterioration. Many residents complained of the huge rate increase and the process is currently on hold.

Your Sanitary Sewer Analysis concludes that the proposed depth of flow from your project will not impact the existing surrounding sanitary sewer systems. It further states that all three sewer mains at the monitored locations will have d/D levels under 0.5. It states that the manhole on Elder, MH-A25, has an existing d/D of 0.3958 and at the completion of the project will have d/D of 0.441 which is still under 0.5. This would be a 10.24% increase which could be significant. I live two houses away from MH A-25 on Elder Avenue. Years ago, the sewer truck would come regularly to clear the pipe in that manhole.

4-4

DRAFT

During the recent storms in January and February, 2024, we witnessed bubbles coming out of the manholes on Elder Street and Ironwood Avenue. Research shows that excessive rain can cause a catastrophe. The pressure from a blockage in the sewer line, amplified by the sudden influx of water, can cause sewer lines to crack and even burst! The increase of sewage from your development added to our already deteriorating pipes could cause very serious and unpleasant problems which would directly affect our section of the neighborhood.

4-4 (CONT.)

OTHER ISSUES

My final comments are in regards to the **Airport Land Use Compatibility Assessment** and the **Noise Study** stating that the proposed project is deemed within the noise limits and will not be susceptible to aircraft accidents. Speaking from experience, the noise from the various aircraft at the JFTB can be extremely loud at times. Helicopter training drills involve takeoffs and landings which involve circling around in a pattern repeatedly for the entire day. When the huge C-5 takes off from the base, we can hear the powerful engine revving up and the noise is so loud that it causes our windows to rattle and house to shake as it slowly makes its ascent over our houses. In the summer, many of the aircraft that participate in the Huntington Beach Air Show take off and land at the JFTB. Yes, it is exciting to see the jets but many people and animals are in distress during those four days. Even if your prospective buyers are fully informed before buying a home in your development, they will be shocked at just how loud and how much activity they will be exposed to and your city will receive complaints.

4-5

Thank you for taking my comments into consideration.

Susan Barembaum
4273 Elder Avenue
Seal Beach
College Park East
susanbarembaum@yahoo.com

DRAFT

Responses to Comment 4

Barembaum, Susan, dated May 13, 2024.

4-1 The commenter expresses general opposition to the Project. The commenter acknowledges the need for housing in California but states that growth should not negatively impact the quality of life of current residents. The commenter expresses concerns related to specific environmental issues related to traffic, hydrology, sanitary sewer, airport compatibility and noise addressed in Response to Comments 4-2 through 4-5, below. Please note that "quality of life" is not considered an impact under CEQA. However, comments related to quality of life are noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

4-2 The commenter expresses concerns with traffic stating that transportation impacts would remain significant and unavoidable, and the project would create massive traffic delays and more accidents. The commenter provides an example of an accident that occurred at Lampson and Rose Street and provides examples of congestion in the area. The commenter also states that the addition of the proposed traffic signal will affect the flow of traffic and will subject residents to noise and light pollution. Please refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns related to congestion, and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, related to accidents and safety. The Project no longer proposes installation of a traffic signal. A Safety Evaluation was prepared to confirm that the Project would have no safety impacts on public roadways and Project access points (see Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, and *Attachment H* of this Final EIR). The Safety Evaluation further confirms the analysis and determination in the Transportation Section (Section 4.15) of the Draft EIR that the Project would not result in a safety impact or substantially increase hazards due to a geometric design feature.

4-3 The commenter expresses concerns with existing flooding issues in the area and provides examples of recent flooding events. The commenter references 2008 and 2029 studies done for the City of Seal Beach by AKM Consulting Engineers, which confirms inadequate drainage within the residential area of College Park East (CPE). The commenter expresses concern that both of the Project's storm drainage alternates will exacerbate existing flooding conditions, considering also that the City of Seal Beach currently has no timeline to install capital improvements to alleviate flooding in CPE. Please refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, for hydrology concerns. Per Master Response 2.1.4, flooding will not be an issue because the Project's storm drainage infrastructure would adequately detain 100-year flows, discharge detained flows at rate that do not exceed existing flows, and the Project's finish floor elevations would be at least 1 foot above the water surface elevation.

DRAFT

4-4 The commenter states the City of Seal Beach's process of proposing a Water/Sewer rate increase due to the age of existing sewer pipes is currently on hold due to residents' complaints. The commenter also summarizes the results of the Project's Sanitary Sewer Analysis (*Technical Appendix O* of the Draft EIR) and expresses concern with regular sewer maintenance, the amount of increase to Manhole A-25 on Elder Avenue as well as the effect of flooding on sewer facilities. Refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, related to sanitary sewer impacts. Per Master Response 2.1.4, wastewater volumes produced by the proposed development would not significantly impact or exceed the existing sewer capacity in the public system, and that the existing sewer system has adequate capacity for the proposed development.

4-5 The commenter expresses concerns with the ALUC assessment and noise study regarding noise impacts from the JFTB. The commenter provides examples of her experience with extremely loud noise from takeoffs and landings at JFTB. Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*.

DRAFT

Comment Letter 5

From: Maria Beaini
To: Tom Oliver
Subject: Written Comment from Los Alamitos Resident
Date: Monday, April 29, 2024 6:59:47 PM

Attention Tom Oliver-

As a resident and owner of the property in the beautiful city of Los Alamitos it is disheartening to hear about your site development

The negative effects of traffic, noise, and pollution will be hazardous to our community. 5-1

Please do not develop your proposed community of 246 residential units. Your development will add about one thousand vehicles on our two lane street of Lampson which will be devastating for current residents.

We will have a community polluted with vehicles and traffic jams resulting in loss of property values. 5-2

Thank you for your time,
Maria Beaini
Los Alamitos Home owner

Responses to Comment 5

Beaini, Maria, dated April 19, 2024.

5-1 The commenter expresses opposition to the Project and states that traffic, noise, and pollution will be hazardous to the community. The commenter does not provide any specific comments on the adequacy of the Draft EIR. However, these comments are noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project.

Comment Letter 6

Comments on Draft Environmental Impact Report for the 4665 Lampson Avenue Project

James Biery <jamesbiery@yahoo.com>
Mon 6/10/2024 12:48 PM

To:Tom Oliver <Toliver@cityoflosalamitos.org>
Cc:James Biery <jamesbiery@yahoo.com>

1. The project is adjacent to Arbor Park is owned by the US Army and overseen by the Army as well as the Joint Forces Training Base(JRTB) Installation Commander. Any modifications and access to the Arbor Park site must be approved by them. This includes taking down or moving fencing and adding a 10 foot addition as proposed in the Draft EIR. The BASE has not approved this change and may not approve it.
This information must be included in the EIR documents. In addition, there must be documentation of approval of changes to the site by the referenced parties. 6-1
2. The city of Seal Beach has a lease for the current Arbor Park site which also must be included and referenced in the documents and related studies. 6-2
3. Arbor Park operates only as permitted by the Army and the Base on a dawn to dusk basis. This should be included in the report.
4. Gate modifications, fence changes, and direct access from the proposed development into the Arbor Park have not been approved by the Army and the Base. The City of Seal Beach or Los Alamitos or the Developer can not make these changes under the current lease to Seal Beach. 6-3
5, The buildings at 4665 are currently supplied with domestic water and sewer by the City of Seal Beach. There is a proposal to change the water supplier for the project to Golden State Water. It is not clear who will supply water for Arbor Park. This should be clarified and described fully as well as the impacts from construction of new water mains. Seal Beach would continue to provide sewer service in Lampson Avenue. The City of Seal Beach uses water use to calculate sewer charges. The water use information will be need to transferred to Seal Beach to determine sewer charges.. 6-4
6. The storm drainage from the property as described in the report will drain into several areas including underground on-site storage, connection into a ditch which runs into the JFTB and then into the Old Ranch Property, and also Lampson Avenue. The impact and capacity of the ditch and the Old Ranch Property is not described. The overflow of water from Lampson Avenue into Heather Street is also not described or analyzed. Heather Street then feeds into Ironwood Avenue which is subject to constant overflow already. This project drainage will impact College Park East. This was not analyzed. 6-5
7. A new traffic signal is now proposed on Lampson Avenue, but is now supposed to be 600 feet west of Rose. This should be verified and plans updated. In addition, the impact of this signal and the adding of this signal to the City of Seal Beach network must be described and analyzed. 6-6

DRAFT

Responses to Comment 6

Biery, James, dated June 10, 2024.

6-1 The commenter states that the United States Army must approve any modifications and access to Arbor Park and has not approved this change. Project Applicant proposes to dedicate or grant an easement for the northern 10 feet of property abutting Arbor Park and Arbor Dog Park to the City of Los Alamitos with authority over the two parks. The City acknowledges that any improvements to Arbor Park, owned by JFTB, would require JFTB approval, which is not guaranteed. Because the Project does not include any improvements to Arbor Park, the Draft EIR analysis does not assume any improvements to Arbor Park as a result of the dedication.

6-2 The commenter states that the City of Seal Beach has a lease for the current Arbor Park and must be included and referenced in the EIR documents and related studies. The commenter also states that Arbor Park operates only as permitted by the Army and JFTB on a dawn to dusk basis and should be included in the report. The Draft EIR states that Arbor Park and Dog Park are currently leased by the City of Seal Beach from the JFTB for its residents, although the two parks are within the jurisdiction of Los Alamitos (see Page 4.14-4 of the Draft EIR). Arbor Park operations are discussed on Pages 4.14-4 and 4.14-5 of the Draft EIR.

6-3 The commenter states that gate modifications, fence changes, direct access from the Project site into Arbor Park have not been approved by the Army and the Base. The commenter states that the City of Seal Beach, Los Alamitos, or the Project cannot make the proposed changes under the current lease to Seal Beach. The Project is not proposing any gate/fencing improvements on JFTB property and on-site improvements do not require JFTB approval.

6-4 The commenter states that the Project site is currently supplied with domestic water and sewer from the City of Seal Beach. The commenter states that there is a proposal to change the water supplier to Golden State Water Company (GSWC) and inquires who will supply water for Arbor Park. The commenter states that the water supplier for Arbor Park should be clarified and described fully as well as impacts from construction of new water mains. The commenter states that water use will need to be provided to Seal Beach to determine sewer fees.

As stated in Section 4.17, *Utilities and Service Systems,* of the Draft EIR, GSWC provides potable water to the Project site. The Project site will be served by GWSC and infrastructure improvements have been analyzed in the Draft EIR (see the water supply will-serve letter provided as *Attachment K* of this Final EIR). Arbor Park is not part of the Project; therefore, there will be no changes to the water supply for the park as a result of the Project. Sewer service to the Project site would be provided by the City of Seal Beach, and the Project Applicant will be required to pay any applicable sewer connection fees.

6-5 The commenter states that the impact and capacity of the ditch that runs into the JFTB and Old Ranch property and overflow of water from Lampson Avenue into Heather Street is not described or analyzed. The commenter states that Project drainage impacts to College Park

DRAFT

East were not analyzed. Refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, for a detail discussion on the Project's proposed storm drain routes and impacts.

6-6 The commenter states that the proposed traffic signal should be verified and the plans should be updated along with an analysis of the proposed traffic signal impacts to the City of Seal Beach network. The Project no longer proposes installation of a traffic signal. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*.

Comment Letter 7

We need more housing

Rose Boland <roseboland7@gmail.com>

Thu 6/6/2024 6:17 PM

To:Tom Oliver <Toliver@cityoflosalamitos.org>

IRONSCALES couldn't recognize this email as this is the first time you received an email from this sender roseboland7@gmail.com

Mr. Oliver

I am a long-term (51-year) Rossmoor homeowner and I am fully in favor of the plan to build multiple new housing units on Lampson Avenue. The Joint Forces air base is already surrounded by housing on all sides. The argument that it would be unsafe to build more housing on Lampson because of the noise and possibility of aircraft accidents has no merit because thousands of people have been living in close proximity to the base for years and years without being adversely affected. Furthermore, I do not believe another environmental impact report is needed. I suspect that a lot of people opposed to new housing at this location fear an influx of low income and minority buyers. Yet if the public does not have the will to permit projects such as the Lampson development, we will never adequately address the problem of a lack of affordable housing in this part of Orange County.

7-1

John Boland

DRAFT

Responses to Comment 7

Boland, Rose, dated June 06, 2024.

7-1 The commenter expresses approval of the Project. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

Comment Letter 8

From: Barbara Boyer
To: Tom Oliver
Subject: Lampson Project
Date: Monday, May 20, 2024 6:54:19 AM

Mr. Oliver,

From my position as a resident that lives off of Lampson I oppose the project that is proposed in our community. The density proposed per acre is too high. The neighboring Parkview neighborhood is far less dense than what is being proposed and that should be taken into consideration when building.

The impact of the traffic and safety to this area is such a concern for me. We have seen fatalities and serious accidents living in College Park East. Lampson, Safety needs to be addressed for the families that drive in our area everyday. This proposal of a minimum of 500 vehicles added to Lampson is unreasonable for this community. I drive here everyday and there are concerns as it is now with visibility and bends in the road. When I think of the stress this will put on our Emergency Response and daily commute it does not make sense.

I am in disagreement with the proposal of this site.

Barbara Boyer

8-1

Responses to Comment 8

Boyer, Barbara, dated May 20, 2024.

8-1 The commenter opposes the Project and states the proposed density is too high. The commenter also expresses concerns with traffic, safety, and emergency response. The commenter does not provide any specific comments on the adequacy of the Draft EIR. However, these comments are noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project.

For reference, the Project is consistent with the City's General Plan and zoning designations for the site, including allowable density. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for pedestrian safety concerns. Refer to Master Response 2.1.7, *Emergency Vehicle Access*, and 2.1.8, *Public Safety* for emergency response concerns.

Comment Letter 9

EIR comments Lampson Place Project

Daniel Brandt <dbrandt660@gmail.com>
Mon 6/10/2024 4:38 PM
To:Tom Oliver <Toliver@cityoflosalamitos.org>

Good afternoon,

I am writing to you as a resident of the City of Seal Beach, who is concerned about the proposed project at 4665 Lampson Ave. My name is Daniel Brandt and I have lived at 3761 Oleander Street for the past 6 years. Our neighborhood in the Seal Beach subdivision is referred to as College Park East (CPE). This neighborhood is a quiet suburb of single family residences. My wife and I moved to CPE from Long Beach to get away from the busy city life and enjoy a neighborhood which is safe for my children to grow up in. We feel safe allowing my young children to ride their bikes in the street and play in our small, but quaint parks. 9-1

I have identified many potential negative impacts on the communities surrounding the proposed development at 4665 Lampson Ave. I will address those potential negative environmental impacts and require and answer to each of the following concerns:

I have reviewed the EIR. The glaring fact was that there was not enough parking for the density of the project. I was also concerned that with the increased number of vehicles that will be on Lampson Ave. has been a dangerous street and has been the scene of many serious/deadly traffic collisions. 9-2

I understand that Lampson Ave. is technically considered a "commercial corridor," but the reality is that this area is a residential area, surrounded by two golf courses. First, there is no street parking on Lampson Ave. Second, Lampson Ave. is a two-lane highway, with many curves and only one sidewalk. Lastly, the area of the proposal is not walkable or safe for bicyclists (little to non-existent bike lanes). Furthermore, Lampson Ave. is already overused and underdeveloped to handle additional vehicles.

According to the EIR, there will be a traffic signal installed on Lampson Ave. between Heather Ave. and Rose. This would be 3 traffic signals in a very short distance. I believe the insulation of another traffic signal will add additional noise for acceleration of engines, braking noise and light pollution to the residents living on Lampson Ave. between Heather And Rose. I would request a light and noise study regarding the impact on the residents with the insulation of a traffic signal. 9-3

Traffic 9-4

I believe there will be approximately 500 plus vehicles that will be utilized by residents of the project, based on the potential occupancy levels, which I will describe later in this email. I will specifically address the potential impacts the additional vehicles will have on Lampson Ave.

DRAFT

1) Lampson Ave. is a two-lane east/west asphalt street with a posted speed limit of 45 MPH. Between Seal Beach Blvd. and Valley View Ave. on Lampson Ave. there are six curves, which decreases visibility and braking reaction times for drivers approaching intersections on Lampson Ave. In the past, there have been many traffic collisions on Lampson Ave. between Seal Beach Blvd. and Valley View St. Many of these collisions have occurred at intersections with drivers making U-turns from westbound Lampson Ave. to eastbound Lampson Ave. In addition to the curves in the roadway, there are raised center medians with large trees and boulders, which also decreases visibility of drivers. Due to these trees and boulders, vehicles traveling eastbound Lampson Ave. approaching Candleberry Ave. and Heather Dr. have reduced visibility of vehicles traveling westbound on Lampson Ave. Based on the fact that vehicles exiting the project must make right turns out of the project, vehicles will be forced to make U-turns at either Basswood St., Candleberry Ave., and Heather Dr. if the drivers wants to travel to Valley View St. They will likely make U-turns at the three aforementioned intersections to drive towards Valley View St. Based on the speed limit of 45 MPH on Lampson Ave., the curves on the roadway, the reduced visibility from the boulders and trees in the center medians, I believe the added vehicles will be a safety hazard and will result in additional traffic collisions. I am requesting technical studies on the braking reaction times for vehicles traveling eastbound Lampson Ave. at the intersections of Basswood St., Candleberry Ave. and Heather Dr. I would like the study to address any additional traffic control signals devices or modifications needed to the existing devices.

9-4 (CONT.)

2) During the morning hours, traffic becomes heavily congested for vehicles traveling westbound Lampson Ave. at the intersection of Seal Beach Blvd. In this area, there are two dedicated left turn lanes and one dedicated right turn lane for vehicular traffic intending to turn northbound or southbound Seal Beach Blvd. Just north of Lampson Ave. at Seal Beach Blvd. is the 405 Freeway. With the additional traffic intending on traveling to the 405 freeway, I am concerned about the two-left turn lanes on Lampson Ave. at Seal Beach Blvd. will not have the capacity to handle the additional vehicles. There will be additional congestion in the two dedicated left turn lanes for vehicles traveling to the 405 Freeway.

9-5

Also, many of the residents of the development will have young kids, who will attend schools in the Los Alamitos Unified School District. The schools are located in the cities of either Rossmoor, Los Alamitos, or Seal Beach. In order to transport their children, they will need to travel westbound on Lampson Ave. towards Seal Beach Blvd. The new residents will increase the traffic congestion during the morning hours. Based on the fact that only one elementary school is located south of Lampson Ave. and the fact that the other five elementary schools, two middle schools, and one high school are located north of Lampson Ave., drivers will most likely travel northbound on Seal Beach Blvd. from Lampson Ave. The already congested one dedicated right turn lane westbound Lampson Ave. at Seal Beach Blvd. will become increasingly congested. I believe a second dedicated right turn lane should be added to handle the additional vehicles making right turns onto northbound Seal Beach Blvd. I am requesting a technical study on the phasing of the traffic control devices at Lampson Ave. and Seal Beach Blvd. and whether a right turn lane should be added.

9-6

Lastly, the vehicles stopped in the westbound lanes of Lampson Ave. in the right turn lane at Seal Beach Blvd. frequently back up to the intersection Lampson Ave. and Old Ranch Plaza. This

9-7

DRAFT

additional traffic would impact the intersection of Lampson Ave. and Old Ranch Plaza. I am requesting a technical traffic times study of the traffic control devices at the intersection of Old Ranch Plaza and Lampson Ave. and would like to know what changes or modifications to these traffic control devices would be.

9-7 (CONT.)

3) In the morning and afternoon hours, traffic from southbound Seal Beach Blvd. to eastbound Lampson Ave. is often congested. There are two dedicated left turn lanes at this location. I am concerned that traffic will be backed up to St. Cloud Dr. and cause a safety issue for those at the intersection of Seal Beach Blvd. and St. Cloud Dr. I do not believe the two dedicated left turn lanes are sufficient for the influx of vehicles wanting to make a left turn onto eastbound Lampson Ave. in the mornings and afternoons. I am requesting a study of the traffic control devices at southbound Seal Beach Blvd. at Lampson Ave. and additional lanes or modifications to the traffic control devices. I believe the two-way left turn lanes need to be lengthened to handle the additional vehicles making left turns.

9-8

4) Lampson Ave. is a two-lane highway in each direction between Seal Beach Blvd. and Valley View Dr. The marked bicycle lanes have a width of a few feet to non-existent in some locations. I am concerned that the additional traffic from the development will be a safety hazard for bicycles traveling on Lampson Ave. in the bicycle lane. I do not believe that the bicycle lanes are safe to use and should not be considered as a transportation source for new residents at the proposed development.

9-9

5) Lampson Ave. only has a narrow sidewalk on the south side of the street on Lampson Ave. between Seal Beach Blvd. and Tulip Dr., with the exception of a sidewalk on the north side in front of the proposed development. I am concerned about pedestrians crossing Lampson Ave. to walk to Heather Park in Seal Beach. The development does not have a planned park and Arbor Park does not have any play structures. It is likely that residents will use Heather Park as their primary recreational activity location. In addition, California's “jaywalking” law will change in January of 2023 and allow for people to cross any street, as long as they safely cross, without impeding vehicular traffic. I believe this will lead pedestrians crossing from the development to cross Lampson Ave. outside of the crosswalk. I am concerned that with the decreased visibility of drivers traveling eastbound Lampson Ave. due to the curves in the roadway, as well as the boulders and trees in the center medians, there will be an increase in pedestrian injuries /fatalities. I am requesting a study on the impact of foot traffic on Lampson Ave. due to the development. I also would like a sidewalk added to the north side of Lampson Ave. between Seal Beach Blvd. and Tulip Dr.

9-10

6) Valley View St. is a major arterial highway, which intersects with Lampson Ave. and this intersection is located east of the development. The eastbound Lanes of Lampson Ave. already become congested at the intersection. Eastbound Lampson Ave. at Valley View St. consist of two dedicated straight lanes for eastbound traffic and one dedicated left turn lane for vehicle traveling northbound Valley View St. Based on the additional added vehicle of the development, I am requesting a technical study on the traffic signal time and where additional traffic signal devices need to be added or modified. Also,

9-11

DRAFT

based on the additional traffic will add congestion to the number two lane of eastbound Lampson Ave. at Valley View St. Vehicle intending on traveling southbound Valley View St. in order to drive to the 405 Freeway / 22 Freeway will be slowed. I am requesting a dedicated right turn lane be added in this area for vehicles making a right turn from Lampson Ave. to southbound Valley View Dr.

9-11 (CONT.)

7) Vehicles leaving the project intending to travel to Valley View St. will take the quickest route possible. Many vehicles traveling eastbound Lampson Ave. towards Valley View St. currently make a right turn onto Blackmer St. and to cut through the residential neighborhood to reach Valley View St. The vehicles will exit on Cerulean Ave. or Tiffany Ave. (Garden Grove) to Valley View Dr. in order to bypass traffic congestion on eastbound Lampson Ave. at Valley View Dr. I believe the additional vehicles from the development will impact the safety of the following street in Garden Grove: Blackmer St., Trinette Ave., Cerulean Ave. Tunstall St., St. Mark St., and Tiffany Ave. Based on the additional vehicle cut through traffic, I am requesting a technical traffic study on the aforementioned streets in Garden Grove.

9-12

Parking

In addition to traffic issues, below I have broken down the potential occupancy of the apartment development, as well as the cluster/townhomes development.

9-13

Apartment Occupancy

	Quantity	Occupancy	Minimum	Maximum
77 total units				
(1) bedrooms	36	1-3 people	36	108
(2) bedrooms	20	2-5people	40	100
(3) bedrooms	21	3-7people	63	147
Total:	77		139	355

Possible registered occupants range is 139-355 residents in only 77 apartment units.

Lack of parking:

- 98 parking spots for between 139-355 residents.
- 30 assigned garages and 68 open parking spaces (first come, first serve)

Conclusion: The lack of parking will lead to residents and guests parking in CPE and surrounding communities. There is no parking on Lampson Ave.

Cluster and Town Homes Occupancy

DRAFT

Cluster Homes
55 total units/ 220 total bedrooms
Townhomes
114 units / 321 bedrooms

Lack of parking:

- 54 driveways
- 90 open parking spaces
- 338 garage spaces

Conclusion: There is no street parking in the proposed neighborhood and garages many times are not used for parking. Enforcement of using garages would have to be carried out by the planned HOA for the cluster and townhouse communities. HOA's are ineffective in enforcing people to keep their garages open for parking. Many of the vehicles will be parking in CPE and surrounding communities. The lack of parking will not impact the City of Los Alamitos, but will impact residents of Seal Beach (CPE).

I believe that based on the number of occupants in these developments and the limited amount of planned parking, there will be approximately 250 plus vehicles parked on CPE streets on a daily/nightly basis. This lack of parking will increase vehicular traffic on the streets of CPE. I would like a comprehensive study on the potential occupancy of both developments and how many vehicles would be associated with the residents. The additional vehicles parking in the streets nightly will have an impact on roadways in CPE. I would like a technical study of how the extra vehicular traffic from the development will cause wear and tear of the streets within CPE and Lampson Ave.

9-13 (CONT.)

Parks

The proposed development only has a 14,000 open area for recreational activities. There are no play structures proposed except for a "tot lot" in the apartment building Arbor Park has open fields and a dog park, but no play equipment. Without a park being built in the community, Heather Park across the street from the development will be heavily impacted. Heather Park is the most used park in CPE. The additional residents in the proposed development will primarily utilize Heather Park, making an aging and overused park more crowded. Due to the lack of parking in the development, many of those vehicles will take up the street parking surrounding Heather Park, restricting access to Heather Park by CPE residents.

Parking spaces at Arbor Park will also be used by residents and guests of the development rather than visitors of Arbor Park and the dog park.

I am requesting a technical study on the impact of parking at Arbor Park, which will be impacted by the development and restrict park use.

9-14

Public Service

The development is located in the City of Los Alamitos, which is located far away from the Los Alamitos Police Department. The distance from the Los Alamitos Police Department will decrease response time for the residents in the proposed development. In addition, the Los

9-15

DRAFT

Alamitos Police Department (LAPD) and the Seal Beach Police Department (SBPD) utilize the same radio frequency and respond to each other's calls for service. I believe that the Seal Beach Police Department will be utilized to respond to priority calls to the development in Los Alamitos and decrease the service level to Seal Beach residents. I am requesting a technical study of the impact the development will have on the SBPD services being deployed to the development to assist LAPD.

9-15 (CONT.)

Residents of the development will be parking on CPE streets in the daytime and overnight hours due to the lack of parking in the development. SBPD will have increased calls for service from residents regarding illegally parked vehicles. These increased service call volumes will decrease the capacity of SBPD to respond to priority calls in the City of Seal Beach. I would like a technical study on whether additional police officers will need to be hired by the Seal Beach Police Department.

9-16

The Orange County Fire Department (OCFA) services many cities in Orange County, including Los Alamitos, Rossmoor and Seal Beach. The closest OCFA station is at Seal Beach Blvd. and Beverly Manor (Station 48). This station primarily services Leisure World, which is a large senior community, which places a high demand on this fire station. With the addition of approximately 800 residents in the development, the services from OCFA will be strained and residents of CPE and the surrounding communities will be impacted. In addition, response time to Leisure World and their elderly population will be decreased because of the reallocation of service calls to the development. The next closest OCFA fire station is in Los Alamitos, which primarily services Los Alamitos and Rossmoor. I am requesting a technical study on the impact of the additional residents and the response times of the OCFA to the proposed developments resident's and residents of CPE and Leisure World.

9-17

Road impacts from heavy equipment

The City of Seal Beach prohibits trucks with a gross vehicle weight over 6,000 pounds from traveling on Lampson Ave., with limited exceptions. This prohibition is due to the damage heavy vehicles can do to the roadway. I would like this weight limit to be enforced during the demolition and construction of the proposed development. I would like a comprehensive study of how the developer would manage the demolition, removal of debris, and transportation of construction equipment and materials. This study should include the impact of the heavy equipment and loads will have to the integrity of Lampson Ave.

9-18

Construction Noise and road closure

The backyards of the homes on Ironwood Ave. directly across from the development will be severely impacted by construction noise and excess debris (dirt). The cinder block walls along Lampson Ave between the sidewalk and their residents are short and need to be reconstructed to decrease the impact of construction noise. The residents between 4509 Ironwood Ave. and 4701 Ironwood Ave. will be impacted and need to have their cinder block walls rebuild higher. I am also requesting a technical study on the construction decibel noise levels and the impact on the Ironwood Ave. resident's health. What will be in place to monitor the decibel levels during construction?

9-19

DRAFT

Due to the road closures during the construction there will be an increase in cut through traffic in the CPE neighborhood. Lampson is only a two lane highway situated between to major arterial highways (Valley View St. and Seal Beach Blvd.). If there is construction and lane closures on Lampson Ave. vehicles cut through CPE and Garden Grove to reach Valley View St. or Seal Beach Blvd.This cut through traffic will decrease the safety of CPE and Garden Grove residents. I would like a study on cut through traffic in CPE and Garden Grove from construction on Lampson Ave.

9-19 (CONT.)

Aesthetics

The front of the development directly off of Lampson Ave. will be two-stories high. Then all of the other residences will be three stories high. The affordable apartment building will be 3 stories high facing Lampson Ave. Based on the high of the construction and the low cinderblock walls of residents on Ironwood Ave. there will be several impacts to their environment.

One impact will be on the glare from the sun, which is overhead to the south in the afternoon. This will cause a bright glare from the reflection off the windows of the two and three story building of the development into the residents located between 4509 Ironwood Ave. and 4701 Ironwood Ave. I am requesting a technical study of the impact of the angle of the sun and the potential glare from the developments residents and the Ironwood Ave. residents.

Secondly, the height of the two and three-story construction of the development and the short cinder block walls will lead to a lack of privacy for the Ironwood Ave. residents. I am requesting a visual simulation from the residents between 4509 Ironwood Ave. and 4701 Ironwood Ave.

9-20

Rodents

During large construction project rodents are dispersed into nearby residential neighborhoods. What are the plans to control and abate the influx of rodents in the Los Alamitos (Parkewood), CPE, and Garden Grove neighborhoods? Rodent displacement occurs during the excavation portion of the development, construction phase, and at the completion of the construction. I am requesting a comprehensive study on the rodent population in the development and the impacts to the surrounding communities.

9-21

Wildlife

The Joint Forces Training Base (JFTB) is home to a large coyote and rabbit population. I am concerned about the development's impact on their ecosystem and I am requesting a technical study on the construction of the development and the impacts to the coyote and rabbit population on JFTB, which is located adjacent to the development.

Thank you for listening to my concerns regarding this development and I look forward to answers to my issues and concerns, including the studies to lessen the impacts of this development.

9-22

DRAFT

Responses to Comment 9

Brandt, Daniel, dated June 10, 2024.

9-1 The commenter provides introductory remarks as a resident of Seal Beach and expresses the concerns which are responded to below.

9-2 The commenter expresses concerns with insufficient parking and increased number of vehicles. The commenter states that Lampson Avenue is a dangerous street and there have been many traffic collisions. The commenter also states that there is no street parking on Lampson, it is not walkable or safe for bicyclists, and it is already overused and underdeveloped to handle additional vehicles.

The City acknowledges that there is no street parking on Lampson. However, there are sidewalks and Class II (on-street, striped) bicycle lanes on Lampson. Refer to Master Response 2.1.3, *Parking*, for parking concerns. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic/congestions concerns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for vehicle and pedestrian safety concerns.

9-3 The commenter states that with the installation of the traffic signal at Lampson Ave. there would be 3 signals in short proximity and it would add additional noise due to the acceleration of engines, braking noise and light pollution to residents living on Lampson Ave. between Heather and Rose. The commenter requests a light noise study regarding the impact to residents due to the installation of the signal.

The Project no longer proposes installation of a traffic signal. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*. Additionally, lighting from car headlights would be temporary and be shielded from the existing residential use on Lampson through existing landscaping and walls within the private residences' backyard.

9-4 The commenter expresses concerns with safety and traffic on Lampson and estimates that the Project would generate 500 vehicles. The commenter states that Lampson is unsafe due to poor visibility and drivers making U-turns and requests a study to address additional traffic control signal devices or modifications.

The Project is estimated to generate 1,658 two-way trip-ends per day with 112 AM peak hour trips and 147 PM peak hour trips (Draft EIR, p. 3-17). Existing trees and boulders in the medians within Lampson Avenue are existing conditions, and the Project will not place any additional trees, boulders, or other objects within the median resulting in any further decrease in visibility. Moreover, the Project will not exacerbate any existing visibility concerns because Lampson Avenue has sufficient capacity to accommodate the additional trips generated by the Project. As discussed in Section 3.0, *Project Description*, of the Draft EIR, according to the City of Seal Beach General Plan, Lampson Avenue is a divided roadway with a raised median and designed to accommodate a maximum of 37,500 daily vehicle trips. At General Plan

DRAFT

Buildout with the Project, these two segments comprising this portion of Lampson Avenue would carry between 15,350 and 15,750 daily trips (see *Technical Appendix N1* of the Draft EIR and *Attachment G* of the Final EIR). Therefore, the Project's anticipated generation of 1,658 daily trips is well within the capacity of Lampson Avenue even at General Plan Buildout (refer to Page 3-17 of the Draft EIR). Finally, CEQA requires an evaluation of the Project's potential impacts on the environment, and not the impacts of environmental conditions on the Project. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic/congestions concerns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for vehicle and pedestrian safety concerns.

9-5 The commenter states that vehicles traveling westbound on Lampson Ave. at the intersection of Seal Beach Blvd. during the morning hours is heavily congested. The commenter is concerned about two left turn lanes on Lampson Ave. at Seal Beach will not have capacity to handle additional vehicles. And there will be additional congestion at the two dedicated left turns for vehicles traveling to the 405 Freeway. The updated Traffic Analysis (*Attachment G* of this Final EIR) identifies the Project's contribution to a level of service deficiency at Seal Beach Boulevard and Lampson Avenue. The recommended improvement is to restripe the number 2 westbound left as a shared left-right turn lane, which will improve the level of service at this intersection (see Table 6-3 of *Attachment G* of this Final EIR). The Project Applicant would be required to pay fair share fees towards this improvement. The Project's contribution to the level of service deficiency at this intersection is 5.1% and therefore negligible. In any event, a project's effects on an intersection or roadway segment level of service is not considered a CEQA impact, and as such, the Project's contribution to a level of service deficiency at this intersection would not constitute a new or substantially more severe impact under CEQA.

9-6 The commenter states that the Project would generate students who would attend schools in either Rossmoor, Los Alamitos, or Seal Beach. The commenter states that residents will need to travel westbound on Lampson Ave. towards Seal Beach and will likely turn northbound on Seal Beach Blvd. from Lampson Ave. The commenter states that Lampson and Seal Beach Blvd. are already congested and believes that a second dedicated right turn lane should be added to handle the additional vehicles. The commentator requests a study on the phasing of traffic control devices for nearby intersections. Refer to Response to Comment 9-5 for the recommended improvement to the intersection of Seal Beach Boulevard and Lampson Avenue.

9-7 The commenter expresses concerns with traffic congestion at Lampson Avenue and Old Ranch Plaza and requests a study on the traffic control devices at Lampson Avenue and Old Ranch Plaza. The commenter states that the two-way left turns need to be lengthened to handle the additional vehicles. The Project's Traffic Analysis (*Attachment G* of this Final EIR) analyzed the intersection of Old Ranch Plaza and Lampson Avenue and determined that this intersection operates at an acceptable level of service under with and without Project conditions under all scenarios.

DRAFT

9-8 The commenter states that traffic from southbound Seal Beach to eastbound Lampson Ave. is often congested. The commenter is concerned that traffic will back up to Saint Cloud Drive and cause a safety issue for those at the intersection of Seal Beach Blvd. and Saint Cloud Drive. The commenter does not believe the two dedicated left turn lanes are sufficient for the influx of vehicles wanting to make a left turn to eastbound Lampson Ave. in the in the morning and afternoon and request a study of traffic control devices at southbound Seal Beach Blvd. at Lampson Ave. Refer to Response to Comment 9-5 for the analysis and recommended improvement to the intersection of Seal Beach Boulevard and Lampson Avenue

9-9 The commenter states that additional traffic from the development will be a safety hazard for bicycles traveling on Lampson Ave. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue,* for pedestrian/bicycle safety concerns.

9-10 The commenter expresses concerns with pedestrian crossing Lampson Avenue to walk to Heather Park, the lack of onsite park amenities, decreased visibility for drivers and pedestrian safety and requests impact on foot traffic on Lampson Avenue. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities,* for impacts to existing parks. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for pedestrian safety concerns.

9-11 The commenter expresses concerns with traffic and requests a study on the traffic signal time and a dedicated right turn lane from Lampson Avenue to southbound Valley View Drive. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion,* for traffic concerns and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding the traffic signal.

9-12 The commenter expresses concerns with traffic and requests a traffic study on streets in Garden Grove. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion,* and Response to Comment C-2 for a discussion on the selection of studied intersections.

9-13 The commenter expresses concerns with parking and requests study on road impacts from extra traffic. Refer to Master Response 2.1.3, *Parking*, for parking concerns. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns.

9-14 The commenter expresses concerns with parking and impacts to Arbor Park and Heather Park. Refer to Master Response 2.1.3, *Parking*, for parking concerns. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities,* for impacts to existing parks.

9-15 The commenter expresses concerns with public service and requests study on Seal Beach Police Department (SBPD) and response times. The Project site is located within the City of Los Alamitos; therefore, it will be served by LAPD, which was also acknowledged by SBPD (see *Technical Appendix L* of the Draft EIR). Refer to Master Response 2.1.8, *Public Safety,* for emergency response concerns. SBPD stated that it will not be expanding service capacity

DRAFT

as a result of the Project because the Project is located within the City of Los Alamitos. However, SBPD has a mutual aid agreement with LAPD and can assist with public services in the event of an emergency, if needed.

9-16 The commenter states that SBPD will experience an increase in calls from services due to illegal parked vehicles from the Project and requests a study on whether additional police officers will be needed. Refer to Master Response 2.1.3, *Parking*, for parking concerns. The commenter assumes that residents of the Project will be parking on streets within the CPE neighborhood. The Project includes 577 parking spaces, which is in exceedance of the City of Seal Beach's parking standards (by 84 spaces). Based on parking requirements specific to the City of Seal Beach, the Project would comply with Seal Beach parking requirements. Residents are not expected to park anywhere other than in the parking spaces located on the Project site.

9-17 The commenter expresses concern with the decrease in response time to Leisure World that is currently served by the closest OCFA station from the Project site, Station 48, and requests a study to analyze the impacts of response times to the Project, residents of College Park East and Leisure World. As discussed in Section 4.13, *Public Services*, of the Draft EIR, considering the existing firefighting resources available in the City, implementation of the Project is not expected to result in the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impact. Per correspondence with the OCFA, there are currently no deficiencies in fire protection service provided to the Project site. OCFA has not indicated the need for a new fire station or expansion of existing facilities due to the Project. The Secured Fire Protection Agreement would ensure that response times and service ratios are met due to the implementation of the Project and no new fire station facilities would be required (refer to Page 4.13-9 of the Draft EIR)

9-18 The commenter states the City of Seal Beach's weight requirements for trucks traveling on Lampson Avenue and requests this be enforced during demolition and construction of the proposed development. The commenter also requests a study analyzing the management of demolition, removal of debris, and transportation of construction equipment and materials. The Project would be required to comply with all applicable local regulations related to vehicle weight limits. If the Project requires the use of an oversize vehicle in excess of the eight, width, height or length permitted by the Vehicle Code, a permit shall be obtained from the City of Seal Beach in accordance with the City of Seal Beach Municipal Code 8.10.135, *Movement of Oversize Vehicles.*

9-19 The commenter expresses concerns with construction noise and road closure, specifically the homes located between 4509 and 4701 Ironwood Avenue. As discussed in Section 4.11, *Noise*, of the Draft EIR, the construction noise analysis shows that noise impacts at the nearest receiver locations will be less than the daytime 80 dBA L_{eq} significance threshold during Project construction activities. Because the highest construction related noise level is 63.31 dBA L_{eq} at the nearest sensitive receiver (Location R3 at the existing noise sensitive residence at 4625 Ironwood Avenue, approximately 82 feet south of the Project site), the noise impacts due to

DRAFT

Project construction noise are considered less than significant and no mitigation is required (refer to Pages 4.11-23 through 4.11-24 of the Draft EIR). Therefore, noise monitoring during construction is not needed or required.

During construction, the Project would result in roadway improvements along Lampson, including replacement of the existing median curb and construction of the two proposed driveways. Construction on Lampson will require an encroachment permit and approval from the City Engineer. Lane closures that may be required for median improvements would be temporary and require a permit and compliance with LAMC 12.08.200, Safety precautions–Obstruction of traffic. Compliance with LAMC 12.08.200 would ensure safe crossing and access for all vehicle and pedestrians at all times. Pursuant to LAMC 12.08.200, a construction management plan would be prepared to identify construction activity, notification of construction activity, and to ensure that construction activity would not re-route/detour commuter or other pass-through or cut-through traffic through local residential streets.

9-20 The commenter expresses concerns with aesthetics and glare and requests a visual simulation of the Project site. Refer to Figure 4.1-2 and 4.1-3 for visual renderings (refer to Pages 4.1-11 through 4.1-12 of the Draft EIR). As discussed in Section 4.1, *Aesthetics*, of the Draft EIR, buildout of the Project would change the existing visual character of the site from a two-story, 88,000 sf commercial office building to a two- to three-story residential development consisting of 246 units. The Project would be attractive and of quality design and visually compatible with the existing residential and park uses in the Project site's vicinity. Additionally, the Project would be compliant with the zoning development standards and City requirements pertaining to scenic quality. Accordingly, the Project would not conflict with applicable zoning and other regulations governing scenic quality. Impacts would be less than significant (refer to Page 4.1-18 of the Draft EIR).

As discussed in Section 4.1, *Aesthetics*, of the Draft EIR, the Project would redevelop the Project site with residential uses which would produce artificial light. The Project would be required to adhere to the light and glare requirements as set forth in t LAMC (Chapter 8.48 - Lighting Performance Standards and Section 17.24.040 Light and Glare). Chapter 8.48 addresses the visual impacts of exterior lighting on adjacent property owners and neighborhoods. The chapter outlines guidelines for the design, scale, location, and illumination level of lighting fixtures. The guidelines aim to reduce light trespass and prevent glare. Section 17.24.040 would require shielding of light sources to reduce impacts on surrounding land uses. The City would confirm compliance with applicable lighting requirements during future review of building permit applications/plans. Mandatory compliance with LAMC Chapter 8.48 and Section 17.24.040 would ensure that the Project would not introduce any permanent design features that would adversely affect day or nighttime views in the area (refer to Page 4.1-19 of the Draft EIR).

Moreover, a shade and shadow study was conducted for the Project (*Attachment I* of this Final EIR). The study provides 3 shade and shadow conditions (9 AM, 11AM, 3PM) for winter

DRAFT

solstice (December) and summer solstice (June) periods. The longest shadows are cast during the winter months and the shortest shadows are cast during the summer months. In the Northern Hemisphere, the longest day and shortest night of the year occur on the Summer Solstice (on June 21 or 22), marking the beginning of summer. The shortest day and longest night of the year occur on the Winter Solstice (December 21 or 22), marking the beginning of winter. The measurement of shadow lengths that occur at the winter and summer solstices therefore represent the most extreme shadow patterns that occur throughout the year. As shown, during the summer period, the shade and shadow would mostly be confined to the Project site without spillover to adjacent properties. During the winter period, shade and shadow would spillover in the northwestern direction during 9AM and in the northeastern direction during 11 AM. However, the shade and shadow footprint would be minimal and would occur on roadway to the east and parking lot to the north. Therefore, the Project would not result in a significant change in the shade or shadow footprint to nearby properties, and this analysis confirms that the Project will not result in any impacts related to shade or shadow footprint to nearby properties.

9-21 The commenter expresses concerns with rodents. The Project site is located in a highly urbanized area and is surrounded by open spaces to the north, east, and west. If rodents were encountered during construction activities, rodents would travel to the nearby open spaces area instead of traveling south across Lampson Avenue to the existing residential communities. Additionally, as discussed in Section 4.3, *Biological Resources*, of the Draft EIR, the Project site is not located within or part of a wildlife movement corridor. Therefore, the Project would not substantially interfere with an established migratory wildlife corridor. (refer to Page 4.3-33 through 4.3-34 of the Draft EIR). However, this comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

9-22 The commenter expresses concerns with wildlife and impacts to coyote and rabbit population at JFTB. While coyotes and rabbits are common species that may currently inhabit the Project site, as discussed in Section 4.3, *Biological Resources*, of the Draft EIR, the Project site does not include any species listed as special-status animals under either the federal Endangered Species Act or California Endangered Species Act. Also as discussed in Section 4.3, *Biological Resources*, of the Draft EIR, no special-status plants were detected on the Project site. However, the Project does provide limited suitable habitat for nesting birds and common raptor species. Construction activities have the potential to adversely impact nesting birds and raptors and roosting bats. Implementation of Mitigation Measures MM 4.3-1 through MM 4.3-3 would ensure that pre-construction surveys are conducted for nesting birds, nesting raptors, and bat roosts prior to site disturbance. If nesting birds or raptors are present on the Project site, mitigation requires avoidance of active nests. With implementation of the required mitigation, potential impacts to nesting birds and common raptors would be reduced to below a level of significance (refer to Pages 4.3-29 through 4.3-39 of the Draft EIR).

Subject: Lampson Project Concerns
Date: Monday, May 20, 2024 10:34:45 PM

Dear Tom Oliver,

We live in College Park East in Seal Beach and I want to express my concern regarding the Lampson Project.
This project will affect CPE the most yet we are not considered in any of the planning.
Our concern is multifold and none of the issues have really been addressed: 10-1

1. CPE already does not have enough parking, especially on street sweeping days its hard enough without the addition of these 246 units, which easily means additional 500 vehicles not counting visitors/company. 10-2

2. Vehicle access into that site is dangerous, just pulling into dog park/AYSO field is hard with the speed of traffic and divider, adding 500 cars to that daily will be a mess and will cause traffic back up across all of Lampson. 10-3

3. There is no playground/play area/park for the new residents so all of them will be impacting CPE parks/play areas which already need repair.
Without the play area, the kids will be dangerously crossing Lampson via walking or biking to access Heather Park. 10-4

4. Vehicle miles travel will be significantly increased on Lampson, Seal Beach Blvd, and Valley View.
The current **Park and Ride** lot that supports car pooling and van pooling will be eliminated increasing vehicle miles traveled further. Project should providing a **Telework Center** in the project to mitigate travel impacts. 10-5

5. California law requires **solar panels** on new housing and **zero emission electric vehicle charging stations**. Neither are mentioned in the draft plan. 10-6

6. This area is a lovely and relatively quiet community where most households are families where we feel safe and its not congested by traffic, pollution or too much housing squeezed into a small area. This project causes a HUGE loss to the hundred of families calling College Park East and the surrounding area "home". **Only a win for the developer.** 10-7

7. Lampson Avenue is not only used by the over 1,700 households in College Park East, but those who live nearby in Rossmoor and Los Al and Garden Grove who go shopping, drop/pick up kids at school and bypass the freeway. Lampson is only a two lane street with constant use and at times extremely congested. By adding one 246 units and potentially 500 additional car trips daily, Lampson will be a nightmare. There are already accidents on Lampson all the time, often affecting the homeowners on both sides of the neighborhoods. 10-8

8. **I am also requesting a study on the impact of foot traffic on Lampson** due to the development.
I would also like a **sidewalk added** to the north side of Lampson between Seal Beach Blvd and Tulip Drive. 10-9

I am concerned that with the **decreased visibilit**y of drivers traveling eastbound on Lampson due to curves in the roadway, as well as the boulders and trees in the center divider, there will be an i**ncrease in pedestrian injuries and fatalities.**

10-10

Responses to Comment 10

Burstein, Valerie, dated May 20, 2024.

10-1 The commenter expresses concerns with the Project's impact on College Park East which are addressed below.

10-2 The commenter states that CPE currently has insufficient parking. Refer to Master Response 2.1.3, *Parking*, for parking concerns.

10-3 The commenter states that vehicle access onto the Project site is dangerous and the additional traffic will cause backup along Lampson. The Project initially proposed to install a traffic signal at the primary neighborhood to alleviate neighborhood concerns related to safety. Subsequent public comments received on the Draft EIR during the 45-day public review period expressed concern with installing a traffic signal and after further traffic signal warrant and safety analyses, it was determined that the proposed traffic signal is not warranted (see *Attachment G* of this Final EIR). Therefore, the Project no longer proposes a traffic signal at this entryway. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns.

10-4 The commenter states that there is no playground, play area or park for the new residents, so they will be impacting CPE parks and kids will dangerously cross Lampson Avenue to get to Heather Park. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, for impacts to existing parks. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for pedestrian safety concerns.

10-5 The commenter expresses concerns with VMT, states that the elimination of the current Park and Ride Lot will further increase VMT, and recommends the Project provide a Telework Center. The existing Park-n-Ride that previously occupied the Project site has not been in operation for the past 18 months and when in operation had limited usage. As discussed in 4.15, *Transportation*, of the Draft EIR, the Project would result in significant VMT impacts with the implementation of Mitigation Measure MM 4.15-1. Mitigation Measure MM 4.15-1 includes implementing CAPCOA strategies such as installing broadband infrastructure or other communication technologies that encourages telecommuting and working from home, which would reduce mobile source emission (refer to Page 4.15-19 of the Draft EIR).

10-6 The commenter states that California law requires solar panels on new housing and zero emission electric vehicle charging stations which are not mentioned in the Draft EIR. Contrary to the commenter's assertions, as part of the Project's Project Design Features (PDFs), the Project will include solar photovoltaic with the capability to generate up to 1,229,520 kWh/annually (PDF GHG-1) and the Project's parking areas will be designed to provide electric vehicle (EV) charging stations. At minimum, the number of EV charging stations will equal the Tier 2 Residential Voluntary Measures of the California Green Building Standards

DRAFT

Code, Section A4.106.8.2.1 (PDF GHG-4) (refer to Page 4.5-6 to 4.5-7 of the Draft EIR) Thus, no revision to the Draft EIR is required.

10-7 The commenter expresses concerns with traffic congestion, pollution, and the proposed density and states that it will be a loss of CPE residents. The commenter does not provide any specific comments on the adequacy of the Draft EIR. However, these comments are noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project.

10-8 The commenter expresses concerns with traffic congestion and accidents on Lampson Avenue. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for safety concerns.

10-9 The commenter requests a study on impact of foot traffic on Lampson Avenue and requests a sidewalk on the north side of Lampson Avenue between Seal Beach Boulevard and Tulip Drive.

A Safety Evaluation was prepared to confirm that the Project would have no safety impacts on public roadways and Project access points (see Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, and *Attachment H* of this Final EIR). The Safety Evaluation further confirms the analysis and determination in the Transportation Section (Section 4.15) of the Draft EIR that the Project would not result in a safety impact or substantially increase hazards due to a geometric design feature. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for a summary of the Safety Evaluation and issues relating to pedestrian safety. Regarding the request for an additional sidewalk on Lampson Avenue between Seal Beach Boulevard and Tulip Drive, the Project would include improvements to sidewalks along the Project's frontage on Lampson Avenue; areas beyond the Project site's frontage is not part of the Project boundary or a requirement of the Project Applicant. However, this comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project.

10-10 The commenter expresses concerns with safety due to decreased visibility of drivers traveling eastbound on Lampson due to curves in the roadway. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns and 2.1.2, *Roadway Safety on Lampson Avenue*, for pedestrian safety concerns.

1 attachments (23 KB)
Response to EIR 6-10-24.docx;

Good Afternoon Tom --

Attached are my comments to the DEIR.
I am also posting them below, so use which ever is easiest to retrieve and read if you have any questions, please don't hesitate to call or contact me.
Thank you so much.

Patty Campbell
4433 Ironwood Ave
Seal Beach
562-716-7587

11-1

Parking

My first area of concern is the insufficient parking for this project. Let's look at some numbers from this document. The DEIR stated there will be an average of 4 people per housing unit (246 units x 4 = 984). However, they also project 647 residents.

So, which is it?

State requirement (density bonus) is 440 parking spaces.

The Project provides 577 spaces.

If they go to the senior component instead of families, parking goes to 594 spaces.

The City of Los Alamitos required 679 spaces, which is smart – makes for happier residents and neighbors.

11-2

The State is trying to pack as many people as possible into housing and they don't much care about parking; it is also trying to push people into using public transportation to lessen the need for vehicles. However, there is **no** public transportation on Lampson, only on Seal Beach Blvd and on Valley View Street. The nearest bus stop per the DEIR is 3.5 miles walking distance -- 3.5 miles is not exactly what one would call reasonable walking distance. Given the lack of public transportation, the only way to access the Project site will be by car, so you can expect every person who can drive, to have a car. This increases parking demand. For example, a one bedroom apartment will have 1.5 parking spaces. If a couple rent such an apartment and each has a car, *how do they park their two cars into 1.5 spaces?*

11-3

DRAFT

In addition, there is the parking demand from AYSO which now uses the existing parking lot. When the Project is completed, that parking lot will cease to exist and excess AYSO parking will try to use College Park East as will overflow parking from the Project itself. *If nothing else, the developer needs to provide adequate parking for his Project.*

When the document refers to "available parking off-site," they are referring to the streets of College Park East for both AYSO and Project overflow parking. CPE is not a parking lot for that excessive traffic and we do not want nor like the intrusion into our neighborhood. It will interfere with our ability to park in front of our homes and the *safety* of our streets. Whenever there is an accident on Lampson between Candleberry and Heather, Lampson gets blocked off at those two intersections and traffic is routed down Ironwood – too many cars going too fast in this residential neighborhood where the speed limit is 25 mph. That's how we know there is an accident: huge increase in traffic in front of my home.

11-4

Page 4.10-21

Policy 4.11 states they will monitor multifamily parking requirements. Once the project is completed, there will be no opportunities to adjust or increase parking, *so what good is "monitoring" the parking facilities?*

In addition, *there is no plan for guest parking at the Project site and there needs to be*.

The shortages of parking will be dumped on the residents of College Park East and that is not right. The Project needs to provide adequately for its own parking needs.

11-5

Hydrology and Storm Water Runoff

2.5.7: Hydrology: "Water runoff: flows within an earthen channel and then collected by an existing 24" CMP that flows westerly, discharge into a westerly flowing earthen channel within the JFTB and then drains to the Old Ranch Country Club to the south. "

How will it do that? There are no underground culverts or drainage pipes to Old Ranch along Lampson Ave on the north side. The south side of Lampson is the City of Seal Beach and there are no underground drainage pipes behind our homes.

Will this runoff from the Project interfere with the runoff from CPE?

11-6

Storm water runoff will never make it to Old Ranch by going down Lampson: the center divider can contain the water until the center divider ends at the cutout for Heather St; then the water will simply run downhill down Heather St (water always seeks the lowest level) and go onto both Ironwood and Hazelnut Avenues heading toward Guava and eventually Candleberry; there already is significant flooding in that area; don't impact it any more.

11-7

DRAFT

Preliminary Hydrology Report, 3.0, p. 2: "Storm water runoff ultimately gets discharged into the San Gabriel River." No it does not, it ends up on Old Ranch Golf Club in the lakes.

11-7 (CONT.)

Hydrology & water quality: see 4.9-21

Ground water runoff: "connecting to storm drain at Guava found to be infeasible due to too conflicts with existing utilities in the ground: water, sewer and gas 34"main (the main line from San Diego to Santa Barbara – So Cal Gas Co employee told us that if that line blows, it will take out a square mile).

"Storm water will run into a biofiltration device or a catch basin or a detention system for water quality treatment." Really? If that doesn't work, and there is too much water, it will run down Lampson Ave -- more likely scenario. As stated above, the center divider can contain it, but only until it reaches Heather Street and then it will go down Heather to both Ironwood and Hazelnut Avenues, exacerbating an already existing significant flooding problem for the residents of CPE.

11-8

The existing storm drains in CPE are not adequate for the volumes of rain we have received these past two years. So far the water has risen into one home and it has come up to the garage doors of others. If you add runoff from this project, it will be much worse. That is not fair to the residents who are already impacted from storm water runoff.

In addition, we do not want storm water runoff from the Project contaminating the City of Seal Beach's well on the north side of Lampson near the curve, aka, Dead Man's Curve.

11-9

Utilities and Service Systems (4.17)

The city of Los Alamitos cannot provide any services for this project except water (Golden State Water Company). They plan to tie in to all services for the City of Seal Beach.

11-10

Airport Land Use Commission

The ALUC found this project to be inconsistent; *if the land was suitable for housing, they would have put houses there in 1970, but it wasn't then and it isn't now*. The air base is still there and the planes and helicopters are still flying. Matter of fact, the base now houses all branches of the services and is the Emergency Disaster Support area for all of southern CA, so it has more importance today than back in 1970.

11-11

"On September 21, 2023, the ALUC voted to require the City to submit all discretionary actions related to Housing Element Site 6 (4665 Lampson Avenue, Site 7 (Laurel Park) and Site 10 (5030-5084 Katella)" to the ALUC for review until such time as the General Pan is revised or the city overrules the ALUC determination. See p. 4.10-9. ***That statement is not correct.*** *The*

11-12

DRAFT

ALUC voted to only require actions related to the Lampson project and not the others to come before the ALUC for review.

A notice will be required on all sales documents to alert the residents of the presence of the base and of airport noise. *Such a notice needs to run with the land*, not just first-time buyers, but all subsequent buyers need to be notified and sign off on it that they have read it and are aware of the presence of the Joint Forces Training Base and of the noise issues.

11-12 (CONT.)

Arbor Park and Arbor Dog Park

DEIR, 4.14 Recreation: Arbor Park and Arbor Dog Park are not under the jurisdiction of the City of Los Alamitos, but under the jurisdiction of the City of Seal Beach. The City of Seal Beach has a lease with the Army Corps of Engineers for the land for those two parks – not the City of Los Alamitos; Arbor Park & Arbor Dog Park have never been under the jurisdiction of the city of Los Alamitos, so to list them as City of Los Alamitos parks **is not correct.** The City of Seal Beach developed those two parks and maintains them. Mr. Frank Laszlo, a former four-term councilmember from CPE, negotiated with the Army Corps of Engineers and the Base personnel for Arbor Park to be leased by and for the City of Seal Beach.

11-13

Arbor Park Boundary and the addition of 10 feet for parking

Addendum Arbor Park Layout: diagrams state the "existing north fence (along the Project northern boundary), adjacent to Arbor Park, "to be removed." They want this 10 feet dedicated to the City of Los Alamitos. The City of Seal Beach has the lease on Arbor Park and Arbor Dog Park. Dedicate that 10' to the City of Los Alamitos has complications that will render it not feasible. *That fence is the southern boundary of the Joint Forces Training Base and cannot arbitrarily or capriciously be removed without express permission from the Army Corps of Engineers and the Base Commander.* It is pragmatic of the developer to give up 10 feet of space for additional park and Project parking but it requires express permission of the Base Commander and Army Corps of Engineers. *However, if they wish to deed that 10' to the US Army and not the City of Los Alamitos, that might be feasible*. This 10' would go a long way to help AYSO parking. Alternately, that 10' could also be completely separate and available to both AYSO and the Project, with the existing boundary fence kept intact or in place. It would also require an entrance from the park end of the driveway into Arbor Park, near the field.

11-14

Outdoor living space: The project would be short of meeting the common area requirement by 33,040 sf due to requests from the City of Los Al regarding the dedication of the northerly10-ft strip of land abutting Arbor Park and Arbor Dog Park, which comprises an area of approximately 1,000 sf of property to the City. If this area is dedicated to the City, then the project will be unable to meet the common area requirement because compliance with this requirement would physically preclude construction of the project at the densities allowed and with the concessions proposed. As stated above, deeding that 10' of property to the Base, ie, Army Corps of Engineers might be more feasible to accomplish the goal of providing more parking.

11-15

DRAFT

The document (Arbor Park Parking Study and Layout) goes on to say, "the project will provide multiple pedestrian connections with Arbor Park/Arbor Dog Park to the north." That requires the permission of the base commander and the Army Corps of Engineers to do that. It is the Base that has stated that the park will close at sunset and open at sunrise, and that therefore there will be no overnight parking.

The Pass-thru gates: *will they be removed?* They were installed by AYSO and the SWRL folks. If the parking lot is removed, that gate will no longer be necessary and will be removed by Base personnel.

11-16

Heather Park

Proposed parks within the Project are small with defined uses; kids will cross Lampson to use Heather Park. 1. crossing Lampson is *dangerous*, even with the traffic light; 2. they need to provide more park space for their own children and 3. not impact Heather Park. Our parks are well used by CPE kids and families; take care of the needs of your own residents. Don't see our park as your solution to inadequate park space.

11-17

Traffic Safety

Where are their school bus stops? Inside the project (can't pick up kids on Lampson Avenue) or at Heather Park?

Sidewalks stop at each end of the property, so people will not be able to walk on the north side of Lampson past the end of the property line; they will have to use the south side, and the area from Heather to Candleberry contains what has become called Dead Man's curve due to the many frequent accidents along that stretch of roadway – vehicles crash into the wall on the south side of the street making walking dicey at best. You really don't see any walkers from Heather to Candleberry along Lampson. The area is very contained: once you start walking it, there is no way out – you have to walk to the end of either Heather or Candleberry. It's just you, the block wall and oncoming traffic. This is a dangerous stretch of roadway for vehicles, let alone pedestrians.

11-18

U-turns on Lampson at Heather. Vehicles exiting either Arbor Park or Arbor Dog Park must make a right turn onto Lampson due to the presence of the center divider. Consequently, many of those drivers make a U-turn at Heather Street. If I am at the light at Heather, trying to turn right, and there is someone on Lampson *appearing* to turn left, if they have a dog in the car, it's a safe bet they are coming from the dog park and will be making a U-turn right in front of me. This situation has caused many incidents at that intersection for CPE folks trying to turn right at Heather Street. *It is unsafe*.

11-19

Public Service Correspondence: "response time for the Los Alamitos PD to the project site: priority 1: less than 5 minutes." Even with sirens blaring and running all stop lights, it will take more than 5 min. In the morning, from my house (4433 Ironwood) to Katella & Los Al Blvd, it takes a good 20 minutes and that is on a good day. Given traffic and distance, that is just the way

11-20

DRAFT

it is. SBPD will end up servicing those calls as traffic is not as bad from SBPD to Lampson as it is from LAPD to Lampson.

11-20 (CONT.)

Project Alternative: instead of family housing, senior housing.
Instead of 77 family units, there should be 77 senior units; this alternative would provide 594 parking spaces, an increase of 20 spaces – placing parking in the north west corner of the project which is where it is the noisiest. A win-win: that helps solve two issues (noise and more parking). In addition, there would be less demand on parks (seniors are more likely not to have children who would use parks) – that puts less stress on the park within the Project and also on Heather Park. In addition, while many seniors work these days, there would most likely be less demand at peak travel times in the morning and late afternoons. Senior's parking needs would also be less than those of townhome and single-family home residents. But still more than 1.5 parking spaces per unit. We are well aware of the parking demands on the western side of The Shops at Rossmoor along Montecito. Those condos were originally built for seniors with one parking space per unit. Now that they have families there, the parking is not sufficient and they park on Montecito and in Rossmoor, much to the chagrin of the residents of Rossmoor who often find cars partially blocking their driveways. The management of the Shops at Rossmoor has told the residents to not park in back of the condos. It is not a pleasant situation and one to avoid in this Project.

11-21

Moon Trees 4.1
Aesthetics - threshold b: yes. Plan calls for removal of all trees – three of those trees are redwoods and we have reason to believe they are Moon Trees. In 1971, Apollo 14 took a canister full of seeds to the moon. That cannister contained seeds from many plants including 5 tree varieties, one of which was redwoods. Upon return, these seeds were planted all over the country. Most if not all of the redwood seedlings died as they were not in their native habitat. Redwoods are not native to this area, so they had to be planted. Fish and Game controlled where these seedlings were planted and Fish and Game was located at that building, so it is conceivable they planted them; those trees are approximately 50+ years old which fits in with the age of those seedlings and should not be cut down. One tree does not look as if it is doing well, but the other two are fine. Originally there were 5 trees, but 2 of them died and now the third appears to be on its way out, but the two that are doing well, should be kept.

11-22

Question about Townhomes. The kitchens will be on the second floor. No one wants to carry groceries up a flight of stairs. *Do they have dumbwaiters?*

11-23

End of comments.

DRAFT

Date: June 10, 2024

To: Mr. Tom Oliver, Planning Department, City of Los Alamitos

From: Patty Campbell, College Park East

Subject: Comments on the DEIR for the Lampson Project

Parking
My first area of concern is the insufficient parking for this project. Let's look at some numbers from this document. The DEIR stated there will be an average of 4 people per housing unit (246 units x 4 = 984). However, they also project 647 residents.
So, which is it?
State requirement (density bonus) is 440 parking spaces.
The Project provides 577 spaces.
If they go to the senior component instead of families, parking goes to 594 spaces.
The City of Los Alamitos required 679 spaces, which is smart – makes for happier residents and neighbors.

The State is trying to pack as many people as possible into housing and they don't much care about parking; it is also trying to push people into using public transportation to lessen the need for vehicles. However, there is **no** public transportation on Lampson, only on Seal Beach Blvd and on Valley View Street. The nearest bus stop per the DEIR is 3.5 miles walking distance -- 3.5 miles is not exactly what one would call reasonable walking distance. Given the lack of public transportation, the only way to access the Project site will be by car, so you can expect every person who can drive, to have a car. This increases parking demand. For example, a one bedroom apartment will have 1.5 parking spaces. If a couple rent such an apartment and each has a car, *how do they park their two cars into 1.5 spaces?*

In addition, there is the parking demand from AYSO which now uses the existing parking lot. When the Project is completed, that parking lot will cease to exist and excess AYSO parking will try to use College Park East as will overflow parking from the Project itself. *If nothing else, the developer needs to provide adequate parking for his Project.*

When the document refers to "available parking off-site," they are referring to the streets of College Park East for both AYSO and Project overflow parking. CPE is not a parking lot for that excessive traffic and we do not want nor like the intrusion into our neighborhood. It will interfere with our ability to park in front of our homes and the *safety* of our streets. Whenever there is an accident on Lampson between Candleberry and Heather, Lampson gets blocked off at those two intersections and traffic is routed down Ironwood – too many cars going too fast in this residential neighborhood where the speed limit is 25 mph. That's how we know there is an accident: huge increase in traffic in front of my home.

DRAFT

Policy 4.11 states they will monitor multifamily parking requirements. Once the project is completed, there will be no opportunities to adjust or increase parking, *so what good is "monitoring" the parking facilities?*

In addition, *there is no plan for guest parking at the Project site and there needs to be*.

The shortages of parking will be dumped on the residents of College Park East and that is not right. The Project needs to provide adequately for its own parking needs.

Hydrology and Storm Water Runoff
2.5.7: Hydrology: "Water runoff: flows within an earthen channel and then collected by an existing 24" CMP that flows westerly, discharge into a westerly flowing earthen channel within the JFTB and then drains to the Old Ranch Country Club to the south. "
How will it do that? There are no underground culverts or drainage pipes to Old Ranch along Lampson Ave on the north side. The south side of Lampson is the City of Seal Beach and there are no underground drainage pipes behind our homes.
Will this runoff from the Project interfere with the runoff from CPE?

Storm water runoff will never make it to Old Ranch by going down Lampson: the center divider can contain the water until the center divider ends at the cutout for Heather St; then the water will simply run downhill down Heather St (water always seeks the lowest level) and go onto both Ironwood and Hazelnut Avenues heading toward Guava and eventually Candleberry; there already is significant flooding in that area; don't impact it any more.

Preliminary Hydrology Report, 3.0, p. 2: "Storm water runoff ultimately gets discharged into the San Gabriel River." No it does not, it ends up on Old Ranch Golf Club in the lakes.

<u>Hydrology & water quality: see 4.9-21</u>
Ground water runoff: "connecting to storm drain at Guava found to be infeasible due to too conflicts with existing utilities in the ground: water, sewer and gas 34"main (the main line from San Diego to Santa Barbara – So Cal Gas Co employee told us that if that line blows, it will take out a square mile).
"Storm water will run into a biofiltration device or a catch basin or a detention system for water quality treatment." Really? If that doesn't work, and there is too much water, it will run down Lampson Ave -- more likely scenario. As stated above, the center divider can contain it, but only until it reaches Heather Street and then it will go down Heather to both Ironwood and Hazelnut Avenues, exacerbating an already existing significant flooding problem for the residents of CPE.

The existing storm drains in CPE are not adequate for the volumes of rain we have received these past two years. So far the water has risen into one home and it has come up to the garage doors of others. If you add runoff from this project, it will be much worse. That is not fair to the residents who are already impacted from storm water runoff.

DRAFT

In addition, we do not want storm water runoff from the Project contaminating the City of Seal Beach's well on the north side of Lampson near the curve, aka, Dead Man's Curve.

Utilities and Service Systems (4.17)
The city of Los Alamitos cannot provide any services for this project except water (Golden State Water Company). They plan to tie in to all services for the City of Seal Beach.

Airport Land Use Commission
The ALUC found this project to be inconsistent; *if the land was suitable for housing, they would have put houses there in 1970, but it wasn't then and it isn't now*. The air base is still there and the planes and helicopters are still flying. Matter of fact, the base now houses all branches of the services and is the Emergency Disaster Support area for all of southern CA, so it has more importance today than back in 1970.

"On September 21, 2023, the ALUC voted to require the City to submit all discretionary actions related to Housing Element Site 6 (4665 Lampson Avenue, Site 7 (Laurel Park) and Site 10 (5030-5084 Katella)" to the ALUC for review until such time as the General Pan is revised or the city overrules the ALUC determination. See p. 4.10-9. ***That statement is not correct.*** *The ALUC voted to only require actions related to the Lampson project and not the others to come before the ALUC for review*.

A notice will be required on all sales documents to alert the residents of the presence of the base and of airport noise. *Such a notice needs to run with the land*, not just first-time buyers, but all subsequent buyers need to be notified and sign off on it that they have read it and are aware of the presence of the Joint Forces Training Base and of the noise issues.

Arbor Park and Arbor Dog Park
DEIR, 4.14 Recreation: Arbor Park and Arbor Dog Park are not under the jurisdiction of the City of Los Alamitos, but under the jurisdiction of the City of Seal Beach. The City of Seal Beach has a lease with the Army Corps of Engineers for the land for those two parks – not the City of Los Alamitos; Arbor Park & Arbor Dog Park have never been under the jurisdiction of the city of Los Alamitos, so to list them as City of Los Alamitos parks **is not correct.** The City of Seal Beach developed those two parks and maintains them. Mr. Frank Laszlo, a former four-term councilmember from CPE, negotiated with the Army Corps of Engineers and the Base personnel for Arbor Park to be leased by and for the City of Seal Beach.

Arbor Park Boundary and the addition of 10 feet for parking
Addendum Arbor Park Layout: diagrams state the "existing north fence (along the Project northern boundary), adjacent to Arbor Park, "to be removed." They want this 10 feet dedicated to the City of Los Alamitos. The City of Seal Beach has the lease on Arbor Park and Arbor Dog Park. Dedicate that 10' to the City of Los Alamitos has complications that

DRAFT

will render it not feasible. *That fence is the southern boundary of the Joint Forces Training Base and cannot arbitrarily or capriciously be removed without express permission from the Army Corps of Engineers and the Base Commander.* It is pragmatic of the developer to give up 10 feet of space for additional park and Project parking but it requires express permission of the Base Commander and Army Corps of Engineers. *However, if they wish to deed that 10' to the US Army and not the City of Los Alamitos, that might be feasible.* This 10' would go a long way to help AYSO parking. Alternately, that 10' could also be completely separate and available to both AYSO and the Project, with the existing boundary fence kept intact or in place. It would also require an entrance from the park end of the driveway into Arbor Park, near the field.

Outdoor living space: The project would be short of meeting the common area requirement by 33,040 sf due to requests from the City of Los Al regarding the dedication of the northerly10-ft strip of land abutting Arbor Park and Arbor Dog Park, which comprises an area of approximately 1,000 sf of property to the City. If this area is dedicated to the City, then the project will be unable to meet the common area requirement because compliance with this requirement would physically preclude construction of the project at the densities allowed and with the concessions proposed. As stated above, deeding that 10' of property to the Base, ie, Army Corps of Engineers might be more feasible to accomplish the goal of providing more parking.

The document (Arbor Park Parking Study and Layout) goes on to say, "the project will provide multiple pedestrian connections with Arbor Park/Arbor Dog Park to the north." That requires the permission of the base commander and the Army Corps of Engineers to do that. It is the Base that has stated that the park will close at sunset and open at sunrise, and that therefore there will be no overnight parking.
The Pass-thru gates: *will they be removed?* They were installed by AYSO and the SWRL folks. If the parking lot is removed, that gate will no longer be necessary and will be removed by Base personnel.

Heather Park
Proposed parks within the Project are small with defined uses; kids will cross Lampson to use Heather Park. 1. crossing Lampson is *dangerous*, even with the traffic light; 2. they need to provide more park space for their own children and 3. not impact Heather Park. Our parks are well used by CPE kids and families; take care of the needs of your own residents. Don't see our park as your solution to inadequate park space.

Traffic Safety
Where are their school bus stops? Inside the project (can't pick up kids on Lampson Avenue) or at Heather Park?

Sidewalks stop at each end of the property, so people will not be able to walk on the north side of Lampson past the end of the property line; they will have to use the south side, and

DRAFT

the area from Heather to Candleberry contains what has become called Dead Man's curve due to the many frequent accidents along that stretch of roadway – vehicles crash into the wall on the south side of the street making walking dicey at best. You really don't see any walkers from Heather to Candleberry along Lampson. The area is very contained: once you start walking it, there is no way out – you have to walk to the end of either Heather or Candleberry. It's just you, the block wall and oncoming traffic. This is a dangerous stretch of roadway for vehicles, let alone pedestrians.

U-turns on Lampson at Heather. Vehicles exiting either Arbor Park or Arbor Dog Park must make a right turn onto Lampson due to the presence of the center divider. Consequently, many of those drivers make a U-turn at Heather Street. If I am at the light at Heather, trying to turn right, and there is someone on Lampson *appearing* to turn left, if they have a dog in the car, it's a safe bet they are coming from the dog park and will be making a U-turn right in front of me. This situation has caused many incidents at that intersection for CPE folks trying to turn right at Heather Street. *It is unsafe.*

Public Service Correspondence: "response time for the Los Alamitos PD to the project site: priority 1: less than 5 minutes." Even with sirens blaring and running all stop lights, it will take more than 5 min. In the morning, from my house (4433 Ironwood) to Katella & Los Al Blvd, it takes a good 20 minutes and that is on a good day. Given traffic and distance, that is just the way it is. SBPD will end up servicing those calls as traffic is not as bad from SBPD to Lampson as it is from LAPD to Lampson.

Project Alternative: instead of family housing, senior housing.
Instead of 77 family units, there should be 77 senior units; this alternative would provide 594 parking spaces, an increase of 20 spaces – placing parking in the north west corner of the project which is where it is the noisiest. A win-win: that helps solve two issues (noise and more parking). In addition, there would be less demand on parks (seniors are more likely not to have children who would use parks) – that puts less stress on the park within the Project and also on Heather Park. In addition, while many seniors work these days, there would most likely be less demand at peak travel times in the morning and late afternoons. Senior's parking needs would also be less than those of townhome and single-family home residents. But still more than 1.5 parking spaces per unit. We are well aware of the parking demands on the western side of The Shops at Rossmoor along Montecito. Those condos were originally built for seniors with one parking space per unit. Now that they have families there, the parking is not sufficient and they park on Montecito and in Rossmoor, much to the chagrin of the residents of Rossmoor who often find cars partially blocking their driveways. The management of the Shops at Rossmoor has told the residents to not park in back of the condos. It is not a pleasant situation and one to avoid in this Project.

DRAFT

Moon Trees
4.1 Aesthetics - threshold b: yes. Plan calls for removal of all trees – three of those trees are redwoods and we have reason to believe they are Moon Trees. In 1971, Apollo 14 took a canister full of seeds to the moon. That cannister contained seeds from many plants including 5 tree varieties, one of which was redwoods. Upon return, these seeds were planted all over the country. Most if not all of the redwood seedlings died as they were not in their native habitat. Redwoods are not native to this area, so they had to be planted. Fish and Game controlled where these seedlings were planted and Fish and Game was located at that building, so it is conceivable they planted them; those trees are approximately 50+ years old which fits in with the age of those seedlings and should not be cut down. One tree does not look as if it is doing well, but the other two are fine. Originally there were 5 trees, but 2 of them died and now the third appears to be on its way out, but the two that are doing well, should be kept.

Question about Townhomes. The kitchens will be on the second floor. No one wants to carry groceries up a flight of stairs. *Do they have dumbwaiters?*

End of comments.

DRAFT

Responses to Comment 11

Campbell, Patty, dated June 10, 2024.

11-1 The commenter provides comments to the Draft EIR which are addressed below.

11-2 The commenter states that the Draft EIR states there will be 4 people per housing unit (984 residents) and also states there is an estimated 647 residents. The commenter also expresses concerns with insufficient parking.

The commenter does not indicate where in the Draft EIR it is stated that there would be 4 people per housing unit. For purposes of evaluating Project impacts related to population and housing, the Draft EIR projects there would be approximately 647 new residents based on an average household size of 2.63, consistent with the housing household size reported in the City's 2021–2029 Housing Element (Refer to Draft EIR page 4.12-9). Refer to Master Response 2.1.3, *Parking*, for parking concerns.

11-3 The commenter states that there is no public transportation on Lampson Avenue and the nearest bus stop is 3.5 miles walking distance. The commenter states that this will increase the demand for parking and expresses concerns with inadequate parking. Although there is no transit service along Lampson Avenue, an OCTA bus stop for Route 123 is located approximately 1.2 miles at the intersection of Valley View Street and Lampson Avenue. Refer to Master Response 2.1.3, *Parking*, for parking concerns.

11-4 The commenter expresses concerns with parking demand from AYSO states that overflow parking from AYSO will be at CPE. The commenter states that overflow parking at CPE will interfere with the CPE residents' ability to park and impact the safety of their streets. Refer to Master Response 2.1.3, *Parking*, for parking concerns.

11-5 The commenter states that the City General Plan Policy 4.11 to monitor multifamily parking requirements is not useful because once a project is developed there is no opportunity to adjust or increase parking. The commenter also expresses concerns with guest parking and adequate parking needs. The City's Policy pursuant to the General Plan is to monitor the parking requirements to reduce the impact of parking requirements on multifamily development and establish strategies as appropriate. Refer to Master Response 2.1.3, *Parking*, for parking concerns.

11-6 The commenter requests an explanation on how runoff will flow from JFTB to Old Ranch Country Club to the south, if there are no underground drainage pipes to Old Ranch along the Lampson. Additionally, the commenter asks whether runoff would interfere with CPE runoff.

Drainage from the Project site currently flows to Old Ranch Country Club. As stated in Section 4.9, *Hydrology and Water Quality*, of the Draft EIR, the existing site generally flows in a north to south direction into an existing westerly flowing concrete channel along the site's southerly

DRAFT

property line. The westerly flowing channel is collected via an offsite 18-inch corrugated metal pipe (CMP) that flows under the offsite driveway to Arbor Park and discharges into an offsite earthen channel on the west side of the driveway. Runoff flows within this earthen channel are then collected by an existing 24-inch CMP that flows westerly, discharges into a westerly flowing earthen channel within the JFTB, and then drains to the Old Ranch Country Club to the south (Draft EIR, p. 4.9-1). Refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, for hydrology impacts.

11-7 The commenter expresses concerns with storm water runoff onto nearby streets and Old Ranch Golf Club and states there is significant flooding in the area. The commenter states that the Draft EIR is incorrect in stating that stormwater runoff is ultimately discharged into the San Gabriel River; and instead states that it ends up in the lakes of Old Ranch Golf Club.

Refer to Response to Comment 11-6 and Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, for hydrology concerns. On a regional basis, stormwater drainage in the City is ultimately conveyed to the San Gabriel River.

11-8 The commenter states that if the water quality detention system does not work and there is too much water then it will flow to Lampson down Heather to Ironwood and Hazelnut Avenues, exacerbating flooding in CPE. Refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, for hydrology concerns.

11-9 The commenter states that the existing storm drains in CPE are not adequate for the amount of rain received in the last two years and states there is a potential that stormwater runoff from the Project could contaminate the City of Seal Beach's well on the north side of Lampson.

Refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, for hydrology concerns. The Project has been designed to ensure that Project peak flows do not exceed existing flows based on a conservative 100-year storm event (a rainfall event that statistically has the same 1% chance of occurring).

As stated in Section 4.9, *Hydrology and Water Quality*, of the Draft EIR, the Project site conditions do not support infiltration and the Project site is not within and is not a part of a recharge facility for the Orange County Groundwater Basin. Implementation of the Project would not result in substantial adverse effects to local groundwater supplies. Further, the Project has been designed to incorporate best management practices to address the pollutants of concern from residential development. Therefore, the Project would have a beneficial impact on water quality.

11-10 The commenter provides a general statement that the City of Los Alamitos cannot provide any utility services for the Project except for water (Golden State Water Company) and the Project plans to tie in all utility services for the City of Seal Beach. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues

DRAFT

concerning the environmental analysis provided in the Draft EIR and no further response is required.

11-11 The commenter states that ALUC found the Project inconsistent. Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*.

11-12 The commenter states that the statement made on Page 4.10-9 on the Draft EIR is incorrect and that ALUC voted to only require actions related to the Project site and not Housing Element Sites 7 (Laurel Park) and 10 (5030-5084 Katella) to come before the ALUC for review. The commenter is incorrect about the conclusion of the ALUC meeting on September 21, 2023. According to the meeting minutes of the ALUC Meeting on September 21, 2023, Commissioner Murphy moved to approve Option #2, and a second by Commissioner Sustarsic, Commission voted 5-0 in favor of Option #2. Option #2 required the City to submit the actions listed in Option #1, limited to Site 6 at 4655 Lampson Avenue; Site 7 Laurel Park APN 241-241 -35; and Site l0 located at 5030- 5084 Katella[5]. Therefore, the Draft EIR's statement is accurate and no revisions to the Draft EIR are required.

The commenter also states that a notice is required on all sales documents to alert residents of the presence of the JFTB and of airport noise. Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*, related to buyer's awareness.

11-13 The commenter states that listing Arbor Park and Arbor Dog Park under the jurisdiction of Los Alamitos is incorrect and the City of Seal Beach developed the two parks and maintains them. The commenter is mistaken on the language in the Draft EIR when stating the two parks are within the jurisdiction of Los Alamitos. As discussed in Section 4.14, *Recreation*, of the Draft EIR, the Arbor Dog Park and Fields are currently leased by the City of Seal Beach from the JFTB for its residents, although the two parks are within the jurisdiction of Los Alamitos (refer to Page 4.14-4 of the Draft EIR). The use of the language for jurisdiction in this case meant that the parks are located within the City of Los Alamitos. However, the Draft EIR acknowledges that the parks are owned by JFTB and operated by the City of Seal Beach.

11-14 The commenter states that the 10 feet of parking would be dedicated to the City of Los Alamitos and would have complications that render it infeasible. The 10 feet dedication requires permission from JFTB. The ownership of the 10 feet dedication will be granted to the appropriate municipality governing the site at that time and is not an environmental issue analyzed under CEQA; however, these comments are noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action

[5]*https://files.ocair.com/media/2024-01/ALUC%20Meeting%20Minutes%2009.21.2023_web.pdf?VersionId=Dc8GuySf9k7xwiPQexQBKGVScqtIfcfG*

DRAFT

being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

11-15 The commenter states that the Project is short of meeting the common area requirement by 33,040 sf if the 10 foot strip of land is dedicated to the City, the Project will not meet the common area requirement. The commenter is correct that the Project Applicant is seeking a waiver pursuant the State's Density Bonus Law for reduced common area requirement. The commenter states that deeding the 10 feet of property to the JFTB is more feasible to accomplish the goal of providing more parking. Refer to Response to Comment 11-14 above for the dedication of the 10-foot strip of land on the Project site.

11-16 The commenter states that providing the proposed pedestrian connections with Arbor Park/Arbor Dog Park requires permission from JFTB and inquires if the pass-thru gates will be removed. The proposed pedestrian connections will be self-locking to match the current operational hours of the parks. The exact configuration and implementation of the proposed pedestrian connections are speculative at this time and are not an environmental issue analyzed under CEQA; however, these comments are noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

11-17 The commenter expresses concerns with street crossing on Lampson, provision of park space, and impacts to Heather Park. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for pedestrian safety concerns. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities* for impacts to existing parks.

11-18 The commenter inquires about the location school bus stops and expresses concerns with traffic safety on Lampson Avenue. There are no school bus stops anticipated at the Project site or along Lampson Avenue. This is currently an existing school bus stop at Heather Park which serves the following schools: McGaugh Elementary, Weaver Elementary, McAuliffe Middle, and Los Alamitos HS. Children from the Project would have access to the existing school bus stop. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns. Refer also to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for pedestrian safety concerns.

11-19 The commenter expresses safety concerns with U-turns on Lampson Avenue at Heather Street. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson* Avenue, for pedestrian safety concerns.

11-20 The commenter states that SBPD will end up servicing police calls instead of Los Alamitos Police Department (LAPD) due to traffic levels. The Project site is located within the City of Los Alamitos; therefore, it will be served by LAPD. Additionally, as discussed in Section 4.13, *Public Services*, of the Draft EIR, Los Alamitos Police Department has indicated that this

DRAFT

increase would not adversely impact Los Alamitos Police Department's existing resources. The existing resources would be adequate to meet the additional demands generated by the Project. Responses times and service ratios would be met and would not require the construction of new facilities (refer to Page 4.13-10 of the Draft EIR). However, SBPD has a mutual aid agreement with LAPD and can assist with public services in the event of an emergency, if needed.

11-21 The commenter advocates for the Senior Housing Alternatives for its ability to alleviate noise, parking, park, and traffic issues. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

11-22 The commenter states that three of the trees on the Project site are redwoods and believed to be Moon Trees. In response to this comment, T&B Planning, Inc. retained LSA to conduct research to determine if the redwood trees located at the southwest corner of the property at 4665 Lampson Avenue are Moon Trees (see *Attachment N* of this Final EIR).

Research found no evidence that the redwood trees at 4665 Lampson Avenue are Moon Trees. Neither the National Aeronautics and Space Administration (NASA) nor the United States Forest Service (USFS) has found any record of the Apollo 14 Moon Trees being planted in Orange County. CDFW was not part of the 1970s Moon Tree program and was not responsible for distributing Moon Tree seedlings. CDFW staff thinks it unlikely they would have been allowed to plant trees at the Lampson Avenue location since they only leased the building. Additionally, it appears the CDFW lease was several decades after the mid-1970s timeframe when the trees would most likely have been planted and therefore the commentor's speculation that "it is conceivable [CDFW] planted them" is unlikely to be accurate. Moreover, according to City records, there are no Moon Trees in Los Alamitos. In addition, none of the other sources that responded to requests for information could confirm that the redwood trees at 4665 Lampson Avenue are Moon Trees or even that any Moon Trees were planted in Orange County.

11-23 The commenter inquires whether there are dumbwaiters so residents do not have to carry grocery to a second story. There are no dumbwaiters proposed at this time. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

DRAFT

COMMENT LETTER 12

Steven B. Chesser
4764 Candleberry Avenue
Seal Beach, CA 90740
sbbk@mail.com

May 18, 2024

Tom Oliver, Associate Planner
City of Los Alamitos Planning Department
3191 Katella Avenue
Los Alamitos, CA 90720

Dear Mr. Oliver,

I am writing to express my opposition to the Lampson Park Place Project. I also wish to point out the inadequacy of the Draft Environmental Impact Report (DEIR).

The report states that the Proposed Project ("the project") is on land in the City of Los Alamitos but fails to acknowledge that virtually **all the negative impacts fall on the City of Seal Beach**; specifically, the existing housing development known as College Park East (CPE). My family and I have lived in CPE since 2002.

12-1

These impacts include vastly increased traffic on Lampson Avenue; the only access to and from the project is on Lampson Avenue. Lampson Avenue already has experienced numerous fatal and near fatal accidents over the years due to speeding, running red lights, illegal U-turns and driving while impaired. This situation can only get worse with the addition of 246 housing units and nearly 600 vehicles entering and leaving the project. The density of the project, 20 units per acre, is far in excess of what exists in surrounding neighborhoods. The Notice of Availability for the DEIR even concedes that Transportation impacts, even after mitigation measures "**would remain significant and unavoidable**".

There is a high probability of spillover parking into CPE, as the project **by design** has fewer than the recommended number of parking spaces.

12-2

The project refers to FAA approval of the project based on the narrow interpretation of building height and obstruction to air navigation, but **completely ignores the potential of airplane accidents and the attendant danger of residential encroachment**. The Airport Land Use Commission has advised that the residential development adjacent to the Joint Forces Training Base (JFTB) is **incompatible** with public health and safety.

The report also ignored the National Commission on Military Aviation Safety report, which released its findings to Congress on December 1, 2020. From the report's

12-3

introduction: "More than 6,000 U.S. noncombat military aviation mishaps occurred between 2013 and 2018. These mishaps occurred during training or routine operations. They claimed the lives of 198 servicemembers and civilians and cost the nation more than $9.41 billion in damages, including 157 destroyed aircraft." The report is highly relevant to the project which directly abuts a military aviation facility, the JFTB.

I request the DEIR be modified to reflect the **true** impacts of the project. I believe once these are known and understood, the project will need to be scaled back to something more compatible with the surrounding neighborhoods and the capacity of the existing roads and infrastructure.

12-3
(CONT.)

Thank you for considering my views.

Sincerely,

Steven B. Chesser

Responses to Comment 12

Chesser, Steven, dated May 18, 2024.

12-1 The commenter expresses opposition to the Project and states that the Draft EIR fails to acknowledge all impacts that fall on the City of Seal Beach, specifically College Park East. The Draft EIR analyzes the environmental impacts of the Project, including potential impacts that occur across jurisdictional boundaries. Additionally, the City of Seal Beach is acknowledged as a Responsible Agency for the Project (see Table 3-6, of the Draft EIR).

12-2 The commenter expresses concerns with increased traffic, access, traffic accidents, density, significant and unavoidable transportation impacts, and parking. The commenter does not provide specific comments on the adequacy of the Draft EIR. However, these comments are noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project.

Explanation of potential impacts related to increased traffic, traffic accidents, significant and unavoidable transportation impacts, and parking are provided in Master Response 2.1.1, *Transportation and Traffic Congestion*, Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, and Master Response 2.1.3, *Parking*. The Project is consistent with the City's General Plan and zoning designations for the site, including allowable density. Vehicle access to the Project site would be provided via two driveways on Lampson Avenue, one for the apartment entry on the western side and one for the primary neighborhood entry central to the site. Additionally, a restricted emergency vehicle access point with Lampson Avenue would be provided at the eastern end of the site.

12-3 The commenter states that the Draft EIR completely ignores the potential of airplane accidents and attendant danger of residential encroachment near JFTB and states that ALUC has advised the residential development is incompatible with public health and safety. The commenter states the Draft EIR ignored the National Commission on Military Aviation Safety Report, released on December 1, 2020 and states that it is relevant to the Project site. The commenter requests the Draft EIR be modified to reflect the true impacts of the Project.

Contrary to the commenter's assertion, the Draft EIR included an analysis of safety hazards of JFTB on the Project (see Section 4.8, Hazards and Hazardous Materials, of the Draft EIR). The National Commission on Military Aviation Safety is a report on military aviation nationwide and does not provide safety information or accident data specific to JFTB. Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*.

DRAFT

Comment Letter 13

draft EIR for 4665 Lampson

Donna Chinn <donna.chinn@gmail.com>
Mon 6/10/2024 3:15 PM
To:Tom Oliver <Toliver@cityoflosalamitos.org>

Please forgive me if this is already included in the draft, but I did not find the results of a traffic flow study. As you are probably aware, the neighborhood of College Park East in Seal Beach has many concerns about the additional traffic that the proposed development would bring. Would there be a left turning lane for eastbound cars at the development entrance? It would seem that there would be a big back up of traffic, especially during the morning and evening rush periods. 13-1

We are also concerned about the number of additional cars overall. Even though it appears that the proposal has the legally required number of parking spaces, I believe that more spaces would be called for. College Park East does not have the capacity for potential overflow parking. 13-2

Lastly, the proposed project would replace areas that are presently covered with vegetation. Removal of mature trees, and grass, to a lesser extent, is definitely a negative impact to the environment. It would destroy habitat for local birds and other wildlife and reduce carbon mitigating capacity. 13-3

Sincerely,
Donna Chinn
College Park East, Seal Beach

DRAFT

Responses to Comment 13

Chinn, Donna, dated June 10, 2024.

13-1 The commenter inquires about the results of a traffic flow study. The commenter asks whether there would be a left turn lane for eastbound cars at the development entrance and whether it would cause a backup of traffic during the morning and evening peak hours. The Project proposes a cross-street stop-controlled intersection at the primary neighborhood entry, which will allow for full access, including left turns for eastbound vehicles. A queuing analysis was performed at the Project driveways to determine whether there is adequate storage length during the AM and PM peak hours. The analysis demonstrates that there is adequate storage at both driveways to accommodate peak hour queues (see Section 1.7, Queuing Analysis, of *Attachment G* of this Final EIR). Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns.

13-2 The commenter expresses concerns about the increased number of vehicles and inadequate parking. The commenter states that College Park East does not have the capacity for potential overflow parking. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns. Refer to Master Response 2.1.3, *Parking*, for parking concerns.

13-3 The commenter expresses concerns with removal of mature trees and grass as it would destroy habitat for local birds and other wildlife and also reduce carbon mitigating capacity. The Project would result in the removal of existing trees. As discussed in Section 3.0, *Project Description*, of the Draft EIR, a variety of trees, shrubs, accent plants, and ground cover are proposed along the perimeter of the Project site, in common areas, recreational amenities, open space areas, and parking areas. Landscaping will feature drought-tolerant plant materials. A total of 441 trees, including 51 36" box focal trees, 190 15-gallon trees, 5 10x10'specimen canopy trees, and 195 24/36" box trees, would be planted throughout the Project site (refer to Page 3-7 of the Draft EIR).

As discussed in Section 4.3, *Biological Resources*, of the Draft EIR, no special-status plants were detected on the Project site. However, the Project does provide limited suitable habitat for nesting birds and common raptor species. Construction activities have the potential to adversely impact nesting birds and raptors and roosting bats. Implementation of Mitigation Measures MM 4.3-1 through MM 4.3-3 would ensure that pre-construction surveys are conducted for nesting birds, nesting raptors, and bat roosts prior to site disturbance. If nesting birds or raptors are present on the Project site, mitigation requires avoidance of active nests. With implementation of the required mitigation, potential impacts to nesting birds and common raptors would be reduced to below a level of significance (refer to Pages 4.3-29 through 4.3-39 of the Draft EIR).

Dear Mr. Oliver,
I'm writing to state my opposition to the Lampson development project. 14-1

Sincerely,

Vita Chirco
Seal Beach resident

DRAFT

Responses to Comment 14

Chirco, Vita, dated May 12, 2024.

14-1 The commenter expresses opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

Comment Letter 15

From: markjuliac@gmail.com
To: Tom Oliver
Subject: LAMPSON HOUSING
Date: Sunday, April 28, 2024 7:21:48 PM

Dear Mr. Oliver:

As a homeowner at CPE, I would like to voice my concern regarding Lampson not suitable for more residential development. 15-1

Back on Dec 22 2019, a car crashed through the block wall facing Lampson into my property in the middle of the night, missing the pool by a few feet. I was thankful that the car didn't plunge into the pool. Police Officer Kieth Phan came the next day and filed a police report. It took me six trips to the police station and over a year including filing at small claim court to get the driver's insurance to pay for repairing the wall. Building more houses on Lampson would definitely worsen public safety and I hope the city would put a brake in the Lampson project. 15-2

Should you have any questions, please do not hesitate to contact me.

Mark & Julia Chow.
4357 Ironwood, Seal Beach, CA 90740

Responses to Comment 15

Chow, Mark and Julia, dated April 28, 2024.

15-1 The commenter expresses concerns with the Project which are responded below.

15-2 The commenter provides a car accident history onto their property from Lampson Avenue and expresses concerns with public safety. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion,* for traffic concerns. Refer to Master Response 2.1.8, *Public Safety*.

Hand Delivered 6/10/24

Regarding 4665 Lampson Ave,
Draft Environmental Impact Report Dated April 24, 2024

Mr. Oliver,

In response to the Notice seeking Comments to the Draft Environmental Report for 4665 Lampson. Ave, I am enclosing the following:

1. Comments to **Air Quality Impact Analysis** by Urban Crossroads dated May 5, 2023;

2. Comments to **Phase 1 Environmental Site Assessment Report by EFI Global** dated January 18, 2023, and copy of **FINAL Phase I Environmental Site Assessment Report to GSA** Southwest Regional Laboratory for 4665 Lampson Avenue, Los Alamitos, California 90720; Contract No. GS-00F-168CA/Award No. GS-10F-0076K prepared by Tetra Tech Inc, dated May 2016;

3. Comments on **Airport Land Use Assessmen**t by Nick Johnson dated October 2, 2023 addressed to Nicole Morse at T&B Planning and August 14, 2023 letter to Chet Simmons from Johnson Aviation Consulting;

4. Comments on **Noise Impact Analysis** prepared by Urban Crossroads buy Bill Maddux dated April 22, 2024;

5. Comments to **Biological Technical Report** by Glenn Lukas dated April 1, 2024;

6. Comments to **Phase I Cultural Resources Stud**y by BFSA Environmental Services by BFSA Environmental Services dated April 7, 2023;

7. Comments on **Fire Service Questionnaire** - Orange County Fire Authority dated March 18, 2024 by Tamara Rivers Management Analyst.

8. Comments on **Seal Beach Police Department Questionnaire** signed by Michael Ezroj on November 16, 2023;

9. Comments on **Traffic Analysis by Urban Crossroads** dated September 2022.
Please confirm timely receipt to my email.

16-1

Thank you,
Carol Churchill

Exhibit 1

Comments to Air Quality Impact Analysis by Urban Crossroads dated May 5, 2023

The executive summary states that development projects must comply with laws put in place by federal, state and local regulatory agencies. "Any operation or activity that might cause the emission of smoke, fly ash, dust, fumes, vapors, gases, or other forms of air pollution which can cause damage to human health, vegetation or other forms of property, or ca cause excessive soiling on any other parcel shall conform to the requirements of the South Coast Air Quality Management District.

SCAQMD Rule 402 states that a person shall not discharge for any source whatsoever such quantities of air contaminants or other material that cause injury, detriment, nuisance or annoyance to any considerable number of persons, or to the public, or that endanger….health or safety..of such person or public….

SCAQMD Rule 403 states in part that the rule is intended to reduce the amount of particulate matter entrained in the ambient air as a result of man-made fugitive dust sources by requiring actions to prevent or reduce fugitive dust emissions. The rule applies to human-made conditions capable of generating fugitive dust and applies to earth moving and grading activities.

16-2

The Site Plan Exhibit 1-B is not consistent throughout all of the DEIR Reports.

16-3

Grading as a Source of Fugitive Dust Emissions.

The Air Quality Analysis identifies grading as a source of generating fugitive dust particles on the site during construction.

The Air Quality analysis identifies the following pollutants: Carbon Monoxide, Oxides of Nitrogen, Particulate Matter, Volatile Organic Compounds, Reactive Organic Gasses, Lead, and Odors.

The Air Quality Analysis fails to address the pollutants identified in the January 18, 2023 Phase I Site Assessment Report by EFI Global which reports on a Phase II Site Assessment that also identified Asbestos, Lead and. More significantly levels of Arsenic at 42 times the screening level of .11mg/kg.

The omission of these pollutants in its Air Quality Analysis, given the acknowledge grading of 12 acres of land for residential development, places the public's health and safety at significant risk based on SCAQMD Rules 402 and 403.

16-4

Carbon Monoxide. The operation of the Joint Forces Training Base adjacent to the site is a source for the burning of fuel which is cumulative to the burning of fuel for the grading and construction process. The Analysis failed to take the burning of significant qualities of fuel at the military airport base into consideration in determining the extent of Carbon Monoxide produced during construction.

Oxides of Nitrogen. The operation of the Joint Forces Training Base adjacent to the site is a source for burning of fuel which is cumulative to the burning of fuel for the grading and construction process.

16-5

Ozone - The production of internal combustion engines synthesize into a Ozone. he operation of the Joint Forces Training Base adjacent to the site is a source for burning of fuel which is cumulative to the burning of fuel for the grading and construction process.

16-5 (CONT.)

Particulate Matter comes from road dust, windblown dust, and construction. Ambient fine particulates increase mortality rates, respiratory infections and asthma attacks. The sources identified are fuel combustion, motor vehicles, and equipment.

16-6

The Air Quality Analysis omits to include two of the three particulates located on the property to be graded: arsenic and asbestos in its particulate matter analysis.

As stated above, the **EFI Global report** dated January 18, 2023, include a Phase II Environment Site Assessment including boring samples that identified Lead, Arsenic and Asbestos fibers.

The report states:

Arsenic was detected in all four soil samples analyzed at a maximum concentration of 4.64 mg/kg.

The residential screening level for arsenic is 0.11.

And this screening Leven was exceed in all of the four samples analyzed.

The **EFI GLOBAL report** concludes these levels are below background concentrations **at CALIFORNIA AIR FORCE BASES..**

16-7

The project site is NOT an Air Force Base. The project is adjacent to an Air Force Base which would suggest that pollutants from the operation of the Base have been deposited beyond the JFTB's BORDER where the residential properties are planned to be constructed. The concentration of arsenic on the site IS 42 TIMES higher than residential screening levels.

Grading the site will **release particulate matter containing lead and arsenic** that will endanger the public health given the extent of the contamination.

Cumulative public safety impacts will occur when the soil is graded due to the additional pollution consisting of lead and asbestos that will be released during demolition of buildings and grading of a 12 acre site that abuts the flight path of the JFTB.

Grading will create particulates that can run untreated into the **storm drain running to the ocean untreated, the sewer system, and into well water belonging to the City of Seal Beach.**

16-8

The site will require extensive mitigation measures to remediate the concentration of arsenic for public safety and health before grading can occur.

Those measures must be identified in the final EIR with the South Coast Air Quality Management District, the City of Seal Beach, and the County of Orange approving the grading plan.

16-9

Exhibit 2

Comments to Phase 1 Environmental Site Assessment Report by EFI GLOBAL dated January 18, 2023.

The report states that **EFI GLOBAL** ***conducted only "visual" observations of the site and structures.*** *The consultant states that its services did* ***NOT*** *include "evaluating compliance of past or future owners with applicable local, provincial and federal government laws and regulations. The Consultant concludes that:*

"IT SHOULD BE NOTED THAT COMPOUNDS OR MATERIALS OTHER THAN THOSE DESCRIBED COULD BE PRESENT IN THE SITE ENVIRONMENT."

Section 3.5.3 entitled Commonly Known or Reasonably Ascertainable Information asked the Use if it is aware of any commonly known information in the community about the subject property with retard to recognized environmental conditions. The User informed the Consultant that user was not aware of any information....

The Consultant's Report is deficient because the property owner/user failed to comply with Section 1.4 entitled User Responsibilities" and deliver to Consultant ***the following public record*** *provided User in connection with the auction conducted by the GSA for the sale of the property to User:*

16-10

FINAL Phase I Environmental Site Assessment Report
GSA Southwest Regional Laboratory
4665 Lampson Avenue, Los Alamitos, California 90720
Contract No. GS-00F-168CA/Award No. GS-10F-0076K

Prepared For:
United States General Services Administration
Office of Real Property Utilization and Disposal (9PZ)
50 United Nations Plaza – 4th Floor North
San Francisco, California 94102

Prepared By:
Tetra Tech, Inc.
45610 Woodland Road, Suite 400
Sterling, VA 20166
May 2016
Tetra Tech Project No: 103G3995003.001

The Final Phase I Environmental Assessment Report dated May 2016 *contains significantly data including the following:*

16-11

The Site was identified three times in the Hazardous Materials Generator (HAZNET) database. In 2000, the Site was identified as generating asbestos containing waste with disposal in a landfill.

Page 1 of 3

In 2003, the Site was identified as a generator of off-specification, aged or surplus organics with a disposal method identified as transfer station.

In 2010, the Site was identified as generating ages or surplus organics with a disposal method identified as other treatment. In 2012, the Site was identified as generating a hazardous waste with a disposal method of storage, bulking, and/or transfer off site with no treatment or recovery.

16-11 (CONT.)

A copy of the full report (435 pages) is transmitted by email to the City of Los Alamitos, the City of Seal Beach, and by USPS to Consultant.

++++++++++++++++

The Consultant reports under section entitled ***User Provided Documents*** *that the owner did* ***NOT*** *provide Consultant any information* ***either verbally or in writing*** *(i.e. title report) regarding environmental clean up liens or activity or use limitations encumbering the subject property.*

EFi Global recommended a Phase II Environmental Site Assessment. The scope of the work included a geophysical survey and soil sampling of 11 borings on August 16 2022.

The Phase II Environmental Assessment soil samples revealed measurable levels of ***arsenic was detected in all 4 samples and the screening Level was exceeded; as well as lead.*** *The consultant pointed out that screening levels at Air Force Bases are significantly higher than for RESIDENTIAL USE.* ***The concentration found in the soil was 4.65 mg/kg, which is 42 TIMES the level allowed for residential use, identified by Consultant at 0.11 mg/kg***

16-12

Given the intended use of the property for "residential" use *and outdoor recreation by residents in the soil, and the high water table underlying the property, liquefaction reported in the Hydrology and Geotechnical Reports, and the location of a ground water well belonging to the City of Seal Beach Department of Water, there is a risk to public safety and the need to assure* ***ground water supplies and storm drains are not contaminated by run off, and air borne contaminates are not released during construction.***

Additional chemical analysis of the soil for ***other hazardous materials*** *that may become* ***wind borne during construction should be conducted, mitigation measures identified,*** *and the results shared with the City of Seal Beach and City of Los Alamitos and any other governmental agency entitled to those results, before the EIR is approved.*

16-13

Page 2 of 3

The 12 acre site will be graded to provide building pads to address flooding on the site, will create dust and wind borne contaminates such as lead, arsenic and asbestos, necessitates ***rigid ongoing monitoring*** *and reporting to the City of Seal Beach and City of Los Alamitos.*

Consultant identified ***asbestos*** *within the building to be removed that requires special precautions to prevent contamination of the site. Mitigation measure includes asbestos Operaton and Maintenance Plan in addition to asbestos abatement PRIOR TO any renovation/ demolition that would disturb the building materials.*

Lead based paint*, possible* ***radon concentrations.*** Mitigation measures include construction personnel be properly trained in lead related construction.

16-14

Additional Testing is required for TPHd - diesel in soil sample, ***evidence of flooding and storm drain run off*** *that could carry untreated contaminants into the ocean, all must to be addressed by the Consultant in terms of mitigations measures before and during construction to protect the water supply, prevent air pollution, and protect the public's safety.*

16-15

Exhibit 3

DEIR Comment on Airport Land Use Assessment

The Report consists of 88 pages from Nick Johnson, a consulting firm of Johnson Aviation Inc dated October 2, 2023. It was directed to Nicole Morse of T&B Planning. T&B Planning is listed as a consultant for both the City of Los Alamitos and the User of the Property Lampson LLC, one of the partners being Matthew Waken. Mathew Waken employed former City of Los Alamitos staff member Les Johnson, who was employed by T&B Planning, to be his "agent" before the City of Los Alamitos Planning Department. The Senior Planner in Los Alamitos is Tom Oliver, who was supervised by Les Johnson during Johnson's employment in Los Alamitos. T&B Planning as a conflict of interest in that it is financially obligated to both the City of Los Alamitos and the owner of the Property for which it is preparing the DEIR. 16-16

Nick Johnson's resume is attached. It reflects that he has no experience in evaluating the operation of a Military Airport. The consultant lacks the knowledge and expertise to express an opinion on whether the Airport Land Use Plan for the Joint Forces Training Base Los Alamitos is inconsistent with findings by the Airport Land Use Commission and the California Department of Transportation-Division of Aeronautics. Both State Agencies found that the Housing Element Update included three properties adjoining the JFTB that presented a risk to the public's health and safety due to noise and crash hazards. 16-17

Nick Johnson failed to provide the CIty's Consultant, T&B Planning, the City of Los Alamitos City Council and Planning Commission, and the Airport Land Use Commissions with evidence that contradicted findings by the National Commission on Military Safety (2020) **" Report to the President and the Congress of the United States".** 16-18

The Executive Summary of the Report reads:

The National Commission on Military Aviation Safety asked thousands of pilots and maintainers this question during visits to military flight lines. Across the country, certain answers were consistently repeated, regardless of Service, rank, or airframe: **insufficient flight hours, decreasing proficiency levels, inadequate training programs, excessive administrative duties, inconsistent funding, risky maintenance practices, and a relentless operations tempo.**

The Commission also independently assessed this same question. The Commission **reviewed thousands of mishap reports**, consulted volumes of secondary research, and conducted **data analysis** to determine **why mishap rates have increased**. The Commission also utilized its resident knowledge and experience: two retired four-star military aviators; a former member of the National Transportation Safety Board and Director of Safety and Survivability for the Navy; a former Secretary of the Army who had previously served as Acting Secretary of the Air Force and as a member of Congress; an engineer turned CEO for major aircraft manufacturers; a White House Deputy Chief of Staff for Operations who served four presidents; and a former Navy helicopter pilot who oversaw Air Force One and Marine One while director of the White House Military Office.

This report shares **critical perspectives from the flight line and addresses the safety concerns that so many aviators and maintainers candidly share**d. This report also covers broader topics in the Commission's statutory charter, such as aviation mishap

Page 1 of 6 6/09/24

rates, unexplained physiological episodes, and aviation maintenance delays. The complete list of the Commission's recommendations is provided in Appendix B.

During its study, the Commission realized that many aviation safety issues are uniquely interconnected and require collaborative, cross-cutting solutions. For example, increasing spare parts inventories does little good if there are not enough experienced maintainers to install them. Fixing one issue may require fixing several related issues, and all solutions must be crafted to work in concert. In this report, the Commission took special care to balance competing and sometimes conflicting priorities, and its recommendations are proposed with an understanding of the importance of harmonization.

Our findings and recommendations focus on four areas where Congress and the Department of Defense can take immediate steps to reduce aviation mishaps: Pilots should fly; maintainers should maintain; data can save lives; and funding should be consistent.

Aircrews and Maintainers

The Commission found that aviation and maintenance experience, the key to doing a job safely and efficiently, is declining. Newly trained pilots and maintainers are reporting to operational units without basic skills. Flight hours are being replaced with simulator hours, yet the simulators are often outdated, out of service, or unavailable. Aircrews and maintainers are saddled with additional nonaviation duties that are more valued than their primary duties for purposes of promotion. Furthermore, on top of their experience gaps, some aircrews are experiencing physiological episodes when an aircraft's environmental systems fail to meet the needs of the pilot.

16-18 (CONT.)

This report addresses these issues in detail. Two chapters address the shortcomings in initial training, follow-on training, and personnel management of aircrews and maintainers. One chapter examines the effects of a relentless pace on military aviation for both machine and personnel. Another chapter discusses the human-machine interface and recommends changes in the acquisition process to better meet the needs of the pilot during aircraft design and modification.

"Additional Duties. . . We have an instructor pilot trying to get a forklift license."
—USAF Junior Officer

However, while addressed in separate chapters, these are compounding problems. A reduction in flight hours for new pilot training adds to the requirements for operational units. These units, already overtasked from a high operations tempo, must then conduct training to develop basic skills for new personnel. This stagnates the units' ability to conduct high-level training. In other words, junior pilots and maintainers are starting their careers a lap behind, and then never catching up, all while their units buckle under the additional stress of getting them up to speed. This, in turn, leads to further costs. By being overworked, overstressed, and overloaded with additional duties unrelated to aviation, the morale and readiness of aircrews and maintainers erode. Experienced aircrews and maintainers leave the Services and are replaced by personnel with no expertise. The average level of experience falls, and the cycle repeats.

To address these issues, the Commission recommends a multipronged approach. As outlined in the report, the Services must improve the training of new pilots and maintainers to broaden their experience and limit the burden on operational units. Additionally, the Services must increase the retention of experienced aircrews and

maintainers through better personnel management, increased bonuses, and better schooling opportunities. The Services, having invested years and millions of dollars in initial, on-the-job, and advanced training, must focus the careers of aviation professionals on their aviation duties. Furthermore, to increase safety and readiness, the Services must ensure that aircraft are designed to match the needs of the aircrew who fly them. Without such complementary solutions, the U.S. military could be left with the worst of all worlds: increased costs, decreased readiness, and eroded safety margins.

Data Deficiencies and the Need for a Joint Safety Council

During its study, the Commission identified numerous data deficiencies in military aviation. Due to poor data collection and analysis, the Services and the Department of Defense are missing out on valuable opportunities to reduce risk, prevent mishaps, and optimize human performance. This is repeatedly referenced in the report. For example, one chapter explains how the Department lacks sufficient data collection methods and analysis capabilities to reduce risks and improve safety, while the Services lack standardized procedures and consistent processes in their mishap reporting. Another chapter examines how improved pilot monitoring could help identify, understand, and reduce unexplained physiological episodes. Additional chapters discuss the need for improved data collection to measure training efficacy for pilots and maintainers.

In studying these issues, the Commission reviewed the current practices of commercial aviation, which has successfully used data analytics to identify and reduce safety risk. While certain commercial practices are limited in their applicability to military aviation, the Commission identified policies and practices that offer opportunities to reduce risk and improve safety. For example, compared to the commercial sector, the Commission determined that the Department of Defense is not properly organized to conduct data analytics, coordinate aviation safety activities, develop safety standards or data collection requirements, or review the Services' implementation of aviation safety programs.

The Commission recommends creating a Joint Safety Council. Reporting to the Deputy Secretary of Defense, the council would be responsible for establishing military aviation safety standards, collecting and analyzing safety data, and developing safety priorities. Led by safety officials from the Services, the council would have the necessary expertise and authority to monitor and coordinate aviation safety programs across the Department. This recommendation is further outlined in Chapter 4, and a legislative proposal is contained in Appendix H.

Consistent and Predictable Resourcing

The question of the next mishap was not hard to answer at one Marine base, where a junior Marine told the Commission that his unit was reusing expendable $5 filters on aircraft. The unit, he explained, still had missions to do even if there was no money to purchase new filters. This was one of the egregious examples the Commission found, and it was a direct result of funding suddenly being withdrawn to meet other priorities. Inconsistent funding, and the tolerance it fosters for maintenance shortcuts, were the likely causes of the next mishap at this unit.

"We are doing 12-hour days, five days a week, and hardly flying." —F-22 Pilot

"Guys are going to take risks they don't even know is a risk." —Marine Supervisor

16-18
(CONT.)

A lack of consistent funding is especially pernicious to military aviation safety. Flying, like surgery and other highly technical professions, is a perishable skill that needs routine practice to maintain proficiency. When a unit's funding is restored in the last part of a fiscal year, it simply cannot make up for lost training and deferred maintenance. Late funding, no matter the amount, cannot reverse the impact of months of insufficient flying hours, missing parts, and deferred maintenance. Timing is everything.

By far the greatest and most preventable source of unpredictable funding is Congress's use of continuing resolutions. The Department of Defense has begun the fiscal year with a continuing resolution for 13 of the past 18 fiscal years. As continuing resolutions have become more common, their average duration has also increased. There is near universal agreement that continuing resolutions significantly degrade readiness, waste money, and put the lives of Servicemembers at unnecessary risk.

The Commission concurs and heard examples from every Service of how inconsistent funding degrades virtually every aspect of military aviation. However, empirical research on the impact of continuing resolutions is lacking. Therefore, while the Commission first recommends that the Department of Defense and Congress resource military aviation in a consistent and predictable manner, the Commission also recommends that Congress require a comprehensive, data-driven analysis of continuing resolutions' impact on military aviation.

Conclusion

In line with the Commission's statutory charter, this report provides a comprehensive review of military aviation safety. The issues outlined above remain illustrative, not exhaustive. Overall, this report addresses numerous topics related to military aviation, including mishap rates, safety data, unexplained physiological effects, sustainment management systems, funding, operations tempo, training, and talent management. Each of these topics warrants careful review and attention, particularly due to the stakes involved.

During the Commission's six-year study period, aviation mishaps cost the U.S. military 198 lives, 157 aircraft, and well over $9 billion in damages. To reduce these unacceptable costs, the Commission stresses that systemic problems require integrated solutions that prioritize safety. The cost of doing anything else is simply too high.

Website: https://www.globalsecurity.org/military/library/report/2020/ncmas_final_report_20201201.pdf

16-18 (CONT.)

++++++++++++++++++++++++++++++++++++

Financial Conflict of Interest. Nick Johnson's expertise lies in commercial airports, not military air bases which negates the value of his conclusions. The consultant's opinions are biased due to a financial conflict of interest. Nick Johnson was employed by the Lampson purchasers to secure a report from the FAA, and was

16-19

subsequently hired by the City's DEIR Consultant T&B Planning. Nick Johnson failed to disclose his financial interest between himself and the developer publicly as it related to the preparation of is Report.

16-19 (CONT.)

Cumulate Noise Impact Ignored. The consultant's also failed to consider the cumulate impact on public safety and welfare of noise generated from Traffic along Lampson Ave, in addition to the noise generated from the operation of the JFTB.

The Noise Report prepared by Bill Maddox of Urban Crossroads dated April 22, 2024, included A Noise Impact Analysis at 4 test sites. Using the Maximum dBa measurement at each of the 4 test sites, it is clear that the use of soundproofing mitigation measures on the windows does not reduce the sound dBa levels to that which is the Standard set by the City of Los Alamitos, 45dBa in the interior of the residential units.

Nick Johnson's use of sound contours to conclude that sound was below the threshold failed to recognize that those contours are not static barriers over which sound cannot travel. Noise consists of vibrations that do not travel in a straight line. The sound waves expand like a ripple of water. The Lampson projects places house along the JFTB border with no evidence of a SOUND WALL around the entire project site, property except along the border of Lampson Road. Even that sound wall appears to eliminate the Emergency Vehicle Access Gate form Lampson, placing the residents in jeopardy in the event of a major emergency: fire or earthquake.

16-20

Additional Mitigation Measure to protect the public safety from crash risks and hearing loss should be imposed in a written Development Agreement that include:

1. Written Disclosure in all sales/leasing/rental materials that the State Airport Land Use Commission-Joint Forces Training Base Los Alamitos California, and California Department of Transportation-Division of Aeronautic, and the National Commission on Military Safety (2020) " Report to the President and the Congress of the United States", made findings that operations the Joint Forces Training Base may place the public's health and safety due to excessive noise causing **hearing loss and/or crash related injuries and property damage.**

These warnings should be included in deeds so the warning "runs with the land" to subsequent purchasers since the noise impact from the JFTB are not only reasonably expected to be operated indefinitely but news report from the JFTB state that the use of the base will be expanded.

16-21

2. Require construction of residential units to include "sound cancelling insulation" in the walls and ceilings in addition to sound attenuation windows and doors.

16-22

3. Install sound monitoring sites within the Lampson Project and required the owner/seller/lessor to pay for all mitigation costs associated with decibel readings above the CIty's standard of 45 dBa from the date of sale sale of the unit to the original purchaser. 16-23

Internal Inconsistency of DEIR Reports.

The sound wall barrier along Lampson appears to remove the "Emergency Vehicle Access Point on the east corner of the property at Lampson, which conflicts with the DER Traffic Report. The DEIR Reports are internally inconsistent with multiple Site Plan versions utilized by consultants. ALL of the DEIR Site Plans should be identical. 16-24

Crash Safety Risks Ignored

Nick Johnson's conclusion in his Letter to the City Of Los Alamitos dated August 14, 2023, lacks credibility because the consultant has no experience in safety on Military Airport Bases.

The Consultant did not utilize the **National Commission on Military Safety (2020) " Report to the President and the Congress of the United States"** to evaluate the safety of the project that borders a Military Airport Base.

The resume of the consultant attached to the August 14, 2023 letter demonstrates his complete of lack of knowledge and experience in the operation of a military airport and the attendant safety risks involved in that operation. His opinion lack gravitas. 16-25

The failure to the City's DEIR consultant, T&B Planning, to recognize this lack of competency places the public at substantial safety risks.g

Mitigation measures should include the employment of a consultant with expertise in the operation of a military airport, and identification of mitigation measures to protect the health and safety of occupants of the housing projects.

The mitigation measures should include adequate set backs from the JFTB boundary; submission of a final site plan to the Orange County Fire Authority and Los Alamitos and Seal Beach Police Departments establishing adequate ingress and egress for emergency vehicles along Lampson Ave and throughout the project site. Mitigation may also include reducing the height of the 3 story buildings closer to the JFTB boundaries where take off and landing occur and where the risk of crashes is higher. 16-26

Exhibit 4

Comments on Noise Impact Analysis dated April 22, 2024

On site traffic noice analysis starts with the false premise that "on-site exterior and interior nose impacts are from traffic related noise levels".

Both the State Airport Land Use Commission and the California Department of Transportation Division of Aeronautics issued findings that noice levels from the operation of the Joint Forces Training Base (JFTB) Orange County have significant noise levels that negatively impact the health and welfare of the public. 16-27

The Noise Impact Analysis states that the City of Los Alamitos requires a 45 dBA CNEL internal noise level.

Remediation measure consist of windows that close and produce a noise reduction of 20.3 dBa on first floors and 26.3 dB on second floors adjacent to Lampson. Installation of a "noise wall" along Lampson is designed to reduce "traffic" noise and has no impact on noice from aircraft, maintenance, operations of the JFTB. 16-28

The Noice Impact Analysis conducted limited Noise Level Tests on 4 sites. Those sites were identified as Arbor Dog Park, 4701 Ironwood, 5001 Lunar Drive and Lampson at Old Ranch Country Club.

The "averaging" of sound and vibrations over the day to obtain a lower than maximum sound impact, fails to protect the public from harmful cumulative noises generated from both traffic and the operation of the military airport.

Site 1 - Arbor Dog Park (north of project) measured a 69.7 dBa daytime and a 52.7 dBa night reading 16-29

Site 2 - 5001 Lunar Drive (east of project along Lampson) measured a 76.9 dBa daytime and a 66.2 dBa night reading

Site 3 - 4701 Ironwood Ave (south of project along Lampson) measured 83.7 dBa daytime and 76.6 dBa night reading

Site 4 Lampson at Old Ranch Country Club- west of project measured 69 dBa daytime and 68.7 dBa night reading.

Even applying the mitigation measures proposed (sealed windows, sound barrier along Lampson) does not reduce the interior reading by a sufficient amount to meet City standards for interior sound of 45 dBA. 16-30

Page 1 of 2 Rev 6/9/24

Additional mitigation measures should be required:

1. Disclosure in all sales/leasing materials that the State Airport Land Use Commission and California Department of Transportation-Division of Aeronautic made findings that due to operational noise from the JBTB, the public may be susceptible to health and safety risks associated with excessive noise causing hearing loss and/or crash related injuries and property damage. These warnings should be included in deeds so the warning "runs with the land" to subsequent purchasers since the noise impact from the JFTB are not only reasonably expected to be operated indefinitely but news report from the JFTB state that the use of the base will be expanded. 16-30 (CONT.)

2. Install sound cancelling insulation in the walls and ceilings of all housing units in addition to sound attenuation windows and doors. 16-31

3. Install sound monitoring sites within the project and required the owner to pay for all mitigation costs associated with decibel readings above 45dBa from the sale of the unit to the original purchaser. 16-32

4. The sound wall barrier along Lampson appears to remove the "Emergency Vehicle Access Point on the east corner of the property at Lampson, which conflicts with the DER Traffic Report. The DEIR Reports are internally inconsistent with multiple Site Plan versions utilized by consultants. ALL of the DEIR Site Plans should be identical. 16-33

Exhibits 5 to 8

Comments to Biological Technical Report by Glenn Lukas, Assoc.

The location of two defined sensitive species, the **Cooper's Hawk and Winterling Merlin**, suggest a mitigation measure to prevent destruction of nests between February1 and September 15 consisting of having a biologist conduct a nesting survey three days before grading, disking, and demolition. The nests be cordoned off until the nests are empty. This mitigation measure should be included in a written Development Agreement. 16-34

Comments to Phase I Cultural Resources Study by BFSA Environmental Services

The consultant concludes that there is a limited potential that archaeological deposit are present. It is recommended that as a Condition of Approval the Permit required an archaeologist be retained to conduct periodic spot checks of related ground disturbance activities.

The recommendation for mitigation consists of 4 spot checks: initial ground exposure; 50% of ground disturbance, 80% of ground disturbance, and any other time determined by geologist. If any historic or archaeological resources are encountered, the construction should stop within 50 feet of the find and be assessed for importance.. Excavated finds shall be curated before insurance of an occupancy permit. If human remains are found, a special procedure shall be followed consistent with CEQA Section 15064.5(e). 16-35

Fire Service Questionnaire - Orange County Fire Authority

COMMENT: There does not seem to be a "report" from the Orange County Fire Authority. Instead there is a Questionnaire.

The OCFA states that any increase in population can potentially increase workload. All projects are cumulative and OCFA uses a **fair share** approach to mitigate fire service response impacts and facility/equipment needs.

The OCFA states that the **sources for funding** OCFA are property taxes and charges for services. 16-36

Comment: The Mitigation recommended is a written Condition of Approval is for the Developer to enter into a **written Fire Protection Agreement** with the Orange County Fire Authority which determines the **fair share of funding** for capital improvements necessary to provide adequate fire protection. These **additional property fee assessments** should include the additional costs will be added to the **Homeowners Association Fee** and paid to the OCFA annually by purchasers. This will mitigate the negative financial impact on existing property owners for increased population caused by the project.

The CIty of Los Alamitos should be a party to the HOA Covenants, Conditions and Restrictions, to enforcement the payment of adequate HOA fees to cover the costs of Fire Protection finding, enforceable through a "lien"imposed on delinquent homeowner title, recoverable upon sale of the property or creditor enforcement, thus preventing the City from having to carry the burden of unpaid assessments. 16-37

There is no Site Plan Exhibit identify the access roads for emergency vehicles in the questionnaire. The boundaries lines in Exhibit 1-4 of the Traffic Analysis do NOT show fire equipment can navigate **around ALL sides of the buildings** within the project boundaries. This is a significant safety hazard if a "wall" will surround the project on all sides, or if landscaping prevents a vehicle from driving around the perimeter of each structure. Setbacks 16-38

on the North, East and West sides of the Project may need to be increased and hardscape installed for vehicles and fire hydrants. Exhibit 3-1 "Existing Number of …Lanes" shows that the **"Emergency Vehicle Access"** identified on Exhibit 1-2 **DOES NOT Exist** at Driveway 8. This is **a major inconsistency that affects public safety.**

16-38 (CONT.)

Additional conditions of approval should include review by the OCFA of construction documents including SITE PLANS to confirm applicable fire safety codes and regulations are implemented.

16-39

The **June 2022 Traffic Report does not contain a current Site Plan** that shows the entrances and exit from the projects site. The Report needs to be amended to include the final design plan including the **width of interior street**s, **turning radius,** location of **fire hydrants**, restricted parking curbs and signs and adequate set backs between building and adjacent property line**s to allow fire trust sufficient space to maneuver around ALL sides of the building.** This is relevant to the boundaries along the JFTB. The Site Plan should verify first responders are not trapped within the Project by walls or too narrow set backs in the event of a major emergency such as collapsing buildings in an earthquake, or a plane crash along the JFTB borders.

16-40

City of Seal Beach Police Department Questionnaire.

Comment: Respondent Seal Beach Police Department states SBPD has concerned about the **cumulative impact of multiple projects** along Lampson relative to traffic flow and safety which should be reviewed and mitigation measures proposed.

The Seal Beach Police Department states that SBPD has concerns about **parking impacts to College Park East and users of Arbor Park** who use the Lampson office site for parking. Existing resource (personnel) levels may not be adequate to manage traffic safety concerns on Lampson. The EIR should carefully consider these issues and mitigate measure for traffic enforcement, road maintenance, signalization, and parking restrictions.

16-41

A traffic mitigation plan by the County of Orange, Seal Beach and Los Alamitos should should be considered on Lampson Ave. Respondent states that Seal Beach has no funding for traffic remediation for the Los Alamitos Project. **A traffic signal should be considered at this time.**

16-42

Additional concerns to be addressed in the Final EIR Mitigation measures, and raised by the SBPD, are parking for residents, guest and park users. The only additional parking overflow feeds into Seal Beach College Park East, placing the burden on SBPD for enforcement. Overflow parking in College Park East becomes is a **foreseeable** public safety hazard due to pedestrians crossing a street with a history of accidents and fatalities and the lack of a traffic signal.

16-43

Exhibit 9

DEIR Traffic Analysis - Urban Crossroads - September 2022

Notwithstanding the Comments by the Seal Beach Police Department, the CrossRoads **does NOT provide mitigation measures indicated are required for public safety reasons.**

CrossRoads report dated September 2022 states that only two improvement are contemplated. Summary of Findings, Section 1.1.

1, No stoplight is contemplated. The report states: **If and when** Driveway 2 meets the appropriate warrants, a traffic signal should be installed at this location and should be coordinated along with the other traffic signals on Lampson.

2. Frontage improvements will be limited to sidewalks, driveway modifications needed to accommodate site access and landscaping.

There is no recognitions or response to the **public safety concerns expressed by Seal Beach Police Department in the Questionnaire submitted by the SBPD.** The failure to mitigate safety concerns transfer the costs of enforcement to the City of Seal Beach and imposes safety risks that can be mitigated by a **traffic study and mitigation plan**. 16-44

The County of Orange should be consulted and be the lead agency in coordinating safety plans to prevent the Lampson property owner from avoiding its financial responsibility for public safety improvements. 16-45

The Cross Roads Traffic Analysis failed to take into consider the **cumulative impacts** of multiple projects along Lampson, including **Old Ranch Country Club in Seal Beach** which will add additional traffic impacts to an existing road that has a documented history of excessive accidents and fatalities. 16-46

The Traffic Analysis does not recognize the **"7 foot tall sound wall"** proposed in the **DEIR Noise Report** to be located along Lampson w**hich wall would block the "emergency vehicle access" entry** on the Consultants Exhibit 1-2 Preliminary Site Plan. 16-47

There is no consistent use of dated Site Plan through out the DEIR. The DEIR Reports have various dates that are not uniform in terms of Site Plans, **and there appears to be NO overall review of all DEIR Reports for internal inconsistencies. For Example:** The Planning Department in Seal Beach signed the Traffic Study Agreement (June 1, 2023) **BEFORE the Police Department completed the Police Services Questionnaire** in November 2023. This demonstrates that the Police Department's **safety concern**s were NOT provided to Urban Crossroad in connection with the preparation of the consultants Summary of Findings in June of 2023. This makes the Approved Traffic Analysis Scoping Agreement deficient in terms of public safety concerns. 16-48

Responses to Comment 16

Churchill, Carol, dated June 09, 2024.

16-1 The commenter provides introductory remarks and a summary of the comments on the Draft EIR's technical reports made in the body of the letter. Refer to Response to Comment 16-1 through 16-48 for responses to these comments. No further response is required. Attachments provided as part of this Comment 16 are included in *Attachment A* of this Final EIR.

16-2 The commenter summarizes the regulatory requirements under the executive summary section of the Project's Air Quality Impact Analysis (*Technical Appendix B1* to this EIR) related to South Coast AQMD Rules 402 and 403. The City acknowledges that these rules apply to the Project. This comment does not raise any issues regarding the environmental analysis provided in the Draft EIR and no further response is required.

16-3 The commenter states that Exhibit 1-B, Site Plan, in the Project's Air Quality Analysis is not consistent throughout all technical studies. All technical reports show consistent and accurate site plans relevant to the particular environmental topic being addressed. However, the Vehicle Miles Traveled (VMT) analysis (*Technical Appendix N2* of the Draft EIR) included a preliminary site plan, which has been updated and included as *Attachment B* to this Final EIR pursuant to the commenter's request.

16-4 The commenter asserts that the Air Quality Impact Analysis failed to address the pollutants identified in the Phase I ESA (*Technical Appendix H1* of the Draft EIR) which includes asbestos, lead, and arsenic.

The Air Quality Impact Analysis (*Technical Appendix B1* of the Draft EIR) provides an analysis of air quality impacts consistent with South Coast AQMD methodology. Section 3.2 of the Air Quality Impact Analysis (*Technical Appendix B1* of the Draft EIR) explains that the criteria used to determine the significance of potential Project-related air quality impacts are taken from the CEQA Guidelines (14 CCR §§15000, et seq.). Based on these thresholds, a project would result in a significant impact related to air quality if it would: 1) Conflict with or obstruct implementation of the applicable air quality plan; 2) Result in a ***cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment [emphasis added***] under an applicable federal or state ambient air quality standard; 3) Expose sensitive receptors to substantial pollutant concentrations; 4) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

South Coast AQMD has developed regional significance thresholds for criteria pollutants that are regulated by federal and state laws through the development of human health based and/or environmentally based criteria for setting permissible levels. In May 2022, the California Air Pollution Control Officers Associated (CAPCOA) in conjunction with other California air districts, including South Coast AQMD, released the latest version of California Emissions Estimator Model (CalEEMod) version 2022.1. The purpose of this model is to calculate

DRAFT

construction-source and operational-source criteria pollutants (VOCs, NOx, SOx, CO, PM_{10}, and $PM_{2.5}$) and GHG emissions from direct and indirect sources; and quantify applicable air quality and GHG reductions achieved from mitigation measures. Based on the analysis presented in Section 4.2, *Air Quality*, of the Draft EIR and the Air Quality Impact Analysis, the Project's air quality impacts were determined to be less than significant. No changes in the Draft EIR are required.

The Phase II Environmental Site Assessment (ESA; *Technical Appendix H2* of the Draft EIR), determined that there was no evidence of a significant release of potential chemicals of concern to the subsurface in the area investigated, including lead and arsenic. With respect to arsenic concentrations, the original Phase II ESA included a typographical error. The Phase II ESA (see Section 4.0 and *Attachment C1* to this Final EIR) has been updated to correct this typographical error and to more accurately reflect the fact that the detected arsenic concentrations found at the Project site are all below the upper bound concentration of 12 mg/kg, and thus, they are trace or background concentrations that do not warrant further investigation or mitigation. The corrected Phase II ESA now reads: "Although the detected concentrations of arsenic found at the site exceed the residential screening level, all levels are less than the DTSC upper bound background concentration of 12 mg/kg."

Section 4.8, *Hazards and Hazardous Materials*, of the Draft EIR identifies the potential for encountering asbestos-containing materials (ACMs) and lead based paint (LBP) during demolition activities. The use of ACM (a known carcinogen) and LBP (a known toxic), both of which are considered hazardous materials, was a common building construction method prior to 1978 and may be present in the existing building. All proposed demolition activities would be required to comply with all applicable federal, State, and local hazardous materials regulation, which includes mandatory provisions for the safe removal, transport, and disposal of PCBs, ACMs and LBP.

Additionally, the Project is required to comply with South Coast AQMD Rule 1403 (Asbestos Emissions) and Title 17 of the CCR, Division 1, Chapter 8: Accreditation, Certification, and Work Practices for Lead-Based Paint and Lead Hazards applies. South Coast AQMD Rule 1403 establishes survey requirements, notification, and work practice requirements to prevent asbestos emissions from emanating during building renovation and demolition activities. Assuming that ACMs are present in the existing structure located on-site, then Rule 1403 requires notification of the South Coast AQMD prior to commencing any demolition activities. Rule 1403 also sets forth specific procedures for the removal of asbestos and requires that an on-site representative trained in the requirements of Rule 1403 be present during the stripping, removing, handling, or disturbing of ACM. Mandatory compliance with the provisions of Rule 1403 would ensure that construction-related grading, clearing, and demolition activities do not expose construction workers or nearby sensitive receptors to significant health risks associated with ACMs. Because future development on the Project site would be required to comply with AQMD Rule 1403 during demolition activities, impacts due to ACMs would be less than significant.

DRAFT

Title 17, CCR, Division 1, Chapter 8: Accreditation, Certification and Work Practices for Lead-Based Paint and Lead Hazards, defines and regulates lead-based paint. Any detectable amount of lead is regulated. During the demolition of the existing structure, there is a potential for exposing construction workers to health hazards associated with lead. The Project would be required to comply with Title 17, CCR, Division 1, Chapter 8, which includes requirements such as employer-provided training, air monitoring, protective clothing, respirators, and handwashing facilities. Mandatory compliance with these requirements would ensure that construction workers and the public are not exposed to significant LBP health hazards or upset during demolition and/or during transport of demolition waste to an appropriate disposal facility and would ensure that impacts related to LBP remain less than significant. Compliance with the above regulatory requirements would ensure that removal of ACMs or LBPs would result in a significant hazard to the public or the environment through routine transport, use, or disposal of hazardous materials, and impacts would be less than significant. Therefore, no mitigation measures are required and no revisions to the Draft EIR are required.

16-5 The commenter asserts that the Air Quality Impact Analysis failed to take into account of burning of significant qualities of fuel at JFTB into consideration in determining the extent of Carbon Monoxide, Nitrogen Oxides, and Ozone produced during construction.

The purpose of the Project's construction analysis is to determine whether Project-generated emissions would result in a *cumulatively considerable* net increase of any criteria pollutant in the South Coast Air Basin. As discussed in Section 4.2, *Air Quality*, of the Draft EIR, according to South Coast AQMD, projects that exceed its project-specific significance thresholds are considered by the South Coast AQMD to be cumulatively considerable. Conversely, projects that do not exceed the project-specific thresholds are not considered to be cumulatively significant. As shown in Table 4.2-5, *Overall Construction Emission Summary*, of the Draft EIR, construction activities associated with the Project would not exceed South Coast AQMD thresholds for any criteria pollutants, including carbon monoxide, nitrogen oxides, and ozone. Therefore, impacts associated with Project-related construction emissions would be less than cumulatively considerable (refer to Page 4.2-30 of the Draft EIR). Thus, the Air Quality Impact Analysis adequately analyzes cumulative impacts that would result from construction activity.

16-6 The commenter states general information about particulate matter. This comment does not raise any issues regarding the environmental analysis provided in the Draft EIR and thus no further response is required.

16-7 The commenter restates the previous comments made related to the Air Quality Impact Analysis not including asbestos, lead, and arsenic into its analysis. The commenter states that arsenic at the site is 42 times higher than the screening levels and grading of the site will release particulate matter containing lead and arsenic that will danger the public health given the extent of contamination. Although the Project site is not a California Air Force Base, EFI Global's report was informed by the fact that the Project site is adjacent to a base installation (the JFTB) in order to evaluate background arsenic levels. The comments here regarding potential health

DRAFT

risk impacts related to air quality and contamination are fully addressed in Response to Comment 16-4. Comments related to arsenic are also addressed in Response to Comment 16-12. No further response is required.

16-8 The commenter states that grading will create particulates that can run untreated into the storm drain running to the ocean, sewer system, and well water in the City of Seal Beach untreated. Construction-related water quality impacts were evaluated in Section 4.6, *Geology and Soils*, and Section 4.8, *Hydrology and Water Quality*. As stated, the Project will be required to implement a Stormwater Pollution Prevention Plan (SWPPP) for construction-related activities. The SWPPP will specify the Best Management Practices (BMPs) that the Project Applicant will be required to implement during construction activities to ensure that waterborne pollution – including erosion/sedimentation – is prevented, minimized, and/or otherwise appropriately treated prior to surface runoff being discharged from the subject property. Examples of BMPs that may be utilized during construction include, but are not limited to, sandbag barriers, geotextiles, storm drain inlet protection, sediment traps, rip rap soil stabilizers, and hydro-seeding. In addition, the Project would be required to implement erosion and dust control measures pursuant to South Coast AQMD Rule 403 to minimize water- and windborne erosion. Mandatory compliance with the SWPPP and the erosion control and dust control measures would reduce, prevent, or minimize soil erosion from Project-related construction activities. Therefore, impacts related to substantial soil erosion or the loss of topsoil would be less than significant and no mitigation is required. Additionally, pursuant to the LAMC Chapter 8.44, the Project Applicant would be required to implement a Water Quality Management Plan (WQMP) to demonstrate compliance with the City's NPDES municipal stormwater permit, and to minimize the release of potential waterborne pollutants, including pollutants of concern for downstream receiving waters. Therefore, the Project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality during long term operation and impacts would be less than significant.

16-9 The commenter states that the site will require extensive mitigation to remediate the concentration of arsenic for public safety and health before grading can occur. Refer to Response to Comment 16-4 regarding the significance of arsenic levels found on the Project site. A typographical error has been corrected. Detected arsenic concentrations found at the Project site were all below the upper bound concentration of 12 mg/kg, and thus, they constitute trace or background concentrations that do not warrant further investigation or mitigation, including remediation.

16-10 The commenter cites select text on limitations on liability in the Project's Phase I ESA (*Technical Appendix H1* of the Draft EIR) ["It should be noted that compounds or materials other than those described could be present in the site environment."]. Additionally, the commenter asserts that the Project's Phase I ESA is deficient because the property owner/user failed to provide a past Phase I ESA that was conducted by Tetra Tech, Inc. (Tetra Tech; included in *Attachment C1* of the Final EIR) in 2016.

DRAFT

Section 1.2 of the Phase I ESA report states that the report has been prepared in accordance with generally accepted environmental methodologies referred to in ASTM E1527-13 and E1527-21 and contains all of the limitations inherent in these methodologies (Refer to Pages 12 and 13 of the Phase I ESA). Language related to limitations on liability and exceptions are commonly found in Phase I ESAs and do not represent a deficiency of the analysis. Moreover, if any other contaminants are discovered during construction that were not identified in the ESA, construction contractors would be required to comply with all applicable federal, State, and local laws and regulations, including but not limited requirements imposed by the Environmental Protection Agency (EPA), Department of Toxic Substances Control (DTSC), and the Santa Ana Regional Water Quality Control Board (RWQCB).

EFI reviewed the above-referenced 2016 Tetra Tech report and found that no recognized environmental conditions (RECs) or recommendations for additional investigation were noted (see *Attachment C2* to this Final EIR). The findings of the above-referenced Tetra Tech report do not alter the results of EFI's Phase I ESA, dated January 18, 2023. Additionally, a Phase II ESA (*Technical Appendix H2* of the Draft EIR) was conducted for the Project which included further geological survey and soil sampling of the Project site.

16-11 The commenter states findings from the 2016 Tetra Tech report related to previous listings of the Project site that contends that they were not provided to the ESA consultant. As discussed in the Project's Phase I ESA (*Technical Appendix H1* of the Draft EIR), the Project's listings in HAZNET in 2000 for generating asbestos containing waste with disposal in landfill, in 2003 as a generator of off-specification aged or surplus organics with a disposal method as transfer station, in 2010 as generating ages/surplus organics identified as other treatment, in 2012 as a generator of hazardous waste with a disposal method of storage, bulking, and/or transfer offsite with no treatment or recovery were all listed within the tables under Section 5.1, Subject Property. Therefore, all previous listings related to the Project site were adequately identified in the Project's Phase I ESA.

16-12 The commenter states the findings related to arsenic in the Phase II ESA and expresses concern with ground water, storm drain runoff, and air borne contaminants during construction. For clarification, the arsenic screening levels were not compared to an Air Force Base land use scenario. EFI recognizes that the arsenic detected in near-surface soils exceeds the Department of Toxic Substances Control (DTSC) screening level (SL) for residential use. It is well documented and accepted by regulatory agencies, including the DTSC, that background or trace concentrations of naturally occurring arsenic in soil throughout the state of California often exceeds the DTSC-SL value of 0.11 milligrams per kilogram (mg/kg). As described in the Phase II, as a result of this analysis, an upper bound background concentration of 12.7 mg/kg can be used as an initial screening level for arsenic concentrations, which has been further proven by the following studies. A statistical analysis was performed at 14 Air Force installations in California to evaluate background levels of arsenic. The result of the analysis detected that an upper bound background concentration of 12.7 mg/kg can be used as an initial screening level for arsenic concentrations.

DRAFT

Furthermore, in a study titled *Determination of a Southern California Regional Background Arsenic Concentration in Soil* (Chernoff, et al., 2008), which was prepared by DTSC staff, the authors concluded, "A Probability Plot and statistical analysis of a large data set from school sites in Los Angeles County gave an upper-bound arsenic concentration of 12 mg/kg. A Probability Plot for school sites from 5 counties in Southern California also gave an upper-bound background arsenic concentration of 12 mg/kg." The study concluded, "This finding suggests that 12 mg/kg [may be] a useful screening number for evaluating arsenic as a chemical of potential concern."

Based on the aforementioned studies, which included both Air Force Base installations and school sites in California, 12 mg/kg is a useful screening number for evaluating arsenic as a chemical of potential concern. All arsenic concentrations in the soil samples analyzed at the Project site were detected at concentrations less than the upper-bound arsenic concentration of 12 mg/kg, and therefore, is not considered a significant environmental concern that would warrant further investigation or mitigation or result in an unacceptable health risk to future occupants.

16-13 The commenter states that additional chemical analysis for other hazardous materials that may become wind borne during construction should be conducted. The commenter does not identify specific materials of concern. The potential for hazardous materials on the Project site were fully analyzed in the Phase I and II ESAs (*Technical Appendix H1and H2* of the Draft EIR). Additionally, as discussed in Section 4.8, *Hazards and Hazardous Materials*, of the Draft EIR, with mandatory compliance with applicable hazardous materials regulations, the Project would not create significant hazard to the public or the environment through routine transport, use, or disposal of hazardous materials during the construction phase (refer to Pages 4.8-16 and 4.8-17 of the Draft EIR) Thus, no additional analysis is required.

16-14 The commenter expresses concern with asbestos, lead, arsenic, and radon. EFI notes that lead and arsenic were not detected at concentrations that would pose an unacceptable health risk to future site occupants, the surrounding community or underlying groundwater. Furthermore, construction Best Management Practices (BMPs) will be employed as a part of the proposed Project to mitigate fugitive dust. Prior to any future demolition or site improvements, the existing structures will undergo routine abatement for asbestos and lead, which will be performed by a properly licensed contractor. Furthermore, such activities will be performed following South Coast Air Quality Management District requirements for the removal and disposal of any suspect asbestos containing material or lead-based paint. Therefore, ongoing monitoring and reporting is not warranted. Refer to Response to Comment 16-4.

As noted in the Phase I ESA, based on research by the USEPA, the average radon concentrations for Orange County are less than 2.0 picocuries per liter (pCi/L), which is below the 4.0 pCi/L action level set by the USEPA. Furthermore, the Radon Potential Zone Map for Orange County, California, dated 2015 notes that the subject property and surrounding area are located in an area of "Low Potential for Indoor Radon Levels Above Four PicoCuries per

DRAFT

Liter"[6]. Therefore, radon is not an environmental concern for the proposed future development, and further investigation or mitigation is not warranted.

The Project will result in the demolition of the currently existing vacant office building in order to allow for project construction, and thus radon testing associated with the existing office building would not result in any relevant results as to the project. Even after demolition of the building, as a general rule it is not industry standard to test a vacant lot for radon and receive accurate results representative of what future construction conditions may be and given that the Project site is located within a low potential area for radon, no testing of radon after construction would be required.

16-15 The commenter states additional testing for TPHd is required to protect the water supply, prevent air pollution, and protect the public's safety. Based on the results of the Phase II ESA, the concentrations of TPH-d detected in site soils does not warrant further investigation. Furthermore, the concentrations do not pose an unacceptable health risk to site occupants, the environment, water supply, or groundwater. Thus, no additional testing for TPHd is required. Refer also to Response to Comment 16-8 related to the SWPPP and BMPs that the Project will implement to protect water quality.

16-16 The commenter states that T&B Planning, Inc. has a conflict of interest in that it is financially obligated to both the City of Los Alamitos and the owner of the Property. The Draft EIR was prepared in accordance with CEQA and the CEQA Guidelines, which allow a lead agency to either prepare an EIR directly with its own staff or accept a draft prepared by a consultant retained by an applicant. (CEQA Guidelines Section 15084(3).) Additionally, CEQA Guidelines Section 15084 states that "before using a draft prepared by another person, the Lead Agency shall subject the draft to the agency's own review and analysis and must reflect the independent judgment of the Lead Agency. The Lead Agency is responsible for the adequacy and objectivity of the draft EIR."

Pursuant to Public Resources Code Section 21067 and CEQA Guidelines Article 4 and Section 15367, the City is the Lead Agency under whose authority this EIR has been prepared. "Lead Agency" refers to the public agency that has the principal responsibility for carrying out or approving a project. As documented in the Draft EIR, the EIR represents the independent judgment of the City of Los Alamitos (as the CEQA Lead Agency) and presents an objective evaluation of the physical environmental effects that could result from construction and operation of the proposed 4665 Lampson Avenue Project refer to Pages S-1, 1-1, and 1-4 of the Draft EIR). The City staff and the City's environmental consultants conducted peer review of the Draft EIR prior to release of the Draft EIR for public review. The City conducted

[6] *https://www.conservation.ca.gov/cgs/Documents/Publications/Special-Reports/SR_232-Radon-Map.pdf*

DRAFT

independent review, evaluated, and exercised judgment over the documents and the issues raised and addressed prior to their release for public review. Therefore, the Draft EIR for the Project is prepared adequately in accordance with the CEQA Guidelines and no revisions to the Draft EIR are required.

This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

16-17 The commenter states that Nick Johnson, the preparer of the Project's Airport Land Use Assessment (*Technical Appendix J1* of the Draft EIR), has no experience in evaluating the operation of a Military Airport and lacks knowledge and expertise to express an opinion on whether the Airport Land Use Plan for the JFTB is inconsistent with findings by ALUC and Caltrans. Contrary to the commenter's assertions, Nick Johnson has several years of experience with military airports including the land use compatibility plan for the joint use Colorado Springs Airport and Peterson Space Force Base, March Air Reserve Base, Marine Corps Air Station Miramar, and Naval Air Station North Island (see *Attachment D* of this Final EIR).

16-18 The commenter states that Nick Johnson failed to provide the findings from a report by the National Commission on Military Safety in 2020. The commenter goes on to quote portions of text from the executive summary of the report. The report provides a comprehensive review of military aviation safety.

The Draft EIR included an analysis of safety hazards of JFTB on the Project (see Section 4.8, *Hazards and Hazardous Materials*, of the Draft EIR). The National Commission on Military Aviation Safety is a report on military aviation nationwide and does not provide safety information or accident data specific to JFTB. Refer to Master Response 2.1.7, *Proximity to the Los Alamitos Joint Force Training Base (JFTB).*

16-19 The commenter restates that the consultant's opinion is biased due to a financial conflict of interest. Refer to Responses to Comments 16-16 and 16-17.

16-20 The commenter states that cumulative noise impacts were not considered and that the mitigation measures on windows would not reduce the interior noise impacts at four test sites.

The commenter may be conflating the operational noise analysis conducted to analyze noise impacts at the four nearest receiver locations with the on-site aircraft noise impacts. The commenter states that the noise measurement at the four nearest receiver locations would exceed the 45dBA standards for interior noise level standards. As discussed in Table 4.11-4, *Summary of Noise Significance Criteria*, the significance of threshold for operational noise analysis is 55 dbA during daytime and 50 dBA during nighttime. The interior noise level standard of 45 dBA is for onsite aircraft noise impacts. The commenter's remark that mitigation measures on windows would not reduce the noise impacts at four test sites were based on applying the results from the operational noise analysis to the on-site aircraft noise threshold.

DRAFT

Nevertheless, the Project cumulative noise impacts were fully addressed in Section 4.11, *Noise*, of the Draft EIR, under Subsection 4.11.8, *Cumulative Impact Analysis* (refer to Pages 4.11-34 through 4.11-36). Refer to Master Response 2.1.7, *Proximity to the Los Alamitos Joint Force Training Base (JFTB)*, for airport noise impacts.

Additionally, the commenter states that the proposed sound wall appears to eliminate the emergency access on Lampson Avenue. As shown in Figure 3-38, *Wall and Fence Plan*, of the Draft EIR, the proposed wall would not eliminate emergency access on Lampson Avenue. Exhibit ES-A of the Project's Noise Impact Analysis (*Technical Appendix K* of the Draft EIR) has been updated accordingly and included as *Attachment F* to this Final EIR.

16-21 The commenter requests additional mitigation measures to be imposed in a Development Agreement that include written disclosure for all sales/leasing/rental materials to include the findings of the findings from a report by the National Commission on Military Safety in 2020. Refer to Response to Comment 16-18 related to the findings of this report. As stated in *Technical Appendix J1*, of the Draft EIR, the ALUC mandates compliance with the State's real estate disclosure provisions requiring buyer and renter notification for new residential land uses within an airport influence area (even if these state laws were to be revised or rescinded). The ALUC also requires that signs providing these disclosures and notices be "prominently posted" in real estate sales offices and within the new development depicting overflight areas and helicopter traffic patterns. Please note that a development agreement is not being proposed as part of the Project entitlements. The requested mitigation measures would not clearly lessen any environmental impacts of the Project because requirements for notifications such as these are already required, and therefore does not constitute significant new information pursuant to the CEQA Guidelines.

16-22 The commenter requests that additional mitigation measures be imposed in a Development Agreement to require construction of residential units to include sound cancelling insulation in the walls and ceilings. Refer to Master Response 2.1.7, *Proximity to the Los Alamitos Joint Force Training Base (JFTB)*, for airport noise impacts. Project Design Feature PDF N-2 specifies architectural upgrades that are incorporated into the Project design to ensure the Project meets the State and City interior noise standards. Please note that a development agreement is not being proposed as part of the Project entitlements. Thus, no additional mitigation measures are required. The requested mitigation measures would not clearly lessen any environmental impacts of the Project because noise impacts were evaluated and determined to be less than significant with incorporation of PDF N-2, and therefore does not constitute significant new information pursuant to the CEQA Guidelines.

16-23 The commenter requests additional mitigation measures to be imposed in a Development Agreement to install sound monitoring sites with the Project and require the owner/seller/lessor to pay for all mitigation costs associated with decibel readings above the City's standard of 45 dBA from the date of sale of the unit to the original purchaser. Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Force Training Base (JFTB)*, for airport noise impacts.

DRAFT

The City's interior noise standards will be enforced as outlined Los Alamitos Municipal Code Section 7.20, Noise. The Municipal Code establishes noise regulations and enforcement mechanisms to control unnecessary, excessive, and annoying sounds emanating from all properties and land uses in the City. No further mitigation is needed. The requested mitigation measures would not clearly lessen any environmental impacts of the Project because noise impacts were evaluated and determined to be less than significant, and therefore does not constitute significant new information pursuant to the CEQA Guidelines.

16-24 The commenter states that Exhibit ES-A, *Noise Control Measure Summary*, in the Project's Noise Impact Analysis appears to remove the emergency access on Lampson Avenue and that the site plan is not consistent throughout all technical studies. Pursuant to the commenter's request, the Project's Noise Impact Analysis has been updated accordingly and included as *Attachment F* to this Final EIR.

16-25 The commenter restates previous comments made about Nick Johnson's expertise and the findings of from a report by the National Commission on Military Safety in 2020 and requests mitigation measure for the employment of a consultant with expertise in the operation of a military airport. Refer to Responses to Comments 16-17 and 16-18 related to Nick Johnson's experience and the findings of the 2020 report.

16-26 The commenter states that mitigation measures should include adequate setbacks from JFTB boundary, submission of a final site plan to OCFA, Los Alamitos and Seal Beach Police Departments to establish adequate ingress and egress for emergency vehicles, and reduction in building height for buildings closer to the boundary of JFTB. As discussed in Section 4.8, *Hazards and Hazards Materials*, of the Draft EIR, the FAA issued Determinations of No Hazard to Air Navigation (*Technical Appendix J2*) after its aeronautical study of the proposed Project revealed that the structures would not exceed obstruction standards and would not be a hazard to air on January 26, 2022 (refer to Page 4.8-18 of the Draft EIR). Additionally, the Project's Fire Master Plan is being reviewed by OCFA as part of the Project's entitlement process. Thus, the City determines no additional mitigation measures are required. Los Alamitos and Seal Beach Police Department were both contacted during the preparation of the Draft EIR and were provided with a copy of the site plan. Responses from both agencies are found in *Technical Appendix L* of the Draft EIR. The requested mitigation measures would not clearly lessen any environmental impacts of the Project because safety hazards with the Project proximity to the Los Alamitos JFTB were evaluated and determined to be less than significant, and therefore does not constitute significant new information pursuant to the CEQA Guidelines.

16-27 The commenter states that the onsite traffic noise analysis starts with the false premise that onsite exterior and interior noise impacts are from traffic related noise levels and that both ALUC and Caltrans Division of Aeronautics issued findings that noise levels from JFTB have significant noise levels that negatively impact the health and welfare of the public. The commenter is conflating two separate issues: Section 7, On-site Traffic Noise Impact, in the

DRAFT

Noise Impact Analysis (*Technical Analysis K* of the Draft EIR), which is to determine the noise exposure levels that would result from adjacent traffic noise sources in the Project study area, and Section 12, Onsite Aircraft Noise Impacts. Noise from aircraft is discussed under Section 12, Onsite Aircraft Noise Impacts, of the Noise Impact Analysis. Refer also to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Force Training Base (JFTB)*, for airport noise impacts.

16-28 The commenter cites to the Noise Impact Analysis related to the City of Los Alamitos 45 dBA CNEL interior noise level criteria and installation of windows and soundwall. The commenter also states that the installation of the noise wall has no impact on noise from aircraft, maintenance, operations of JFTB. The commenter is correct that the noise wall is not intended to reduce noise levels from aircraft operations. Refer also to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Force Training Base (JFTB)*, for airport noise impacts.

16-29 The commenter states the four noise measurement locations that Urban Crossroads, Inc. recorded under existing noise conditions and the measurement daytime and nighttime reading. The noise measurements provided by the commenter are incorrect and higher than those in the Draft EIR and Noise Impact Analysis. As discussed in Section 4.11, *Noise*, of the Draft EIR,

- Location L1, represents the noise levels located approximately 10 feet north of the Project site near Arbor Dog Park at 4665 Lampson Avenue. The noise level measurements collected show an average daytime noise level calculated to be 49.9 dBA Leq and an average nighttime noise level calculated to be 42.4 dBA Leq at location L1.

- Location L2 represents the noise levels located approximately 845 feet east of the Project site near single-family residence at 5001 Lunar Drive. The noise level measurements collected show an average daytime noise level calculated to be 60.8 dBA Leq and an average nighttime noise level calculated to be 52.4 dBA Leq at location L2.

- Location L3 represents the noise levels located approximately 540 feet southwest of the Project site near single-family residence at 4701 Ironwood Avenue. The noise level measurements collected show an average daytime noise level calculated to be 68.7 dBA Leq and an average nighttime noise level calculated to be 60.7 dBA Leq at location L3.

- Location L4 represents the noise levels located approximately 5,486 feet west of the Project site near Old Ranch Country Club Golf Course at 3901 Lampson Avenue. The noise level measurements collected show an average daytime noise level calculated to be 56.5 dBA Leq and an average nighttime noise level calculated to be 55.1 dBA Leq at location L4 (refer to Page 4.11-4 pf the Draft EIR).

DRAFT

16-30 The commenter incorrectly asserts that the Project does not meet the interior noise standards of 45 dBA. The commenter requests that additional mitigation measures be required to include written disclosure for all sales/leasing/rental materials to include the findings from a report by the National Commission on Military Safety in 2020. Refer to Response to Comment 16-18 related to the findings of this report. Refer also to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Force Training Base (JFTB)*, related to buyer awareness. The Project Applicant will make all required airport disclosures in accordance with State and federal laws. As discussed in Section 4.10, *Land Use and Planning*, of the Draft EIR, the ALUC mandates the provision of the State's real estate disclosure regarding buyer and renter notification for new residential land uses within an airport influence area even if these state laws were to be revised or rescinded. The ALUC also requires that signs providing these disclosures and notices be "prominently posted" in real estate sales offices and within the new development depicting overflight areas and helicopter traffic patterns. Buyer awareness is required as part of the City's approval process for the Project. The buyer awareness notification process is built into the real estate disclosure laws of the State to ensure that potential buyers are fully informed before buying a home near an airport if they are sensitive to the types of annoyances or disruptions that may come with the location (refer to Page 4.10-18 of the Draft EIR). The requested mitigation measures would not clearly lessen any environmental impacts of the Project because requirements for notifications such as these are already required for the Project, and therefore does not constitute significant new information pursuant to the CEQA Guidelines.

16-31 The commenter requests additional mitigation measures to require construction of residential units to include sound cancelling insulation in the walls and ceilings. Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Force Training Base (JFTB)*, for airport noise impacts. Refer to Response to Comment 16-22 related to architectural updates. The requested mitigation measures would not clearly lessen any environmental impacts of the Project because noise impacts were evaluated and determined to be less than significant with incorporation of PDF N-2, and therefore does not constitute significant new information pursuant to the CEQA Guidelines.

16-32 The commenter requests additional mitigation measures to require the installation of sound monitoring sites within the Project and require the owner/seller/lessor to pay for all mitigation costs associated with decibel readings above the City's standard of 45 dBA from the date of sale of the unit to the original purchaser. Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Force Training Base (JFTB)*, for airport noise impacts. Refer to Response to Comment 16-23. The requested mitigation measures would not clearly lessen any environmental impacts of the Project because noise impacts were evaluated and determined to be less than significant, and therefore does not constitute significant new information pursuant to the CEQA Guidelines.

16-33 The commenter states that Exhibit ES-A, *Noise Control Measure Summary*, in the Project's Noise Impact Analysis appears to remove the emergency access on Lampson Avenue and that

DRAFT

the site plan is not consistent throughout all technical studies. Refer to Response to Comments 16-3, 16-24 and 16-26.

16-34 The commenter states that the mitigation measure to prevent destruction of nests and that nests be cordoned off until nests are empty should be included in a written Development Agreement. As discussed in Section 4.3, *Biological Resources*, of the Draft EIR, Mitigation Measure MM 4.3-1 includes measures for establishing appropriate avoidance buffers around the nest (based on the species detected), and the buffer areas shall be avoided until the nests are no longer occupied. Moreover, as discussed in Section S.0, *Executive Summary*, of the Draft EIR, State law requires the preparation of a mitigation monitoring and reporting program (MMRP) to ensure that measures that would avoid or lessen significant environmental effects of the project are implemented after project approval. The mitigation measures identified in this EIR have been described in sufficient detail to provide the necessary information to identify the party or parties responsible for carrying out the mitigation, when the mitigation will be implemented, and why the mitigation has been required. An MMRP would be adopted by the City at the time that the Project is considered for approval (refer to Page S-5 of the Draft EIR). The requested mitigation measures would not clearly lessen any environmental impacts of the Project because a Development Agreement is unnecessary to address any such impacts in light of the CEQA requirement that an MMRP be prepared and approved to ensure the existing mitigation measures identified in the Biological Resources section of the Draft EIR are implemented. As such, the commenter's recommendation that this mitigation measure be included does not constitute significant new information pursuant to the CEQA Guidelines. Please note that a development agreement is not being proposed as part of the Project entitlements.

16-35 The commenter recommends a condition of approval for an archaeologist to be retained to conduct periodic spot checks related to ground disturbance activities and includes details of the recommended mitigation measure. The commenter's requested mitigation is already provided under Mitigation Measures MM 4.4-1 and MM 4.4-2 in the Draft EIR, which requires an archaeologist to conduct periodic spot checks during construction, among other things. Thus, the City determines that no additional mitigation measures are required.

16-36 The commenter first states that a questionnaire was prepared instead of a report by OCFA, summarizes OCFA responses to the questionnaire provided in *Technical Appendix L*, of the Draft EIR, and recommends a mitigation for a condition of approval for the Developer to enter into a written Fire Protection Agreement with OCFA to determine the fair share funding necessary to provide adequate fire protection. The commenter states that these fees should be included to the Homeowners Association (HOA) Fee to be paid to OCFA annually.

In accordance with OCFA Guideline B-09, Fire Master Plans for Commercial & Residential Development, Firesafe Planning Solutions prepared a Fire Master Plan for the Project (see Figure 4.8-3, *Fire Master Plan*, in the Draft EIR). The Fire Master Plan demonstrates the Project's compliance with the California Fire and Building Codes and other regulations governing water availability for firefighting and emergency access to the Project site, including

DRAFT

but not limited to fire access and roadway design, fire lane identification, and access to structures. A report prepared by OCFA for the Project is typically not a requirement during OCFA's review process of the Project's plans; however, OCFA is responsible for reviewing and approving the Project's site plan and Fire Master Plan. As discussed in Section 4.13, *Public Services*, of the Draft EIR, the Project Applicant is required to enter into a Secured Fire Protection Agreement to provide for fair-share funding of capital improvements necessary to establish adequate fire protection facilities and equipment, and/or personnel as a condition of approval (refer to Page 4.13-9 of the Draft EIR). Any fees associated with the Secured Fire Protection Agreement would be paid by the Project Applicant prior to construction and not by the future HOA. Thus, the City determines no additional mitigation measures are required.

16-37 The commenter states that the City of Los Alamitos should be a part of HOA Covenants, Conditions and Restrictions, to enforce the payment of adequate HOA fees to cover the cost of Fire Protection funding. Refer to Response to Comment 16-36 related to the Secured Fire Projection Agreement. Payment of fair-share funding and timing would be agreed upon with OCFA; these fees would not be paid through the HOA.

16-38 The commenter states that there is no site plan exhibit that identified the access roads for emergency vehicles in the questionnaire, Exhibit 1-4 of the Traffic Analysis does not show fire equipment can navigate around all sides of the buildings, and Exhibit 3-1 does not show the emergency access at Driveway 8. The commenter is incorrect in all three assertions made for the following reasons. When conducting public service correspondence with OCFA, a cover letter describing the Project, the Project location maps, and Site Plan was provided along with the questionnaire. As discussed in the Traffic Analysis, Exhibit 1-4 depicts driveway intersection recommendations needed to accommodate site access and maintain acceptable peak hour operations for the proposed Project. The purpose of Exhibit 1-4 is not to depict fire equipment access. Figure 4.8-3, *Fire Master Plan*, of the Draft EIR demonstrates the Project's compliance with the California Fire and Building Codes and other regulations regarding emergency access to the Project site, including but not limited to fire access and roadway design, fire lane identification, and access to structures. Moreover, as discussed in the Traffic Analysis, Exhibit 3-1 illustrates the study area intersections located near the proposed Project and identifies the number of through traffic lanes for existing roadways and intersection traffic controls. Exhibit 3-1 does not include the proposed conditions of the Project site and is intended to depict the existing circulation network.

16-39 The commenter recommends additional conditions of approval including review by OCFA of construction documents including the site plans to confirm applicable fire safety codes and regulations are implemented. As discussed in Section 4.13, *Public Services*, of the Draft EIR, site plans would be submitted to OCFA to ensure compliance with OCFA standard conditions, including fire flow requirements based upon the tenant type, building size, and building type (refer to Page 4.13-9 of the Draft EIR).

DRAFT

16-40 The commenter states that the Traffic Analysis does not contain a current site plan and that the report needs to be revised to include width of interior streets, turning radius, location of fire hydrants, restricted parking curbs and signs and adequate setbacks. Note that Project's Traffic Analysis has been updated and included as *Attachment G* to this Final EIR. The commenter's request for a plan that shows the width of interior streets, turning radius, location of fire hydrants, restricted parking curbs and signs and adequate setbacks are shown in the Figure 4.8-3, *Fire Master Plan*, of the Draft EIR.

16-41 The commenter restates the Seal Beach Police Department's concern on parking impacts to College Park East and Arbor Park and existing resource may not be adequate to manage traffic and safety concerns on Lampson Avenue. The commenter states that the Draft EIR should carefully consider these issues and mitigation measures for traffic enforcement, road maintenance, signalization, and parking restrictions. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, 2.1.2, *Roadway Safety on Lampson Avenue*, 2.1.3, *Parking*, and 2.1.8, *Public Safety*. SBPD stated that it will not be expanding service capacity as a result of the Project because the Project is located within the City of Los Alamitos. However, SBPD has a mutual aid agreement with LAPD and can assist with public services in the event of an emergency, if needed.

16-42 The commenter states that a traffic mitigation plan and traffic signal should be considered. Impacts to automobile delay-based LOS is no longer a CEQA topic pursuant to SB 743. A Traffic Analysis was prepared for non-CEQA purposes and included as *Technical Appendix N1* of the Draft EIR. An updated Traffic Analysis was prepared and included as *Attachment G* of this Final EIR. The Traffic Analysis considered the Project's contribution to intersection deficiencies, if any, as well as a traffic signal. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion* and 2.1.2, *Roadway Safety on Lampson Avenue*.

16-43 The commenter expresses concern with overflow parking to College Park East leading to public safety hazard due to pedestrian crossing and lack of traffic signal. The commenter also states that parking overflow would place a burden on SBPD for enforcement. SBPD stated that it will not be expanding service capacity as a result of the Project because the Project is located within the City of Los Alamitos. However, SBPD has a mutual aid agreement with LAPD and can assist with public services in the event of an emergency, if needed. The Project would install a high visibility crosswalk at the primary neighborhood entry. A Safety Evaluation was prepared to evaluate the Project's safety impact on public roadways and Project access points, including the design of the proposed high visibility crosswalk (see Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, and *Attachment H* of this Final EIR). The Safety Evaluation identifies the on-site circulation for the site, including various vehicle paths (front-loading garbage trucks, fire trucks, delivery trucks, etc.) for various internal drive aisles, which allow for two-way traffic. Access to and from the site will be accommodated via driveways on Lampson Avenue. The vehicle turning templates show acceptable turning movements for the various vehicles and trucks anticipated to access the site (see Attachment D of *Attachment H* of this Final EIR). Table 1 of the Safety Evaluation provides a summary of the types of

DRAFT

collisions by intersection for eight intersections. The existing crash rates for the study area intersections are lower than the statewide average crash rates as determined by the 2021 Crash Report. A Project would have the potential to create an increase in collision rate if it introduced a geometric design feature that did not meet safety standards or incompatible uses (e.g. farm equipment). Implementation of Project improvements (within the public right-of-way) per Los Alamitos and Seal Beach standards ensures all that sight distance requirements, pedestrian crossing requirements, and street design requirements are met. Additionally, the Project vehicle mix is consistent with the adjacent land uses, including the residential neighborhood to the south. As demonstrated, the Project would not result in a safety impact or substantially increase hazards due to a geometric design feature. Refer also to Master Responses 2.1.3, *Parking*, and 2.1.2, *Roadway Safety on Lampson Avenue*.

16-44 The commenter states that Urban Crossroads, Inc. did not provide mitigation measures required to address the public safety concerns expressed by the Seal Beach Police Department. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*. As analyzed in Section 4.13, *Public Services*, of the Draft EIR, the Project would not result in a significant impact to police protection services, including SBPD. Therefore, no mitigation is required.

16-45 The commenter states that the County of Orange should be consulted and be the lead agency in coordinating safety plans to prevent the Lampson property owner from avoiding its financial responsibility for public safety improvements. Refer to Master Response 2.1.8, *Public* Safety, for the Project's potential public safety impacts. For CEQA purposes, the lead agency for the proposed Project is the City of Los Alamitos. The City of Seal Beach is a responsible agency for the proposed Project because the Project site requires approvals from the City of Seal Beach for certain infrastructure improvements. Enforcement of the Project's conditions of approval and mitigation measures will occur through the City of Los Alamitos. The County of Orange does not have jurisdiction over the proposed Project.

16-46 The commenter states that the Traffic Analysis failed to consider the cumulative impacts of multiple projects along Lampson, including Old Ranch Country Club in Seal Beach. Refer to Response to Comment D-9 regarding the analysis of the proposed Project's cumulative traffic impacts.

16-47 The commenter states that the Traffic Analysis does not recognize the proposed 7-foot soundwall that would block the emergency vehicle access entry. As shown in Figure 3-38, *Wall and Fence Plan*, the proposed wall would not eliminate emergency access on Lampson Avenue. Refer to Response to Comments 16-3 and 16-24.

16-48 The commenter states that there is no consistent use of the site plan throughout the Draft EIR and that the public safety concerns from the Seal Beach Police Department were not included in the Project's Traffic Analysis. All technical reports show the correct site plan, with the exception that the site plan in the VMT Report was updated (*Attachment B* of this Final EIR). This does not result in a change to any of the findings of the VMT analysis.

DRAFT

A Safety Evaluation was prepared to confirm that the proposed Project would have no safety impacts on public roadways and Project access points after taking into consideration the Project's implementation of the proposed high visibility crosswalk (see Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, and *Attachment H* of this Final EIR). The Safety Evaluation further confirms the analysis and determination in the Transportation Section (Section 4.15) of the Draft EIR that the proposed Project would not result in a safety impact or substantially increase hazards due to a geometric design feature. Refer to Response to Comments 16-3 and 16-24 regarding the Project's site plan.

17-1

The attached "Lampson Comment emails" are intended to be a partial response the Request for Comments to the Notice of Availability of Draft Environmental Impact Report (DEIR) and the Notice of Preparation of DEIR for the Lampson Project, Los Alamitos, California.

The Lampson Comment emails are public records produced by the City Clerk of the City of Los Alamitos pursuant to a Public Records Request. The Comments address the potential significant effects generated by the proposed project in relation to the following Environmental Analysis Check List Categories: biological resources, cultural resources, geology and soil, transportation and tribal cultural resources.

Please acknowledge receipt of the 4 SETS of Comments, and your ability to open the Attachment containing
Set 1 - 108 pages
Set 2 - 96 pages
Set 3 - 65 pages
Set 4 - 71 pages

17-2

In the absence of a response, written copies of the Comments will be delivered to Tom Oliver in the Planning Department prior to June 10, 2024

Respectfully
Carol Churchill
On Behalf of
Protect Our Community
Los Alamitos-Rossmoor-Seal Beach

Responses to Comment 17

Churchill, Carol, dated May 20, 2024.

17-1 The commenter provides a set of comment letters as a partial response to the NOA for the Draft EIR. The commenter notes that the comment letters are public records produced by the City Clerk pursuant to a Public Records Request and addresses the potential significant effects related to biological resources cultural resources, geology and soil, transportation, and tribal cultural resources. The Draft EIR analyzed the above-mentioned environmental topics in Sections 4.3, 4.4, 4.6, 4.15, and 4.16, respectively.

17-2 The commenter requests receipt of the four sets of comment letters, which contain comment letters received on the Notice of Preparation (NOP) of the Draft EIR. These comment letters were incorporated as *Technical Appendix A* in the Draft EIR and are provided in *Attachment A* of this Final EIR (refer to this attachment for comment numbering). Written responses to NOP comments are not required but are used to inform the scope of the Draft EIR. However, because the commenter included all the NOP comments as part of this comment letter, responses to the four sets of comment letters are provided below. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. However, NOP comments provided during the scoping process were taken into consideration during the preparation of the Draft EIR (see Table 1-1, of the Draft EIR).

17-3 The commenter inquires about access to the open space/park for the low-income housing area. As shown in Figure 3-22, *Site Plan*, of Section 3.0, *Project Description*, of the Draft EIR, there are two open space areas with the affordable housing units portion of the site: a tot lot park area and young adult zone (refer to Page 3-7 of the Draft EIR).

17-4 The commenter inquires about Project parking and increased traffic on Lampson Avenue with the Project and the Interstate 405 (I-405) expansion. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, and 2.1.3, *Parking*.

17-5 The commenter requests trees to be studied in the Draft EIR. As discussed in Section 4.3, *Biological Resources*, of the Draft EIR, on April 18, 2022, the City of Los Alamitos adopted a Parkway Tree Master Plan as part of its Urban Forest Program. This plan addresses City parkway trees. There are currently no parkway trees along the Project's frontage. The Project would not result in an impact to the City parkway trees. Therefore, the Project would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance. No impact would occur and mitigation is not required (refer to Page 4.3-34 of the Draft EIR). See also Response to Comment 17-6.

17-6 The commenter inquires about tree removal during Project construction. As discussed in Section 4.3, *Biological Resources*, of the Draft EIR, the Project requires removal of existing

DRAFT

ornamental trees (refer to Page 4.3-33of the Draft EIR). Impacts would be less than significant, as explained in the Draft EIR.

17-7 The commenter expresses concerns about the need for trees in the community, lack of open space, removal of trees, automobile pollution, and requests for only one entry whether the primary apartment entryway is proposed. As discussed in Section 4.1, *Aesthetics*, of the Draft EIR, the Project site does contain a number of ornamental trees onsite that will be removed and replaced. As shown in Figure 3- 18, *Landscape Plan*, a total of 441 trees would be planted throughout the Project site (refer to Page 4.1-10 of the Draft EIR). Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, for the discussion of the open space. See also Response to Comment 17-6 regarding air quality.

Moreover, as discussed in Section 4.2, *Air Quality*, of the Draft EIR, implementation of the Project which includes mobile emissions sources would not: 1) exceed applicable South Coast AQMD localized criteria pollution emissions thresholds during construction and operation; 2) would not cause or measurably contribute to the formation of a CO "hot spot;" and 3) would not result in a health risk for nearby residents during construction (refer to Pages 4.2-26 through 4.2-29 of the Draft EIR). The commenter' suggestion for one entry way is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-8 The commenter expresses concerns regarding impacts to AYSO operations and states that the Project would eliminate kids ability to play soccer. The Project would not eliminate kids ability to play soccer in connection with AYSO events. As discussed in Section 3.0, *Project Description*, of the Draft EIR, AYSO uses the abutting Arbor Park (north of Project) on weeknights and weekends for soccer practice and games, utilizing the existing paved parking lot on the Project site for overflow parking, particularly on weekends. To allow for additional parking at Arbor Park and Arbor Dog Park, located adjacent to the north boundary of the Project site, the Project Applicant proposes to dedicate or grant an easement for the northern 10 feet of property abutting Arbor Park and Arbor Dog Park to the City of Los Alamitos or jurisdiction with authority over the two parks. This dedication or grant of easement would support the use of this area for parking after construction of the Project by allowing an approximate capacity of 154 to 200 parking spaces to serve the parks, depending on the ultimate configuration (refer to Page 3-4 of the Draft EIR). Additionally, the Project Applicant has agreed to coordinate with the City of Seal Beach and AYSO, as needed, with respect to parking for Arbor Park and Arbor Dog Park. Refer to Master Response 2.1.3, *Parking*.

17-9 The commenter opposes the Project due to traffic issues and removal of AYSO operations. Project. Refer to Response to Comment D-30, 17-8, and Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic and 2.1.3, *Parking*, and regarding AYSO operations.

DRAFT

17-10 The commenter expresses concerns regarding overflow parking to Arbor Park and College Park East and the lack of signal control from the Project. Refer to Master Response 2.1.3, *Parking*, for a detailed discussion on the proposed Project's potential parking impacts. As discussed in Section 3.0, *Project Description*, of the Draft EIR, the primary neighborhood entry is not anticipated to meet a peak hour or planning level (daily volume) that would warrant a traffic signal. Therefore, the Project no longer proposes installation of a traffic signal. A Safety Evaluation was prepared to confirm that the Project would have no safety impacts on public roadways (see Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, and *Attachment H* of this Final EIR). The Safety Evaluation further confirms the analysis and determination in the Transportation Section (Section 4.15) of the Draft EIR that the Project would not result in a safety impact or substantially increase hazards due to a geometric design feature.

17-11 The commenter expresses concerns regarding provision of open space/park space for residents of the proposed Project. The commenter requests that the Draft EIR include a listing of existing parks within a ½ mile of the Project and an evaluation of Project impacts to recreational facilities. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*. Pursuant to the commenter's request, Section 4.14, *Recreation*, of the Draft EIR includes a listing of existing parks within a ½ mile of the Project and an evaluation of Project impacts to recreational facilities.

17-12 The commenter requests that the Draft EIR include an evaluation of noise impacts at Arbor Park during weekends to the proposed Project. The commenter requests the noise study to include all hours of the day on Saturdays when whistles, loud voices, cheering, and other noises are made. CEQA does not require an analysis of the impact of existing environmental conditions on a proposed Project. Therefore, an evaluation of activities at Arbor Park and related noise impacts to the future residents of the Project were not evaluated. Noise impacts associated with the Project were evaluated in Section 4.11, *Noise*, of the Draft EIR.

17-13 The commenter expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

17-14 The commenter expresses concerns with parking and open space for the Project. Refer to Master Response 2.1.3, *Parking*, for parking impacts and 2.1.8, *Loss of Existing Open Space and Provision of On-Site Amenities*, for recreation impacts.

17-15 The commenter opposes the Project due to congestion on Lampson Avenue and parking. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns, and 2.1.3, *Parking*, for parking concerns.

DRAFT

17-16 The commenter opposes the Project due to existing conditions of parks and limited green space in the Project area. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, for recreation impacts.

17-17 The commenter recommends the Draft EIR focus on biological resources due to the Project's adjacency to both the JFTB Los Alamitos and Arbor Park. The commenter requests significant impacts analysis to several species of protected birds known to utilize the immediate surrounding area of the Project. Pursuant to the commenter's request, Section 4.3, *Biological Resources*, of the Draft EIR discuss impacts to biological resources including protected bird species. Thus, no further response is required.

17-18 The commenter requests analysis on Swainson's Hawk, White-tailed Kite, Northern Harrier, and Vermilion Flycatcher. As discussed in Section 4.3, *Biological Resources*, of the Draft EIR, the above-mentioned species were analyzed. Implementation of Mitigation Measures MM 4.3-1 through MM 4.3-3 would ensure that pre-construction surveys are conducted for nesting birds, nesting raptors, and bat roosts prior to site disturbance. If nesting birds or raptors are present on the Project site, mitigation requires avoidance of active nests. With implementation of the required mitigation, potential impacts to nesting birds and common raptors would be reduced to below a level of significance (refer to Pages 4.3-37 through 4.3-39 of the Draft EIR).

17-19 The commenter recommends a thorough and extensive literature review of the above-mentioned sensitive species and to investigate rigorous nesting bird protection measures as well as possible compensatory mitigation for direct and indirect loss of foraging habitat both on- and offsite as a result of the Project. The commenter also recommends analysis of impacts to Peregrine Falcon, Horned Lark, Swainson's Hawks, or others, including non-avian species. A Project-specific biological technical report was prepared for the Draft EIR (included as *Technical Appendix C1* of the Draft EIR), which included a thorough and extensive literature review, general biological surveys, habitat assessments, and focused bat surveys. As discussed in Section 4.3, *Biological Resources*, of the Draft EIR, peregrine falcon was not detected on the site and foraging potential is very limited and nesting sites are absent (refer to Page 4.13-17 of the Draft EIR). Additionally, the California horned lark was not detected onsite during all surveys and not expected to nest onsite due to proximity of large trees adjacent to the open field (refer to Page 4.13-17 of the Draft EIR). The Swainson's hawk would not be expected to nest onsite due to the lack of solitary trees and level of nearby human disturbance such as development and traffic, but would be expected to forage opportunistically onsite, but primarily over large open fields, including open areas within the JFTB, Seal Beach Naval Weapons Station, Old Ranch Country Club and the Navy golf course (refer to Page 4.13-18 of the Draft EIR). Moreover, implementation of Mitigation Measures MM 4.3-1 through MM 4.3-3 would ensure that pre-construction surveys are conducted for nesting birds, nesting raptors, and bat roosts prior to site disturbance. If nesting birds or raptors are present on the Project site, the identified mitigation requires avoidance of active nests. With implementation of the required mitigation, potential impacts to nesting birds and common raptors would be reduced to below a level of significance (refer to Pages 4.3-37 through 4.3-39 of the Draft EIR).

DRAFT

17-20 The commenter expresses concerns with the Project due to limited green space existing residents would have access to, traffic and parking impacts on Lampson Avenue, and lack of a signal control. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns, 2.1.3, Parking, for parking impacts, and 2.1.8, *Loss of Existing Open Space and Provision of On-Site Amenities*, for recreation impacts. Refer to Response to Comment 17-10 and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for traffic signal concerns.

17-21 The commenter expresses concerns with the Project due to the insufficient number of planned parking spaces. The commenter also expresses concerns with the proposed low-income housing. Refer to Master Response 2.1.3, *Parking* for parking concerns. The commenter's concern on low-income housing is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-22 The commenter expresses concerns with parking during AYSO operation and traffic impacts on Lampson Avenue. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns, 2.1.3, *Parking*, for parking concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, for safety concerns.

17-23 The commenter expresses concerns with the Project and requests the Draft EIR include the environmental issues that are discussed below in Responses to Comment 17-24 to 17-28.

17-24 The commenter requests consideration of wildlife, endangered habitats, plants, nesting birds, noise from pets, rodents, and inquires about the California Natural Diversity Database. As discussed in Section 4.3, *Biological Resources*, of the Draft EIR, wildlife, special-status vegetation communities, special-status species, nesting birds, and indirect impacts to biological resources were analyzed (refer to Pages 4.3-29 through 4.3-31 of the Draft EIR).

17-25 The commenter inquires about whether the City has reviewed the CDFW's CEQA Review website. This comment is acknowledged and no further response is required. As discussed in Section 1.0, *Introduction*, of the Draft EIR, the Draft EIR has been prepared in accordance with all criteria, standards, and procedures of CEQA (California Public Resource Code Section 21000 et seq.) and the CEQA Guidelines (California Code of Regulations, Title 14, Division 6, Chapter 3, Section 15000 et seq.). Pursuant to Public Resources Code Section 21067 and CEQA Guidelines Article 4 and Section 15367, the City is the Lead Agency under whose authority this EIR has been prepared. "Lead Agency" refers to the public agency that has the principal responsibility for carrying out or approving a project. Serving as the Lead Agency and before taking action to approve the Project, the City has the obligation to: (1) ensure that this EIR has been completed in accordance with CEQA; (2) review and consider information contained in this EIR as part of its decision making process; (3) make a statement that this EIR reflects the City's independent judgement; (4) ensure that all significant effects on the environment are eliminated or substantially lessened where feasible; and, if necessary (5) make written findings for each unavoidable significant environmental effect stating the reasons why

DRAFT

mitigation measures or project alternatives identified in this EIR are infeasible and citing the specific benefits of the Project that outweigh its unavoidable adverse effects (CEQA Guidelines Section 15090 through 15093) (refer to Page 1-3 of the Draft EIR).

17-26 The commenter requests consideration of water issues due to drought conditions. As discussed in Section 4.17, *Utilities and Service Systems*, of the Draft EIR, based on the water supplies available and the estimated water demand, there are sufficient water supplies available to serve the Project during average, single dry, and multiple dry years. Additionally, the Project is subject to connection and service fees to offset increased demand and assist in facility expansion and service (at the time of need). Accordingly, there would be sufficient water supplies available to serve the Project and impacts would be less than significant (refer to Pages 4.17-15 through 4.17-17 of the Draft EIR).

17-27 The commenter requests consideration of traffic impacts on Lampson Avenue and emergency access. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, for safety concerns.

17-28 The commenter requests consideration of sanitation, trucks, and landfills and requests involvement in the Project noticing. As discussed in Section 4.17, *Utilities and Service Systems*, of the Draft EIR, solid waste from the City is transported to Frank R. Bowerman Sanitary Landfill in the City of Irvine and the Olinda Alpha Sanitary Landfill near the City of Brea. The two landfills have a combined permitted disposal capacity of 19,500 tons per day. The Project's estimated solid waste generation represents approximately 0.0077 % of the two landfill's capacity and therefore, would not contribute significantly to both of the landfill's daily capacity. Additionally, the Project is subject to connection and service fees to offset increased demand and assist in facility expansion and service (at the time of need). Accordingly, impacts would be less than significant and no mitigation is required (refer to Pages 4.17-19 through 4.17-20 of the Draft EIR). Additionally, as discussed above, the NOA was mailed to responsible agencies, local government agencies, and interested parties that received the NOP, to individuals who had previously requested the NOA or EIR, and to all individuals who provided NOP comments on April 24, 2024.

17-29 The commenter expresses general opposition to the Project due to inadequate Project parking and using Seal Beach Homeowners' parking spaces. Refer to Master Response 2.1.3, *Parking*, for parking concerns.

17-30 The commenter states that the Project would bring a significant increase in traffic and traffic hazards to Lampson Avenue such as making U-turns at Heather. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, for sight distance.

17-31 The commenter states that inadequate public facilities will cause Project residents to use Seal Beach's public facilities, specifically College Park East's parks. As discussed in Section 4.14, *Recreation*, of the Draft EIR, the Project would result in an increase in residents; however, the

DRAFT

Project is not anticipated to increase the use of the existing parks such that a significant impact would result. Accordingly, implementation of the Project would not increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility could occur or be accelerated. Impacts would be less than significant (refer to Pages 4.14-8 through 4.14-10 of the Draft EIR). Refer also to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*.

17-32 The commenter states that the Project will put a strain on the Los Alamitos Unified School District System. As discussed in Section 4.13, *Public Services*, of the Draft EIR, based on current enrollment, there is a deficiency of 45 students at the K-5 grade level at Project buildout. However, the District currently has open enrollment which allows students to attend schools other than the school assigned based upon their area of residence. As shown in Table 4.13-5, there are four other K-5 elementary schools within a 2.5 mile radius of the Project site with a total excess capacity of 62 students and enough excess capacity to serve the Project generated 51 K-5 students. It should be noted that the projected student population is conservative because it represents a snapshot in time. It is unlikely that all students generated by the Project would occur at Project buildout but rather would fluctuate over the life of the Project. Moreover, the Project would be required to pay development impact fees to LAUSD in compliance with SB 50 for the construction of new schools, which provides full and complete mitigation to school facilities. Development impact fees currently charged by LAUSD for residential uses are $5.17 per sf, and the Project Applicant will pay the applicable fees at the time building permits. Although project buildout would result in an increase of 135 students, the availability of schools in the area and the payment of impact fees in compliance with SB 50 would address any potential impacts. Therefore, based on the preceding, impacts from implementation of the Project on school services would be less than significant. No mitigation is required (refer to Pages 4.13-10 through 4.13-12 of the Draft EIR).

17-33 The commenter states that the change in the use of the land from a state office building to housing will necessitate major utility infrastructure changes. The commenter states that the construction work needed for these changes will cause major disruptions to Lampson Avenue and College Park East residents for many months. Section 3.3.7, *Infrastructure Improvements*, of the Draft EIR, discusses the Project's proposed utility infrastructure improvements. As discussed in 4.17, *Utilities and Service Systems*, of the Draft EIR, the construction of the Project's infrastructure improvements necessary to serve the Project would not result in any significant physical effects on the environment. Impacts would be less-than significant and no mitigation is required (refer to Page 4.17-13 of the Draft EIR). Additionally, as discussed in Section 4.8, *Hazards and Hazardous Materials*, construction on Lampson Avenue will require an encroachment permit and approval from the City Engineer Lane closures that may be required for median improvements would be temporary and require a permit and compliance with LAMC 12.08.200, Safety precautions–Obstruction of traffic. Compliance with LAMC 12.08.200 would ensure safe crossing and access for all vehicle and pedestrians at all times (refer to Page 4.8-21 of the Draft EIR).

DRAFT

17-34 The commenter states that the Project will put a strain on water supply and would cause air pollution. As discussed in Section 4.17, *Utilities and Service Systems*, of the Draft EIR, based on the water supplies available and the estimated water demand, there are sufficient water supplies available to serve the Project during average, single dry, and multiple dry years. Additionally, the Project is subject to connection and service fees to offset increased demand and assist in facility expansion and service (at the time of need). Accordingly, there would be sufficient water supplies available to serve the Project and impacts would be less than significant (refer to Pages 4.17-15 through 4.17-17 of the Draft EIR). As discussed in Section 4.2, *Air Quality*, of the Draft EIR, implementation of the Project would not: 1) exceed applicable South Coast AQMD localized criteria pollution emissions thresholds during construction and operation; 2) would not cause or measurably contribute to the formation of a CO "hot spot;" and 3) would not result in a health risk for nearby residents during construction (refer to Pages 4.2-26 through 4.2-29 of the Draft EIR).

17-35 The commenter expresses opposition to the Project and states that the Project will bring hundreds of vehicles onto Lampson avenue creating more pollution, impacting wildlife, and causing traffic and safety issues. As discussed in Section 4.2, *Air Quality*, of the Draft EIR, implementation of the Project would not: 1) exceed applicable South Coast AQMD localized criteria pollution emissions thresholds during construction and operation; 2) would not cause or measurably contribute to the formation of a CO "hot spot;" and 3) would not result in a health risk for nearby residents during construction (refer to Pages 4.2-26 through 4.2-29 of the Draft EIR). As discussed in Section 4.3, *Biological Resources*, of the Draft EIR, impacts to biological resources were determined to be less than significant with mitigation (refer to Pages 4.3-37 through 4.3-39 of the Draft EIR). Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, for pedestrian safety concerns.

17-36 The commenter states that the Project residents will utilize nearest cities for all their needs and recreation causing excessive noise, pollution, traffic congestion, and wear and tear on facilities/equipment. Refer to Response to Comment 17-34 for pollution concerns. As discussed in Section 4.11, *Noise*, of the Draft EIR, the Project would not exceed significance thresholds for construction noise levels, operational noise levels, or off-site traffic noise levels. As such, the Project would not generate substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies. Impacts would be less than significant (refer to Pages 4.11-23 through 4.11-29 of the Draft EIR). Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns. As discussed in Section 4.14, *Recreation*, of the Draft EIR, the Project would result in an increase in residents; however, the Project is not anticipated to increase the use of the existing parks such that substantial additional use or physical deterioration of the existing parks would occur or be accelerated. Accordingly, impacts would be less than significant (refer to Pages 4.14-8 through 4.14-10 of the Draft EIR).

DRAFT

17-37 The commenter recommends adding a traffic light, reducing apartments to two stories, and adding a playground and asks to consider the added noise, lights, traffic, pollution, and overcrowding of the Project. Refer to Response to Comment 17-10 and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for traffic signal concerns. The Draft EIR evaluated Project impacts related to noise, lighting, transportation, and air quality. Refer also to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*.

17-38 The commenter expresses gratitude regarding the number of concerns for the Project. This comment is acknowledged and no further response is required.

17-39 The commenter requests the Draft EIR address safety issues for pedestrians and parking for Arbor Park. As discussed in Section 3.0, *Project Description*, of the Draft EIR, non-motorized circulation would include pedestrian connectivity with existing sidewalks along Lampson Avenue, including an existing signalized pedestrian connection to the south at Rose Street and Lampson Avenue and pedestrian "paseo" connections with Arbor Park and the Arbor Dog Park to the north. The Project would provide pedestrian gates to be controlled by the Homeowners' Association to restrict residents from entering Arbor Park and Arbor Dog Park outside of hours specified by JTFB. The Project would provide 577 parking spaces (475 spaces for the single family detached and townhomes and 102 for the apartments) in exceedance of the 440 parking spaces that would be required pursuant to the State's Density Bonus Law. Refer to Master Response 2.1.3, *Parking*, for parking concerns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for pedestrian safety concerns.

17-40 The commenter requests that noise impacts are addressed in the Draft EIR. As discussed in Section 4.11, *Noise*, of the Draft EIR, the Project would not exceed significance thresholds for construction noise levels, operational noise levels, and off-site traffic noise levels. As such, the Project would not generate substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies. Impacts would be less than significant (refer to Pages 4.11-23 through 4.11-29 of the Draft EIR).

17-41 The commenter states that the loss of Arbor Park would be a huge detriment due to parking access. Refer to Master Response 2.1.3, *Parking*, for parking concerns. Additionally, the Project would be confined to the Project site with the exception of infrastructure improvements and would not remove Arbor Park as a recreational facility for the community. AYSO will be able to continue to use Arbor Park for soccer games upon Project development.

17-42 The commenter inquires about traffic flow on Lampson, use of existing facilities in the area, noise and pollution from construction, and public services be addressed in the Draft EIR. The Draft EIR includes analysis on traffic, recreation, noise, air quality, and public services in Sections 4.15, 4.14, 4.11, 4.2, and 4.13, respectively.

17-43 The commenter provides an introduction about being a nearby resident and expresses opposition to the Project. This comment is noted for the record and will be forwarded to the

DRAFT

decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. NOP comments provided during the scoping process were taken into consideration during the preparation of the Draft EIR. Thus, no further response is required.

17-44 The commenter expresses concerns with traffic impacts on Lampson Avenue, cross streets and freeway exits and requests traffic, wildlife and safety impacts be conducted. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns. A traffic analysis and biological resources report was conducted for the Project (Refer to *Technical Appendix N1 and C1*, of the Draft EIR respectively). Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for pedestrian safety concerns and Response to Comments B-2 and B-3 for impacts on the freeway system.

17-45 The commenter expresses concerns with the Project and notes being a resident that utilizes Arbor Park and Arbor Dog Park. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

17-46 The commenter expresses concerns with traffic on Lampson Avenue. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns.

17-47 The commenter expresses concerns with recreational impacts and parking. Refer to Master Response 2.1.3, *Parking*, for parking concerns. As discussed in Section 4.14, *Recreation*, of the Draft EIR, the Project would result in an increase in residents; however, the Project is not anticipated to increase the use of the existing parks such that substantial additional use or physical deterioration of the existing parks would occur or be accelerated. Impacts would be less than significant (refer to Pages 4.14-8 through 4.14-10 of the Draft EIR).

17-48 The commenter expresses concerns about the removal of green space and greenhouse gas emissions. As discussed in Section 3.0, *Project Description*, of the Draft EIR, the Project would provide a total of 67,480 square feet (sf) or 1.55 acres of open space in the Project site, including 16,508 sf of usable common open space, 51,320 sf of private open space (homeowner maintained). The 51,320 sf of private open space includes 4,620 sf of multi-family private deck, 5,181 sf of townhomes private deck, and 41,519 sf of private open space (homeowner maintained) (refer to Page 3-7 of the Draft EIR). As discussed in Section 4.7, *Greenhouse Gas Emissions*, of the Draft EIR, construction and operation of the Project would generate a 2,757.11 $MTCO_2e$/yr; the Project would not exceed the significance threshold of 3,000 $MTCO_2e$/yr. Thus, impacts would be less than significant and no mitigation is required (refer to Pages 4.7-26 through 4.7-27 of the Draft EIR).

DRAFT

17-49 The commenter expresses concerns with air quality and health impacts to local residents. As discussed in Section 4.2, *Air Quality*, of the Draft EIR, implementation of the Project would not: 1) exceed applicable South Coast AQMD localized criteria pollution emissions thresholds during construction and operation; 2) would not cause or measurably contribute to the formation of a CO "hot spot;" and 3) would not result in a health risk for nearby residents during construction (refer to Pages 4.2-26 through 4.2-29 of the Draft EIR).

17-50 The commenter concludes the comment letter and expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

17-51 The commenter expresses concerns with the Project's public noticing not extending to Garden Grove. The mailing list radius complied with the City of Los Alamitos distance requirements and was expanded to 1,000 feet to include every house within College Park East and Parkwood regardless of distance. Additionally, public notice was published in the Event News Enterprise; the notice of availability and Draft EIR were made available for review, on the City's web site. Therefore, the City met and exceeded its legal requirement for noticing. No further response is required.

17-52 The commenter raises concerns with the amount of on-site parking for the Project and the potential for the College Park East neighborhood or the Arbor Park parking lot to be used for overflow parking. The commenter also expresses concerns regarding lack of signal control planned for traffic in and out of the development and traffic safety on Lampson. Refer to Master Response 2.1.3, *Parking*, for parking concerns. A condition of approval has been added to the Project to ensure the parking garages onsite be used primarily for parking purposes. Refer to Response to Comment 17-10 and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for traffic signal concerns and concerns regarding roadway safety.

17-53 The commenter notes that College Park East has less park acreage than other Seal Beach neighborhoods, states that the Project does not show park space, requests that the Draft EIR include a listing of existing parks within a half-mile radius of the Project and requests an evaluation of whether the development should include park space to avoid further impacts to nearby parks. Refer to Response to Comment 17-11.

17-54 The commenter requests that the Draft EIR evaluate weekend noise levels at Arbor Park due to soccer games and dogs at the dog park. The commenter recommends proposing mitigation measures to avoid future complaints from residents of the Project. Refer to Response to Comment 17-12.

17-55 The commenter expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to

DRAFT

any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

17-56 The commenter expresses gratitude for being included in the NOP of the Draft EIR, provides a summary of the Project Description as described in the NOP and notes that Caltrans is a responsible agency on the Project. This comment is acknowledged and no further response is required.

17-57 The commenter recommends the Project consider the design of Complete Streets that include high-quality pedestrian, bicycle, and transit facilities that are safe and comfortable for all users; encourages the Project to look at opportunities to include Complete Streets improvements; consider including long-term bicycle parking facilities for the multi-family apartment units; ensure appropriate temporary detours to maintain safe bicycle access on Lampson Avenue during construction; and coordinate with Caltrans System Planning Unit regarding the existing Park and Ride facility agreement. As discussed in Section 3.0, *Project Description*, of the Draft EIR, the Project would promote the use of bicycles as an alternative means of transportation by providing short-term and/or long-term bicycle parking accommodations. Along the Project frontage, Lampson Avenue is developed to its ultimate General Plan roadway classification. Frontage improvements would include median improvements, sidewalks, driveway modifications needed to accommodate site access, and landscaping improvements as required by City standards (refer to Page 3-4 of the Draft EIR). Additionally, at the time of preparation of this Final EIR, the Park-n-Ride that previously occupied the Project site has not been in operation for the past 18 months and when in operation had limited usage. There are no requirements or proposal to provide a substitute park-and-ride location.

17-58 The commenter requests submittal of all traffic related documents for Caltrans review. The commenter requests that data used in the Traffic Impact Analysis be no more than two years old and be based on Southern California Association of Governments Regional Transportation Plan Model; and recommends using the Highway Capacity Manual methodology for traffic analyses. The Traffic Analysis (*Technical Appendix N1* of the Draft EIR) was provided to Caltrans for review during the 45-day public review period for the Draft EIR. The Traffic Analysis was prepared in accordance with the City of Los Alamitos' requirements, as required by CEQA. Refer also to Response to Comment B-1 through B-13.

17-59 The commenter recommends the Project ensure that truck parking, ingress and egress, and staging will not interfere with vehicle parking, pedestrian paths, or bicycle lanes/parking; establish freight pick up and drop off times that do not coincide with peak commute hours to reduce passenger vehicle conflicts and congestion for freight; consider amazon lockers or an equivalent shared drop off location depending on number of packages for residential package delivery; and work with local partners and community representatives to mitigate truck traffic routing onto residential streets or conflicting with other road users. Refer to Response to

DRAFT

Comment B-11 and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding truck parking and freight pick up. As demonstrated, the Project would not result in any vehicle conflicts on-site as proposed; however, installation of an Amazon locker may be considered by the Project proponent following occupancy of the Project.

17-60 The commenter attaches a list of comments for the Project which are responded to below and expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-61 The commenter expresses concerns with traffic and traffic safety on Lampson Avenue. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion,* for traffic concerns and 2.1.2, *Roadway Safety on Lampson Avenue,* for roadway safety concerns.

17-62 The commenter states that the Project will affect the neighborhood of College Park East and that the low-income housing has the potential to bring increased crime to the neighborhood and decrease existing home values. As discussed in Section 4.13, *Public Services*, of the Draft EIR, implementation of the Project would generally result in an increase in calls for service (not solely related to the fact that the site will include low-income housing); however, Los Alamitos Police Department has indicated that this increase would not adversely impact Los Alamitos Police Department's existing resources. The existing resources would be adequate to meet the additional demands generated by the Project. The Los Alamitos Police Department has not indicated the need for a new police station or expansion of existing facilities due to the Project. Responses times and service ratios would be met and would not require the construction of new facilities. Because the Project does not include or require construction of new police facilities and does not generate a need for additional facilities, increases in demands for police protection resulting from implementation of the Project impacts would be less than significant (refer to Page 4.13-10 of the Draft EIR). Additionally, home values are not an environmental issue analyzed under CEQA; however, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-63 The commenter expresses concerns with minimal parking at the Project site and how it will impact neighboring streets. Refer to Master Response 2.1.3, *Parking,* for parking concerns. A condition of approval has been added to the Project to ensure the parking garages onsite be used primarily for parking purposes.

17-64 The commenter expresses concerns with an increase in the need for police presence and expresses general opposition to the Project. Refer to Response to Comment 17-62.

17-65 The commenter expresses concerns with the aesthetics of the development. As discussed in Section 4.1, *Aesthetics*, of the Draft EIR, buildout of the Project would change the existing visual character of the site from a two-story, 88,000 sf commercial office building to a two- to three-story residential development consisting of 246 units. The Project would be visually

DRAFT

compatible with the existing residential and park uses in the Project site's vicinity. Additionally, the Project would be compliant with the zoning development standards and City requirements pertaining to scenic quality. Accordingly, the Project would not conflict with applicable zoning and other regulations governing scenic quality. Impacts would be less than significant (refer to Page 4.1-18 of the Draft EIR).

17-66 The commenter expresses concerns with air quality from the increased traffic on Lampson and during construction. As discussed in Section 4.2, *Air Quality*, Project-related activities would not exceed the applicable South Coast AQMD regional thresholds of significance during construction and operation. As such, Project-related emissions would not violate South Coast AQMD air quality standards or contribute to the non-attainment of ozone standards in the SCAB, and impacts would be less than significant (refer to Pages 4.2-23 through 4.2-26 of the Draft EIR).

17-67 The commenter expresses concerns with construction noise and road closures on Lampson Avenue. Refer to Response to Comment 17-40 for noise impacts. As discussed in Section 4.15, *Transportation*, of the Draft EIR, during construction, frontage improvements including median improvements, sidewalks, driveway modifications needed to accommodate site access, and landscaping improvements would be constructed in accordance with City standards. Lane closures that may be required for median improvements would be temporary and require a permit and compliance with Los Alamitos Municipal Code (LAMC) 12.08.200, Safety precautions–Obstruction of traffic. This would ensure safe crossing and access for all vehicles and pedestrians at all times. (refer to Pages 4.15-16 through 4.15-17 of the Draft EIR).

17-68 The commenter expresses concerns with fire, police, and medical responses due to increased traffic. The commenter also expresses concern that more accidents will occur due to increased traffic. As discussed in Section 4.13, *Public Services*, of the Draft EIR, considering the existing firefighting resources available in the City, implementation of the Project is not expected to result in the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impact. Per correspondence with the OCFA, there are currently no deficiencies in fire protection service provided to the Project site. OCFA has not indicated the need for a new fire station or expansion of existing facilities due to the Project. The Secured Fire Protection Agreement would ensure that responses times and service ratios are met due to the implementation of the Project and no new fire station facilities would be required (refer to Page 4.13-9 of the Draft EIR). Refer to Response to Comment 17-62 for police protection services. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for roadway safety concerns.

17-69 The commenter expresses concerns with greenhouse gas emissions due to construction and increased traffic. Refer to Response to Comment 17-48 for greenhouse gas emissions.

17-70 The commenter expresses concerns with safety hazards due to speeding and increased traffic and hazardous vehicle emissions. Refer to Master Response 2.1.2, *Roadway Safety on Lampson*

DRAFT

Avenue, for pedestrian safety concerns. Refer to Response to Comment 17-48 and 17-66 for vehicle emissions. As discussed in Section 4.8, *Hazards and Hazardous Materials*, of the Draft EIR, during construction, the Project would result in roadway improvements along Lampson, including replacement of the existing median curb and construction of the two proposed driveways. Construction on Lampson will require an encroachment permit and approval from the City Engineer Lane closures that may be required for median improvements would be temporary and require a permit and compliance with LAMC 12.08.200, Safety precautions–Obstruction of traffic. Compliance with LAMC 12.08.200 would ensure safe crossing and access for all vehicle and pedestrians at all times (refer to Page 4.8-21 of the Draft EIR).

17-71 The commenter expresses concerns with land use and planning and opines that the Project is an inconsistent use given its adjacency to the active military airfield. As discussed in Section 4.10, *Land Use and Planning*, of the Draft EIR, the Project would not conflict with JFTB AELUP's safety, height, noise, or aircraft overflight criteria, and impacts would be less than significant. Table 4.10-2, *General Plan Consistency Analysis*, provides an analysis of the Project's consistency with all applicable General Plan goals and policies that were adopted for the purpose of avoiding or mitigating an environmental effect. As shown in Table 4.10-2, the Project would not conflict with any of the applicable General Plan goals and policies. Accordingly, the Project would have a less-than-significant impact with respect to a conflict with the City of Los Alamitos General Plan and mitigation is not required (refer to Pages 4.10-14 through 4.10-32 of the Draft EIR).

17-72 The commenter expresses concerns with noise pollution on Lampson Avenue and added vehicles on the I-405 from residents exiting onto Lampson Avenue. Refer to Response to Comment 17-36.

17-73 The commenter expresses concerns with increased population and housing and its impact on parking spaces and uses of existing parks. As discussed in Section 4.12, *Population and Housing*, of the Draft EIR, the Project would not result in substantial unplanned growth in the area because: 1) the Project is within the growth projections of the City's General Plan, 2) the planned housing is a requirement of State Housing Law and in response to an existing unmet need for housing, 3) the Project is consistent with the existing General Plan land use and zoning designations, and 4) the Project improves the City's job-housing balance by developing housing in a currently jobs-rich and housing-poor area. Therefore, implementation of the Project would not result in substantial unplanned population growth, and impacts would be less than significant (refer to Pages 4.12-8 through 4.12-10 of the Draft EIR). Refer to Master Response 2.1.3, *Parking*, for parking concerns. Refer to Response to Comment 17-11 for impacts to existing recreational facilities.

17-74 The commenter expresses concerns with the increase in traffic and lack of available parking in the College Park East neighborhood and recommends that parking permits be implemented. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns

DRAFT

and 2.1.3, *Parking*, for parking concerns. Refer to Response to Comment 17-73 for population impacts.

17-75 The commenter expresses concerns with the strain on Seal Beach public services from the new development due to traffic accidents, pedestrian related issues, traffic issues. As discussed in Section 4.13, *Public Services*, of the Draft EIR, fire protection services for the Project site is currently provided by the Orange County Fire Authority (OCFA) and police protection service is provided by the Los Alamitos Police Department (refer to Page 4.13-1 and 4.13-2 of the Draft EIR). Refer also to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for roadway safety concerns and 2.1.6, *Public Safety*, for concerns related to public services.

17-76 The commenter expresses concerns with the increased use of parks and the increased need for maintenance of park equipment. Refer to Response to Comment 17-11 for impacts to existing parks.

17-77 The commenter expresses concerns with road impacts from heavy equipment usage. The Project would be required to comply with all applicable local regulations related to vehicle weight limits. If the Project requires the use of an oversize vehicle in excess of the eight, width, height or length permitted by the Vehicle Code, a permit shall be obtained from the City of Seal Beach in accordance with the City of Seal Beach Municipal Code 8.10.135, *Movement of Oversize Vehicles*. Additionally, the Project Applicant would be required to pay development impact or connection fees, as applicable or required, to the City of Seal Beach, as agreed upon, prior to Project approval for future infrastructure improvements.

17-78 The commenter expresses concerns with rodents due to more trash and litter caused by additional residents. The Project site plan incorporates necessary trash enclosures protect against rodent populations onsite. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

17-79 The commenter expresses concerns with overcrowded schools/libraries. As discussed in Section 4.13, *Public Services*, of the Draft EIR, the Project would be required to pay development impact fees to LAUSD under SB 50 for the construction of new schools, which provides full and complete mitigation to school facilities. Development impact fees currently charged by LAUSD for residential uses are $5.17 per sf. Although project buildout would result in an increase of 135 students, the availability of schools in the area and the payment of impact fees in compliance with SB 50 would address any potential impacts. Impacts from implementation of the Project on school services would be less than significant (refer to Pages 4.13-10 through 4.13-12 of the Draft EIR).

Project buildout would increase population onsite by an estimated 647 residents, thus increasing demand for other public facilities, such as library services. Increased demands are

DRAFT

expected to most affect the library facilities closest to the Project site – that is the Los Alamitos-Rossmoor Library. According to the administrative manager of the OCPL, it is anticipated that the increase in residents may impact service. With the current renovations previously underway at the library, however, OCPL does not expect Project buildout to require construction of new or expanded physical library facilities, the construction of which could cause a substantial adverse impact. Although future Project residents would be mainly served by the Los Alamitos-Rossmoor Library, they would have access to all libraries within OCPL's system. Therefore, impacts to library services would be less than significant and no mitigation is required (refer to Page 4.13-12 of the Draft EIR).

17-80 The commenter expresses concerns with traffic safety on Lampson Avenue, Seal Beach Boulevard and Valley View, and cut through traffic. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion,* for traffic concerns and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for safety concerns. Refer to Response to Comment 9-19 for cut through traffic.

17-81 The commenter expresses concerns with the added burden to utilities and service system infrastructure. Refer to Section 4.17, *Utilities and Service Systems*, of the Draft EIR, which evaluates this issue and concludes there would be sufficient water supplies, wastewater treatment facility capacity, and landfill capacity available to serve the Project and impacts would be less than significant (refer to Page 4.17-15 to 4.17-20 of the Draft EIR).

17-82 The commenter expresses concerns with aesthetic views of the Project site and expresses general opposition to the Project. Refer to Response to Comment 17-65 for aesthetics.

17-83 The commenter expresses concerns with insufficient parking, increased foot traffic, unsafe street crossings, and increased crime. Refer to Master Response 2.1.3, *Parking*, for parking concerns and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for safety concerns. Refer to Response to Comment 17-70 for street crossing and Response to Comment 17-62 for police protection.

17-84 The commenter expresses concerns with the proposed open space of the Project and the burden to existing recreational facilities. Refer to Response to Comment 17-11 for impacts to existing recreational facilities and Response to Comment 17-14 for the Project's proposed open space area. Additionally, refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*.

17-85 The commenter expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

DRAFT

17-86 The commenter expresses concerns with safety impacts and traffic congestion due to increased traffic. Refer to Response to Comment 17-70 for street crossing concerns. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for safety concerns.

17-87 The commenter expresses concerns with insufficient parking. Refer to Master Response 2.1.3, *Parking*, for parking concerns.

17-88 The commenter expresses concerns with Project residents utilizing Seal Beach City resources, parks and amenities. Refer to Response to Comment 17-11 for impacts to existing recreational facilities.

17-89 The commenter expresses concerns with construction vehicles during Project construction and the current signage restricting trucks over 3 tons from using the street. Refer to Response to Comment 17-77.

17-90 The commenter expresses concerns with traffic on Lampson Avenue. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns.

17-91 The commenter expresses concerns with impacts to Arbor Park and inquires about an evaluation of existing parks and proposed parks. Refer to Response to Comment 17-11 for impacts to existing recreational facilities and Response to Comment 17-14 for the Project's proposed open space area. Additionally, refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities.*

17-92 The commenter expresses concerns with impacts to Arbor Park and parking and recommends the new development include a play area for residents to offset demand. Refer to Response to Comment 17-11 for impacts to existing recreational facilities and Response to Comment 17-14 regarding the Project's proposed open space area. Additionally, refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities.* Refer to Master Response 2.1.3, *Parking*, for parking concerns.

17-93 The commenter recommends the Draft EIR consider noise levels coming from the park and from parking for residents. The commenter recommends that the residential units provide sufficient sound barriers or building materials to reduce noise levels. The commenter encourages the City to add improvements to soccer fields. Refer to Response to Comment 17-12 for noise concerns. As discussed in Section 4.14, *Recreation*, of the Draft EIR, per the City's park dedication requirements under Chapter 16.18 (Dedication of Land for Park Facilities and Payment of In Lieu Fees) of the City of Los Alamitos Municipal Code, all new residential development is required either to dedicate parkland or pay park facilities impact fees to offset the cost to expand or construct new park and recreational space and facilities to adequately serve the City's growing population (refer to Page 4.14-11 of the Draft EIR). Additionally, the commenter's request for the City to invest in more soccer fields is noted for

DRAFT

the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-94 The commenter expresses general opposition to the Project and expresses concerns with additional vehicles and traffic congestions on Lampson Avenue along with impacts to wildlife and residences, and safety issues. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for safety concerns. Refer to Response to Comments 17-18, 17-19, and 17-35 for impacts to wildlife.

17-95 The commenter expresses concerns with overcrowding, excessive noise, pollution, traffic, parking, and wear and tear to existing public facilities. The commenter recommends adding a traffic light and reducing the apartment density. Refer to Response to Comment 17-36 for impacts related to noise, pollution, traffic, and wear and tear to existing public facilities and Response to Comment 17-37 for impacts related to overcrowding above. Refer to Master Response 2.1.3, *Parking*, for parking concerns. Refer to Response to Comment 17-10 and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for traffic signal concerns. Refer to Response to Comment 17-71 for land use consistency.

17-96 The commenter expresses general opposition to the Project due to safety concerns from traffic, insufficient parking, lack of community spaces, aesthetics, noise, and impacts to existing recreational facilities. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns, 2.1.3, *Parking* for parking concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, for pedestrian safety concerns. Refer to Response to Comment 17-65 for aesthetic concerns and Response to Comment 17-12 for noise concerns. Refer to Response to Comment 17-11 for impacts to existing recreational facilities and Response to Comment 17-14 for the Project's proposed open space area.

17-97 The commenter expresses concerns with safety and traffic on Lampson Avenue. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, for pedestrian safety concerns.

17-98 The commenter expresses concerns with insufficient parking which will led to increase foot traffic and unsafe street crossings. Refer to Master Response 1.2, *Roadway Safety on Lampson Avenue*, for pedestrian safety concerns and 2.1.3, *Parking*, for parking concerns.

17-99 The commenter expresses concerns with impacts to existing parks and proposed open space. Refer to Response to Comment 17-11 for impacts to existing recreational facilities and Response to Comment 17-14 for the Project's proposed open space area.

17-100 The commenter expresses concerns with construction noise and visual impacts from the Project and request a taller sound and privacy wall. Refer to Response to Comment 17-65 for aesthetic concerns. Refer to Response to Comment 17-36 for construction noise. The commenter's

DRAFT

request for a higher wall is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-101 The commenter expresses concerns with impacts to Arbor Park and expresses general opposition to the Project. Refer to Response to Comment 17-11 for impacts to existing recreational facilities and 2.1.3, *Parking,* for parking concerns. In regard to the commenter's opposition to the Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-102 The commenter expresses concerns with the Project due to impacts to College Park East, including parks and parking. Refer to Response to Comment 17-11 for impacts to existing recreational facilities. Refer to Master Response 2.1.3, *Parking,* for parking concerns.

17-103 The commenter expresses concerns with increased traffic on Lampson Avenue and risk with heavy construction vehicles. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion,* for traffic concerns and 2.1.2, *Roadway Safety on Lampson Avenue,* for roadway safety concerns. Refer to Response to Comment 17-77 regarding construction vehicle concerns.

17-104 The commenter expresses concerns with noise and pollution. Refer to Response to Comment 17-12 for noise concerns and Response to Comment 17-34 for pollution concerns.

17-105 The commenter expresses concerns with impacts to existing parks and states that no parks are planned for the new development. Refer to Response to Comment 17-11 for impacts to existing recreational facilities. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities,* for concerns regarding the Project's planned open space.

17-106 The commenter expresses concerns with insufficient parking. Refer to Master Response 2.1.3, *Parking,* for parking concerns.

17-107 The commenter expresses general opposition to the Project and concerns due to lack of resources. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

17-108 The commenter expresses concerns with impacts to school services. Refer to Response to Comment 17-79 for responses regarding school services.

17-109 The commenter expresses concerns with police and fire protection services. Refer to Response to Comment 17-62 for responses regarding police protection services and Response to Comment 17-68 for responses regarding fire protection services.

DRAFT

17-110 The commenter expresses concerns with impacts to existing parks and proposed open space. Refer to Response to Comment 17-11 for impacts to existing recreational facilities and Response to Comment 17-14 for responses regarding the Project's proposed open space area.

17-111 The commenter expresses concerns with medical services and how the Project would impact the Los Alamitos hospital. The Project buildout would increase the population onsite by an estimated 647 residents, a small percentage of which are expected to need hospital services at any given time. This growth was anticipated in the Los Alamitos Housing Element Update. There are six medical facilities and hospitals within a 5 mile radius of the Project site. Therefore, it is not expected that the Project would impact the Alamitos Medical Center in such a way that it would require the construction of new or expanded medical facilities. Emergency medical services would be provided by OCFA. Per correspondence with the OCFA, there are currently no deficiencies in fire protection service provided to the Project site. OCFA has not indicated the need for a new fire station or expansion of existing facilities due to the Project. The Project applicant must enter into the Secured Fire Protection Agreement which would ensure that responses times and service ratios are met due to the implementation of the Project and no new fire station facilities would be required (refer to Page 4.13-9 of the Draft EIR).

17-112 The commenter expresses concerns with the insufficient amount of youth camps, summer camps, and summer school activities available, and the increase in taxes. The commenter also expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

17-113 The commenter expresses concerns with light pollution, sound pollution above roadway standards, vibrations, increased traffic, loss of park space, and unsafe road conditions. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns and 2.1.3, *Parking* regarding parking concerns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for pedestrian safety concerns. As discussed in Section 4.1, *Aesthetics*, of the Draft EIR, the Project would redevelop the Project site with residential uses which would produce artificial light. The Project would be required to adhere to the light and glare requirements as set forth in the LAMC (Chapter 8.48 - Lighting Performance Standards and Section 17.24.040 Light and Glare). Chapter 8.48 addresses the visual impacts of exterior lighting on adjacent property owners and neighborhoods. The chapter outlines guidelines for the design, scale, location, and illumination level of lighting fixtures. The guidelines aim to reduce light trespass and prevent glare. Section 17.24.040 would require shielding of light sources to reduce impacts on surrounding land uses including sensitive receptors in College Park East. The City would confirm compliance with all applicable lighting requirements during future review of building permit applications/plans. Mandatory compliance with LAMC Chapter 8.48 and Section 17.24.040 would ensure that the Project would not introduce any permanent design features that would adversely affect day or nighttime views in the area (refer

DRAFT

to Page 4.1-19 of the Draft EIR). Refer also to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, for impacts related to the loss of park space.

As discussed in Section 4.11, *Noise*, of the Draft EIR, based on the significance criteria for off-site traffic noise impacts, land uses adjacent to the study area roadway segments would not experience substantial noise level increases due to Project-related traffic noise level increases and off-site traffic related noise impacts would less than significant. No mitigation is required. The Project's construction and operational activities would not exceed vibration thresholds at all nearest receiver locations. As such, the Project would not generate excessive groundborne vibration or groundborne noise levels. Impacts would be less than significant (refer to Pages 4.11-25 through 4.11-30 of the Draft EIR).

17-114 The commenter expresses concerns regarding the height of the buildings, and with light and sound from the proposed apartment buildings, particularly during nighttime hours. Refer to Response to Comment 17-65 for aesthetic concerns and to Response to Comment 17-113 above for light and sound concerns. As discussed in Section 4.11, *Noise*, of the Draft EIR, the operational noise analysis evaluates the potential daytime and nighttime activities at the Project site. Both daytime and nighttime Project operational noise levels at nearby sensitive receptor locations would be less than significant (refer to Pages 4.11-24 through 4.11-25 of the Draft EIR).

17-115 The commenter expresses concerns with additional cars on Lampson Avenue and noise and vibration impacts. Refer to Response to Comment 17-113 above.

17-116 The commenter expresses concerns with parking. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns.

17-117 The commenter expresses concerns with traffic and safety concerns on Lampson Avenue, including U-turns at Heather Street. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding roadway safety concerns.

17-118 The commenter expresses concerns with the proposed density and use of existing recreational facilities. Refer to Response to Comment 17-71 regarding land use consistency. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities. As discussed in Section 4.12, *Population and Housing*, of the Draft EIR, The Project site is identified within the City's Housing Element as a housing element site with an estimate of 246 units. Development of the Project with a total of 246 units would be consistent with the City's 2021–2029 Housing Element (refer to Page 4.12-9 of the Draft EIR).

17-119 The commenter expresses concerns with impacts to AYSO operation and parking. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns.

DRAFT

17-120 The commenter recommends denial of the Project. This comment is noted for the record and will be forwarded to the decision makers for required review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

17-121 This comment letter references a peer review memorandum of the Project's Preliminary Water Quality Management Plan conducted by the City's consultants. This comment is addressed in Response to Comment 17-122.

17-122 The comments pertain to the Project's Water Quality Management Plan and were made by the City's consultants. These comments were addressed and incorporated into an updated WQMP which was included as *Technical Appendix I2* of the Draft EIR.

17-123 The commenter expresses concerns with impacts to Heather Park and opines that the park cannot handle additional children. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities and Response to Comment 17-14 regarding the Project's proposed open space area.

17-124 The commenter expresses concerns with increased traffic on Lampson Avenue and safety concerns for the bike lane. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding roadway safety concerns.

17-125 The commenter expresses concerns with insufficient parking. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns.

17-126 The commenter expresses concerns with impacts to AYSO operation and parking. Refer to Master Response 2.1.3, *Parking*, for parking concerns.

17-127 The commenter expresses concerns with safety on Lampson Avenue. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding roadway safety concerns.

17-128 The commenter expresses concerns with the proposed open space and utilization of existing parks. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities and Response to Comment 17-14 regarding the Project's proposed open space area.

17-129 This comment letter pertains to removal of a "Stop Lampson Project" sign on the property. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

DRAFT

17-130 The commenter asserts that the Project Applicant's focus was to keep the Project unknown to the public and expresses concerns with increased traffic and safety issues in the surrounding neighborhoods. As discussed previously, in compliance with Section 15201 of the State CEQA Guidelines, the City has taken steps to provide opportunities for public participation in the environmental review process. The mailing list radius for noticing complied with the City of Los Alamitos distance requirements and was expanded to 1,000 feet to include every house within College Park East and Parkwood regardless of distance. Additionally, public notice was published in the Event News Enterprise; the notice of availability and Draft EIR were made available for review, on the City's web site. Therefore, the City met and exceeded its legal requirement for noticing. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion,* for traffic concerns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for roadway safety concerns.

17-131 The commenter expresses concerns with the zoning and proposed density. Refer to Response to Comment 17-71 regarding land use consistency.

17-132 The commenter expresses concerns with limited accessibility into and out of the Project and how that impacts emergency access during fire hazards or police access. As discussed in Section 4.13, *Public Services*, access to and around structures would meet OCFA and CFC requirements. Figure 4.8-3, *Fire Master Plan*, of the Draft EIR demonstrates compliance with all codes and other regulations governing water availability for firefighting and emergency access to the Project site and structures. Compliance with OCFA requirements would ensure adequate provision of resources such as access, water mains, fire flows, and fire hydrants (refer to Page 4.13-9 of the Draft EIR).

17-133 The commenter expresses concerns with traffic and safety issues on Lampson Avenue and the lack of a stop light. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding roadway safety concerns. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion,* regarding traffic concerns. Refer to Response to Comment 17-10 and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding traffic signal concerns.

17-134 The commenter expresses concerns with traffic accidents due to increased traffic on Lampson Avenue. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding roadway safety concerns.

17-135 The commenter expresses concerns with access through Lampson Avenue and safety concerns. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding roadway safety concerns.

17-136 The commenter expresses concerns with safety and traffic on Lampson Avenue. Refer to Master Response Refer to Master Response 2.1.1, *Transportation and Traffic Congestion,* regarding traffic concerns and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding roadway safety concerns.

DRAFT

17-137 The commenter expresses concerns with insufficient parking. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns.

17-138 The commenter expresses concerns with impacts to AYSO operation based on parking. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns.

17-139 The commenter expresses concerns with the proposed density and safe access around the Project site. Refer to Response to Comment 17-71 regarding land use consistency and Response to Comment 17-132 regarding safe access.

17-140 The commenter expresses concerns with the lack of "no U-turn" signage and lack of a traffic signal. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns including U-turns. Refer to Response to Comment 17-10 and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding traffic signal concerns.

17-141 The commenter expresses concerns with insufficient parking and recommends adding a parking garage or decreasing the proposed units. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns.

17-142 The commenter recommends requiring a public park. Refer to Response to Comment 17-11regarding impacts to existing recreational facilities and Response to Comment 17-14 regarding the Project's proposed open space area.

17-143 The commenter recommends keeping some of the land commercial and adding small restaurants. A commercial alternative at the Project site was considered but rejected as a "No Project" alternative. It is unlikely that the existing office building would resume operation since commercial uses would be inconsistent with the General Plan designation and zoning. Refer to Response to Comment 17-71 for land use consistency.

17-144 This comment letter is an informational email from AYSO Region 159 to notify the public about the Project. The commenter expresses concerns with parking, lack of a traffic signal proposed, impacts to existing recreation facilities, and noise impacts to residents from AYSO usage of Arbor Park. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, 2.1.2, *Roadway Safety on Lampson Avenue*, regarding the lack of a traffic signal, 2.1.3, *Parking*, regarding parking concerns, and 2.1.8, *Loss of Existing Open Space and Provision of On-Site Amenities*, regarding impacts to existing recreational facilities. CEQA does not require an analysis of the impact of environmental conditions on a proposed Project. Therefore, an evaluation of activities at Arbor Park and related noises to the future residents of the Project were not evaluated.

17-145 The commenter expresses concerns with parking, traffic, and pollution and expresses general opposition to the Project. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns and 2.1.3, *Parking*, regarding parking concerns. Refer to Response to Comment 17-34 regarding pollution concerns.

DRAFT

17-146 The commenter expresses concerns with noise pollution, overcrowding of Heather Park, traffic safety, and negative impacts to AYSO operation. Refer to Response to Comment 17-36 and 17-37 above regarding noise pollution, impacts to existing recreational facilities, traffic safety, and AYSO operation concerns.

17-147 The commenter expresses concerns with the Project due to sound pollution impacting Ironwood Avenue from added traffic. Refer to Response to Comment 17-113 above regarding off-site traffic noise impacts.

17-148 The commenter expresses concerns with increased traffic and safety issues for pedestrians and cyclists on Lampson Avenue. The commenter provides links to several news articles referencing accidents that have occurred on Lampson. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian and cyclist safety concerns.

17-149 The commenter expresses concerns with aesthetics, specifically daytime glare, nighttime illumination, and existing visual characteristics. Refer to Response to Comment 17-113 regarding light and glare concerns. Refer to Response to Comment 17-65 regarding consistency with zoning development standards.

17-150 The commenter expresses concerns with existing property values. Property value is not an environmental issue analyzed under CEQA; however, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. Thus, no further response is required.

17-151 The commenter expresses concerns with air quality, specifically increased carbon monoxide emissions, particulate matter, and greenhouse gas emissions. Refer to Response to Comment 17-35 regarding air quality impacts concerns and Response to Comment 17-48 regarding greenhouse gas emissions concerns.

17-152 The commenter expresses concerns with biological impacts, specifically impacts to wildlife, birds, and trees. Refer to Response to Comments 17-18, 17-19, and 17-35 regarding impacts to wildlife and birds. As discussed in Section 4.3, *Biological Resources*, of the Draft EIR, on April 18, 2022, the City of Los Alamitos adopted a Parkway Tree Master Plan as part of its Urban Forest Program. This plan addresses City parkway trees. There are currently no parkway trees along the Project's frontage. The Project would not result in an impact to the City parkway trees. Therefore, the Project would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance. No impact would occur and mitigation is not required (refer to Page 4.3-34 of the Draft EIR).

17-153 The commenter expresses concerns with geology and soils, drainage impacts, and runoff concerns, including soccer field conditions. As discussed in Section 4.6, *Geology and Soils*, of the Draft EIR, Mitigation Measure MM 4.6-1 would ensure that that the Project's design professionals and construction contractors implement the recommendations of the Project's

DRAFT

Geotechnical Investigation (*Technical Appendix F1* of the Draft EIR), which in turn would ensure measures are implemented to address potential impacts due to the exposure of people or structures to adverse effects, including loss, injury, or death as a result of strong seismic ground shaking liquefaction hazards, soil settlement and expansion. Implementation of the required mitigation would ensure that impacts are reduced to less-than-significant levels (refer to Page 4.6-16 of the Draft EIR).

As discussed in Section 4.9, *Hydrology and Water Quality*, of the Draft EIR, the Project would not substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would substantially increase the rate or amount of surface runoff resulting in flooding on- or offsite (refer to Pages 4.9-22 through 4.9-23 of the Draft EIR). Project runoff would flow to the southwest corner (refer to Pages 4.9-18 through 4.9-20 of the Draft EIR) and would not impact the soccer fields.

17-154 The commenter expresses concerns with impacts to public services, specifically fire protection, police protection, libraries and parks. As discussed in Section 4.13, *Public Services*, of the Draft EIR, implementation of the Project would result in an increased requirement for public services. However, considering the existing resources available, the Project is not expected to result in the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impact. Impacts are less than significant (refer to Pages 4.13-8 through 4.13-12 of the Draft EIR). Increase in crime is not an environmental impact on the physical environment unless it leads to an increase in services or decrease in response times resulting in the need for construction of additional facilities. Refer also to Response to Comment in 17-62 regarding impacts to the police protection services.

17-155 The commenter recommends disapproval of the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

17-156 The commenter states that the parking lot on Lampson at West Ed has a Caltrans park and ride and is concerned that the new development is missing the park and ride. The Commenter also states that the parking lot used to support Arbor Park and is concerned that the parking lot is not being kept for the community park. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns. As of the time of preparation of this Final EIR, the Park-n-Ride that previously occupied the Project site has not been in operation for the past 18 months and when in operation had limited usage. There are no requirements or proposal to provide a substitute park-and-ride location.

DRAFT

17-157 The commenter expresses concerns that the Project will overpopulate the Lampson/College Park East area and cause overflow parking in their neighborhood, along with increasing traffic. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns and 2.1.3, *Parking*, regarding parking concerns.

17-158 The commenter expresses concerns with impacts to wildlife, including nesting red-tailed hawks, and asserts that measures must be taken to ensure endangered species and nesting birds are not disturbed. Refer to Response to Comments 17-18, 17-19, and 17-35 regarding impacts to wildlife and birds.

17-159 The commenter expresses concerns with impacts to wildlife, specifically relocation of species. The commenter asserts that the City include specific details of how wildlife would be affected by the plan and include a no kill requirement for those animals relocating themselves into local neighborhoods. Refer to Response to Comments 17-18, 17-19, and 17-35 regarding impacts to wildlife and birds and corresponding mitigation measures. As discussed in Section 4.3, *Biological Resources*, of the Draft EIR, the Project site is not located within or part of a wildlife movement corridor. The site is located within the Pacific flyway; however, given the small area of the site, lack of native habitats and levels of disturbance, there is no potential for significant impacts to the Pacific flyaway. The Project site is developed and is adjacent to developed areas that do not contribute to wildlife movement. Therefore, the Project would not substantially interfere with an established migratory wildlife corridor (refer to Page 4.3-33 through 4.3-34 of the Draft EIR).

17-160 The commenter expresses concerns with the origination of the water supply and loss of wetlands for migratory animals. Refer to Response to Comment 17-26 regarding water supply. As discussed in Section 4.3, *Biological Resources*, of the Draft EIR, the Project would not result in a substantial adverse effect on state or federally protected wetlands during both construction and operational activities. No impact would occur and mitigation is not required. The Project would be required to comply with existing laws including but not limited to the Migratory Bird Treaty Act (MBTA) and California Department of Fish and Game Code Sections 3505, 3503.5, and 3800. Therefore, no impact would occur, and mitigation is not required with respect to wetland impacts (refer to Pages 4.3-32 through 4.3-34 of the Draft EIR).

17-161 The commenter expresses concerns with the Project site in close proximity to the military base and decrease in property values. The commenter also expresses concerns regarding an increase in crime and questions where additional resources for code enforcement will come from. The commenter also expresses concerns with traffic issues on Lampson Avenue. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns and Response to Comment 17-62 related to the potential increase in crime. The Project Applicant will be required to pay Development Impact fees that will be used for future public service improvements. Property value is not an environmental issue analyzed under CEQA; however, this comment is noted for the record and will be forwarded to the decision makers for their

DRAFT

review and consideration prior to any action being taken on the Project. Thus, no further response is required.

17-162 The commenter expresses concerns with increased traffic and safety concerns on Lampson Avenue. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion,* regarding traffic concerns and 2.1.2, *Roadway Safety on Lampson Avenue,* regarding safety concerns.

17-163 The commenter expresses concerns that Arbor Park will be shut down because of noise complaints by new residents of the Project. The commenter also expresses concern that with no proposed open space as part of the Project, children will have to cross Lampson to utilize Heather Park. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, for a detailed discussion on the Project's proposed open space. There is no evidence to support the statement that Arbor Park would be shut down due to noise complaints by new residents of the Project; however, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. Thus, no further response is required

17-164 The commenter expresses concerns with parking, connection to Arbor Park, and proposes a playground. Refer to Master Response 2.1.3, *Parking* regarding parking concerns and Response to Comment 17-14 regarding proposed open space. As discussed in Section 3.0, *Project Description*, of the Draft EIR, non-motorized circulation would include pedestrian connectivity with existing sidewalks along Lampson Avenue, including an existing signalized pedestrian connection to the south at Rose Street and Lampson Avenue and pedestrian "paseo" connections with Arbor Park and the Arbor Dog Park to the north. The Project would provide pedestrian gates to be controlled by the Homeowners' Association to restrict residents from entering Arbor Park and Arbor Dog Park outside of hours specified by JTFB (refer to Page 3-5 of the Draft EIR).

17-165 The commenter expresses concerns with increased traffic and safety issues on Lampson Avenue. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion,* regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns.

17-166 The commenter expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

17-167 The commenter expresses concerns with increased traffic on Lampson Avenue, Seal Beach Boulevard and Valley View Boulevard, inadequate parking, and safety concerns. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion,* regarding traffic concerns, 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns, and 2.1.3,

DRAFT

Parking, regarding parking concerns. Refer to Response to Comment 17-10 and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding traffic signal concerns.

17-168 The commenter expresses concerns with increase in population, increased traffic and safety of only one thoroughfare. Refer to Response to Comment 17-73 regarding population growth and Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding safety concerns. As discussed in Section 4.8, *Hazards and Hazardous Materials*, of the Draft EIR, the Project site is not located within a very fire hazard severity zone and City's General Plan identifies very little risk of wildland fire hazards due to the urban nature of Los Alamitos, Rossmoor, and the surrounding communities. The City currently does not have any designated evacuation routes, however, the EOP recognizes that during a major evacuation event, all major roadways would be available for evacuation purposes. Implementation of the Project would not result in changes to the existing roadways that would impair or physically interfere with the EOP or evacuation routes (refer to Page 4.8-21 of the Draft EIR).

17-169 The commenter expresses concerns with lack of parking spaces causing future residents to park in College Park East. The commenter is also concerned about pedestrian safety as they cross Lampson. Refer to Master Response 2.1.3, *Parking* regarding parking concerns and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding safety concerns.

17-170 The commenter expresses concerns with an increase in car accidents and expresses general opposition to the Project. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns.

17-171 The commenter provides an introduction and expresses general concerns regarding the Project which are responded to below.

17-172 The commenter expresses concerns about the lack of parking spaces and the use of parking garage for storage. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns A condition of approval has been added to the Project to ensure the parking garages onsite be used primarily for parking purposes.

17-173 The commenter expresses concerns with traffic, accidents and speeding. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding roadway safety concerns.

17-174 The commenter expresses concerns with noise and air pollution during construction. The commenter also expresses concern for impacts to wildlife in the strawberry fields to the west of the Project. Refer to Response to Comment 17-40 regarding noise impacts and Response to Comment 17-35 regarding air pollution. As discussed in Section 4.3, *Biological Resources*, of the Draft EIR, wildlife, special-status vegetation communities, special-status species, nesting

DRAFT

birds, and indirect impacts to biological resources were analyzed (Refer to Pages 4.3-29 through 4.3-31 of the Draft EIR).

17-175 The commenter expresses concerns with increased traffic and suggests scaling the project down or not building it altogether. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion,* regarding traffic concerns.

17-176 The commenter requests environmental studies be prepared on traffic safety, parking, population, and recreation. The commenter expresses concerns about the proposed building heights, lack of parking, lack of traffic signals, and lack of recreation space. The commenter also expresses concern regarding the increase in traffic and pedestrians and the resulting safety issues. A Traffic Analysis, Onsite Parking Analysis, and Parks Impact Analysis were prepared for the Project and are included as *Technical Appendix N1, P, and M*, to the Draft EIR, respectively. Refer to Response to Comment 17-73 regarding concerns regarding population growth; Response to Comment 17-65 regarding aesthetic concerns; Response to Comment 17-11 regarding impacts to existing recreational facilities; Response to Comment 17-14 regarding the Project's proposed open space area. Refer to Response to Comment 17-10 and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding traffic signal concerns. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns and 2.1.8, *Loss of Existing Open Space and Provision of On-Site Amenities*, regarding recreation space concerns.

17-177 The commenter requests a restriction in the number of units proposed, the building of a recreation space, increase parking to accommodate residents and their guests, and recommends that a traffic signal be installed so that residents do not make U-turns at Heather Avenue and Rose Avenue. The Project proposes to develop up to only 246 residential units. Refer to Response to Comment 17-14 for the Project's proposed open space area. Refer to Response to Comment 17-10 and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for traffic signal concerns. Refer to Master Response 2.1.3, *Parking*, for parking concerns and 2.1.8, *Loss of Existing Open Space and Provision of On-Site Amenities,* for recreation space concerns.

17-178 The commenter expresses concerns with impacts to Heather Park and opines that the park cannot handle additional children. Refer to Response to Comment 17-123 for impacts to Heather Park and capacity.

17-179 This comment letter pertains to discussion items for a meeting between the City and City consultants. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

17-180 The commenter expresses concerns with access into Arbor Park from the Project site through the proposed pedestrian connections. The approval of the proposed pedestrian connections are speculative and not reasonably foreseeable at this time and for that reason are not further

DRAFT

evaluated in the Draft EIR; however, these comments are noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

17-181 The commenter expresses concerns with parking in Arbor Park and sufficient parking for the Project. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns.

17-182 The commenter expresses concerns with traffic flow at the left turn lane at the main entrance and congestion on Lampson. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns.

17-183 The commenter expresses concerns with lack of Project parking, and the use of parking garage for storage, and its impacts to parking at Arbor and Heather Park. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns. A condition of approval has been added to the Project to ensure the parking garages onsite be used primarily for parking purposes.

17-184 The commenter expresses concerns with impacts to Heather Park facilities, the impact on tennis courts and safety issues regarding pedestrians crossing Lampson to get to the park. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities and Response to Comment 17-14 regarding the Project's proposed open space area. Refer to Master Comment 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns.

17-185 The commenter expresses concerns with traffic safety on Lampson Avenue. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns.

17-186 The commenter expresses concerns with safety issues for children at the bus stop at Heather Park, runoff and flooding, utilities and impacts to service, police response and the density of the Project. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns. As discussed in Section 4.9, *Hydrology and Water Quality*, of the Draft EIR, the Project would not substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would substantially increase the rate or amount of surface runoff resulting in flooding on- or offsite (refer to Pages 4.9-22 through 4.9-23 of the Draft EIR). Refer to Response to Comment 17-81 regarding impacts to utilities and services systems. Refer to Response to Comment 17-62 regarding police protection.

17-187 The commenter expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment

DRAFT

letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

17-188 The commenter expresses concerns with construction noise; road closures; fire and police response; increased traffic on Lampson; parking; increased population; traffic safety; utilities and service systems; impacts on local shopping and services; safety of children; impacts on local parks and public services, and AYSO at Arbor Park. Refer to Response to Comment 17-36 regarding construction noise. Refer to Response to Comment 17-62 regarding police protection services, Response to Comment 17-67 regarding road closures, and Response to Comment 17-68 regarding fire protection services. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns. Refer to Response to Comment 17-73 regarding population growth. Refer to Response to Comment 17-81 regarding impacts to utilities and services systems. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities.

17-189 The commenter expresses concerns with traffic. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns and Response to Comment D-9 for cumulative traffic impacts.

17-190 The commenter expresses concerns with population growth, overflow parking, and increased traffic and safety impacts to Lampson Avenue. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns; 2.1.3, *Parking*, f regarding parking concerns; and 2.1.2 *Roadway Safety on Lampson Avenue*, regarding safety concerns. Refer to Response to Comment 17-73 regarding population growth.

17-191 The commenter expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

17-192 The commenter expresses concerns with traffic. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns.

17-193 The commenter expresses concerns with impacts to existing parks, parking and sports programs. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns.

17-194 The commenter expresses concerns with residents of the Project parking in College Park East and the need for traffic lights to handle congestion. Refer to Master Response 2.1.3, *Parking* regarding parking concerns and 2.1.1, *Transportation and Traffic Congestion*, for traffic congestion concerns. Refer to Response to Comment 17-10 and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding traffic signal concerns.

DRAFT

17-195 The commenter expresses concerns with increased crime due to increased parking in College Park East. Increase in crime is not an environmental impact on the physical environment unless it leads to an increase in services or decrease in response times resulting in the need for construction of additional facilities. Refer to Response to Comment 17-62 regarding police protection.

17-196 The commenter expresses concerns with air quality due to increased traffic and noise pollution. As discussed in Section 4.2, *Air Quality*, of the Draft EIR, the Project would not exceed criteria pollutant thresholds established by the South Coast AQMD for emissions of any criteria pollutant and impacts would be less than significant (refer to Pages 4.2-24 and 4.2-25 of the Draft EIR). Refer to Master Response 2.1.1, *Transportation and Traffic Congestion,* regarding traffic concerns. Refer to Response to Comment 17-40 regarding noise impacts.

17-197 The commenter expresses concerns with the use of existing parks and wait times for their amenities. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities.

17-198 The commenter expresses concerns with police response services. Refer to Response to Comment 17-62 regarding police protection.

17-199 The commenter expresses concerns with impacts to school services and safety concerns for children crossing on Lampson Avenue. Refer to Response to Comment 17-79 regarding impacts to school services and Response to Comment 17-70 regarding safe crossing. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns.

17-200 The commenter expresses concerns with traffic congestion, pollution and safety concerns on Lampson. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion,* for traffic concerns. Refer to Response to Comment 17-34 for pollution concerns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for safety concerns

17-200 The commenter expresses concerns with traffic congestion, pollution and safety concerns on Lampson. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion,* regarding traffic concerns. Refer to Response to Comment 17-34 regarding pollution concerns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding safety concerns

17-201 The commenter expresses concerns with increased traffic, pollution, noise, parking, street crossing, and safety near the JFTB. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion,* regarding traffic concerns, Response to Comment 17-34 regarding pollution concerns, Response to Comment 17-40 regarding noise impacts, Master Response 2.1.3, *Parking,* regarding parking concerns, Response to Comment 17-70 regarding safe crossing, Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns, and Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB),* for concerns related to safety from the military base.

DRAFT

17-202 The commenter expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

17-203 The commenter expresses concerns with noise from additional traffic, safety on Lampson Avenue, and air quality impacts. Refer to Response to Comment 17-113 regarding off-site traffic noise impacts. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns. Refer to Response to Comment 17-66 regarding air quality impacts.

17-204 The commenter expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

17-205 The commenter expresses concerns with construction noise, cumulative noise, dust, dirt and rodents. Refer to Response to Comment 17-40 regarding noise impacts. As discussed in Section 4.11, *Noise*, of the Draft EIR, the Project would not result in an increase in the cumulative noise levels at sensitive receiver locations during both construction and operation (refer to Page 4.11-34 of the Draft EIR). Refer also to Response to Comment D-9 for cumulative offsite traffic noise impacts. Refer to Response to Comment 9-21 regarding the potential for rodents and small animals to move into CPE. As discussed in Section 4.6, *Geology and Soils*, the Project would be required to implement erosion and dust control measures pursuant to South Coast AQMD Rule 403 to minimize water- and windborne erosion. Mandatory compliance with the SWPPP and the erosion control and dust control measures would reduce, prevent, or minimize soil erosion from Project-related construction activities (refer to Page 4.6-10 of the Draft EIR). Moreover, as discussed in Section 4.2, *Air Quality*, of the Draft EIR, the Project would not exceed the South Coast AQMD localized significance thresholds for assessing localized health impacts from criteria air pollutants during construction. Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations during Project construction. Further, Project traffic would not create or result in a CO "hotspot." Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations due to the Project, and impacts would be less than significant (refer to Pages 4.2-26 through 4.2-29 of the Draft EIR).

17-206 The commenter expresses concerns with increased traffic and safety concerns due to additional traffic. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding safety concerns.

DRAFT

17-207 The commenter expresses concerns with traffic noise and accidents. Refer to Response to Comment 17-113 regarding off-site traffic noise impacts. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns.

17-208 The commenter expresses concerns with dense neighborhoods, increased traffic, safety, noise, and air pollution. Refer to Response to Comment 17-73 regarding population growth. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns. Refer to Response to Comment 17-34 regarding pollution concerns. Refer to Response to Comment 17-40 regarding noise impacts.

17-209 The commenter expresses general opposition to the Project and expresses concerns with the proposed density. Refer to Response to Comment 17-71 regarding land use consistency. In regard to the commenter's opposition to the Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-210 The commenter expresses concerns with increased traffic, U-turn at Heather Park and associated safety concerns, parking, and use of existing parks. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns, and 2.1.3, *Parking*, regarding parking concerns. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities.

17-211 The commenter expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

17-212 The commenter expresses general opposition and requests an unbiased review/full assessment of the Project. As discussed in Section 1.0, *Introduction*, of the Draft EIR, the Draft EIR is an informational document that represents the independent judgement of the City of Los Alamitos, acting as the Lead Agency pursuant to the CEQA, and evaluates the physical environmental effects that could result from construction and operation of the proposed Project. In regard to the commenter's opposition to the Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-213 The commenter expresses concerns with increased traffic, air quality, and noise pollution. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns. Refer to Response to Comment 17-66 regarding air quality impacts. Refer to Response to Comment 17-40 regarding noise impacts.

DRAFT

17-214 The commenter expresses concerns with limited parking, lack of parks/recreation area, impacts to school services, impacts to emergency service providers, construction equipment impacts to Lampson, construction noise, impacts on animals, aesthetics, water supply, and water quality during construction. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities and Response to Comment 17-14 regarding the Project's proposed open space area. Refer to Response to Comment 17-79 regarding impacts to school services. Refer to Response to Comment 17-62 regarding police protection services and Response to Comment 17-68 regarding fire protection services. Refer to Response to Comment 17-77 regarding construction equipment. Refer to Response to Comment 17-36 regarding construction noise. Refer to Response to Comments 17-18, 17-19, and 17-35 regarding impacts to wildlife and birds. Refer to Response to Comment 17-65 regarding aesthetic concerns. Refer to Response to Comment 17-26 regarding water supply.

As discussed in Section 4.9, *Hydrology and Water Quality*, of the Draft EIR, the Project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality during construction or long-term operation. Impacts would be less than significant and no mitigation is required (refer to Pages 4.9-14 through 4.9-16 of the Draft EIR).

17-215 The commenter requests consideration of the above-mentioned concerns in the Draft EIR. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

17-216 The commenter expresses concerns related to infrastructure to support the Project, impacts to public services, and water supply. The commenter recommends a park instead of the Project. Refer to Response to Comment 17-81 regarding utilities concerns. Refer to Response to Comment 17-154 regarding impacts to public services. Refer to Response to Comment 17-26 regarding water supply. Refer to Response to Comment 17-14 regarding the Project's proposed open space area. The commenters recommendation for a park is acknowledged and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-217 The commenter expresses concerns with insufficient parking spaces, traffic congestion, loss of parking for sporting events at Arbor Park, accidents and safety. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns; 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns, and 2.1.3, *Parking*, regarding parking concerns.

DRAFT

17-218 The commenter expresses general opposition to the Project and concerns with traffic. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. In regard to the commenter's opposition to the Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-219 The commenter expresses concerns with traffic on Lampson Avenue. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns.

17-220 The commenter expresses concerns with impacts to school services. Refer to Response to Comment 17-79 regarding impacts to school services.

17-221 The commenter expresses concerns with emergency access and evacuation. Refer to Response to Comment 17-132 for emergency access and 17-168 for evacuation.

17-222 The commenter expresses concerns with additional traffic on Lampson Avenue and impact of construction trucks on the roadway. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. Maintenance and repair concerns regarding the "wear and tear" of streets would be addressed by the agencies with jurisdiction over those roadways to the extent the Project construction results in any damage to streets or roadways. Refer to Response to Comment 17-77 regarding heavy construction equipment.

17-223 The commenter expresses concerns with emergency and evacuation routes. As discussed in Section 3.0, *Project Description*, of the Draft EIR, vehicle access to the Project site would be provided via two driveways on Lampson Avenue, one for the apartment entry on the western side and one for the primary neighborhood entry central to the site (full access driveway). Additionally, a restricted emergency vehicle access point with Lampson Avenue would be provided at the eastern end of the site (refer to Page 3-4 of the Draft EIR). Refer to Response to Comment 17-132 regarding emergency access. As discussed in Section 4.8, *Hazards and Hazardous Materials*, of the Draft EIR, the City currently does not have any designated evacuation routes, however, the EOP recognizes that during a major evacuation event, all major roadways would be available for evacuation purposes. Implementation of the Project would not result in changes to the existing roadways that would impair or physically interfere with the EOP or evacuation routes (refer to Page 4.8-21 of the Draft EIR).

17-224 The commenter expresses concerns with aesthetics of the proposed apartments. Refer to Response to Comment 17-65 regarding aesthetic concerns.

17-225 The commenter expresses concerns with impacts to existing parks and proposed open space. The commenter recommends the Project be reduced/modified. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities and Response to Comment 17-14 regarding the Project's proposed open space area. Additionally, refer to Master Response 2.1.8, *Loss of Existing Open Space and Provision of On-Site Amenities*.

DRAFT

17-226 The commenter expresses concerns with inadequate parking, traffic congestion, impacts to emergency response, air quality, noise pollution, and impacts to school services. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. Refer to Response to Comment 17-62 regarding police protection services and Response to Comment 17-68 regarding fire protection services. Refer to Response to Comment 17-66 regarding air quality impacts. Refer to Response to Comment 17-40 regarding noise impacts. Refer to Response to Comment 17-79 regarding impacts to school services.

17-227 The commenter inquires about the Project timeline and proposed means of entry for the Project site. For purposes of analysis in the Draft EIR, construction is assumed to occur over a period of approximately 39.5 months. The estimated Project construction schedule, organized by construction stage, is summarized in Table 3-4, *Estimated Construction Schedule* of the Draft EIR. The Project is anticipated to be partially operational in early 2025 with some buildings being fully constructed by that time (refer to Pages 3-4 through 3-14 of the Draft EIR). As discussed in Section 3.0, *Project Description*, of the Draft EIR, vehicle access to the Project site would be provided via two driveways on Lampson Avenue, one for the apartment entry on the western side and one for the primary neighborhood entry central to the site. Additionally, a restricted emergency vehicle access point with Lampson Avenue would be provided at the eastern end of the site.

17-228 The commenter expresses concerns with traffic on Lampson Avenue, Seal Beach Boulevard, and Valley View. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns.

17-229 The commenter expresses concerns with traffic congestion and safety, GHG emissions, hazardous materials, air quality, and noise pollution. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding safety concerns. Refer to Response to Comment 17-48 regarding greenhouse gas emissions. Refer to Response to Comment 17-66 regarding air quality impacts. Refer to Response to Comment 17-40 regarding noise impacts.

As discussed in Section 4.8, *Hazards and Hazardous Materials*, of the Draft EIR, the Project site does not contain any hazards, nor is the Project site affected by any off-site hazards. During Project construction and operation, mandatory compliance with federal, State, and local regulations would ensure that the proposed Project would not create a significant hazard to the environment due to routine transport, use, disposal, or upset of hazardous materials. Impacts would be less than significant (refer to Pages 4.8-15 through 4.8-17 of the Draft EIR).

17-230 The commenter expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment

DRAFT

letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

17-231 The commenter expresses concerns with existing views of the mountains, trees, and wildlife, excessive noise, bright lights, traffic, pollution, and overcrowding. Refer to Response to Comment 17-40 regarding noise impacts. Refer to Response to Comment 17-113 regarding light pollution. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. Refer to Response to Comment 17-34 regarding pollution concerns. Refer to Response to Comment 17-73 for population growth.

As discussed in Section 4.1, *Aesthetics*, of the Draft EIR, the Project development would block the partial and distant views of the San Gabriel Mountains from Lampson Avenue along the project frontage. However, redevelopment of the Project site would not result in a substantial adverse effect on a scenic vista, because background views of the San Gabriel Mountains are distant and limited due to existing development and landscaping and the Project site is not considered to be part of a designated scenic vista. Therefore, impacts would be less than significant (refer to Pages 4.1-8 through 4.1-10 of the Draft EIR).

17-232 The commenter expresses concerns with traffic, noise, pollution, overcrowding, safety and quality of life for people and animals. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. Refer to Response to Comment 17-40 regarding noise impacts. Refer to Response to Comment 17-34 regarding pollution concerns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns.

17-233 The commenter expresses concerns with noise from traffic impacting residents, pets and wildlife. Refer to Response to Comment 17-113 regarding off-site traffic noise impacts. Section 4.11, *Noise*, of the Draft EIR, analyzed the Project's construction and operational related noise impacts and found impacts to be less than significant. Under Public Resources Code Section 21085, social noise generated by project occupants and their guests is not considered a significant environmental impact of residential projects on humans for CEQA purposes.

17-234 The commenter expresses concerns with noise from school buses, children and the safety of children crossing the street in the absence of a bus stop. Refer to Response to Comment 17-113 regarding off-site traffic noise impacts. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for pedestrian safety concerns.

17-235 The commenter expresses concerns with noise impacts to wildlife and safety of wildlife crossing Lampson Avenue. The commenter also expresses concern that noise from the Project will impact residents with special needs and those sensitive to sound and requests that a study be completed to determine impacts on these residents.

DRAFT

As discussed in Section 4.3, *Biological Resources*, of the Draft EIR, indirect (or secondary) impacts are those that are reasonably foreseeable and caused by a project but occur at a different time or place. Indirect impacts can occur at the urban/wildland interface of projects, to biological resources located downstream from projects, and other offsite areas where the effects of the project may be experienced by plants and wildlife. Examples of indirect impacts include the effects of increases in ambient levels of noise or light; predation by domestic pets; competition with exotic plants and animals; introduction of toxics, including pesticides; and other human disturbances such as hiking, off-road vehicle use, unauthorized dumping, etc. Indirect impacts are often attributed to the subsequent day-to-day activities associated with project build-out, such as increased noise, the use of artificial light sources, and invasive ornamental plantings that may encroach into native areas. Indirect effects may be both short-term and long-term in their duration. These impacts are commonly referred to as "edge effects" and may result in a slow replacement of native plants by non-native invasive species, as well as changes in the behavioral patterns of wildlife and reduced wildlife diversity and abundance in habitats adjacent to project sites. The Project site is not surrounded by or adjacent to natural open space; rather, adjacent facilities include Arbor Dog park, Arbor Park and the Navy Golf Course which are recreational facilities subject to regular human uses and associated disturbances, including noise. The Project is not expected to result in indirect effects to biological resources as the Project site is predominantly developed with existing outdoor lighting in place and the proposed Project would incorporate measures to minimize indirect light spillover into the adjacent areas including Arbor Park, Navy Golf Course, and JFTB (refer to Page 4.3-31 of the Draft EIR).

As indicated in Section 4.1, *Noise*, of the Draft EIR, some land uses are more tolerant of noise than others. For example, schools, hospitals, churches, and residences are more sensitive to noise intrusion than commercial or industrial developments and related activities (refer to Page 4.11-3 of the Draft EIR). This section analyzed noise level impacts at nearby sensitive receiver locations, as required by CEQA, and impacts were found to be less than significant.

17-236 The commenter expresses concerns with noise from existing noise sources (e.g. fighter jets, military vehicles, police helicopters training, and traffic on Lampson) and the Project's heavy equipment for construction and its cumulative effect on residents. Refer to Response to Comment 17-36 regarding construction noise.

17-237 The commenter expresses concerns with AYSO operation and overflow parking into surrounding neighborhoods adding increased noise and air pollution to College Park East. The commenter also expresses concern regarding additional pollution from increased vehicles, health impacts negative affects to aesthetics, and how added air pollution may affect property values and requests studies to address these concerns.

A parking study (*Technical Appendix Q* of the Draft EIR) has been conducted for the Project to evaluate the parking need at Arbor Park and Arbor Dog Park, including AYSO Region 159 uses. Refer to Master Response 2.1.3, *Parking*, for the results of the parking study and overflow

DRAFT

parking. Additionally, as discussed in Section 4.2, *Air Quality*, of the Draft EIR, the increase in vehicle trips associated with the Project would not result in significant air quality impacts or health affects to nearby sensitive receptors, including residents at College Park East (refer to Page 4.2-27 through 4.2-29 of the Draft EIR).

Regarding AYSO overflow parking, if there were not adequate parking spaces for an AYSO soccer game event, vehicles would have the option of dropping off players/visitors at the park and/or driving a short distance to available parking off-site and walking to the park. These scenarios would not result in the addition of new vehicle trips attributable to the Project. Additionally, any change in vehicle trip distance would be negligible, as it would only occur on Saturdays during soccer season. Because these vehicles are arriving at certain appointed times to watch or participate in these events, they are not expected to circle the parking lot to wait until a parking space became available. As such, vehicles unable to find adequate parking would not result in any significant traffic impacts related to congestion at the site or air quality impacts related to emissions (refer to Page 4.2-25 of the Draft EIR). Property value is not an environmental issue analyzed under CEQA; however, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. Thus, no further response is required regarding property values.

17-238 The commenter expresses concerns about insufficient parking available and indirect noise impacts from people parking and talking in the neighborhood. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns. Indirect social noise impacts are not an environmental issue analyzed under CEQA; however, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project

17-239 The commenter expresses concerns about Project lighting and how it will impact drivers, residents and wildlife. The commenter requests 3-D renderings of how the Project will appear from the College Park East backyards from Heather to Rose Streets and requests a daytime and nighttime [lighting] model for all residents adjacent to Lampson Avenue in College Park East between these streets. Refer to Response to Comment 17-113 regarding lighting impacts and 17-2135 for indirect impacts such as lighting to wildlife. Additionally, visual rendering of the Project on Lampson Avenue is shown in Figure 4.1-2 and 4.1-3 of the Draft EIR. For purposes of evaluating aesthetic impacts under CEQA, views from public vantage points, not private views (e.g. from the backyards of residents), are required to be evaluated.

17-240 The commenter expresses concerns about Project lighting affecting wildlife and requests a shade study. The commenter questions whether solar panels will be included to help with the energy crisis. Refer to Response to Comment 17-235 related to indirect impacts to biological resources. Additionally, the Project will include solar photovoltaic with the capability to generate up to 1,229,520 kWh/annually as a Project Design Feature (PDF GHG-1). Moreover, pursuant to the commenter's request, a shade and shadow study was conducted for the Project (*Attachment I* of this Final EIR). The study provides 3 shade and shadow conditions (9 AM,

DRAFT

11AM, 3PM) for winter solstice (December) and summer solstice (June) periods. The longest shadows are cast during the winter months and the shortest shadows are cast during the summer months. In the Northern Hemisphere, the longest day and shortest night of the year occur on the Summer Solstice (on June 21 or 22), marking the beginning of summer. The shortest day and longest night of the year occur on the Winter Solstice (December 21 or 22), marking the beginning of winter. The measurement of shadow lengths that occur at the winter and summer solstices therefore represent the most extreme shadow patterns that occur throughout the year. As shown, during the summer period, the shade and shadow would mostly be confined to the Project site without spillover to adjacent properties. During the winter period, shade and shadow would spillover in the northwestern direction during 9AM and in the northeastern direction during 11 AM. However, the shade and shadow footprint would be minimal and would occur on roadway to the east and parking lot to the north. Therefore, the Project would not result in a significant change in the shade or shadow footprint to nearby properties and open space, and this analysis confirms that the Project will not result in any impacts related to shade or shadow to nearby properties and open space.

17-241 The commenter expresses concerns with the lack of a traffic light, safety and congestion. Refer to Response to Comment 17-10 and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding traffic signal concerns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding safety concerns and Master Response 2.1.1, *Transportation and Traffic Congestion,* regarding traffic congestion concerns.

17-242 The commenter expresses concerns with pollution and dust from construction and vehicles and their impact to residents and wildlife. The commenter questions how many trees will be cut down. The commenter requests that a study be completed to determine how this added pollution will impact neighboring communities.

As discussed in Section 4.3, *Biological Resources*, of the Draft EIR, the Project requires removal of existing ornamental trees (refer to Page 4.3-33 of the Draft EIR). As shown in Figure 3- 18, *Landscape Plan*, a total of 441 trees would be planted throughout the Project site to replace the existing trees onsite. Impacts to wildlife were also addressed in Section 4.3, *Biological Resources*, of the Draft EIR, and determined to be less than significant with mitigation measures incorporated.

An air quality impact analysis was conducted and included as *Technical Appendix B1* of the Draft EIR. As discussed in Section 4.2, *Air Quality*, of the Draft EIR, implementation of the Project would not: 1) exceed applicable South Coast AQMD localized criteria pollution emissions thresholds during construction and operation; 2) would not cause or measurably contribute to the formation of a CO "hot spot;" and 3) would not result in a health risk for nearby residents during construction. The land use with the greatest potential exposure to Project construction-source diesel particulate matter (DPM) emissions is Location R3 which is located approximately 86 feet south of the Project site at an existing residence located at 4625 Ironwood Avenue. R3 is placed in the private outdoor living areas (backyard) facing the Project

DRAFT

site. At the Maximally Exposed Individual Receptor (MEIR), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 2.59 in one million, which is less than the South Coast AQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be less than 0.01, which would not exceed the applicable threshold of 1.0. Location R3 is the nearest receptor to the Project site and would experience the highest concentrations of DPM during Project construction due to meteorological conditions (wind speed and direction) at the site. Because all other modeled receptors would experience lower concentrations of DPM during Project construction, all other receptors in the vicinity of the Project would be exposed to less emissions and therefore less risk than the MEIR identified for location R3. As such, the Project will not cause a significant human health or cancer risk to adjacent land uses as a result of Project construction activity (refer to Pages 4.2-26 through 4.2-29 of the Draft EIR).

17-243 The commenter expresses concerns with the lack of proposed playgrounds, shopping centers, grocery stores, recreational amenities and other community resources such as walking paths, business centers and public transportation hubs. The commenter expresses concern that the current facilities and resources cannot handle additional overcrowding and wear. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, regarding impacts to recreational facilities and refer to Response to Comment 1-73 for overcrowding concerns. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

17-244 The commenter expresses concerns with traffic and parking. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns.

17-245 The commenter expresses concerns with the height of the proposed structures. Refer to Response to Comment 17-65 regarding aesthetic concerns.

17-246 The commenter expresses concerns with safety on Lampson Avenue. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns.

17-247 The commenter expresses concerns with lack of available parking and use of existing parks for parking and recreation, and overcrowding. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities. Refer to Response to Comment 17-73 regarding population growth.

17-248 The commenter expresses concerns with the proposed density. Refer to Response to Comment 17-71 regarding land use consistency.

DRAFT

17-249 The commenter expresses concerns with Project site ingress and egress, uncontrolled intersections and safety on Lampson. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*,regarding safety concerns. As discussed in Section 3.0, *Project Description*, of the Draft EIR, vehicle access to the Project site would be provided via two driveways on Lampson Avenue, one for the apartment entry on the western side and one for the primary neighborhood entry central to the site. Additionally, a restricted emergency vehicle access point with Lampson Avenue would be provided at the eastern end of the site (refer to Page 3-4 of the Draft EIR).

17-250 The commenter inquires about proposed open space/recreational area. Refer to Response to Comment 17-14 regarding the Project's proposed open space area.

17-251 The commenter inquires about guest parking. Refer to Master Response 2.1.3, *Parking*.

17-252 The commenter questions what is meant by affordable housing. As discussed in Section 3.0, *Project Description*, the Project intends to provide a variety of affordable housing types to support middle-income workers (refer to Pages 3-1 through 3-2 of the Draft EIR). Middle-income workers are characterized as Moderate Income as defined in the City's Housing Element.

17-253 The commenter inquires about Project construction impacts including road closures, construction equipment and noise impacts. Refer to Response to Comment 17-36 regarding construction noise. As discussed in Section 4.15, *Transportation*, of the Draft EIR, during construction, frontage improvements including median improvements, sidewalks, driveway modifications needed to accommodate site access, and landscaping improvements would be constructed in accordance with City standards. Refer to Response to Comment 17-67 regarding road closures.

17-254 The commenter expresses concerns with the zoning and incompatible use of the Project. Refer to Response to Comment 17-71 regarding land use consistency.

17-255 The commenter expresses concerns with construction noise, pollution, road closures, increased traffic, parking, use of existing parks, increased crime, and property values. Refer to Response to Comment 17-36 regarding construction noise. Refer to Response to Comment 17-34 regarding pollution concerns. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities. Refer to Response to Comment 17-62 regarding police protection services and 17-67 above regarding construction road closures. The commenter also expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

DRAFT

17-256 The commenter expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

17-257 The commenter expresses concerns with traffic safety. Refer to Master Response 2.1.1, *Traffic Concerns/Congestion* regarding traffic concerns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns.

17-258 The commenter expresses concerns with air quality. Refer to Response to Comment 17-35 for air quality impacts. Moreover, as discussed in Section 4.2, *Air Quality*, of the Draft EIR, impacts associated with Project-related construction and operational emissions would be less than cumulatively considerable. The Project would also have a less-than-cumulatively considerable LST impact during construction and long-term operation and impacts associated with CO "Hot Spots" would be less than cumulatively considerable (refer to Page 4.2-30 of the Draft EIR).

17-259 The commenter expresses concerns with noise pollution. Refer to Response to Comment 17-40 regarding noise impacts. Moreover, as discussed in Section 4.11, Noise, of the Draft EIR, the Project would not result in an increase in the cumulative noise levels at sensitive receiver locations during both construction and operation (refer to Page 4.11-34 of the Draft EIR). Refer also to Response to Comment D-9 for cumulative offsite traffic noise impacts.

17-260 The commenter expresses concerns with impacts to existing parks and recreation. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities and Response to Comment 17-14 regarding the Project's proposed open space area.

17-261 The commenter expresses concerns with limited parking. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns.

17-262 The commenter expresses concerns with emergency response. Refer to Response to Comment 17-62 regarding police protection services and Response to Comment 17-68 regarding fire protection services.

17-263 The commenter expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

DRAFT

17-264 The commenter expresses concerns with traffic safety. Refer to Master Response 2.1.1, *Traffic Concerns/Congestion* regarding traffic concerns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns.

17-265 The commenter expresses concerns with air quality. Refer to Response to Comment 17-35 regarding air quality impacts. Moreover, as discussed in Section 4.2, *Air Quality*, of the Draft EIR, impacts associated with Project-related construction and operational emissions would be less than cumulatively considerable. The Project would also have a less-than-cumulatively considerable LST impact during construction and long-term operation and impacts associated with CO "Hot Spots" would be less than cumulatively considerable (refer to Page 4.2-30 of the Draft EIR).

17-266 The commenter expresses concerns with noise pollution. Refer to Response to Comment 17-40 regarding noise impacts. Moreover, as discussed in Section 4.11, *Noise*, of the Draft EIR, the Project would not result in an increase in the cumulative noise levels at sensitive receiver locations during both construction and operation (refer to Page 4.11-34 of the Draft EIR). Refer also to Response to Comment D-9 for cumulative offsite traffic noise impacts.

17-267 The commenter expresses concerns with impacts to existing parks and recreation. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities and Response to Comment 17-14 regarding the Project's proposed open space area.

17-268 The commenter expresses concerns with limited parking. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns.

17-269 The commenter expresses concerns with emergency response. Refer to Response to Comment 17-62 regarding police protection services and Response to Comment 17-68 regarding fire protection services.

17-270 The commenter expresses general opposition to the Project and expresses concerns with traffic, noise pollution and safety. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns. Refer to Response to Comment 17-40 regarding noise impacts.

17-271 The commenter expresses concerns with noise and air pollution. Refer to Response to Comment 17-40 regarding noise impacts. Refer to Response to Comment 17-35 regarding air quality impacts. As discussed in Section 4.2, *Air Quality*, of the Draft EIR, impacts associated with Project-related construction and operational emissions would be less than cumulatively considerable. The Project would also have a less-than-cumulatively considerable LST impact during construction and long-term operation and impacts associated with CO "Hot Spots" would be less than cumulatively considerable (refer to Page 4.2-30 of the Draft EIR). Moreover, as discussed in Section 4.11, *Noise*, of the Draft EIR, the Project would not result in an increase in the cumulative noise levels at sensitive receiver locations during both

DRAFT

construction and operation (refer to Page 4.11-34 of the Draft EIR). Refer also to Response to Comment D-9 for cumulative offsite traffic noise impacts.

17-272 The commenter expresses concerns with damage to roads from the addition of heavy road equipment and vehicles; traffic congestion; and safety for pedestrians with additional drivers. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns, and Response to Comments 17-77 and 17-222 regarding road impacts from heavy equipment.

17-273 The commenter expresses concerns with pedestrian safety and traffic accidents. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for safety concerns.

17-274 The commenter expresses concerns with insufficient parking; overcrowding of existing parks; and crime with the addition of more people. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities and Response to Comment 17-14 regarding the Project's proposed open space area. Refer to Master Response 2.1.8, *Public Safety*, regarding safety concerns.

17-275 The commenter expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

17-276 The commenter expresses concerns with EIR topics such as aesthetics, air quality, cultural resources, construction noise and road closures, emergency response, greenhouse gas emissions, hazards and hazardous materials, land use and planning, noise pollution, population and housing, recreation, public services, schools and library impacts, and utilities and services systems. The commenter also expresses concerns regarding parking, road impacts from heavy equipment, rodents, and traffic safety. As discussed in Section 4.0, *Environmental Analysis*, of the Draft EIR, taking all known information and public comments into consideration, 17 primary environmental subject areas were evaluated in detail. Each subsection evaluated several specific subject matters related to the primary environmental subject. The title of each subsection is not limiting; therefore, refer to each subsection for a full account of the subject matters addressed therein (refer to Page 4-1 of the Draft EIR). Please also refer to Master Response 2.1.3, *Parking*, regarding parking concerns, Response to Comment 17-77 regarding road impacts from heavy equipment, and Response to Comment 9-21 regarding rodent concerns.

17-277 The commenter expresses general concerns to the Project which are responded to below.

DRAFT

17-278 The commenter expresses concerns about traffic congestion, particularly during school drop off hours. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns.

17-279 The commenter expresses concerns with parking, including meeting the needs for guest/overflow parking. Refer to Master Response 2.1.3, *Parking,* regarding parking concerns.

17-280 The commenter expresses concerns with air quality during demolition of the existing building. Refer to Response to Comment 17-242 regarding air quality impacts to sensitive receptors during construction.

17-281 The commenter requests parking studies to ensure sufficient parking for residents to avoid impacts to College Park East and other neighborhoods. The commenter notes that there are no existing groceries or schools within walking distance. The commenter requests that studies be completed on the increased traffic and pollution, especially noise and smog. An Onsite Parking Analysis, Traffic Analysis, Noise Impact Analysis, Air Quality Impact Analysis, and Health Risk Assessment were prepared for the Project and are included in Draft EIR *Technical Appendices P, N1, K, B1* and *B2*, respectively.

17-282 The commenter expresses concerns with increased traffic impact on surrounding streets including accidents and congestion, and rezoning Arbor Park for residential development. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion,* regarding traffic concerns and 2.1.2, *Roadway Safety on Lampson Avenue,* regarding roadway safety concerns. Refer to Response to Comment 17-71 regarding land use consistency. The commenter also expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-283 The commenter expresses concerns with property value, construction and road closures, public services response times, traffic safety, noise, air quality, greenhouse gas emissions, parking, pressure on schools and parks, and rodents and sanitation. Refer to Response to Comment 17-154 regarding impacts to public services. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue,* regarding pedestrian safety concerns. Refer to Response to Comment 17-40 regarding noise impacts. Refer to Response to Comment 17-66 regarding air quality impacts. Refer to Response to Comment 17-48 regarding greenhouse gas emissions. Refer to Master Response 2.1.3, *Parking,* regarding parking concerns. Refer to Response to Comment 17-79 regarding school services. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities. Refer to Response to Comment 17-28 regarding sanitation. Refer to Response to Comment 17-67 regarding road closures. Refer to Response to Comment 9-21 regarding rodent concerns. See response to comment 17-284 regarding property values.

17-284 The commenter expresses concerns with property value. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments

DRAFT

were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

17-285 The commenter expresses concerns with construction road closure. Refer to Response to Comment 17-67 above regarding construction road closures.

17-286 The commenter expresses concerns with public services response times, safety concerns due to increased traffic, increased noise, and impacts to air quality and greenhouse gas emissions. Refer to Response to Comment 9-15 regarding public service response times, 2.1.2, *Roadway Safety on Lampson Avenue*, regarding roadway safety concerns, Response to Comment 17-40 regarding noise impacts, Response to Comment 17-35 regarding air quality concerns, and Response to Comment 17-48 for greenhouse gas emissions impacts.

17-287 The commenter expresses concerns with impacts to school services, parks, and sanitation. Refer to Response to Comment 17-79 regarding school services. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities. Refer to Response to Comment 17-28 regarding sanitation.

17-288 The commenter expresses concerns with inadequate parking. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns.

17-289 The commenter expresses concerns with vehicle access to the Project site and safety issues for emergency vehicles and school buses. As discussed in Section 3.0, *Project Description*, of the Draft EIR, vehicle access to the Project site would be provided via two driveways on Lampson Avenue, one for the apartment entry on the western side and one for the primary neighborhood entry central to the site. Additionally, a restricted emergency vehicle access point with Lampson Avenue would be provided at the eastern end of the site (refer to Page 3-4 of the Draft EIR). Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding roadway safety concerns.

17-290 The commenter expresses concerns with the lack of proposed open space for recreation, and safety for children crossing Lampson to access recreational facilities. The commenter also expresses concern regarding an increase in VMT and the elimination of the current Park-n-Ride lot. The commenter suggests adding a formal telework center to the project to reduce mobile source emissions and air pollution. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, regarding open space concerns, 2.1.2, *Roadway Safety on Lampson Avenue*, regarding roadway safety concerns, 2.1.1, *Transportation and Traffic Congestion*, regarding VMT impacts, and Response to Comment 10-5 regarding impacts related to the existing Park-n-Ride and telework recommendation.

17-291 The commenter states that California law requires solar panels on new housing and zero emission electric vehicle charging stations which are not mentioned in the schematics. As part of the Project's Project Design Features (PDFs), the Project will include solar photovoltaic

DRAFT

with the capability to generate up to 1,229,520 kWh/annually (PDF GHG-1) and the Project's parking areas will be designed to provide electric vehicle (EV) charging stations. At minimum, the number of EV charging stations will equal the Tier 2 Residential Voluntary Measures of the California Green Building Standards Code, Section A4.106.8.2.1 (PDF GHG-4) (refer to Page 4.5-6 to 4.5-7 of the Draft EIR). Thus, no revisions to the Draft EIR are required.

17-292 The commenter expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

17-293 The commenter expresses concerns with EIR topics, traffic congestion, pollution, and proposed density. Refer to Response to Comment 17-276 regarding EIR topics. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. Refer to Response to Comment 17-35 regarding pollution concerns. Refer to Response to Comment 17-71 regarding land use consistency.

17-294 The commenter expresses concerns with parking at Arbor Park, the dog park and overflow into the surrounding communities. The commenter also expresses concern for the safety of families crossing Lampson to get to recreational facilities. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns.

17-295 The commenter expresses concerns with impacts to existing parks, pedestrian safety, lack of public transportation, crime, and property values. Refer to Response to Comment 17-11 for impacts to existing recreational facilities. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns. Increase in crime is not an environmental impact on the physical environment unless it leads to an increase in services or decrease in response times resulting in the need for construction of additional facilities. Refer to Response to Comment 17-62 regarding police protection services. Property value is not an environmental issue analyzed under CEQA; however, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-296 The commenter expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. However, it should be noted that, since these NOP comments were written prior to the preparation and release of the Draft EIR, the comment letters do not address the adequacy of the environmental analysis in the Draft EIR. Thus, no further response is required.

DRAFT

17-297 The commenter expresses concerns with traffic congestion, safety issues on Lampson, parking and increased crime. Increase in crime is not an environmental impact on the physical environment unless it leads to an increase in services or decrease in response times resulting in the need for construction of additional facilities. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns, 2.1.3, *Parking* regarding parking concerns and 2.1.6, *Public Safety*, regarding public safety concerns.

17-298 The commenter expresses concerns with insufficient parking for residents of the Project and the lack of parking for recreational users of Arbor Park. The commenter also expresses concern regarding traffic, safety, recreation, noise, pollution from cars, stress on public services. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns. Refer to Section 4.14, *Recreation*, of the Draft EIR for analysis regarding the Project's impact on existing recreational facilities. Refer to Response to Comment 17-40 regarding noise impacts. Refer to Response to Comment 17-34 regarding pollution concerns. Refer to Response to Comment 17-154 for impacts to public services.

17-299 The commenter expresses concerns with medical response times, overcrowding of medical facilities, increased traffic causing safety concerns on Lampson, and lack of parks and open space. Refer to Response to Comment 17-111 regarding medical response and overcrowding of medical facilities. Response to Comment 17-62 regarding police protection services and Response to Comment 17-68 regarding fire protection services. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding roadway safety concerns. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities and Response to Comment 17-14 regarding the Project's proposed open space area.

17-300 The commenter expresses concerns with increased traffic and congestion and requests that an environmental study assess traffic impacts, accident risk, and emissions. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding roadway safety concerns. Refer to Response to Comment 17-66 regarding air quality impacts. Refer to Response to Comment 17-48 regarding greenhouse gas emissions.

17-301 The commenter expresses concerns with the lack of public outreach other than the mandated 500 feet notification radius. Refer to Response to Comment 17-51 regarding public noticing procedures

17-302 The commenter expresses concerns with insufficient parking, increased traffic with no additional traffic control devices, and safety issues on Lampson. Refer to Master Response

DRAFT

2.1.3, *Parking*, regarding parking concerns. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns.

17-303 The commenter expresses concerns with parking, pedestrian and cyclist safety and the adequacy of Lampson to handle additional vehicles. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns, 2.1.2, *Roadway Safety on Lampson Avenue*, regarding roadway safety concerns, and 2.1.1, *Transportation and Traffic Congestion*, regarding the capacity of Lampson Avenue.

17-304 The commenter expresses concerns with additional traffic on Lampson Avenue, resulting traffic accidents that may occur and traffic congestion. The commenter requests technical studies on the braking reaction times for vehicles traveling eastbound on Lampson Avenue at the intersections of Basswood Street, Candleberry Avenue and Heather Drive. The commenter also requests that studies address any additional traffic control signals devices or modifications needed to the existing devices. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding roadway safety concerns, including stopping sight distance. Refer to Response to Comment 17-10 and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding traffic signal concerns.

17-305 The commenter expresses concerns with traffic congestion, especially during the school commute, and requests a study on the phasing of the traffic control devices at Lampson Avenue and Seal Beach Boulevard and whether a right turn lane should be added. The commenter also requests a study of the traffic control devices at the intersection of Old Ranch Plaza and Lampson Avenue and would like to know what changes or modifications to these traffic control devices are proposed. A Traffic Analysis was prepared for the Project (included as Draft EIR *Technical Appendix N1* and *Attachment G* to this Final EIR*)* which evaluated potential circulation system deficiencies that may result from the development of the Project, and where necessary recommend improvements to achieve acceptable operations consistent with General Plan level of service goals and policies. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns which includes the results of the Traffic Analysis and the recommended improvement.

17-306 The commenter expresses concerns with traffic congestion and safety for those at the intersection of Seal Beach Boulevard and St. Cloud Drive. The commenter requests a study of the traffic control devices at southbound Seal Beach Boulevard at Lampson Avenue and additional lanes or modifications to the traffic control devices. The commenter also expresses concern for bicycles traveling on Lampson Avenue. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding roadway safety concerns. Refer to Response to Comment 17-10 and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding traffic signal concerns. A Traffic Analysis was prepared for the Project (included as Draft EIR *Technical*

DRAFT

Appendix N1 and *Attachment G* to this Final EIR*)* which evaluated potential circulation system deficiencies that may result from the development of the Project, and where necessary recommend improvements to achieve acceptable operations consistent with General Plan level of service goals and policies. Regarding the commenter's concern on Seal Beach Boulevard and St. Could Drive, the Project contributes less than 50 peak hour trips to this intersection and the intersection lies outside of the study area that has been evaluated in the Traffic Analysis. Therefore, Project's contribution/effect to this intersection is not expected to meet applicable thresholds to warrant improvements to be implemented by the Project.

17-307 The commenter expresses concerns with pedestrian crossing, use of existing parks, and recommends roadway improvements including the addition of a sidewalk to the north side of Lampson Avenue between Seal Beach Boulevard and Tulip Drive. The commenter also requests a study on the impact of foot traffic on Lampson Avenue due to the Project, stating that California's "jaywalking" law will change in January of 2023 and allow for people to cross any street, as long as they safely cross, without impeding vehicular traffic. AB 2147, the Freedom to Walk Act, would decriminalize jaywalking when the roadway is safe to cross. A Safety Evaluation was prepared to confirm that the Project would have no safety impacts on public roadways and Project access points (see Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, and *Attachment H* of this Final EIR). The Safety Evaluation further confirms the analysis and determination in the Transportation Section (Section 4.15) of the Draft EIR that the Project would not result in a safety impact or substantially increase hazards due to a geometric design feature. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding a summary of the Safety Evaluation and issues relating to pedestrian safety. Regarding the request for an additional sidewalk on Lampson Avenue between Seal Beach Boulevard and Tulip Drive, the Project would include improvements to sidewalks along the Project's frontage on Lampson Avenue; sidewalk areas beyond the Project site's frontage are not included within the Project boundary or within the scope of the Project. However, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. Refer also to Response to Comment 17-11 regarding impacts to existing recreational facilities.

17-308 The commenter expresses concern regarding traffic congestion at the intersection of Valley View Street and Lampson Avenue and requests a study on the traffic signal time and where additional traffic signal devices need to be added or modified. The commenter also requests a dedicated right turn lane be added in this area for vehicles making a right turn from Lampson Avenue to southbound Valley View Drive. The commenter also requests traffic studies for Blackmer Street, Trinette Avenue, Cerulean Avenue, Tunstall Street, St. Mark Street, and Tiffany Avenue. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. Transportation analysis under CEQA is now based on VMT rather than impacts to automobile delay-based level of service (LOS) (traffic congestion). A Traffic Analysis was prepared for the Project and is included as Draft EIR *Technical Appendix N1*, and an updated Traffic Analysis was prepared and included as *Attachment G* to this Final EIR. The intersections selected for analysis is based on discussion with the City of Los Alamitos,

DRAFT

Seal Beach, and Garden Grove staff. Additionally, the roadway of Blackmer, Trinette, Tunstall, St. Mark, Tiffany, and Cerulean are all internal streets to an existing residential neighborhood. Industry standard recognizes that any contribution less than 50 peak hour trips does not cause a significant increase in delay. The Project is not anticipated to contribute more than 50 peak hour trips to any of these roadways and therefore does not warrant further analysis. Refer to Response to Comment 17-10 and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding traffic signal concerns. The peak hour intersection operations analysis presented in the Traffic Analysis indicates the intersection of Valley View Drive and Lampson Avenue operates at an acceptable LOS and meets the City of Garden Grove's operational standards. As such, no improvements are needed. Furthermore, there is no available right-of-way to implement an eastbound right-turn lane without acquiring property/right-of-way.

17-309 The commenter expresses concerns with a lack of parking. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns

17-310 The commenter expresses concerns with lack of parking and traffic. The commenter requests a study on the potential occupancy of both the Project and College Park East developments and how many vehicles would be associated with the residents. The commenter also requests a study of how the extra vehicular traffic from the development will cause wear and tear of the streets within College Park East and Lampson Avenue. Refer to Master Response 2.1.3, *Parking*, for parking concerns which includes the results of the Onsite Parking Analysis (*Technical Appendix P* of the Draft EIR), and 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns. Maintenance and repair concerns regarding the "wear and tear" of streets would be addressed by the agencies with jurisdiction over those roadways. Additionally, a condition of approval has been added to the Project to ensure the parking garages onsite be used primarily for parking purposes.

17-311 The commenter expresses concerns with proposed open space and impacts to existing parks. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities and Response to Comment 17-14 regarding the Project's proposed open space area. Additionally, refer to Master Comment 2.1.8, *Loss of Existing Open Space and Provision of On-Site Amenities*, for concerns regarding open space.

17-312 The commenter expresses concerns regarding decreased emergency response times and requests a study of the impact the Project will have on the Seal Beach Police Department services deployed to assist the Los Alamitos Police Department. The commenter requests information on whether additional police officers would need to be hired to handle the increase in potential service calls. The commenter also requests a study on the impact additional residents will have on the response time of Orange County Fire Department. Refer to Response to Comment 17-154 regarding impacts to public services.

17-313 The commenter expresses concerns with construction noise and road impacts and requests a study on how the developer would manage demolition, removal of debris, and transportation

DRAFT

of construction equipment and materials. The commenter also expresses concern regarding the impact of heavy equipment on the integrity of Lampson. The commenter requests a study on how additional cut through traffic due to construction on Lampson would impact College Park East and Garden Grove. Refer to Response to Comment 17-67 regarding road closures during construction. Refer to Response to Comment 9-19 regarding construction noise and Response to Comment 17-77 regarding road impacts from heavy equipment. Even though it is not reasonably foreseeable that one construction project would significantly deteriorate a roadway, maintenance and repair concerns regarding the "wear and tear" of streets would be addressed by the agencies with jurisdiction over those roadways. Additionally, the Project would be required to comply with South Coast AQMD Rule 403, which is intended to reduce the amount of particulate matter entrained in the ambient air as a result of anthropogenic (human-made) fugitive dust sources by requiring actions to prevent and reduce fugitive dust emissions. There is no cut-through traffic that is assumed to occur (or any that has been evaluated) with the completion of the Project through any of the adjacent local residential streets since these streets do not provide any direct connection to the regional freeway system. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion,* for a detailed discussion on cut-through traffic into existing neighborhoods.

As discussed in Section 4.17, *Utilities and Service Systems*, of the Draft EIR, based on the approximate construction waste generated per day, demolition and construction waste generated by the Project is not anticipated to cause these landfills to exceed their maximum permitted daily disposal volume. Furthermore, none of these regional landfill facilities are expected to reach their total maximum permitted disposal capacities during the Project's construction period. In addition, the Project would be required to comply with LAMC Chapter 8.13, Construction and Demolition Waste, which requires the Project Applicant to divert a minimum of 50 percent of the construction and demolition debris resulting from the proposed development in compliance with State and local statutory goals and policies (refer to Pages 4.17-19 through 4.17-20 of the Draft EIR).

17-314 The commenter requests a technical study on glare impacts and visual impacts of the 3-story building. The commenter expresses concern regarding the lack of privacy for Ironwood Avenue residents and requests a visual simulation for residents between 4509 and 4701 Ironwood Avenue. Refer to Response to Comment 17-113 regarding light and glare concerns. Refer to Response to Comments 17-65 and 17-239 regarding aesthetic concerns.

17-315 The commenter expresses concerns with the rodent population due to animals dispersing into nearby neighborhoods during construction. Refer to Response to Comment 9-21 regarding rodent concerns.

17-316 The commenter requests a technical study on impacts to wildlife, particularly related to how the Project would impact the coyote and rabbit population. Refer to Response to Comments 17-18, 17-19, and 17-35 regarding impacts to wildlife. With respect to biological resources, CEQA requires an analysis of a Project's impacts to special status wildlife species. Impacts to

DRAFT

common wildlife species, such as coyotes and rabbits, are not evaluated as protected species under CEQA.

17-317 The commenter requests a technical study on street lighting in the area, noting that there is limited lighting on Lampson Avenue between Valley View Street and Seal Beach Boulevard. This comment pertains to the existing lighting and it does not raise any concerns related to the Project's potential for impacts on the physical environment or the sufficiency of the environmental analysis in the Draft EIR. No further response to this comment is required.

17-318 The commenter expresses general opposition to the Project due to increased traffic. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns.

17-319 The commenter expresses concerns that the Project would negatively impact EIR topics such as Aesthetics, Air Quality, Cultural Resources, Construction Noise and road closure, Fire / Police / Medical Response, Greenhouse Gas Emissions, Hazards & Hazardous Materials, Land Use & Planning, Noise Pollution (vehicles on Lampson), Population & Housing, Public Services, Recreation, Road impacts from heavy equipment, Rodents, Schools / Libraries, Traffic Safety, and Utilities & Service Systems. The commenter also expresses concern regarding parking. Refer to Response to Comment 17-276 regarding concerns regarding EIR topics. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns.

17-320 The commenter expresses concerns with impacts to existing parks, traffic congestion, pollution and an imbalance of housing in a small area. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. Refer to Response to Comment 17-35 regarding pollution concerns. Refer to Response to Comment 17-71 regarding land use consistency.

17-321 The commenter expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

17-322 The commenter expresses concerns with EIR topics. Refer to Response to Comment 17-276 regarding concerns regarding EIR topics.

17-323 The commenter requests submittal of studies pertaining to environment, fire and police services, parking, population growth, and school services. Refer to Response to Comment 17-62 regarding police protection services and Response to Comment 17-68 regarding fire protection services. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns. Refer to Response to Comment 17-73 regarding population growth. Refer to Response to Comment 17-79 regarding impacts to school services.

17-324 The commenter expresses general opposition to the Project due to noise pollution, air quality, traffic, and parking and requests proper impact studies to be prepared and reviewed. A Noise

DRAFT

Impact Analysis, Air Quality Impact Analysis, Traffic Analysis, and Onsite Park Analysis was prepared and are included as Draft EIR *Technical Appendix K, B1, N1, and P*, respectively. In regard to the commenter's opposition to the Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-325 The commenter requests amendment of prior comments. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

17-326 This comment is part of an email template requesting examples of how the Project could negatively affect the community. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

17-327 This comment lists the EIR topics. Refer to Response to Comment 17-276 regarding EIR topics.

17-328 The commenter expresses concerns with low-income housing, Section 8 government supported housing and increased crime. As discussed in Section 3.0, *Project Description*, of the Draft EIR, the Project intends to provide a variety of affordable housing types to support middle-income workers (refer to Pages 3-1 through 3-2 of the Draft EIR). Refer to Response to Comment 17-62 regarding police protection.

17-329 The commenter expresses concerns with crime. Increase in crime is not an environmental impact on the physical environment unless it leads to an increase in services or decrease in response times resulting in the need for construction of additional facilities. Refer also to Response to Comment 17-62 regarding police protection.

17-330 The commenter opposes the Project stating concerns about traffic, increase in car accidents, and congestion and requests the Project be scaled back. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding roadway safety concerns. In regard to scaling the Project back, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

17-331 The commenter expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

DRAFT

17-332 The commenter expresses concerns regarding traffic, accidents and questions where the water supply for the additional units will come from. The commenter also expresses concern regarding parking for residents of the Project as well as those utilizing Arbor Park. The commenter is also concerned about existing parks handling additional people. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion,* regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue,* regarding roadway safety concerns. Refer to Response to Comment 17-26 regarding water supply concerns. Refer to Master Response 2.1.3, *Parking,* regarding parking concerns. Refer to Response to Comment 17-31 regarding concerns regarding impacts to existing recreational facilities.

17-333 The commenter lists the EIR topics and expresses concerns with traffic. Refer to Response to Comment 17-276 regarding EIR topics. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion,* regarding traffic concerns. Note that aesthetic impacts under CEQA evaluate view impacts from public spaces, and not from private backyard views.

17-334 The commenter expresses concerns with traffic, safety and noise on Lampson Avenue. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion,* regarding traffic concerns and 2.1.2, *Roadway Safety on Lampson Avenue,* regarding roadway safety concerns. Refer to Response to Comment 17-113 for off-site traffic noise impacts.

17-335 The commenter expresses concerns with traffic noise, construction noise, pollution and air quality. As discussed in Section 4.11, *Noise,* of the Draft EIR, land uses adjacent to the study area roadway segments would not experience substantial noise level increases due to Project-related traffic noise level increases and off-site traffic related noise impacts would less than significant (refer to Pages 4.11-25 through 4.11-29 of the Draft EIR). Refer to Response to Comment 17-36 for construction noise concerns. Refer to Response to Comment 17-34 for pollution and air quality concerns.

17-336 The commenter expresses concerns with open space, wildlife, including bird species like the burrowing owl, and proposed density. Refer to Response to Comment 17-11 impacts to existing recreational facilities and Response to Comment 17-14 the Project's proposed open space area. Refer to Response to Comments 17-18, 17-19, and 17-35 regarding impacts to wildlife and birds. Refer to Response to Comment 17-71 regarding land use consistency. In regard to the commenter's opposition to the Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-337 The commenter expresses concerns with traffic congestion, traffic accidents, impacts to schools, and parks. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion,* regarding traffic concerns and 2.1.2, *Roadway Safety on Lampson Avenue,* regarding roadway safety concerns. Refer to Response to Comment 17-79 regarding impacts to school services. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities and Response to Comment 17-14 regarding the Project's proposed open space area.

DRAFT

17-338 The commenter expresses concerns with noise pollution, parking and road impacts from heavy equipment. Refer to Response to Comment 17-113 regarding off-site traffic noise impacts. Refer to Master Response 2.1.3, *Parking,* regarding parking concerns. Refer to Response to Comment 17-77 regarding road impacts from heavy equipment.

17-339 The commenter expresses concerns with traffic safety and impacts to existing parks. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion,* regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities.

17-340 The commenter expresses concerns with parking plan, open space, and traffic. Refer to Master Response 2.1.3, *Parking,* for parking concerns. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion,* regarding traffic concerns. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities and Response to Comment 17-14 regarding the Project's proposed open space area.

17-341 The commenter expresses concerns with additional traffic, air quality impacts, noise pollution on Lampson Avenue, traffic safety, loss of parking, and impacts to schools. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion,* regarding traffic concerns. Refer to Response to Comment 17-66 regarding air quality impacts. Refer to Response to Comment 17-113 above for off-site traffic noise impacts. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding roadway safety concerns and 2.1.3, *Parking,* for parking concerns. Refer to Response to Comment 17-79 regarding impacts to schools.

17-342 The commenter expresses concerns with traffic, safety, impacts to existing parks and property value. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion,* regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding roadway safety concerns. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities. Property value is not an environmental issue analyzed under CEQA; however, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-343 The commenter lists out EIR topics and expresses general opposition to the Project. Refer to Response to Comment 17-276 regarding EIR topics. In regard to the commenter's opposition to the Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-344 The commenter expresses concerns with dust from construction and health impacts. Refer to Response to Comment 17-205 regarding erosion control and dust control measures. As discussed in Section 4.2, *Air Quality*, of the Draft EIR, implementation of the Project would not: 1) exceed applicable South Coast AQMD localized criteria pollution emissions thresholds during construction and operation; 2) would not cause or measurably contribute to the formation of a CO "hot spot;" and 3) would not result in a health risk for nearby residents during construction (refer to Pages 4.2-26 through 4.2-29 of the Draft EIR). In regard to dust

DRAFT

from additional traffic upon completion of construction, the air quality analysis evaluated the increase criteria pollutants (including particulate matter) due to Project operation and determined that impacts were less than significant.

17-345 The commenter expresses concerns with increased traffic and lack of traffic lights and left turn signals. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. Refer to Response to Comment 17-10 and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding traffic signal concerns.

17-346 The commenter expresses concerns with noise levels from traffic and property value. Refer to Response to Comment 17-113 regarding off-site traffic noise impacts. Property value is not an environmental issue analyzed under CEQA; however, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-347 The commenter expresses concerns with the overcrowding of existing parks and that no parks are included for the current Project. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, regarding onsite open space concerns.

17-348 The commenter expresses concerns with fire and police protection services and questions the land use for this area. Refer to Response to Comment 17-62 regarding police protection services and Response to Comment 17-68 regarding fire protection services. Refer to Response to Comment 17-71 regarding land use consistency.

17-349 The commenter expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

17-350 The commenter makes introductory remarks and expresses concern regarding existing and future sound pollution. Refer to Response to Comment 17-147 regarding concerns regarding noise pollution.

17-351 The commenter raises concerns about the number of accidents on Lampson and the safety of children and pedestrians. The commenter also provides links to news sources about accidents on Lampson. A Safety Evaluation (*Attachment H* to this Final EIR) was prepared which analyzed collision data, pedestrian and bicycle safety, and site access management (e.g. driveway sight distance, driveway spacing, project access and queuing, multimodal conflict points, and pedestrian/bicycle connections. Refer to 2.1.2, *Roadway Safety on Lampson Avenue*, regarding the results of the Safety Evaluation and pedestrian and cyclist safety concerns.

.

DRAFT

17-352 The commenter lists concerns about the aesthetics of the Project and the impact on daytime glare, nighttime illumination, and existing visual characteristics. Refer to Response to Comment 17-113 regarding light and glare concerns and Response to Comment 17-65 regarding consistency with zoning development standards for existing visual characteristics.

17-353 The commenter expresses concerns with existing property values. Refer to Response to Comment 17-150 above regarding property values.

17-354 The commenter expresses concerns with air quality, specifically carbon monoxide emissions, particulate matter, and greenhouse gas emissions. Refer to Response to Comment 17-35 regarding air quality impacts concerns and Response to Comment 17-48 regarding greenhouse gas emissions concerns. .

17-355 The commenter expresses concerns with biological impacts, specifically impacts to wildlife, birds, and trees. Refer to Response to Comments 17-18, 17-19, and 17-35 regarding impacts to wildlife and birds. As discussed in Section 4.3, *Biological Resources*, of the Draft EIR, on April 18, 2022, the City of Los Alamitos adopted a Parkway Tree Master Plan as part of its Urban Forest Program. This plan addresses City parkway trees. There are currently no parkway trees along the Project's frontage. The Project would not result in an impact to the City parkway trees. Therefore, the Project would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance. No impact would occur and mitigation is not required (refer to Page 4.3-34 of the Draft EIR).

17-356 The commenter expresses concerns with geology and soils, drainage impacts, and runoff concerns. Refer to Response to Comment 17-153 above regarding impacts to geology and soils, drainage, and runoff.

17-357 The commenter expresses concerns with impacts to public services. Refer to Response to Comment 17-154 above regarding impacts to public services.

17-358 The commenter recommends disapproval of the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

17-359 The commenter expresses opposition to the Project and concerns with traffic congestion and parking, noise pollution, and increased need for fire/police services. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns and 2.1.3, *Parking*, regarding parking concerns. Refer to Response to Comment 17-40 regarding noise impacts. Refer to Response to Comment 17-62 regarding police protection services and Response to Comment 17-68 regarding fire protection services. In regard to the commenter's opposition to the Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

DRAFT

17-360 The commenter expresses concerns with traffic impacts on Lampson Ave and parking on Ironwood from new residents. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion,* regarding traffic concerns and 2.1.3, *Parking,* regarding parking concerns.

17-361 The commenter expresses concerns with health impacts and air quality impacts. The Draft EIR's Air Quality Impact Analysis (*Technical Appendix B1* of the Draft EIR) included localized air quality impacts and addressed impacts to sensitive receptors in accordance with CEQA and South Coast AQMD Guidelines. Refer to Response to Comment 17-35 regarding health impacts concerns and 17-35 regarding air quality impacts.

17-362 The commenter expresses concerns with increased traffic, road closures, crime, and emergency response. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion,* regarding traffic concerns. Increase in crime is not an environmental impact on the physical environment unless it leads to an increase in services or decrease in response times resulting in the need for construction of additional facilities. Refer to Response to Comment 17-62 regarding police protection services and Response to Comment 17-68 for fire protection services.

17-363 The commenter expresses concerns with noise impacts. As discussed in Section 4.11, *Noise*, of the Draft EIR, the operational noise analysis evaluates the potential daytime and nighttime activities at the Project site. Refer to Response to Comment 17-40 regarding noise impacts.

17-364 The commenter expresses concerns with traffic safety on Lampson Avenue along with an increase in traffic and pollution. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding roadway safety concerns. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion,* regarding traffic concerns

17-365 The commenter expresses concerns with impacts to youth sports at the existing parks and expresses general opposition to the Project. The commenter also expresses concern over the Project's impacts to home values. Refer to Response to Comment 17-11 for impacts to existing recreational facilities. Property value is not an environmental issue analyzed under CEQA. Additionally, in regard to the commenter's opposition to the Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-366 The commenter expresses general opposition to the Project and lists out EIR topics of concern. Refer to Response to Comment 17-276 regarding EIR topics concerns.

17-367 The commenter expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

17-368 The commenter expresses concerns with impacts to existing parks, traffic, parking and crime, and property values. Refer to Response to Comment 17-11 regarding impacts to existing

DRAFT

recreational facilities. Refer to Response to Comment 17-62 regarding police protection services. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns, and 2.1.3, *Parking*, regarding parking concerns. Increase in crime is not an environmental impact on the physical environment unless it leads to an increase in services or decrease in response times resulting in the need for construction of additional facilities. Additionally, property value is not an environmental issue analyzed under CEQA; however, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-369 The commenter recommends reconsidering the proposed location and expresses concerns with the proposed density. Refer to Response to Comment 17-71 regarding land use consistency. The commenter asserts that studies should be done to investigate and quantify short and long-term impacts of the proposed location for the Project and that community members should be given access to these studies. Technical studies by technical experts in each field were prepared to evaluate the Project's short term (construction) and long term (operation) impacts, included as technical appendices to the Draft EIR, and provided for public review. The Draft EIR and technical appendices are available for review at the City of Los Alamitos, Development Services Department – Planning Division, 3191 Katella Avenue, Los Alamitos, California 90720, during the City's regular business hours or can be accessed in electronic form on the City's website at http://cityoflosalamitos.org/203/Planning-Commission-Projects (refer to Page 1-36 of the Draft EIR).

17-370 The commenter expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

17-371 The commenter expresses general opposition to the Project and lists out EIR topics concerns. Refer to Response to Comment 17-276 regarding EIR topics concerns. Moreover, as discussed in Section 4.11, *Noise*, of the Draft EIR, the Project would not result in an increase in the cumulative noise levels at sensitive receiver locations during both construction and operation (refer to Page 4.11-34 of the Draft EIR). Refer also to Response to Comment D-9 for cumulative offsite traffic noise impacts.

17-372 The commenter opposes the Project and expresses concerns with air quality, noise pollution, traffic congestion, pedestrian safety, and parking. Refer to Response to Comment 17-66 regarding air quality impacts. Refer to Response to Comment 17-40 regarding noise impacts. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns, and 2.1.3, *Parking*, for parking concerns. In regard to the commenter's opposition to the Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

DRAFT

17-373 The commenter expresses concerns with dust and hazardous materials. Refer to Response to Comment 17-205 regarding erosion control and dust control measures concerns. Refer to Response to Comment 17-229 regarding hazardous materials concerns.

17-374 The commenter expresses concerns with land use and planning (housing density and recreation space), low income housing, and crime. Refer to Response to Comment 17-71 for land use consistency. Increase in crime is not an environmental impact on the physical environment unless it leads to an increase in services or decrease in response times resulting in the need for construction of additional facilities. Refer to Response to Comment 17-62 regarding police protection services. As discussed in Section 3.0, *Project Description*, of the Draft EIR, the Project intends to provide a variety of affordable housing types to support middle-income workers (refer to Pages 3-1 through 3-2 of the Draft EIR).

17-375 The commenter expresses concerns with traffic, accidents, and emergency response. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns. Refer to Response to Comment 17-62 regarding police protection services and Response to Comment 17-68 regarding fire protection services. Additionally, as discussed in Section 4.8, *Hazards and Hazardous Materials*, construction on Lampson Avenue will require an encroachment permit and approval from the City Engineer Lane closures that may be required for median improvements would be temporary and require a permit and compliance with LAMC 12.08.200, Safety precautions–Obstruction of traffic. Compliance with LAMC 12.08.200 would ensure safe crossing and access for all vehicle and pedestrians at all times (refer to Page 4.8-21 of the Draft EIR).

17-376 This comment is part of an email template requesting examples and EIR topics for analysis. Refer to Response to Comment 17-276 regarding EIR topics.

17-377 The commenter makes introductory remarks and expresses concern regarding existing and future sound pollution. Refer to Response to Comment 17-147 regarding concerns regarding sound pollution.

17-378 The commenter raises concerns about the number of accidents on Lampson and the safety of children and pedestrians. The commenter also provides links to news sources about accidents on Lampson. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian and cyclist safety concerns.

17-379 The commenter lists concerns about the aesthetics of the Project and the impact on daytime glare, nighttime illumination, and existing visual characteristics. Refer to Response to Comment 17-113 regarding light and glare concerns and Response to Comment 17-65 regarding consistency with zoning development standards for existing visual characteristics. 17-380 The commenter expresses concerns with existing property values. Refer to Response to Comment 17-150 above regarding property values.

DRAFT

17-381 The commenter expresses concerns with air quality, specifically carbon monoxide emissions, particulate matter, and greenhouse gas emissions. Refer to Response to Comment 17-35 regarding air quality impacts concerns and Response to Comment 17-48 regarding greenhouse gas emissions concerns.

17-382 The commenter expresses concerns with biological impacts, specifically impacts to wildlife, birds, and trees. Refer to Response to Comments 17-18, 17-19, and 17-35 regarding impacts to wildlife and birds. As discussed in Section 4.3, *Biological Resources*, of the Draft EIR, on April 18, 2022, the City of Los Alamitos adopted a Parkway Tree Master Plan as part of its Urban Forest Program. This plan addresses City parkway trees. There are currently no parkway trees along the Project's frontage. The Project would not result in an impact to the City parkway trees.

17-383 The commenter expresses concerns with geology and soils, drainage impacts, and runoff concerns. Refer to Response to Comment 17-153 above regarding impacts to geology and soils, drainage, and runoff.

17-384 The commenter expresses concerns with impacts to public services. Refer to Response to Comment 17-154 above regarding impacts to public services.

17-385 The commenter recommends disapproval of the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-386 The commenter expresses opposition to the Project and concerns with traffic congestion and parking, noise pollution, increased need for fire/police services, construction noise and impacts to public services. Refer to Response to Comment 17-359 above for responses on these topics. In regard to the commenter's opposition to the Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-387 The commenter expresses concerns with traffic impacts on Lampson Ave and parking on Ironwood from new residents. Refer to Response to Comment 17-360 above regarding traffic impacts and parking.

17-388 The commenter expresses concerns about health impacts and air quality impacts. Refer to Response to Comment 17-361 above regarding health and air quality impacts.

17-389 The commenter expresses concerns regarding increased traffic, road closures, crime, and emergency response. Refer to Response to Comment 17-362 above for responses on these topics.

17-390 The commenter expresses concerns about noise impacts. Refer to Response to Comment 17-363 above regarding noise impacts.

DRAFT

17-391 The commenter expresses concerns with traffic safety on Lampson Avenue along with an increase in traffic and pollution. Refer to Response to Comment 17-364 above regarding traffic, safety, and pollution concerns.

17-392 The commenter expresses concerns regarding impacts to youth sports at the existing parks and expresses general opposition to the Project. The commenter also expresses concern over the Project's impacts to home values. Refer to Response to Comment 17-11 for impacts to existing recreational facilities. Property value is not an environmental issue analyzed under CEQA. Additionally, in regard to the commenter's opposition to the Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-393 The commenter expresses concerns with increased traffic, traffic noise, traffic safety, school services in Rossmoor and impacts to roads in Rossmoor. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding roadway safety concerns. Refer to Response to Comment 17-113 regarding off-site traffic noise impacts. Refer to Response to Comment 17-79 regarding impacts to school services. Refer to Response to Comment 17-77 regarding road impacts during construction.

17-394 This comment is part of an email template requesting examples and EIR topics for analysis. Refer to Response to Comment 17-276 regarding EIR topics concerns.

17-395 The commenter expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

17-396 The commenter expresses general opposition to the Project and lists EIR topics of concern. Refer to Response to Comment 17-276 regarding EIR topics of concern.

17-397 The commenter expresses concerns with dust from construction, health impacts, increased traffic, and lack of traffic lights and left turn signals. Refer to Response to Comment 17-344 and 17-345 for responses on these topics.

17-398 The commenter expresses concerns with noise levels from traffic. Refer to Response to Comment 17-346for responses on these topics.

17-399 The commenter expresses concerns with the overcrowding existing parks and that no parks are included for the current Project. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, regarding onsite open space concerns.

DRAFT

17-400 The commenter expresses concerns with fire and police protection services and parking. Refer to Response to Comment 17-348 regarding fire and police protection services and Master Response 2.1.3, *Parking*, regarding parking concerns.

17-401 The commenter expresses general opposition to the Project and raises concerns that the Project will negatively affect the College Park East neighborhood. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

17-402 The commenter expresses concerns with loss of open space for wildlife and traffic impacts. Refer to Response to Comments 17-18, 17-19, and 17-35 regarding impacts to wildlife and birds including hawks (several varieties). As discussed in Section 4.3, *Biological Resources*, of the Draft EIR, common avian species detected included house finch and mourning dove (refer to Page 4.3-5 of the Draft EIR) while barn owl was detected by GLA biologists flying over or in proximity to the Project site. Implementation of Mitigation Measures MM 4.3-1 and MM 4.3-2 would ensure that pre-construction surveys are conducted for nesting birds and nesting raptors prior to site disturbance. If nesting birds or raptors are present on the Project site, the identified mitigation requires avoidance of active nests. With implementation of the required mitigation, potential impacts to nesting birds and common raptors would be reduced to below a level of significance (refer to Pages 4.3-37 through 4.3-39 of the Draft EIR). Refer to Response to Comment 17-403, below, regarding traffic concerns.

17-403 The commenter expresses concerns with traffic with no proposed alternative route and references traffic and flooding issues that arose during a 1995 rainstorm. The commenter acknowledges the validity of affordable housing federal guidelines and suggests alternative sites for the Project. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns and 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, regarding flooding impacts. Regarding alternative Project Site suggestions, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

17-404 The commenter expresses general opposition to the Project and raises concerns regarding the impact of one city's project on another city, specifically the size, stature, and location. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

17-405 The commenter expresses concerns with traffic, pedestrian safety due to U-turns on Heather Street, and emergency response times. The commenter also requests report on the number of

DRAFT

tickets written for speeding and report on accidents on Lampson Avenue. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns and collision data. Refer to Response to Comment 17-62 for police protection services and Response to Comment 17-68 regarding fire protection services.

17-406 The commenter expresses concerns with on-site parking and overflow parking in the College Park East neighborhood. The commenter also raises concerns regarding the rate of vehicle accidents. Refer to Master Response 2.1.3, *Parking* for parking concerns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue,* for accident concerns. Additionally, a condition of approval has been added to the Project to ensure the parking garages onsite be used primarily for parking purposes.

17-407 The commenter expresses concerns with impacts to existing parks and proposed open space. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities and Response to Comment 17-14 regarding the Project's proposed open space area.

17-408 The commenter expresses concerns with construction noise and road closure. Refer to Response to Comment 17-40 regarding noise impacts. As discussed in Section 4.15, *Transportation*, of the Draft EIR, during construction, frontage improvements including median improvements, sidewalks, driveway modifications needed to accommodate site access and landscaping improvements would be constructed in accordance with City standards. Refer to Response to Comment 17-67 regarding lane closures.

17-409 The commenter believes that the Project will negatively affect College Park East and expresses concerns about increased traffic and accidents. Refer to Master Responses *2.1.1, Transportation and Traffic Congestion,* regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns.

17-410 The commenter inquires about additional traffic signals and overflow parking. Refer to Response to Comment 17-10 and Master Response 2.1.2, *Roadway Safety on Lampson Avenue,* regarding traffic signal concerns. Refer to Master Response 2.1.3, *Parking,* regarding parking concerns.

17-411 The commenter inquires about increased use of Seal Beach public services and the City's public services. The commenter inquires about the utility infrastructure. Refer to Response to Comment 17-75 regarding impacts to Seal Beach public services. Refer to Response to Comment 17-81 for utilities concerns. As discussed in Section 4.13, *Public Services*, of the Draft EIR, fire protection services for the Project site is currently provided by the Orange County Fire Authority (OCFA) and police protection service is provided by the Los Alamitos Police Department (refer to Page 4.13-1 and 4.13-2 of the Draft EIR). Refer to Master Reponses 2.1.6, *Public Safety*, for concerns related to public services.

DRAFT

17-412 The commenter expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

17-413 The commenter expresses concerns regarding EIR topics. Refer to Response to Comment 17-276 regarding EIR topics.

17-414 The commenter expresses general concerns with the Project which are responded to below.

17-415 The commenter expresses concerns with aesthetics and visibility and suggests decreasing the height of the Project or including landscaping to screen buildings. Refer to Response to Comment 17-65 regarding aesthetic concerns. The comment regarding building height and landscaping is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

17-416 The commenter expresses concerns with traffic and accidents. The commenter also suggests adding traffic signals, increasing policing of roads, and improving center medians. Refer to Master Responses *2.1.1, Transportation and Traffic Congestion,* regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue,* regarding pedestrian safety concerns. Refer to Master Response 2.1.8, *Public Safety*, regarding policing concerns. Refer to Response to Comment 17-10 and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding traffic signal concerns. Along the Project frontage, Lampson Avenue is developed to its ultimate General Plan roadway classification. Frontage improvements would include median improvements, sidewalks, driveway modifications needed to accommodate site access, and landscaping improvements as required by City standards.

17-417 The commenter expresses concerns with parking. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns.

17-418 The commenter expresses concerns with overflow into surrounding neighborhoods for park use and dog walking, apparent lack of on-site amenities, and use of existing parks. As discussed in Section 3.0, *Project Description*, of the Draft EIR, the usable common open space areas in the Project site would include amenities such as tot-lot with rubberized play surface, shade surface with BBQ Island and dining furniture, lawn area with cornhole, ping pong table, and lounge seating with fire-pit (refer to Page 3-7 of the Draft EIR). Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities.

17-419 The commenter expresses concerns with traffic, pollution, and overcrowding at parks, and parking. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion,* regarding traffic concerns, Response to Comment 17-34 regarding pollution concerns, Master Response

DRAFT

2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, regarding impacts to exiting recreational facilities, and 2.1.3, *Parking*, regarding parking concerns.

17-420 The commenter expresses concerns with traffic and accidents. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion* regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns.

17-421 The commenter expresses concerns with potential gophers. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

17-422 The commenter expresses concerns with increased traffic on Lampson Avenue. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns.

17-423 The commenter expresses concerns with pedestrian safety, pollution, and noise. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns. Refer to Response to Comment 17-12 regarding noise concerns and Response to Comment 17-34 for pollution concerns.

17-424 The commenter expresses concerns with traffic impacts on Lampson Ave, school district impacts, and impacts to public services. As discussed in Section 2.0, *Environmental Setting*, of the Draft EIR, the Project site is zoned as "Multi-Family Residential (R-3)" and the R-3 zone applies to lots intended to provide multi-family housing (refer to Page 2-3 of the Draft EIR). Therefore, the Project proposed residential uses are consistent with the existing zoning designation. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns. Refer to Response to Comment 17-79 for school services. Refer to Response to Comment 17-154 for impacts to public services.

17-425 The commenter expresses concerns with traffic on Lampson Ave, lack of proposed parks and reduction of open space, use of College Park East residential streets as "cut through" routes, and fire and police services. The commenter also requests technical study results. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities and Response to Comment 17-14 regarding the Project's proposed open space area. Refer to Response to Comment 9-19 regarding cut through traffic. Refer to Response to Comment 17-62 regarding police protection services and Response to Comment 17-68 regarding fire protection services. As discussed in Section 1.5, *EIR Scope, Format, and Content*, of the Draft EIR, the *Technical Appendices* are available for review at the City of Los Alamitos, Development Services Department – Planning Division, 3191 Katella Avenue, Los Alamitos, California 90720, during the City's regular business hours or can be accessed in electronic form on the City's website at http://cityoflosalamitos.org/203/Planning-Commission-Projects (refer to Page 1-36 of the Draft EIR).

DRAFT

17-426 The commenter expresses concerns with parking at Arbor Park for soccer games. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns.

17-427 The commenter expresses concerns with EIR topics. Refer to Response to Comment 17-276 regarding EIR topics.

17-428 The commenter expresses general opposition to the Project due to overcrowding, impacts to wildlife, increased traffic, health impacts, and decreased property values. Refer to Response to Comment 17-73 regarding population growth. Refer to Response to Comments 17-18, 17-19, and 17-35 regarding impacts to wildlife and birds. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns.

As discussed in Section 4.2, *Air Quality*, of the Draft EIR, implementation of the Project would not: 1) exceed applicable South Coast AQMD localized criteria pollution emissions thresholds during construction and operation; 2) would not cause or measurably contribute to the formation of a CO "hot spot;" and 3) would not result in a health risk for nearby residents during construction (refer to Pages 4.2-26 through 4.2-29 of the Draft EIR).

Property values are not an environmental issue analyzed under CEQA. However, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

17-429 This comment is part of an email template requesting examples and EIR topics for analysis. Refer to Response to Comment 17-276 regarding EIR topics.

17-430 The commenter expresses concerns with traffic on Lampson Ave, accidents, noise pollution, air quality impacts, crowded parks, crime to vehicles and homes, more vehicles within the College Park East neighborhood, lower housing values, more rodents due to construction, and damage to aesthetics. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson* Avenue, regarding accident concerns. Refer to Response to Comment 17-40 regarding noise impacts. Refer to Response to Comment 17-66 regarding air quality impacts. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities. Refer to Increase in crime is not an environmental impact on the physical environment unless it leads to an increase in services or decrease in response times resulting in the need for construction of additional facilities. Response to Comment 17-62 regarding police protection services. Refer to Response to Comment 17-65 for aesthetic concerns. Refer to Response to Comment 9-21 regarding rodent concerns. Regarding housing values, these comments are not environmental issues analyzed under CEQA; however, these comments are noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

DRAFT

17-431 The commenter expresses concerns with aesthetics, air quality, construction noise and road closure, emergency response, greenhouse gas emissions, and hazards and hazardous waste. Refer to Response to Comment 17-65 regarding aesthetic concerns. Refer to Response to Comment 17-66 and 17-258 regarding air quality impacts and cumulative air quality impacts. Refer to Response to Comment 17-40 and 17-205 regarding noise impacts and cumulative noise impacts. As discussed in Section 4.13, *Public Services*, of the Draft EIR, fire protection services for the Project site is currently provided by the Orange County Fire Authority (OCFA) and police protection service is provided by the Los Alamitos Police Department (refer to Page 4.13-1 and 4.13-2 of the Draft EIR). Refer to Response to Comment 17-62 regarding police protection services and Response to Comment 17-68 regarding fire protection services. Refer to Response to Comment 17-48 regarding greenhouse gas emissions. Refer to Response to Comment 17-229 regarding hazardous materials.

17-432 The commenter expresses concerns with land use and planning, noise from construction, existing noise from the Joint Base, overflow parking in College Park East, use of College Park East parks, and public services. Refer to Response to Comment 17-71 regarding land use consistency. Refer to Response to Comment 17-40 regarding construction noise impacts. Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Force Training Base (JFTB)*, regarding noise impacts due to the Los Alamitos JFTB. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, regarding park use. Refer to Response to Comment 17-154 regarding impacts to public services.

17-433 The commenter expresses concerns with recreation, road impacts during construction, schools/libraries, traffic safety, taxes, utilities and service systems, and aesthetics. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities. Refer to Response to Comment 17-77 regarding road impacts during construction. Refer to Response to Comment 17-79 regarding impacts to school and library services. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns. Refer to Response to Comment 17-81 regarding utilities concerns. Refer to Response to Comment 17-65 regarding aesthetic concerns

17-434 This comment is part of an email template requesting examples and EIR topics for analysis. Refer to Response to Comment 17-276 regarding EIR topics.

17-435 The commenter inquires about site access, utilizing the existing traffic signal at Rose Street, left turn access at the proposed east entrance, and concern about left turns exiting the Project or making U-turns at Heather Street. As discussed in Section 3.0, *Project Description*, of the Draft EIR, vehicle access to the Project site would be provided via two driveways on Lampson Avenue, one for the apartment entry on the western side and one for the primary neighborhood entry central to the site. Additionally, a restricted emergency vehicle access point with Lampson Avenue would be provided at the eastern end of the site (refer to Page 3-4 of the Draft EIR). Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding

DRAFT

traffic concerns including U-terns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns. Refer to Response to Comment 17-10 and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding traffic signal concerns. In regard to the commenter's suggestion of land acquisition at Rose Street, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-436 The commenter expresses concerns with Project driveway entrances. As discussed in Section 4.13, *Public Services*, of the Draft EIR, access to and around structures would meet OCFA and CFC requirements. Figure 4.8-3, *Fire Master Plan*, of the Draft EIR demonstrates compliance with all codes and other regulations governing water availability for firefighting and emergency access to the Project site and structures. Compliance with OCFA requirements would ensure adequate provision of resources such as access, water mains, fire flows, and fire hydrants (refer to Page 4.13-9 of the Draft EIR).

17-437 The commenter inquires about JFTB regulations and the proposed development. As discussed in Section 4.10, *Land Use and Planning*, of the Draft EIR, the City and the Project site are within the airport planning area of the Los Alamitos JFTB. Land uses within the airport planning-area boundaries are required to conform to four key areas of military airport compatibility including: 1) aviation safety; 2) aircraft noise; 3) aircraft overflight; and 4) airspace protection/height zoning. Section 2.1 of the AELUP describes the standards and criteria adopted by the Airport Land Use Commission for Orange County for establishing planning boundaries. The Project would not conflict with JFTB AELUP's safety, height, noise, or aircraft overflight criteria, and impacts would be less than significant. No mitigation is required (refer to Page 4.10-14 through 4.10-18 of the Draft EIR).

17-438 The commenter inquires about impacts to police and fire responses. Refer to Response to Comment 17-62 regarding police protection services and Response to Comment 17-68 regarding fire protection services.

17-439 The commenter inquiries about the Statewide Community Infrastructure Program and/or other subsidies to build homes and address the City's Regional Housing Needs Allocation (RHNA) requirements and with Mello Roos Act. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

17-440 The commenter expresses concerns with emergency access and site access. Refer to Response to Comment 17-132 regarding emergency access. As discussed in Section 3.0, *Project Description*, of the Draft EIR, vehicle access to the Project site would be provided via two driveways on Lampson Avenue, one for the apartment entry on the western side and one for the primary neighborhood entry central to the site. Additionally, a restricted emergency vehicle

DRAFT

access point with Lampson Avenue would be provided at the eastern end of the site (refer to Page 3-4 of the Draft EIR).

17-441 The commenter inquires about the City's tree ordinance. As discussed in Section 4.3, *Biological Resources*, of the Draft EIR, on April 18, 2022, the City of Los Alamitos adopted a Parkway Tree Master Plan as part of its Urban Forest Program. This plan addresses City parkway trees. There are currently no parkway trees along the Project's frontage. The Project would not result in an impact to the City parkway trees. Therefore, the Project would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance. No impact would occur, and mitigation is not required (refer to Page 4.3-34 of the Draft EIR).

17-442 The commenter inquires about impervious surface area and water quality requirements. As discussed in Section 4.9, *Hydrology and Water Quality*, of the Draft EIR, the Project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality during construction or long-term operation. Impacts would be less than significant, and no mitigation is required (refer to Pages 4.9-14 through 4.9-16 of the Draft EIR). The Project would not substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would substantially increase the rate or amount of surface runoff resulting in flooding on- or offsite (refer to Pages 4.9-22 through 4.9-23 of the Draft EIR).

17-443 The commenter inquires about the parking concession and parking. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns. As discussed in Section 3.0, *Project Description*, of the Draft EIR, the Project would provide 577 parking spaces, which is below the City's required 679 parking spaces pursuant to LAMC Section 17.22.030, Required Parking Spaces. The State's Density Bonus Law specifies that for housing developments that qualify for a density bonus the local government shall not require a vehicular parking ratio, inclusive of parking for persons with a disability and guests, that exceeds the following ratios: (A) zero to one bedroom: one onsite parking space; (B) two to three bedrooms: one and one-half onsite parking spaces; and (C) four and more bedrooms: two and one-half parking spaces. (Gov't Code Section 65915(p)(1).) The Applicant requests that the City require no more than 2.35 spaces per unit for a total of 577 parking spaces for the Project, which is significantly more than the 440 parking spaces that would be required pursuant to the State's Density Bonus Law (refer to Page 3-13 of the Draft EIR).

17-444 The commenter inquires about the Project's greenhouse gas emissions. Refer to Response to Comment 17-48 for greenhouse gas emissions.

17-445 The commenter expresses concerns with EIR topics and traffic. Refer to Response to Comment 17-276 regarding EIR topics. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns.

DRAFT

17-446 The commenter expresses opposition to the Project due to traffic congestion and safety. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns. In regard to the commenter's opposition to the Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-447 The commenter expresses concerns with noise pollution and availability of parks. Refer to Response to Comment 17-40 regarding noise impacts. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, regarding parking concerns.

17-448 The commenter expresses concerns with impacts to wildlife and rodents. Refer to Response to Comments 17-18 and 17-19 regarding impacts to wildlife and birds. Refer to Response to Comment 9-21 regarding rodent concerns.

17-449 This comment is part of an email template requesting examples and EIR topics for analysis. Refer to Response to Comment 17-276 regarding EIR topics.

17-450 The commenter expresses concerns regarding overcrowded schools. Refer to Response to Comment 17-79 regarding impacts to school services.

17-451 The commenter expresses concerns regarding increased traffic. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns.

17-452 The commenter requests amendment of prior comments. Refer to Response to Comment 17-325 above for responses to this comment

17-453 This comment is part of an email template requesting examples of how the Project could negatively affect the community and listing the EIR topics. Refer to Response to Comment 17-326 above for responses to these topics.

17-454 The commenter expresses concerns with low-income housing, Section 8 government supported housing, and increased crime. Refer to Response to Comment 17-328 above for responses to these topics.

17-455 The commenter expresses concerns with crime. Refer to Response to Comment 17-329 above for responses to this topic.

17-456 The commenter expresses opposition to the Project and concerns about overbuilding in the area, which will lead to more traffic and accidents. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding collision. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being

DRAFT

taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

17-457 The commenter opposes the Project and requests to scale back the Project. Refer to Response to Comment 17-330 above for responses to these topics. In regard to the commenter's opposition to the Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-458 The commenter expresses concerns with traffic safety, parking, quality of life, U-turns on Heather Street, and use of residential streets to bypass Lampson traffic. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding cut-through traffic, traffic safety concerns and U-turns on Heather Street. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns. Quality of life is not an environmental issue analyzed under CEQA; however, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. Refer to Response to Comment 9-19 regarding cut through traffic during construction.

17-459 The commenter expresses concerns with on-site parking availability. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns. Additionally, a condition of approval has been added to the Project to ensure the parking garages onsite be used primarily for parking purposes.

17-460 The commenter expresses concerns with impacts to public services and existing parks. Refer to Response to Comment 17-154 regarding impacts to public services. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities.

17-461 The commenter expresses concerns with construction noise, road closure during construction, overflow parking in College Park East, road impacts from usage of heavy construction equipment, traffic safety, noise pollution, and Heather Park usage. Refer to Response to Comment 17-40 regarding noise impacts. Refer to Response to Comment 17-67 regarding road closure during construction. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding traffic safety concerns. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, regarding impacts to existing recreational facilities.

17-462 The commenter requests environmental studies on the EIR topics and expresses concerns with traffic and vehicle accidents. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding impacts related to accidents. As discussed in Section 1.5, *EIR Scope, Format, and Content*, of the Draft EIR, the *Technical Appendices* are available for review at the City of Los Alamitos, Development Services Department – Planning Division, 3191 Katella Avenue, Los Alamitos, California 90720, during the City's regular business hours

DRAFT

or can be requested in electronic form on the City's website at http://cityoflosalamitos.org/203/Planning-Commission-Projects. (Refer to Page 1-36 of the Draft EIR)

17-463 The commenter expresses concerns with EIR topics. Refer to Response to Comment 17-276 regarding EIR topics.

17-464 The commenter expresses concerns with construction, rodent issues, aesthetics, and increased traffic. Construction impacts are analyzed throughout the Draft EIR. Refer to Response to Comment 9-21 regarding rodent concerns. Refer to Response to Comment 17-65 regarding aesthetic concerns. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns.

17-465 The commenter inquires what studies have been completed to assess impacts on residents. The commenter also expresses concerns with aesthetics/height, rodents, traffic, noise, hazardous materials, impacts to existing parks, and accidents.

As discussed in Section 1.5, *EIR Scope, Format, and Content*, of the Draft EIR, the *Technical Appendices* are available for review at the City of Los Alamitos, Development Services Department – Planning Division, 3191 Katella Avenue, Los Alamitos, California 90720, during the City's regular business hours or can be requested in electronic form on the City's website at http://cityoflosalamitos.org/203/Planning-Commission-Projects or by contacting the City's Development Services Department – Planning Division. (Refer to Page 1-36 of the Draft EIR) Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding vehicle accident concerns. Refer to Response to Comment 17-40 regarding noise impacts. Refer to Response to Comment 17-229 regarding hazardous materials. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities. Refer to Response to Comment 9-21 regarding rodent concerns.

17-466 The commenter opposes the Project and expresses concerns regarding increased traffic, availability of open space, housing prices, poor aesthetics, worsening Air Quality and GHG emissions, hazards and hazardous materials, noise and population and housing. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, regarding open space concerns. Refer to Response to Comment 17-65 regarding aesthetic concerns. Refer to Response to Comment 17-35 regarding air quality impacts. Refer to Response to Comment 17-48 regarding greenhouse gas emissions. Refer to Response to Comment 17-229 regarding hazardous materials. Refer to Response to Comment 17-40 regarding noise impacts. Refer to Response to Comment 17-73 regarding population growth. Housing prices are not an environmental issue analyzed under CEQA. Additionally, in regard to the commenter's opposition to the Project, this comment is noted for the record and will be

DRAFT

forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-467 The commenter expresses concerns with aesthetics and air quality impacts and makes additional remarks in opposition to the Project. Refer to Response to Comment 17-65 regarding aesthetic concerns. Refer to Response to Comments 17-35 and 17-258 regarding air quality impacts and cumulative air quality impacts. The remainder of the comments do not address potential impacts of the Project on the physical environment or the sufficiency of the Draft EIR, and therefore no further response to this comment is required.

17-468 The commenter expresses concerns with the proposed density and the impacts on traffic, recreation, noise, wildlife, and parking. Refer to Response to Comment 17-71 regarding land use consistency. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities. Refer to Response to Comment 17-40 regarding noise impacts. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns. Regarding impacts to wildlife, as discussed in Section 4.3, *Biological Resources*, of the Draft EIR, wildlife, special-status vegetation communities, special-status species, nesting birds, and indirect impacts to biological resources were analyzed. Impacts to biological resources were determined to be less than significant with mitigation (refer to Pages 4.3-29 through 4.3-39 of the Draft EIR).

17-469 The commenter expresses concerns about increased traffic on Lampson, parking, and safety. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, 2.1.2, *Roadway Safety on Lampson Avenue*, regarding safety concerns, and 2.1.3, *Parking*, regarding parking concerns.

17-470 The commenter expresses concerns with the increase in greenhouse gas emissions and hazardous waste during construction, including soil disturbance resulting in Aerially Deposited Lead and toxic dust. Refer to Response to Comment 17-48 regarding greenhouse gas emissions. Refer to Response to Comment 17-229 regarding hazardous materials. Additionally, lead was not detected at concentrations that would pose an unacceptable health risk to future site occupants, the surrounding community or underlying groundwater. Furthermore, construction BMPs will be employed as a part of the Project to mitigate fugitive dust. Therefore, ongoing monitoring and reporting would not be warranted. Regarding construction fumes, a construction health risk assessment was prepared for the Project (*Technical Appendix B2* of the Draft EIR) and determined that Project construction impacts would be less than significant.

17-471 The commenter expresses concerns with the proposed density, parking impacts, and increased traffic. Refer to Response to Comment 17-71 regarding land use consistency. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion* regarding traffic concerns. Additionally, a condition of

DRAFT

approval has been added to the Project to ensure the parking garages onsite be used primarily for parking purposes.

17-472 The commenter expresses opposition to the Project and raises concerns with traffic issues, safety, noise, utilities and service systems, and vehicle accidents. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. Refer to Response to Comment 17-40 regarding noise impacts. Refer to Response to Comment 17-81 regarding utilities concerns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding safety and vehicle accident concerns. In regard to the commenter's opposition to the Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-473 The commenter expresses concerns with property values and aesthetic views of mixed area housing. Refer to Response to Comment 17-65 regarding aesthetic concerns. Property values are not an environmental issue analyzed under CEQA; however, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-474 The commenter expresses concerns with traffic impacts on Lampson Avenue and water supply. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. Refer to Response to Comment 17-26 regarding water supply.

17-475 The commenter expresses concerns with traffic and on-site parking. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns.

17-476 The commenter expresses concerns with AYSO parking and use of existing parks. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns. Refer to Response to Comment 17-11 regarding impacts to existing recreational facilities and Response to Comment 17-14 regarding the Project's proposed open space area.

17-477 The commenter expresses concerns with traffic on Lampson Avenue, increase in accidents and speeding, and flooding. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding safety and vehicle accident concerns. As discussed in Section 4.9, *Hydrology and Water Quality*, of the Draft EIR, the Project would not substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would substantially increase the rate or amount of surface runoff resulting in flooding on- or offsite (refer to Pages 4.9-22 through 4.9-23 of the Draft EIR).

17-478 The commenter expresses concerns with use of existing parks, on-site parking, and parking at Arbor Park. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of*

DRAFT

On-Site Amenities, regarding impacts to recreational facilities. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns.

17-479 The commenter expresses concerns with quality of life, increased traffic, and the provided on-site parking. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns and 2.1.3, *Parking*, regarding parking concerns. Quality of life is not an environmental issue analyzed under CEQA; however, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-480 The commenter expresses concerns with noise, dirt, and traffic due to construction; pedestrian safety, inadequate parking; air quality, noise, and commute time due to traffic; overcrowding of parks; population growth; and crime. Refer to Response to Comment 17-36 regarding construction and operational noise impacts. Refer to Response to Comment 17-205 regarding erosion control and dust control measures. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, 2.1.2, *Roadway Safety on Lampson Avenue*, regarding safety concerns, and 2.1.3, *Parking*, regarding parking concerns. Refer to Response to Comment 17-66 regarding air quality impacts. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, regarding the Project's proposed open space area and impacts to existing recreational facilities. Refer to Response to Comment 17-73 regarding population growth. Increase in crime is not an environmental impact on the physical environment unless it leads to an increase in services or decrease in response times resulting in need for construction of additional facilities. Refer to Response to Comment 17-62 regarding police protection services.

17-481 The commenter expresses concerns with Project plans, improvement plans on Lampson Avenue, and parking. Refer to Master Response 2.1.3, *Parking, regarding* parking concerns. As discussed in Section 3.0, *Project Description*, of the Draft EIR, Figure 3-4, *Site Plan*, depicts the overall site plan proposed as part of the Project. Vehicle access to the Project site would be provided via two driveways on Lampson Avenue, one for the apartment entry on the western side and one for the primary neighborhood entry central to the site. Additionally, a restricted emergency vehicle access point with Lampson Avenue would be provided at the eastern end of the site. The Project would implement stop controls for the southbound approach at all driveways on Lampson Avenue. The driveway for the apartment entry would be restricted to right in/right-out access only. Vehicular circulation would be unrestricted throughout the Project site. Along the Project frontage, Lampson Avenue is developed to its ultimate General Plan roadway classification. Frontage improvements would include median improvements, sidewalks, driveway modifications needed to accommodate site access, and landscaping improvements as required by City standards (refer to Pages 3-2 through 3-4 of the Draft EIR).

17-482 The commenter expresses general opposition to the Project and lists EIR topics. Refer to Response to Comment 17-276 regarding EIR topics. In regard to the commenter's opposition

DRAFT

to the Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-483 The commenter expresses concerns with traffic and accidents on Lampson Avenue. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding vehicle accident concerns.

17-484 The commenter expresses concerns with use of existing parks and proposed open space. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, regarding the Project's proposed open space area and impacts to existing recreational facilities.

17-485 The commenter expresses concerns about insufficient parking and safety. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns.

17-486 The commenter expresses concerns with traffic, overcrowding, and parking. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, and 2.1.3, *Parking*, regarding parking concerns. Refer to Response to Comment 17-73 regarding population growth.

17-487 The commenter expresses general opposition to the Project and concerns with safety. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns and Master Response 2.1.8, *Public Safety*, regarding general safety concerns. In regard to the commenter's opposition to the Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-488 The commenter expresses general opposition to the Project and expresses concern with traffic. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. In regard to the commenter's opposition to the Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-489 The commenter expresses general opposition to the Project and lists EIR topics. Refer to Response to Comment 17-276 regarding EIR topics. In regard to the commenter's opposition to the Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-490 The commenter expresses opposition to the Project and concerns with traffic congestion, crowded schools, and use of existing parks. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. Refer to Response to Comment 17-79 regarding impacts to school services. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, regarding the Project's proposed open space area and impacts to existing recreational facilities. In regard to the commenter's opposition to the

DRAFT

Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-491 The commenter lists EIR topics. Refer to Response to Comment 17-276 regarding EIR topics.

17-492 The commenter opposes the Project and expresses concerns with overpopulation, overuse of resources, and traffic issues. Refer to Response to Comment 17-73 regarding population growth. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. As discussed in Section 5.0, *Other CEQA Considerations*, of the Draft EIR, the Project would also not reduce the availability of non-renewable natural resources associated with long-term operational activities (refer to Page 5-2 and 5-3 of the Draft EIR). In regard to the commenter's opposition to the Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-493 The commenter expresses concerns with emergency response times, increased traffic, U-turns at Heather Street, accidents, and use of existing parks. Refer to Response to Comment 17-62 regarding police protection services and Response to Comment 17-68 regarding fire protection services. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, for vehicle accident concerns. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, regarding impacts to existing recreational facilities.

17-494 The commenter expresses concerns with increased traffic accidents and emissions. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding vehicle accident concerns. Refer to Response to Comment 17-48 regarding greenhouse gas emissions.

17-495 The commenter expresses concerns with traffic on Lampson Avenue and traffic safety. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding traffic safety and vehicle accident concerns.

17-496 The commenter expresses concerns with noise pollution and air quality. Refer to Response to Comment 17-40 regarding noise impacts. Refer to Response to Comment 17-66 regarding air quality impacts.

17-497 The commenter expresses concerns with parking. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns.

17-498 The commenter expresses concerns with flooding on Lampson Avenue. As discussed in Section 4.9, *Hydrology and Water Quality*, of the Draft EIR, the Project would not substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which

DRAFT

would substantially increase the rate or amount of surface runoff resulting in flooding on- or offsite (refer to Pages 4.9-22 through 4.9-23 of the Draft EIR).

17-499 The commenter expresses concerns with recreation areas. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, regarding the Project's proposed open space area and impacts to existing recreational facilities.

17-500 The commenter expresses concerns with aesthetics. Refer to Response to Comment 17-65 regarding aesthetic concerns. The Draft EIR and technical studies are available for public review on the City's website: https://cityoflosalamitos.org/203/Planning-Commission-Projects.

17-501 The commenter expresses concerns with extra traffic on Lampson Avenue. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns.

17-502 The commenter expresses concerns with inadequate parking and use of existing recreational facilities. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, regarding the Project's proposed open space area and impacts to existing recreational facilities.

17-503 The commenter recommends reducing the intensity of the Project. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

17-504 The commenter recommends a sound wall on the Los Alamitos side of the Project and reducing the Project intensity. The Project includes sound walls along the southern edge of the Project. site. Also refer to Response to Comment 17-40 regarding noise impacts. Regarding the intensity of the Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-505 The commenter recommends that funds for air purifiers and higher fences for College Park East residents be provided by the developer. Refer to Response to Comment 17-66 regarding air quality impacts. Refer to Response to Comment 17-65 regarding aesthetic concerns.

17-506 The commenter expresses concerns with parking, safety, traffic, noise, and public services. Refer to Master Responses 2.1.3, *Parking*, regarding parking concerns, 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns, and 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. Refer to Response to Comment 17-40 regarding noise impacts. Refer to Response to Comment 17-154 regarding impacts to public services.

17-507 The commenter expresses concerns with insufficient on-site parking and pedestrian safety. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns, and 2.1.2, *Roadway*

DRAFT

Safety on Lampson Avenue, regarding pedestrian safety. A condition of approval has been added to the Project to ensure the parking garages onsite be used primarily for parking purposes. In regard to the commenter's request for reduced units, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-508 The commenter expresses concerns with traffic and traffic safety on Lampson Avenue. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns and 2.1.2, *Roadway Safety on Lampson Avenue*, regarding traffic safety concerns.

17-509 The commenter expresses concerns with construction noise impacts. Refer to Response to Comment 17-40 for noise impacts. Additionally, as discussed in Section 4.11, *Noise*, of the Draft EIR, the Project would not result in an increase in the cumulative noise levels at sensitive receiver locations during both construction and operation (refer to Page 4.11-34 of the Draft EIR). Refer also to Response to Comment D-9 for cumulative offsite traffic noise impacts.

17-510 The commenter expresses opposition to the Project and concerns with public services and utilities. Refer to Response to Comment 17-154 regarding impacts to public services. Refer to Response to Comment 17-81 regarding utilities concerns. In regard to the commenter's opposition to the Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-511 The commenter provides an introduction and expresses concerns which are responded to below.

17-512 The commenter expresses concerns regarding availability of on-site parking, overflow parking to Arbor Park and College Park East, and the lack of signal control from the Project. Refer to Master Response 2.1.3, *Parking* regarding a detailed discussion on parking impacts. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, and Response to Comment 17-10 regarding traffic and signal control concerns.

17-513 The commenter expresses concerns regarding provision of open space/park space for residents. The commenter requests the Draft EIR include a listing of existing parks within a half-mile of the Project and an evaluation of Project impacts to recreational facilities. Refer to Response to Comment 17-11 regarding availability of open space and impacts to recreational facilities.

17-514 The commenter requests the Draft EIR include an evaluation of noise at Arbor Park during weekends. The commenter requests the noise study to include all hours of the day on Saturdays when whistles, loud voices, cheering, and other noises are made. Refer to Response to Comment 17-12 regarding noise at Arbor Park.

17-515 The commenter expresses concerns about new recreational areas, availability of on-site parking, a need for widening the existing bicycle lane on Lampson Ave, and traffic conditions

DRAFT

on North Seal beach Boulevard. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, regarding the Project's proposed open space area and impacts to existing recreational facilities. Refer to Master Response 2.1.3, *Parking*, regarding parking concerns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue* regarding a discussion about bicycle facilities. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns.

17-516 The commenter provides an introduction and expresses concerns which are responded to below.

17-517 The commenter expresses concerns with traffic, drainage, and backyard privacy. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. As discussed in Section 4.9, *Hydrology and Water Quality*, of the Draft EIR, the Project would not substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would substantially increase the rate or amount of surface runoff resulting in flooding on- or offsite (refer to Pages 4.9-22 through 4.9-23 of the Draft EIR). Backyard privacy is not an environmental issue evaluated under CEQA; however, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-518 The commenter expresses concerns with dust, pollution, and noise. Refer to Response to Comment 17-35 regarding health impacts. As discussed in Section 4.6, *Geology and Soils*, the Project would be required to implement erosion and dust control measures pursuant to South Coast AQMD Rule 403 to minimize water- and windborne erosion and to control fugitive dust. Mandatory compliance with the Project's SWPPP and the erosion control and dust control measures would reduce, prevent, or minimize soil erosion from Project-related construction activities. Refer to Response to Comment 17-40 regarding noise impacts. The Project's Air Quality Impact Analysis and Noise Study is included as *Technical Appendices B1 and K* to the Draft EIR, respectively.

17-519 The commenter expresses concerns with increased traffic and noise on Lampson. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. Refer to Response to Comment 17-40 regarding noise impacts.

17-520 The commenter expresses concerns with pollution and noise impacts to pets, and accidents. Refer to Response to Comment 17-35 regarding air quality and health impacts. Refer to Response to Comment 17-40 regarding noise impacts. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding vehicle accident concerns.

17-521 The commenter expresses opposition to the Project and concerns with traffic and safety issues on Lampson Avenue, accessibility issues to Arbor Park and Dog Park, overflow parking into College Park East, and burdens on the school district. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, 2.1.2, *Roadway Safety on*

DRAFT

Lampson Avenue, regarding traffic safety concerns, and 2.1.3, *Parking*, regarding parking concerns. Refer to Response to Comment 17-32 regarding impacts on the school district. In regard to the commenter's opposition to the Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-522 The commenter expresses opposition to the Project and concerns with aesthetics. Refer to Response to Comment 17-65 regarding aesthetic concerns. In regard to the commenter's opposition to the Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-523 The commenter expresses concerns with construction pollution, noise, and traffic. The Draft EIR's Air Quality Impact Analysis (*Technical Appendix B1* of the Draft EIR) included localized air quality impacts and considered sensitive receptors in accordance with CEQA and South Coast AQMD Guidelines. Refer to Response to Comment 17-35 regarding health impacts. As discussed in Section 4.6, *Geology and Soils*, of the Draft EIR, the Project would be required to implement erosion and dust control measures pursuant to South Coast AQMD Rule 403 to minimize water- and windborne erosion. Mandatory compliance with the SWPPP and the erosion control and dust control measures would reduce, prevent, or minimize soil erosion from Project-related construction activities. Refer to Response to Comment 17-40 for noise impacts. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns.

17-524 The commenter expresses concerns with traffic safety, population growth, school services, and use of existing parks. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding traffic safety concerns. Refer to Response to Comment 17-73 regarding population growth. Refer to Response to Comment 17-32 regarding impacts on school services. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, regarding impacts to existing recreational facilities.

17-525 The commenter provides concluding remarks. This comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

17-526 The commenter expresses concerns with impacts to AYSO and Arbor Park. Refer to 2.1.8, *Loss of Existing Open Space and Provision of On-Site Amenities*, regarding impacts to existing recreational facilities. Refer to Master Response 2.1.3, *Parking*, regarding concerns regarding parking at Arbor Park.

17-527 The commenter expresses concerns with traffic on Lampson and overflow parking from Project residents in College Park East. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns, and 2.1.3, *Parking* regarding parking concerns.

DRAFT

17-528 The commenter expresses concerns regarding parking availability at Arbor Park and the impact on AYSO operations. Refer to Master Response 2.1.3, *Parking*, regarding concerns regarding parking at Arbor Park.

17-529 The commenter opposes the Project and expresses concerns with parking availability at Arbor Park and overflow parking in College Park East. Refer to Master Response 2.1.3, *Parking*, regarding Arbor Park and on-site parking concerns. In regard to the commenter's opposition to the Project, this comment is noted for the record and will be forwarded to the decision makers for their review and consideration prior to any action being taken on the Project.

17-530 The commenter expresses concerns with access onto Lampson Avenue, traffic during and after construction, and availability of open space to Project residents. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion* regarding traffic concerns. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities,* regarding the Project's proposed open space area and impacts to existing recreational facilities.

Vehicle access to the Project site would be provided via two driveways on Lampson Avenue, one for the apartment entry on the western side and one for the primary neighborhood entry central to the site. Additionally, a restricted emergency vehicle access point with Lampson Avenue would be provided at the eastern end of the site. The Project would implement stop controls for the southbound approach at all driveways on Lampson Avenue. The driveway for the apartment entry would be restricted to right-in/right-out only. Vehicular circulation would be unrestricted throughout the Project site. Refer to Response to Comment 17-10 and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding traffic signal concerns.

17-531 The commenter expresses concerns with traffic impacts, accidents, and noise impacts from JFTB operation on the Project's future residents. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion* regarding traffic concerns, 2.1.2, *Roadway Safety on Lampson Avenue*, regarding pedestrian safety concerns, and 2.1.7, *Proximity to the Los Alamitos Joint Force Training Base (JFTB)* for related responses.

17-532 The commenter provides an introduction and expresses concerns which are responded to below. Refer to Response to Comment 17-511 above for responses to these topics.

17-533 The commenter expresses concerns regarding availability of on-site parking, overflow parking to Arbor Park and College Park East, and the lack of signal control from the Project. Refer to Master Response 2.1.3, *Parking*, regarding a detailed discussion on parking impacts. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, and Response to Comment 17-10 regarding traffic and signal control concerns.

17-534 The commenter expresses concerns regarding provision of open space/park space for residents. The commenter requests the Draft EIR include a listing of existing parks within a ½ mile of the Project and an evaluation of Project impacts to recreational facilities. Refer to Response to Comment 17-11 regarding availability of open space and impacts to recreational facilities.

DRAFT

17-535 The commenter requests the Draft EIR include an evaluation of noise at Arbor Park during weekends. The commenter requests the noise study to include all hours of the day on Saturdays when whistles, loud voices, cheering, and other noises are made. Refer to Response to Comment 17-12 regarding concerns regarding noise at Arbor Park.

17-536 The commenter expresses concerns with water supply and electricity. As discussed in Section 4.17, *Utilities and Service Systems*, of the Draft EIR, the Project would be served in accordance with the California Public Utilities Commission (CPUC) and Federal Energy Regulatory Commission tariffs. As discussed in Section 4.5, *Energy*, Project operational energy demands are estimated to be 98,388 kWh/year of electricity which would be supplied by Southern California Edison (SCE) (refer to Page 4.17-15 of the Draft EIR). Refer to Response to Comment 17-26 regarding water supply.

17-537 The commenter expresses concerns with traffic, police services, and the scale of the Project. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, regarding traffic concerns. Refer to Response to Comment 17-62 regarding police protection services. Refer to Response to Comment 17-65 regarding aesthetic concerns.

17-538 The commenter expresses concerns with affordable housing, parking, and use of existing parks. As discussed in Section 3.0, *Project Description*, of the Draft EIR, the Project intends to provide a variety of affordable housing types to support middle-income workers (refer to Pages 3-1 through 3-2 of the Draft EIR). Refer to Master Response 2.1.3, *Parking*, regarding parking concerns. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, regarding impacts to existing recreational facilities.

> Dear Mr. Oliver,,
>
> I have been in touch with you previously regarding the impact that the Lampson Project will have on our community here in Los Alamitos and College Park East in Seal Beach. I have also attended several city council meetings to discuss and address the impact that this project will have on our community. After reviewing all the documentation available, I am extremely concerned about the impact that this project will have on our beautiful community and neighborhood. I personally feel that the concerns of the residents have been ignored and just swept under the carpet due to the financial gains that the developers are going to make if this project is allowed to go forward. 18-1

> Please, please, please I would ask that you obtain new environmental reports that are unbiased and provide environmental remediation measures. I would also like to ask that a request be made to release the Peer Review report before any environmental decisions are made on the Lampson Project. 18-2

DRAFT

It is crucial that this information be made available to all concerned and to those of us who will be the most affected by this project.
>
> I have lived in this area for 25 years and had hoped to live out my life in this beautiful neighborhood. However, with these proposed changes, I feel this area will become overridden with traffic and increased pollution, and that a huge strain will be placed upon the sewage, drainage, public utilities and emergency response providers in our area, and that tremendous environmental issues will result in destroying our beautiful community if this project is allowed to go forward.
>
> I thank you for your time in reading my email. I do appreciate and respect your time.

Responses to Comment 18

De Boer, Kristal, dated June 09, 2024.

18-1 The commenter expresses concerns with the Project on the College Park East community. The commenter does not provide any specific comments on the adequacy of the Draft EIR. However, these comments are noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project.

18-2 The commenter requests new environmental reports that are unbiased and provide environmental remediation measures. The commenter requests the City to release the Peer Review report before any environmental decisions are made on the Project.

The City staff and the City's environmental consultant conducted peer review of the Draft EIR prior to release of the Draft EIR for public review. Pursuant to Public Resources Code Section 21067 and CEQA Guidelines Article 4 and Section 15367, the City is the Lead Agency under whose authority this EIR has been prepared. "Lead Agency" refers to the public agency that has the principal responsibility for carrying out or approving a project. As documented in the Draft EIR, the EIR represents the independent judgment of the City of Los Alamitos (as the CEQA Lead Agency) and presents an objective evaluation of the physical environmental effects that could result from construction and operation of the proposed 4665 Lampson Avenue Project (see Draft EIR, pp. S-1, 1-1, and 1-4).

18-3 The commenter expresses concerns with traffic, increased pollution, sewage, drainage, public utilities, and emergency response. The Draft EIR addressed the environmental topics raised by the commenter. Also refer to Section 2.1, Master Response, of this Final EIR. The commenter does not provide any specific comments on the adequacy of the Draft EIR. However, these comments are noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project.

Comments on the DEIR for 4665 Lampson Avenue

Dear Mr. Oliver:
Lampson Avenue is a street that suffers many safety concerns. There have been many fatal accidents on this street. It is unconscionable to add 246 residential units knowing there is yet another large development on its way. And all of these units with minimum parking. While providing housing is admirable, to not give a thought to whether those who live there are safe is

19-1

DRAFT

not. This is dangerous and it is asking for problems—both foreseeable and unforeseeable in the future. I urge the Council to cut back the density. 19-1 (CONT.)

Once upon a time quality of life meant something to our officials. This huge project will not only increase accidents, air pollution, tire dust, noise, but will overcrowd this small impacted area of Los Alamitos, Seal Beach and West Garden Grove. There is absolutely no concern for the new residents or existing resident's quality of life. 19-2

The safety concerns continue in the proposed project with the idea of sharing a very old sewer system with Seal Beach. If Seal Beach concurs with this bad idea, you should require a new sewer system be built so sewage spills do not become an issue, a safety concern for everyone. 19-3

And then there is water drainage. The Golf Course and College Park East already flood when we have rain. There needs to be mitigation worked out with the City of Seal Beach to ensure that new drainage systems are in place for the new development, College Park East, West Garden Grove and the Golf Course. 19-4

My suggestions are: 1. Cut the density, 2. Increase the parking, 3. Replace Seal Beach City's sewer system along Lampson, 4. Add new drainage projects for all the affected neighborhoods —College Park East, West Garden Grove, The Golf Course and the new development.

Thank you for the opportunity to examine and comment on the DEIR for 4665 Lampson. I request that my observations and requests be entered into the EIR, addressed, answered, and mitigated. 19-5

Sincerely yours,
Ellery Deaton

DRAFT

Responses to Comment 19

Deaton, Ellery, dated June 07, 2024.

19-1 The commenter expresses concerns with traffic safety on Lampson Avenue. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue,* for pedestrian safety concerns.

19-2 The commenter expresses concerns with increased accidents, air pollution, tire dust, noise, and overcrowding and overall quality of life. The commenter does not provide any specific comments on the adequacy of the Draft EIR. However, these comments are noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project.

19-3 The commenter expresses concerns with sharing an "old" sewer system with the City of Seal Beach and requests that a new sewer system is built to avoid sewage spills. Refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, for a discussion on sewer impacts.

19-4 The commenter expresses concerns with drainage and recommends mitigation be worked out with the City of Seal Beach to ensure new drainage systems are in place for the Project and nearby neighborhoods. Refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, for hydrology concerns.

19-5 The commenter makes suggestions to: 1) to cut the density, 2) increase the parking, 3) replace Seal Beach's sewer system along Lampson Avenue, 4) add new drainage projects for affected neighborhoods. The commenter requests the comments to be included in the Final EIR, addressed, answered, and mitigated. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

Comment Letter 20

Lampson Project EIR response

Kellie DuRose <kelliedurose@gmail.com>
Mon 6/10/2024 4:42 PM
To:Tom Oliver <Toliver@cityoflosalamitos.org>

6 attachments (9 MB)
image_50427649.JPG; image_50372353.JPG; image_67171585.JPG; image_50735873.JPG; image_67210241.JPG; image_50422785.JPG;

I am writing in response to the Lampson Housing Project EIR. I live in the College Park East neighborhood and have lived here for over 6 years and think the proposal for the location does not make sense for the area and should not be approved. I have concerns about parking, safety, traffic, infrastructure, and services. 20-1

The proposed number of parking spots allocated to the community is highly insufficient. A little over 2 parking spaces per home is not sufficient for any neighborhood. Prior to moving to Seal Beach my husband and I lived in the 360 at South Bay planned community in Hawthorne, CA. It was new construction consisting of condos, townhouses, and single family homes. Each home had a garage and there were also street parking spots (both parallel parking along streets as well as pull-in spots on side streets). We parked our cars inside our garage and only needed street parking for our guests. Even with this, parking was a nightmare. We had many occasions where we had to have guests park outside the community and we had to go pick them up and shuttle them to our home. The amount of parking proposed at this location seems very similar and therefore very inadequate. Residents and guests are going to end up parking in the College Park East neighborhood and trying to cross a very dangerous street, Lampson. Even in our single family home community I find that our street is always full of cars because people don't use their garages and have more than 2 cars, filling our streets with overflow from another community will only make it worse. If this is to proceed then I think fewer homes should be planned and more space allocated to parking so that all of the residents and their guests can easily park in the community without needing our streets for overflow. 20-2

Earlier I mentioned Lampson being a dangerous street and this community would make it even worse. In my short 5 years here there have been an extreme amount of accidents on Lampson, including fatalities. People drive too fast and don't notice people pulling out of the CPE community and the West Garden Grove community and adding a new community is not going to change that. Additionally, we have many problems with people heading on Lampson towards Seal Beach Blvd and u-turning at Heather from the dog park and based on the proposed configuration I see that only increasing. Forcing tons of cars into u-turn situations is extremely dangerous and opening the street up to more accidents than it already has, and it already has too much. 20-3

I also have concerns about traffic. The intersections of Seal Beach Blvd and Lampson and Valley View and Lampson are very congested today with the existing communities and the traffic they produce that adding many more people and homes is only going to make it worse. Additionally, if a portion of this community is truly allocated for low income housing (I 20-4

DRAFT

have my doubts that any of these properties will actually be affordable for low income families but that is beside the point) then public transportation will need to be easily accessible. To my knowledge there are no bus stops along Lampson and if they were to be introduced (if they aren't, people are going to walk 1.5 miles to Seal Beach Blvd or 1.1. miles to Valley View to catch the bus one way?!?!) then that would make traffic even more of a problem along Lampson. If residents are going to be needing to walk to bus stops there aren't adequate sidewalks on Lampson to accommodate this (specifically from Seal Beach Blvd to Tulip). Walking would require crossing a very busy Lampson.

On the topic of public transportation, a park and ride is being eliminated by this development which is actually discouraging current residents from carpooling and hurting the environment. The state government is saying that we need to be environmentally conscious and increase low income housing and I don't see this development focused on either.

20-4 (CONT.)

In addition to driving and walking safety the EIR does not address airplane safety concerns raised by CalTrans and CALUC. I think both agencies raise valid concerns and don't understand why those aren't included in the EIR.

20-5

I am concerned about the existing infrastructure in the area and additional development that will negatively contribute to it. We have dealt with flooding in the CPE neighborhood for many years with no solutions presented. The water table issues exist in that area as well and will only lead to more issues with the existing issues going unresolved. I feel as if the existing residents flooding issues should be resolved before new construction starts. I have attached some pictures to show the flooding on our street over the past few years. It's bad and needs to be resolved before we eliminate runoff options with more building.

20-6

Finally, I feel as if we do not have the appropriate amount of services in the area to accommodate a new community. We have very few grocery stores in the area and some of them are very old. The stores in the strip malls at Valley View and Lampson which would be the closest for this community are closing down, are very run down, or have been left empty for years. People in the community have raised concerns to the city of Garden Grove and to the owners of the properties and nothing is being addressed. We also have very old infrastructure for electricity, internet, cable, etc. and are well overdue for upgrades for the existing communities. And now we're proposing adding new residents and communities with no plans to address any of these issues.

20-7

DRAFT

Responses to Comment 20

DuRose, Kellie, dated June 10, 2024.

20-1 The commenter provides introductory remarks and expresses concerns with parking, safety, traffic, infrastructure, and services which are responded to below.

20-2 The commenter expresses concerns about the insufficient number of parking spaces and provides personal experience of inadequate parking. Refer to Master Response 2.1.3, *Parking*, for parking concerns.

20-3 The commenter expresses concerns with traffic safety on Lampson Avenue. The commenter states that Lampson is a dangerous street, there have been many accidents, and there are problems with U-turns on Heather. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue,* for pedestrian safety concerns.

20-4 The commenter expresses concerns with traffic congestion on Lampson Avenue and nearby intersections. Additionally, the commenter expresses concerns with accessibility of public transportation for affordable housing residents and elimination of the Park-n-Ride. The commenter states that there is no bus stop along Lampson Avenue and inadequate sidewalks on Lampson to accommodate walking from Seal Beach Boulevard to Tulip.

The commenter is correct that there is no transit service along Lampson Avenue; the nearest OCTA bus stop from the Project site is Route 123, approximately 1.2 miles at the intersection of Valley View Street and Lampson Avenue. The existing Park-n-Ride that previously occupied the Project site has not been in operation for the past 18 months and when in operation had limited usage. As discussed in Section 4.15, *Transportation*, of the Draft EIR, the Project Mitigation Measure MM 4.15-1 has been incorporated which includes implementing CAPCOA strategies such as coordination with OCTA to determine whether providing new or re-routing existing transit services to the site would be feasible, as determined by OCTA pursuant to OCTA's standards (refer to Page 4.15-19 of the Draft EIR). Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns. Refer to Master Response 2.1.2, *Avenue, for* pedestrian safety concerns.

20-5 The commenter states that the EIR does not address airplane safety concerns raised by Caltrans and ALUC. The commenter is incorrect in stating that the Draft EIR did not address airplane safety concerns. Please refer to Draft EIR, Section 2.4.3 for a discussion regarding Airport Environs Land Use Plan for the Joint Forces Training Base Los Alamitos and the ALUC process. Airport safety is analyzed in Section 4.8, *Hazards and Hazardous Materials*, in the Draft EIR. Refer also to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (*JFTB).

20-6 The commenter expresses concerns with flooding and existing storm drainage infrastructure in the area. The commenter expresses concerns with the existing water table and recommends

DRAFT

flooding issues be resolved before construction starts. Refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, for hydrology concerns.

20-7 The commenter expresses concerns with existing utility infrastructure and services (i.e. grocery stores) in the area due to the Project's population growth. The commenter expresses concerns with the age of existing grocery stores and nearby stores to the Project site. As discussed in Section 4.17, *Utilities and Service Systems*, of the Draft EIR, there is sufficient capacity in utility services to serve the Project site. The Project would be served in accordance with the CPUC and Federal Energy Regulatory Commission tariffs. The Project does not propose uses that are inherently energy intensive and the energy demands in total would be comparable to other residential uses of similar scale and configuration. No new or expanded off-site dry utilities are required to serve the Project, and therefore there would be no impact associated with any such facilities that could cause significant environmental effects. (refer to Draft EIR p. 4.17-15) The commenter does not provide any specific comments on the adequacy of the Draft EIR. However, these comments are noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project.

Subject: Lampson project
Date: Sunday, May 5, 2024 3:32:45 PM

Mr. Oliver-

I'm sure you've heard from many of us about this residential project to be built on Lampson Ave. you've probably heard many concerns about the number of parking spaces to be provided per number of units. It is unacceptable. To think that people will be taking public transit to offset the lack of parking is to be intellectually dishonest. The residents would park in college park because that will be the only option. Not only will it impact residents that already are dealing with lack of parking as children grow older and start to drive but it will become a real safety concern. I've lived in college park for only 5 years and in that time I've seen a dozen or so serious accidents on Lampson. The last one was almost in our back yard just 6-7 weeks ago. Lampson is already dangerous as everybody knows- you add to that hundreds of people crossing it (maybe at a traffic light maybe not) everyday and you have made life in this neighborhood much more dangerous. The likeliness that there will be a fatality will go up exponentially if the project goes through as planned. 21-1 21-2

This of course doesn't even take into account the joint air base and the study that seems to have been ignored by the powers that want this project. I don't understand how a federal study/conclusion can be ignored by local government. 21-3

Safety should be the first concern and at least from where I sit it has been overtaken by the affordable housing cartel and whatever monies that brings to the city. It's almost always about money and it certainly is with the Lampson project. It's unsafe and it's wrong to put revenue above safety. 21-4

Sincerely,

Chris Eble

Responses to Comment 21

Eble, Chris, dated May 05, 2024.

21-1 The commenter expresses concerns about the number of parking spaces provided. Refer to Master Response 2.1.3, *Parking*, for parking concerns.

21-2 The commenter expresses concerns about pedestrian safety and traffic on Lampson Avenue. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for pedestrian safety concerns.

21-3 The commenter expresses concerns with the ALUC and Caltrans conclusions and states that the studies have been ignored. Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*.

21-4 The commenter expresses general opposition to the project. The commenter does not provide any specific comments on the adequacy of the Draft EIR. However, these comments are noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project.

Comment Letter 22

Lampson Housing Project

susanne farjami <sfarjami@hotmail.com>
Sun 6/9/2024 11:18 AM

To:Tom Oliver <Toliver@cityoflosalamitos.org>
Cc:Farhad <ffarjami@aol.com>

IRONSCALES couldn't recognize this email as this is the first time you received an email from this sender sfarjami@hotmail.com

We were dismayed to learn that the Lampson Project draft environmental impact reports were prepared by consultants hired by Lampson LLC (the property developer), not by independent consultants who should have been hired by the City of Los Alamitos. 22-1

It makes sense that land bordering a military airport would not be zoned for residential development. It makes no sense that this area was re-zoned to allow for residential development, especially after the Airport Land Use Commission and the California Department of Transportation - Division of Aeronautics deemed this area unsuitable and unsafe for residential housing. 22-2

It is our understanding that hundreds of opposition letters written by members of this community in November 2022 were not provided to the City Council or the Planning Commission. Why would they be prevented from knowing the extent of opposition to this project within the community before making this decision?

Before this project proceeds any further, all conflicts of interest should be disclosed and unbiased consultants should prepare new environmental reports that address the obvious public safety and quality of life issues this project creates for the residents of Los Alamitos, Rossmoor and Seal Beach. In addition, the "Peer Review" report should be released before any environmental decisions are made on the Lampson Project. 22-3

We have lived in Rossmoor for 30 years, raised a family here and enjoyed a relatively safe and quiet community. Building so much new housing in a small area will have a huge impact on our quality of life with increased traffic, congestion, noise and safety issues. Building these houses next to a military airbase just adds to these concerns.

We would urge the Los Alamitos City Council, the Planning Commission, and everyone involved in this project to listen to the many, many voices in this community that oppose this project for so many reasons - you work for them! 22-4

Fred and Susanne Farjami

DRAFT

Responses to Comment 22

Farjami, Susanne dated June 09, 2024.

22-1 The commenter expresses dismay that the EIR was prepared by consultants hired by the Project Applicant and not the City. The City staff and the City's environmental consultant conducted peer review of the Draft EIR prior to release of the Draft EIR for public review. Pursuant to Public Resources Code Section 21067 and CEQA Guidelines Article 4 and Section 15367, the City is the Lead Agency under whose authority this EIR has been prepared. "Lead Agency" refers to the public agency that has the principal responsibility for carrying out or approving a project. As documented in the Draft EIR, the EIR represents the independent judgment of the City of Los Alamitos (as the CEQA Lead Agency) and presents an objective evaluation of the physical environmental effects that could result from construction and operation of the proposed 4665 Lampson Avenue Project (see Draft EIR, pp. S-1, 1-1, and 1-4).

22-2 The commenter expresses concerns with the zoning of the Project site and expresses concerns with ALUC and Caltrans conclusion on the site. Please refer to Draft EIR, Section 2.4.3 for a discussion regarding Airport Environs Land Use Plan for the Joint Forces Training Base Los Alamitos and the ALUC process. Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*.

22-3 The commenter inquires why the NOP comment letters were not provided to City Council or Planning Commission. The commenter requests all conflicts of interest be disclosed and new unbiased environmental reports that address public safety and quality of life issues. The commenter also requests the Peer Review report be released before any environmental decisions are made.

The NOP comment letters are intended to inform the scope of the Project's EIR. The NOP comments were summarized in the Draft EIR (see Table 1-1 of the Draft EIR) and included in *Technical Appendix A* of the Draft EIR, therefore, the NOP comments were made publicly available. The Draft EIR and Final EIR, including all comments made on the Project will be made available to the decision makers prior to any scheduled public hearings on the Project.

Please refer to Response to Comment 16-16 and 22-1 regarding the EIR reflecting the independent judgment of the City, as Lead Agency, and peer review. There are no known conflicts of interest.

22-4 The commenter opposes the Project and expresses concerns with increased traffic, congestion, noise, and safety issues and quality of life. The commenter does not provide any specific comments on the adequacy of the Draft EIR. However, these comments are noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project.

Comment Letter 23

From: rosemaryfrenkiel@gmail.com
To: Tom Oliver
Subject: 4665 Lampson Project
Date: Thursday, May 2, 2024 12:15:08 PM

Sir:
Just a quick note in regards to this project. First, I think that 246 housing units are a bit too many. People have to go to work, school, shopping and doctor's appointments etc. This will lead to much traffic congestion, much more than there is now. Second, it is too close to the Los Alamitos Military airport. The training that goes on there is very loud on weekends and sometime during the week. How happy do you think people will be when they find themselves in that noise and the level will be higher because they are close to the airport. Third, what will you do, if God forbid, a helicopter or military plane crashes.
I believe I read that that safety board did not give your project its blessing. Who will be morally and monetarily responsible? Maybe cut back on the project and put it as far from the military runway as possible. Maybe it would be a good idea for you to hire a small plane and pilot and fly over the area to get a birds eye view. The runway is closer than you think. You can't use a drone because it is a military facility, but a small plane is allowed to make a fly over.

23-1

23-2

Cordially,
Rosemary Frenkiel

Subject: Lampson Project and Old Ranch Country Club Project
Date: Saturday, May 4, 2024 11:24:53 AM

Dear Mr. Oliver,

We are two of many community residents who are deeply concerned about these high density / low income projects moving forward. It seems that we as a community have no say in this matter. 24-1

The negative impact these projects will have to our community in terms of traffic congestion, parking, noise and air pollution, crime, increased demand on city and energy resources, etc., are very serious. 24-2

It should be noted that two State Agencies, Cal Trans Division of Aeronautics and the California Airport Land Use Commission, issued warnings that these projects have safety and health issues due to their close proximity to the Joint Forces Training Base. These warnings were omitted from the Draft Environmental Impact Report. This is unacceptable "editing" to get your projects approved. 24-3

In closing, we will stress again that we highly disapprove of these projects which have such a high negative impact to our community. 24-4

Mr. & Mrs. L.C. Fulton
3271 Hillrose Drive
Rossmoor, CA 90720

Comment Letter 25

From: zombie4me2
To: Tom Oliver
Subject: Lampson project
Date: Sunday, May 19, 2024 1:09:45 PM

IRONSCALES couldn't recognize this email as this is the first time you received an email from this sender zombie4me2@aol.com

I have lived in college park east half my life, my mother still lives there. I now live in rossmoor. This project will make it that much harder to get to and from visiting with my mother. Traffic is already awful on lampson. I agree with all the points made below. This was not well thought out and is only benefiting the builder and creating more property tax for Los alamitos which is not being directly impacted by the new traffic. 25-1

1. The mixed use of density of 20 units per acre is too high to accommodate adequate parking. Spill-over right into College Park East. 25-2

2. AYSO games will be impacted and not be able to continue with limited parking. 25-3

3. Vehicle access to the project site via two driveways on Lampson is not safe.

Ingress and egress are severely limited due to the green belt divider on Lampson.

This is a safety issue for school buses and emergency vehicles. 25-4

4. The project opens space should be converted into a recreational park with playground equipment for neighborhood children.

Without the play area, the kids will be dangerously crossing Lampson via walking or biking to access Heather Park. 25-5

5. Vehicle miles travel will be significantly increased on Lampson, Seal Beach Blvd, and Valley View.

The current **Park and Ride** lot that supports car pooling and van pooling will be eliminated increasing vehicle miles traveled further. Project should providing a **Telework Center** in the project to mitigate travel impacts. 25-6

6. California law requires **solar panels** on new housing and **zero emission electric vehicle charging stations**. Neither are mentioned in the draft plan.

SINCERELY, 25-7

KIM GARTHWAITE

Sent via the Samsung Galaxy S23 Ultra 5G, an AT&T 5G smartphone

DRAFT

Responses to Comment 25

Garthwaite, Kim, dated May 19, 2024.

25-1 The commenter provides introductory remarks, expresses concerns with traffic on Lampson Avenue, and expresses general opposition to the Project. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns. Other specific comments are addressed below.

25-2 The commenter expresses concerns with inadequate parking due to the proposed density and potential spill over into College Park East. Refer to Master Response 2.1.3, *Parking*, for parking concerns.

25-3 The commenter expresses concerns with AYSO operations and parking. Refer to Master Response 2.1.3, *Parking*, for parking concerns.

25-4 The commenter expresses concerns with vehicle access onto the Project site and safety issues for emergency vehicles and school buses. Refer to Master Responses 2.1.2, *Roadway Safety on Lampson Avenue*, and 2.1.7, *Emergency Vehicle Access.*

25-5 The commenter recommends the Project open space be converted into a recreational park. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities.*

25-6 The commenter expresses concerns with VMT, states that the elimination of the current Park and Ride Lot will further increase VMT, and recommends the Project provide a Telework Center. The existing Park-n-Ride that previously occupied the Project site has not been in operation for the past 18 months and when in operation, had limited usage. Additionally, as discussed in 4.15, *Transportation*, of the Draft EIR, the Project would result in significant VMT impacts with the implementation of Mitigation Measure MM 4.15-1. Mitigation Measure MM 4.15-1 includes implementing CAPCOA strategies such as installing broadband infrastructure or other communication technologies that encourages telecommuting and working from home, which would reduce mobile source emission (refer to Page 4.15-19 of the Draft EIR).

25-7 The commenter states that California law requires solar panels on new housing and zero emission electric vehicle charging stations which are not mentioned in the Draft EIR. Contrary to the commenter's assertions, as part of the Project's Project Design Features (PDFs), the Project will include solar photovoltaic with the capability to generate up to 1,229,520 kWh/annually (PDF GHG-1) and the Project's parking areas will be designed to provide electric vehicle (EV) charging stations. At minimum, the number of EV charging stations will equal the Tier 2 Residential Voluntary Measures of the California Green Building Standards Code, Section A4.106.8.2.1 (PDF GHG-4) (refer to Page 4.5-6 to 4.5-7 of the Draft EIR) Thus, no revision to the Draft EIR is required.

DRAFT

Comment Letter 26

From: gizem oksuz gulec
To: toliver@cityoflosalamitos.org
Subject: Lampson project
Date: Sunday, May 19, 2024 11:47:03 AM

Dear Tom Oliver,
Please consider below points and our requests as residents before moving forward with the Lampson project as most of the residents are opposed to this not so well planned development. Below are the most pressing concerns; 26-1

1. The mixed use of density of 20 units per acre is too high to accommodate adequate parking. Spill-over right into College Park East will cause air pollution and accidents in the neighborhoods. 26-2

2. AYSO games will be impacted and not be able to continue with limited parking. This takes away the right of our kids play soccer in our own neighborhoods. 26-3

3. Vehicle access to the project site via two driveways on Lampson is not safe. Ingress and egress are severely limited due to the green belt divider on Lampson. This is a safety issue for school buses and emergency vehicles. 26-4

4. The project opens space should be converted into a recreational park with playground equipment for neighborhood children. Without the play area, the kids will be dangerously crossing Lampson via walking or biking to access Heather Park. 26-5

5. Vehicle miles travel will be significantly increased on Lampson, Seal Beach Blvd, and Valley View.
The current **Park and Ride** lot that supports car pooling and van pooling will be eliminated increasing vehicle miles traveled further. Project should provide a **Telework Center** to mitigate travel impacts. 26-6

6. California law requires **solar panels** on new housing and **zero emission electric vehicle charging stations**. Neither are mentioned in the draft plan. 26-7

7. This area is a lovely and relatively quiet community where most households are families where we feel safe and its not congested by traffic, pollution or too much housing squeezed into a small area. This project causes a HUGE loss to the hundred of families calling College Park East and the surrounding area “home”. **Only a win for the developer.** 26-8

8. Lampson Avenue is not only used by the over 1,700 households in College Park East, but those who live nearby in Rossmoor and Los Al and Garden Grove who go shopping, drop/pick up kids at school and bypass the freeway.

Lampson is only a two lane street with constant use and at times extremely congested. By adding one 246 units and potentially 500 additional car trips daily, Lampson will be a nightmare.

26-9

9. **I am requesting a study on the impact of foot traffic on Lampson** due to the development.
I would also like a **sidewalk added** to the north side of Lampson between Seal Beach Blvd and Tulip Drive. I am concerned that with the **decreased visibilit**y of drivers traveling eastbound on Lampson due to curves in the roadway, as well as the boulders and trees in the center divider, there will be an i**ncrease in pedestrian injuries and fatalities.**

Please stop the Lampson project.
Kindly,

Gizem Gulec

26-10

Responses to Comment 26

Gulec, Gizem, dated May 19, 2024.

26-1 The commenter provides introductory remarks and expresses opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

26-2 The commenter expresses concerns with inadequate parking due to the proposed density, spill over into College Park East air pollution, and accidents. The commenter does not provide any specific comments on the adequacy of the Draft EIR. However, these comments are noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project.

26-3 The commenter expresses concerns with AYSO operation and parking. Refer to Master Response 2.1.3, *Parking*, for parking concerns.

26-4 The commenter expresses concerns with vehicle access onto the Project site and safety issues for emergency vehicles and school buses. Refer to Master Responses 2.1.2, *Roadway Safety on Lampson Avenue*, and 2.1.7, *Emergency Vehicle Access*.

26-5 The commenter recommends the Project open space be converted into a recreational park. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities.*

26-6 The commenter expresses concerns with VMT, states that the elimination of the current Park and Ride Lot will further increase VMT, and recommends the Project provide a Telework Center. The existing Park-n-Ride that previously occupied the Project site has not been in operation for the past 18 months and when in operation had limited usage Additionally, as discussed in 4.15, *Transportation*, of the Draft EIR, the Project would result in significant VMT impacts with the implementation of Mitigation Measure MM 4.15-1. Mitigation Measure MM 4.15-1 includes implementing CAPCOA strategies such as installing broadband infrastructure or other communication technologies that encourages telecommuting and working from home, which would reduce mobile source emission (refer to Page 4.15-19 of the Draft EIR).

26-7 The commenter states that California law requires solar panels on new housing and zero emission electric vehicle charging stations which are not mentioned in the Draft EIR. Contrary to the commenter's assertions, as part of the Project's Project Design Features (PDFs), the Project will include solar photovoltaic with the capability to generate up to 1,229,520 kWh/annually (PDF GHG-1) and the Project's parking areas will be designed to provide electric vehicle (EV) charging stations. At minimum, the number of EV charging stations will

DRAFT

equal the Tier 2 Residential Voluntary Measures of the California Green Building Standards Code, Section A4.106.8.2.1 (PDF GHG-4) (refer to Page 4.5-6 to 4.5-7 of the Draft EIR) Thus, no revision to the Draft EIR is required.

26-8 The commenter expresses concerns with traffic congestion, pollution, and proposed density, and expresses general opposition to the Project. The commenter does not provide any specific comments on the adequacy of the Draft EIR. However, these comments are noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project.

26-9 The commenter expresses concerns with traffic on Lampson Avenue. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns.

26-10 The commenter requests a study on the impact of foot traffic on Lampson Avenue and a sidewalk added to the north side of Lampson between Seal Beach Boulevard and Tulip Drive. A Safety Evaluation was prepared to confirm that the Project would have no safety impacts on public roadways and Project access points (see Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, and *Attachment H* of this Final EIR). The Safety Evaluation further confirms the analysis and determination in the Transportation Section (Section 4.15) of the Draft EIR that the Project would not result in a safety impact or substantially increase hazards due to a geometric design feature. As for the commenter's request for an additional sidewalk on Lampson Avenue between Seal Beach Boulevard and Tulip Drive, the Project would include sidewalks along the Project's frontage on Lampson Avenue and areas beyond the Project site's frontage is not part of the Project boundary or a requirement of the Project Applicant. However, this comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project.

Following up on this email.

Unfortunately, the quality of the EIR work that has been released is very disappointing. There are claims of conflict of interest as well and tremendous safety concerns with respect to the JFTB. These do not appear to be properly addressed.

As noted in my prior email, a proper due diligence on such a controversial development requires these reports independently reviewed and results of those to be shared with the public. Without independent peer review, there is no way to address these concerns.

As a resident of Seal Beach, I trust this route will be followed and concerns of the residents will be addressed.

> It is remarkable to propose this location for such a high density, boilerplate housing project. The idea of state mandating housing is rather ridiculous by itself and most likely won't achieve the results it is intended to, but proposing this right next to a neighborhood with completely different characteristics defies pretty much every urban planning principle in the book. Self inflicted wound is perhaps best way to describe this, very short sighted. Destroying livability is essentially akin to asking those who live there to move somewhere else. Perfect way to diminish the attractiveness of the city in the long term by making life miserable for those who live there.
>
> Clearly this can have a significant impact on our neighborhood and such consequences will be unacceptable and unfair but ultimate losers will also include the city of los Alamitos and city of seal beach.
>
> This project location appears to be ill conceived in many ways. Right next to Arbor and Dog parks, which are two of the busiest recreation areas in the city, with arbor park hosting soccer events every week. There is absolutely no way lampson can handle this added traffic due to this development. There is absolutely no way our parks can handle this additional demand from the new condensed housing. It will create parking issues in our neighborhood, crime will go up. It will be a disaster from urban planning perspective and not only diminish value of our neighborhood but our city as well.

27-1

27-2

27-3

DRAFT

proposed location for the high density housing. This will certainly have a significantly negative impact to its neighbors. And those "neighbors" will likely use every legal tool they have to oppose this development location of which not only defies common sense but likely would not pass any objective criteria/test either. Hopefully, this idea goes away but if not an extensive due dilligence process should be expected and planned. Studies by reputable consultants/experts that investigate and quantify the short/long term impact of the proposed location on its surrounding communities and the city overall should be performed. If these studies are done by the developer, they should be independently peer reviewed by the city and findings should be objectively reconciled. Community members also should be given access to these studies and also an opportunity to perform independent peer reviews, and city should collect their comments. All comments need to should be addressed satisfactorily.

Thank you,

Responses to Comment 27

Gulec, CK, dated June 10, 2024.

27-1 The commenter states that there is a conflict of interest and safety concerns with JFTB. The commenter requests proper due diligence on the Draft EIR and should be independently reviewed and shared to the public. The City staff and the City's environmental consultant conducted peer review of the Draft EIR prior to release of the Draft EIR for public review. Pursuant to Public Resources Code Section 21067 and CEQA Guidelines Article 4 and Section 15367, the City is the Lead Agency under whose authority this EIR has been prepared. "Lead Agency" refers to the public agency that has the principal responsibility for carrying out or approving a project. As documented in the Draft EIR, the EIR represents the independent judgment of the City of Los Alamitos (as the CEQA Lead Agency) and presents an objective evaluation of the physical environmental effects that could result from construction and operation of the proposed 4665 Lampson Avenue Project (see Draft EIR, pp. S-1, 1-1, and 1-4). Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB).*

27-2 The commenter expresses opposition to the Project. The commenter does not provide any specific comments on the adequacy of the Draft EIR. However, these comments are noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project.

27-3 The commenter expresses concerns with impacts to existing parks, traffic on Lampson Avenue, and parking, as well as independent peer review of developer initiated studies. Refer to Master Response 2.1.3, *Parking*, for parking concerns. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities.* Refer to Response to Comment 27-1 regarding independent review.

COMMENT LETTER 28

From: Ann Gunvalsen
To: Tom Oliver
Subject: 4665 Lampson Avenue Project
Date: Thursday, April 25, 2024 5:04:33 PM

Dear Planning Committee,

I am in favor of this new devleopment on Lampson. Nobody wants more traffic etc., but how are we going to control homelessness when people can't afford homes. The only solution is building more projects like this one in all communities.

28-1

Ann Gunvalsen Saks
4273 Candleberry Ave

Responses to Comment 28

Gunvalsen Saks, Ann, dated April 25, 2024.

28-1 The commenter expresses approval for the Project. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and no further response is required.

Los Al Lampson Project-Horning comments.docx;

June 10, 2024

To: Tom Oliver toliver@cityoflosalamitos.org

From: Donald M. Horning

Subject: Comments to the Draft Environmental Impact Report for the proposed Lampson Park Place, LLC Project at 4665 Lampson Ave.

I am a retired environmental professional with 40+ years of experience. I submit the following comments based upon my review of the Draft Environmental Impact Report. My emphasis is primarily on sections noted to have no significant environmental impact where a clear argument to the contrary exists. 29-1

Section 4.8 Environmental Hazards / Hazardous Materials

Threshold E. The Project is located within the Joint Forces Airport land use plan. The report determined that there is a "less than significant impact" with no mitigation required.

Comment: This is a military airport used for training pilots from the US military and from other allied countries. The training involves practice primarily in helicopters and smaller winged aircraft with occasional large cargo planes.

This military airport is regulated primarily by the US Military and not the Federal Aviation Authority. The entire area of the Project site is within a designated Military Airport Safety Zone. Permanent housing is not recommended. 29-2

Threshold F. *Physical Interference* There is a written Military Emergency Response Plan and Emergency Evacuation Plan

Comment: Construction of a permanent housing Project within this Military Airport Safety Zone is clearly not in the best interests of anyone.

Mitigation: At a minimum, measures need to be developed to provide full disclosure to residents of the hazards noted in Thresholds E and F at this site noted by the State Airport Land Use Commission and the National Commission on Military Safety (2020). 29-3

Section 4.9 Hydrology and Water Quality. The report notes a determination of less than significant impact with no mitigation required.

Threshold C Impact of Drainage and Surface Water

Comment: The Project area is underlain with liquefaction soils that can heave more than 10% under wet conditions. The entire Project area along the residential areas across 29-4

DRAFT

Lampson Street (College Park East) are currently subject to significant flooding. 29-4 (CONT.)

Mitigation: The combination of liquefaction soils and clear evidence of decades of nearby flooding during even moderate rain events signals a need for mitigation within the Project area, so as to not repeat what is happening in the nearby existing College Parke East neighborhood.

Surface drainage likewise needs a suitable outlet that directs drainage to unoccupied areas adjacent to the military airport. 29-5

Section 4.10 Land Use Planning. The report notes no significant impact with no mitigation required.

Comment: The Project is clearly located within the Military Airport Safety Zone. This should be a red flag regarding suitableness for permanent housing. 29-6

Section 4.12 Population and Housing. The report indicates less than significant impact with no mitigation required

Comment: This area was never zoned for permanent multifamily housing due to the proximity of the military airport.

Mitigation: Again, at a minimum, measures need to be developed to provide full disclosure to residents of the hazards noted in Sections 4.10 and 4.12 at this site noted by the State Airport Land Use Commission and the National Commission on Military Safety (2020). 29-7

4.13 Public Service. The report indicates less than significant impact to existing Fire, Emergency, and Police Services

Comment: It is foolish to assume that a large high density, multifamily complex has no significant impact to emergency services. The services of Rossmoor, Los Alamitos, Seal Beach and Orange County are already at capacity. The fact that two other proposed projects within the same general area, will certainly have an adverse impact to the current load to response agencies.

Mitigation: Instead of the erroneous assumption that such development would have no impact on response services, there needs to be a documented study to assess current response times and the personnel needed to meet the needs once this project is completed and how the developers can help meet that new need. 29-8

4.15 Transportation. The report indicates a potentially significant impact.

Comment: I agree with this determination but the report offers no suggestion of possible mitigation.

Mitigation: A study by OCTA should be required and funded by the developers to determine specific mitigation measures for the developers to address. 29-9

4.17 Utilities and Service System. The report indicates a less than significant impact.

Comment: This is clearly an erroneous conclusion as the primary sanitary sewer connection will be to the City of Seal Beach sewer line. This line is currently at an approximate 50% 29-10

DRAFT

capacity. The addition of 10-15 % increase to the base capacity by the Project will move close to the recommended 80% maximum flow for the pipe.

In addition, the City of Seal Beach officials have stressed that some sewer lines are over 100 years old and there are critical concerns of an aging sewer system which results in brakes that can lead to pollution violations and fines.

The study of this sewer line in this report only was regarding volume and capacity but did not address the age of the pipe and whether nearing the maximum capacity of an aging pipe would result in catastrophic failure or the probability of stormwater intrusion.

29-10 (CONT.)

Mitigation: Further study is needed to determine the age of the sewer line, the relationship to the proposed increase capacity, the additional increased capacity from the proposed development at Old Ranch, whether the line needs to be replaced to effectively handle the resulting increased capacity of both developments, and if one or both of these developers need to replace this sewer line because a relining of the sewer line reduces the capacity, such that the line would not be able to accommodate both projects hooking into the line.

29-11

I appreciate the opportunity to comment on this Environmental Impact Report.

Donald M. Horning, Resident

Seal Beach

DRAFT

Responses to Comment 29

Horning, Donald, dated June 10, 2024.

29-1 The commenter provides an introduction and provides comments on the Draft EIR which are responded to below.

29-2 The commenter lists Threshold e of Section 4.8, *Hazards and Hazardous Materials*, and states that the entire area of the Project site is within a designated Military Airport Safety Zone and permanent housing is not recommended. Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*.

29-3 The commenter lists Threshold f of Section 4.8, *Hazards and Hazardous Materials* and states that construction of permanent housing within the Military Airport Safety Zone is not in the best interests of anyone. The commenter recommends mitigation measures be developed to provide full disclosure of the hazards noted in Thresholds e and f noted by the State ALUC and National Commission on Military Safety (2020). Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (*JFTB).The proposed mitigation measure is already mandated through regulatory requirements. Per Master Response 2.1.9, ALUC mandates the provision of the State's real estate disclosure regarding buyer and renter notification for new residential land uses within an airport influence area even if these state laws were to be revised or rescinded. The ALUC also requires that signs providing these disclosures and notices be "prominently posted" in real estate sales offices and within the new development depicting overflight areas and helicopter traffic patterns. Buyer awareness is required as part of the City's approval process for the Project. The buyer awareness notification process is built into the real estate disclosure laws of the State to ensure that potential buyers are fully informed before buying a home near an airport if they are sensitive to the types of annoyances or disruptions that may come with the location (refer to Page 4.10-18 of the Draft EIR).

29-4 The commenter lists Threshold c of Section 4.9, *Hydrology and Water Quality*, and states that the Project area is underlain with liquefaction soils that can heave more than 10% under wet conditions. The commenter states the entire Project area along the residential areas across Lampson are currently subject to significant flooding. Section 4.6, Geology and Soils, in the Draft EIR, states that the Project site is located within a liquefaction hazard zone per the State of California Seismic Hazard Zone for liquefaction potential, imposes mitigation measures, and determined that impacts were less than significant after mitigation. Refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, for hydrology concerns.

29-5 The commenter recommends a mitigation measure to provide a suitable outlet that directs drainage to unoccupied areas adjacent to the military airport due to current flooding conditions. Arbor Park is within the JFTB and drains south to the same earthen channel outlet as the Project site. If the proposed flows from the Project are not allowed to outlet to the JFTB at the

DRAFT

southwest corner of the site, proposed flows from the Project would not be allowed to outlet to the JFTB to the north of the site either since they are essentially the same outlet location. In addition, the existing site does not flow in the northerly Arbor Park/ JFTB area as the site drains in the southwesterly direction, therefore directing stormwater runoff to the north would change the historic drainage pattern which can potentially cause downstream flooding. Refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, for hydrology concerns.

29-6 The commenter states that the Project is clearly located within the Military Airport Safety Zone and should be a red flag regarding suitableness for permanent housing. Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*.

29-7 The commenter incorrectly states that the Project site was never zoned for permanent multifamily housing due to the proximity of the military airport. The commenter recommends mitigation measures be developed to provide full disclosure of the hazards noted in Thresholds e and f noted by the State ALUC and National Commission on Military Safety (2020).

The Project site is currently zoned for residential uses (refer the Draft EIR, Section 2.4.2, *Zoning*). Refer to Response to Comment 29-3 and Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)* regarding disclosures required.

29-8 The commenter disagrees with the impact conclusion in Section 4.13, *Public Services* and states that the public services of Rossmoor, Los Alamitos, Seal Beach, and Orange County are already at capacity. The commenter recommends mitigation measures to assess current response times and personnel needed to meet the needs once the Project is completed.

The commenter does not provide evidence that the services of Rossmoor, Los Alamitos, Seal Beach, and Orange County are already at capacity. The Draft EIR includes correspondence from the public service providers for the Project site which demonstrate adequate capacity for the Project (*Technical Appendix L*). As discussed in Section 4.13, *Public Services*, of the Draft EIR, implementation of the Project would increase the overall demand on fire and police protection and emergency services in the City. However, considering the existing firefighting resources available in the City, implementation of the Project is not expected to result in the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impact. Per correspondence with the OCFA, response times would not decrease to necessitate the construction of a new fire station. In order to maintain acceptable service ratios, OCFA uses a fair share approach to mitigate fire service response impacts and facility/equipment needs. Similarly, the increase in potential services needed would not require the construction of a new police station or improvements to the existing station that serves the Project site. Implementation of the Project would result in an increase in calls for service; however, Los Alamitos Police Department has indicated that this increase would not adversely impact Los Alamitos Police Department's existing resources. Therefore, impacts to public services would be less than significant (refer to Page 4.13-9 to 4.13-10).

DRAFT

29-9 The commenter agrees with the impact conclusion for VMT but recommends a study by OCTA to determine specific mitigation measures for the developers to address. The commenter incorrectly states that the Draft EIR offers no suggested mitigation measures. As discussed in Section 4.15, *Transportation*, of the Draft EIR, the Project would result in significant VMT impacts with the implementation of Mitigation Measure MM 4.15-1. Mitigation Measure MM 4.15-1 includes implementing CAPCOA strategies such as coordination with the OCTA whether providing new or re-routing existing transit services to the site would be feasible, as determined by OCTA pursuant to OCTA's standards (refer to Page 4.15-19 of the Draft EIR).

It is also not necessary for the developer to hire OCTA to determine mitigation measures. The Draft EIR was circulated to OCTA for public review and comment, which is the appropriate process for OCTA to suggest mitigation. It should be noted that OCTA did provide a comment letter on the Draft EIR and responses were provided under Comment Letter F, above.

29-10 The commenter disagrees with the impact conclusion in Section 4.17, *Utilities and Service Systems*, of the Draft EIR, and states that the sewer lines are currently at 50% capacity and the Project would lead to near the recommended maximum flow for the sewer pipe. The commenter states that the sewer study addressed the volume and capacity but did not address the age of the pipe and whether nearing the maximum capacity of the sewer pipe would result in catastrophic failure or probability of stormwater intrusion.

A Sanitary Sewer Analysis (*Technical Appendix O* of the Draft EIR) was prepared for the Project and investigates the sewer discharge route for the proposed development to the existing sewer mains of three manholes: 1) Basswood and Aster Street (Manhole A-16); 2) Candleberry Avenue and Aster Street (Manhole A-21); and 3) Elder Avenue (Manhole A-25). As concluded in the Project's Sanitary Sewer Analysis, Basswood and Aster Street [Manhole A-16] is at depth-to-diameter ratio of 0.3013; Candleberry Avenue and Aster Street [Manhole A-21] is at depth-to-diameter ratio of 0.3266; and Elder Avenue [Manhole A-25] is at depth-to-diameter ratio of 0.3958 under existing conditions. As demonstrated, in all cases the sewer pipe system capacity is capable of maintaining an adequate flow well below 50% of its flow depth capacity with the additional flow from the proposed development. Moreover, in order to connect to the City of Seal Beach sanitary sewer service, the Project Applicant would be required to pay connection fees, which may be used by the City of Seal Beach to maintain its existing infrastructure and implement needed improvements.

29-11 The commenter recommends for further study to determine the age of the sewer line, the relationship to the proposed increase capacity, the additional increase capacity from the proposed development at Old Ranch, whether the lines need to be replaced to effectively handle the resulting increased capacity of both developments. Refer to Response to Comment 29-10 regarding the sewer line capacity and maintenance (e.g. age of the sewer line). The Sanitary Sewer Analysis (*Technical Appendix O* of the Draft EIR) evaluated upstream sewer flows in combination with the Project. As indicated in Response to Comment 29-10, the sewer discharge route to the existing sewer mains has adequate capacity to accept the Project's sewer

DRAFT

generation. Old Ranch Country Club would connect to sewer facilities/manholes downstream of the manholes analyzed for the Project. The sewer analysis for Old Ranch Country Club will need to demonstrate adequate sewer capacity along with upstream sewer flows. Additionally, a sewer capacity analysis has been conducted to include all components of the Old Ranch Country Club (see *Attachment L* to this Final EIR). To evaluate a potential increase in the flow depth to pipe diameter ratio (d/D) based on the increase in total demand associated with the Old Ranch Country Club project and after taking into consideration the amount of sewer discharge associated with the Project, C&V Consulting, Inc. applied the increase in total demand from the further refined Old Ranch Country Club Project to manhole (MH) IDs B03-A14 and B01-A13 through B01-A02A. These manholes and their associated pipeline segments are located downstream of the three manholes that were monitored for the Project and as such include the upstream sewer flows anticipated by the Project and currently existing development. The Draft EIR concluded that the proposed flows from the Project, in addition to the observed flows, create a proposed depth of flow that would not impact the existing surrounding sanitary sewer systems, and that the existing sewer system has adequate capacity for the proposed development.

As concluded, the overall d/D is anticipated to be less than 0.5 for the identified segments with the increased demand added to the system. This means that when the sewer flows from the further refined Old Ranch Country Club project are added to the sewer flows from the Project based on the downstream monitored manhole flows, the depth of flow to pipe diameter ratio is less than 50%. This in turn means that even with the Old Ranch Country Club project, the sewer pipe system capacity remains capable of maintaining an adequate flow well below 50% of its flow depth capacity. As such, adequate capacity exists to serve the Project's projected demand in addition to the sewer pipe systems existing commitments, even after taking into account the Old Ranch Country Club project. The anticipated d/D increase determined from the Project plus the Old Ranch Country Club Project is approximately 2.6-3.4%, which is considered negligible.

Comment Letter 30

Concerns Regarding the Lampson Project

Leah N. Huffington <lhuffington@lclark.edu>
Fri 6/7/2024 7:00 AM
To:Tom Oliver <Toliver@cityoflosalamitos.org>

IRONSCALES couldn't recognize this email as this is the first time you received an email from this sender lhuffington@lclark.edu

Dear Tom Oliver,

We hope this message finds you well. We are writing to express our pressing concerns regarding the proposed Lampson Project in Los Alamitos. The project poses significant environmental and infrastructural challenges that will predominantly affect our neighborhoods once the developer departs. While Los Alamitos stands to gain financially, Seal Beach (and Garden Grove) will bear the brunt of increased pollution, strained infrastructure, and potential health risks associated with the development of 246 new complexes and apartments.

As mentioned previously, the proposed development also raises air, water, and noise pollution that could jeopardize the well-being of future and current residents. The noise pollution from military jets and aircraft, in violation of established aircraft codes, threatens to disrupt the peace and quality of life for apartment residents. This decision, though overturned by distant decision-makers, overlooks the direct effects on Seal Beach residents who rightfully deserve a say in matters that could detrimentally affect their community.

30-1

Additionally, the proposed placement of townhomes between heavily fertilized golf courses poses significant health risks, including potential exposure to cancer-causing agents and water contamination from pesticides and toxins. The increased water usage by new residents could worsen contamination of groundwater, surface water, soil, air quality, and ocean health. Moreover, the removal of trees without adequate replacement would exacerbate air pollution, harm the environment, and diminish essential greenery crucial for maintaining air quality, reducing carbon footprint, and preserving wildlife habitats. It's essential to prioritize preserving green spaces, especially as our community grows.

30-2

The strain on local road infrastructure, compounded by dangerous intersections such as Rose and Lampson, poses significant risks to pedestrians and drivers alike. Illegal U-turns on Lampson are frequent, further endangering residents—members of our family have narrowly avoided accidents multiple times. Increased population density will exacerbate traffic congestion and safety concerns, especially during peak hours and events like soccer games. How will Los Alamitos plan to accommodate the increased vehicle miles traveled? Installing one traffic light will do little to prevent the inevitable increase in cars, which will escalate accidents and deaths in the Seal Beach neighborhood.

30-3

Additionally, the Lampson Project not only impacts convenience but also raises safety concerns with increased traffic and parking on residential streets, compromising pedestrian and vehicle safety. The plan appears to narrow streets, reduce potential greenery, and deliberately limit parking so Los Alamitos tenants must park at College Park East (CPE). The builder plans to force Los Alamitos residents to find parking elsewhere, adding strain to CPE infrastructure and streets. The developer aims to have residents utilize Seal Beach parks without contributing, minimizing open park space.

30-4

DRAFT

Essentially, new residents will be forced to use parks and residential parking outside their own development due to property overbuilding, likely leading developers to limit on-site parking to maximize units. As discussed in the Ayres Hotel open house, attempts have even been made to segregate townhome and private residence parking in their development. Ultimately, Seal Beach stands to gain nothing but increased infrastructure costs and overcrowding. The developer benefits from the CPE community without contributing to costs and maintenance by overbuilding and failing to provide enough parking or sufficient open park spaces and recreation areas in the development.

30-4 (CONT.)

The flooding issue along Lampson will worsen with the addition of 246 homes. Seal Beach purchased the Ironwood property to improve drainage to the Old Ranch Country Club golf course. The Lampson project's Draft EIR mentions potential drainage solutions, including undersized exit drainage that might discharge onto Lampson, potentially damaging vehicles and houses along Ironwood Ave. Flooded streets pose risks like structural damage, health hazards from mold and contaminated water, and financial burdens from repairs and property devaluation. Would Los Alamitos be accountable for repairing these damages to Seal Beach? Are there alternative measures to reduce burdens on Seal Beach residents or lower risks on Lampson Road?

30-5

In conclusion, while recognizing the importance of housing development, we urge the committee to reconsider the scale of the Lampson Project. Rather than completely halting the project, we propose a reduction in the number of units (possibly halving the number of units or eliminating the construction of the townhomes or apartments). This adjustment aims not to thwart housing development but rather to safeguard the well-being of Seal Beach residents and mitigate the project's negative repercussions on our community and environment.

We appreciate your attention to these matters and look forward to your thoughtful consideration of the concerns raised.

Thank you for your time.

30-6

DRAFT

Responses to Comment 30

Huffington, Leah, Lidia, and Hector, dated June 07, 2024.

30-1 The commenter expresses concerns with strained infrastructure and potential health risks, along with air, water, and noise pollution from the Project.

Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns. As discussed in Section 4.2, *Air Quality*, of the Draft EIR, the Project would not exceed the South Coast AQMD localized significance thresholds for assessing localized health impacts from criteria air pollutants during construction. Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations during Project construction. Further, Project traffic would not create or result in a CO "hotspot." Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations due to the Project, and impacts would be less than significant (refer to Pages 4.2-26 through 4.2-29 of the Draft EIR).

As discussed in Section 4.9, *Hydrology and Water Quality*, the Project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality during construction or long-term operation. Impacts would be less than significant and no mitigation is required (refer to Pages 4.9-14 through 4.9-16 of the Draft EIR).

As discussed in Section 4.11, *Noise*, of the Draft EIR, the Project would not exceed significance thresholds for construction noise levels, operational noise levels, and off-site traffic noise levels. As such, the Project would not generate substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies. Impacts would be less than significant (refer to Pages 4.11-23 through 4.11-29 of the Draft EIR).

30-2 The commenter expresses concerns with health risks, including potential exposure to cancer-causing agents and water contamination from pesticides and toxins due to the placement of proposed townhomes between heavily fertilized golf courses. The commenter states concerns that increased water usage by new residents could worsen contamination of groundwater, surface water, soil, air quality and ocean health. The commenter expresses concern regarding the removal of trees without adequate replacement stating that this could exacerbate air pollution, and diminish greenery crucial for maintaining air quality, reducing carbon footprint, and preserving wildlife habitats.

The Phase I ESA (*Technical Appendix H1* of the Draft EIR) concluded that no other adjoining/immediately surrounding properties (within 100 feet) were listed on any of the regulatory databases researched or the listings were not associated with the storage or disposal of hazardous wastes including aboveground or underground storage tanks, did not indicate a known chemical release, and did not indicate a property use where the use of hazardous chemicals would be expected. The commenter does not provide evidence that existing and/or

DRAFT

future residences adjacent to the golf course would create a health risk. As discussed in Section 4.8, *Hazards and Hazardous Materials*, of the Draft EIR, Based on a review of regulatory databases and a site reconnaissance, the Project site does not contain any hazards, nor is the Project site affected by any off-site hazards. The Phase I ESA and Limited Phase II ESA identified no RECs, HRECs, or CRECs during the course of the assessment. The potential chemicals of concern detected in the soil in the areas assessed do not indicate that a significant subsurface chemical release occurred. The detected concentrations found during the investigation are considered to be de minimis for the proposed residential redevelopment. Therefore, past and present uses do not represent a significant environmental concern for the Project site. As a result, implementation of the Project would result in less than significant impacts. No mitigation is required (refer to Pages 4.8-16 through 4.8-17 of the Draft EIR).

It is unclear how the increased use of water at the Project would result in air quality impacts. Regarding the potential of groundwater, surface water, and soil contamination impacts due to the increased in water usage, as discussed in Section 4.9, *Hydrology and Water Quality*, of the Draft EIR, the Project Applicant would be required to implement a WQMP to demonstrate compliance with the City's NPDES municipal stormwater permit, and to minimize the release of potential waterborne pollutants, including pollutants of concern for downstream receiving waters. The WQMP is a site-specific post-construction water quality management program designed to address the pollutants of concern of a development project via best management practices (BMPs), implementation of which ensures the on-going protection of the watershed basin (refer to Page 4.9-15 of the Draft EIR).

As discussed in Section 4.17, *Utilities and Service Systems*, of the Draft EIR, based on the water supplies available and the estimated water demand, there are sufficient water supplies available to serve the Project during average, single dry, and multiple dry years. Additionally, the Project is subject to connection and service fees to offset increased demand and assist in facility expansion and service (at the time of need). Accordingly, there would be sufficient water supplies available to serve the Project and impacts would be less than significant. No mitigation is required (refer to Pages 4.17-15 through 4.17-17 of the Draft EIR).

Regarding the removal of trees without adequate replacement, as discussed in Section 4.1, *Aesthetics*, of the Draft EIR, the Project site does contain a number of ornamental trees onsite that will be removed and replaced. As shown in Figure 3- 18, *Landscape Plan*, a total of 441 trees would be planted throughout the Project site (refer to Page 4.1-10 of the Draft EIR).

30-3 The commenter expresses concerns with the strain on local road infrastructure including dangerous intersections such as Rose and Lampson, and the impact on pedestrian safety. The commenter also expresses concern regarding the increased population density and its impact on traffic congestion during peak hours and events such as soccer games. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns. Response 2.1.2, *Roadway Safety on Lampson Avenue* for pedestrian safety concerns.

DRAFT

30-4 The commenter expresses concerns with safety due to increased traffic and parking. The commenter is concerned that the plan narrows streets, reduces greenery and limits parking so that tenants will have to park at College Park East. The commenter expresses concern that tenants will use existing Seal Beach parks for parking and minimize open park space without the developer contributing to costs and maintenance. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns. Response 2.1.2, *Roadway Safety on Lampson Avenue*, for pedestrian safety concerns. Refer to Master Response 2.1.3, *Parking*, for parking concerns. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, for impacts to existing parks.

30-5 The commenter expresses concerns with flooding along Lampson Avenue. The commenter expresses concern that the exit drainage that may discharge to Lampson is undersized and flooding could potentially damage homes and vehicles along Ironwood Avenue. Refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, related to flooding impacts.

30-6 The commenter recommends reconsidering the scale of the Project and reducing the number of units proposed. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

COMMENT LETTER 31

4232 Birchwood Ave

Seal Beach, CA 90740

Tom Oliver
Associate Planner, City of Los Alamitos Planning Department
3191 Katella Avenue Los Alamitos, California 90720

Dear Mr. Oilver

I am very disappointed with the sequence of events by which the plan to develop the property on Lampson Avenue was approved by your city. Two State Agencies (CalTrans Division of Aeronautics and the California Airport Land Use Commission) issued written findings that the Lampson Ave. location was not suitable for residential development due to public safety and health risks as a result of activities at the Joint Forces Training Base that borders the project site. The State Agencies' warnings have been omitted from the Draft Environmental Impact Report prepared by Lampson Consultants. This sounds VERY shady to me.

31-1

Also, Consultants Nick Johnson and T&B Planning employee Les Johnson, are consultants Employed by Lampson LLC, according to the City of Los Alamitos Planning Department-Public Records. This sounds like a clear conflict of interest to me. It sure looks like this project is being pushed through despite these issues, just because the city of Los Alamitos wants to make some money, because they don't give a damn about the neighbors that this project will directly affect, and it's just "win at all costs" for the city of Los Alamitos.

I am sure if the situation were reversed and YOU were the one that was directly impacted by the very questionable actions of another nearby city, you would be upset too, so do you have any sense of empathy and fairness? If the city of Los Alamitos wants to make enemies out of their neighbors, they are doing a very good job of that. Is that what you want? Do you care? Will this somehow come back to bite the city of Los Alamitos in the future?

31-2

Sincerely,

David Kalish

Responses to Comment 31

Kalish, David, dated No date.

31-1 The commenter expresses concerns that the Caltrans and California ALUC findings regarding public safety and health risks were omitted from the Draft EIR. Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*.

31-2 The commenter expresses opposition to the Project and states there is a conflict of interest between consultants and the Project Applicant. Refer to Response to Comment 16-16 related to the preparation of the Draft EIR and conflicts of interest. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

Subject: Comments for Proposed Lampson Project

Mr Oliver, Reference, Draft Enviromental Impact Report (DEIR)

My name is Tom Lasser. I am a retired military aviation officer with no official connection to the Joint Forces Training or Los Alamitos Army Airfield.

Encroachment(noun)- Intrusion on a person's territory, etc, a gradual advance beyond usual or acceptable limits...(Dictionary)

No one questions the ability to development, build housing especially under the current conditions of the State of California. But encroachment is the most critical threat to military bases and airfields in California. Encroachment in all forms is the bane of military installations.

32-1

DRAFT

I did not see a clear sign or evidence of a professional response from the airfield staff at Los Alamitos Army Airfield. I highly suggest the EIR considers the input of the assigned, local aviation subject matter experts from the airfield to better describe flight operations, altitudes, flight patterns, safety concerns including briefings, charts and testimony. This is evidence that needs to be documented.

There will be noise complaints, disagreement issues, quality of life allegations, negative comments and unrest from the residents of this new project which projects into the base, overlooks the airfield and is under the flight patterns.

The first thing people do when they knowingly move adjacent to an airport...*is to complain about the airport*.

Though there may be some documentation, this proposal must still comply to laws, ordinances or regulations. And common-sense facts.

The EIR does not clearly address this enduring topic and effect upon the airfield and I recommend it be researched and documented.

RE: Lampson Project

Valerie Lindow <v.lindow@outlook.com>
Mon 6/10/2024 1:24 PM
To:Tom Oliver <Toliver@cityoflosalamitos.org>

Mr. Oliver,

Our house backs up to the Armed Forces Reserve Center aka "The Base". As you may or may not know… they have not mowed the base in about a year. They are not mowing the property because California in their infinite "wisdom" has declared the base a protected "wetlands" area because the drainage ditch has water in it. Right now the weeds are green because of all the rain… but they are going to dry become a serious fire hazard. Last year on the Fourth of July our neighbors placed Tiki torches on the top of their back fence and lit them… not knowing the danger on the other side of the fence.

33-1

Anything you can do to help this danger would be appreciated.

Thank you,

Valerie Lindow

Responses to Comment 33

Lindow, Valerie, dated June 06, 2024.

33-1 The commenter expresses concerns with current wetland conditions on the JFTB not being mowed and potential fire hazards on the base as this vegetation dries out. The commenter is providing an opinion regarding the existing conditions at JFTB. The Project would not impact wetlands on JFTB or create an increased risk of fire to JFTB. As discussed on Section 4.3, *Biological Resources*, of the Draft EIR, the Project site does not contain any wetlands as defined under the federal CWA or by the State of California (refer to Page 4.3-32 of the Draft EIR). Refer also to *Technical Appendix C2*, Jurisdictional Determination, of the Draft EIR. However, this comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

33-2 The commenter requests new unbiased environmental reports, remediation measures, and to release the peer review report before any decisions are made on the project. Refer to Response to Comment 16-16, above, related to the preparation of the Draft EIR and conflicts of interest.

IRONSCALES couldn't recognize this email as this is the first time you received an email from this sender rchliu98@gmail.com

Hello Mr. Oliver,

I received a copy of draft EIR for the project listed above. I am very concern about this project.

I live in College Park East for over 45 years. I grew up here and went to Pine Junior High School and Los Alamitos High School. I have seen our area change from a small community to a much larger neighborhood with all the traffic congestion on Los Alamitos Blvd to the 405 freeway. This project with such high density, I can just foresee all the issues such as damage on the road with additional cars traveling and additional traffic congestion going on to the freeway. As an architect myself, I have completed numerous projects similar to this in Orange and Ventura Counties. I have seen the final impact of the project where the traffic has increased and the lifestyle changed because of that. Besides the traffic, there is no amenity such as a large green area so the occupants in this community must go elsewhere like Heather Park across the street or into Garden Grove.

34-1

DRAFT

This project is just too densely designed and the traffic, infrastructure and lifestyle will have a negative impact on the surrounding neighborhoods. I hope you can reconsider this project to be less dense and more amenity.

34-1 (CONT.)

Thank You

Robert Liu
3530 Daffodil Circle
Seal Beach, CA. 90740

DRAFT

Responses to Comment 34

Liu, Robert, dated June 09, 2024.

34-1 The commenter expresses concerns about damage to the roads from additional cars and traffic congestion going on to the freeway. The commenter also states concern that there is no amenity such as a large green area, and as such, residents must go to Heather Park or Garden Grove. The commenter states that the project is too densely designed and requests reconsideration of the density and requests the addition of more amenities. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, for concerns regarding on-site amenities.

In regard to the proposed density of the Project, the Project is consistent with the density allowed by the existing zoning. However, this comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

Attached are my comments regarding the proposed Lampson Park Place Project.
I live in College Park East and will be directly affected by the Project which is why I am submitting these comments.
I also work in Los Alamitos and will be affected by the increased traffic along Lampson and Seal Beach Blvd.
Please sincerely consider my comments.

Thank you,
Renee Lloyd

35-1

DRAFT

June 8, 2024

To: City of Los Alamitos

Attn: toliver@cityoflosalamitos.org

RE: Lampson Project DEIR

I have three comments:

1. There are apartments located within the 60 dBA zone in the northwest corner of the development. Windows would need to be shut and AC use only to bring interior noise level w to 45 dBA. In the alternate plan as a Senior community this area is used for parking. Since parking is a shortage in this plan, eliminate the apartments within the 60 dBA zone and use this area for parking.

35-2

2. The design calls for several gates leading to Arbor Park. This park is locked from dusk until dawn by order of JFTB. The only pedestrian gate currently existing is always locked and cannot be accessed. It is only open during the park's use by the soccer organizations. Any gates would need to be approved by JFTB and be locked every evening- most likely by JFTB personnel.

35-3

3. There was no mention in the DEIR of the existing California Redwood trees growing on the site in the species survey. The DEIR describes "mature ornamental trees" and all pictures of the site exclude pictures of the three trees growing at the southwest corner of the site. The site plan shows an apartment building where the Redwood trees are growing which means the trees will be eliminated. The Redwood trees should remain untouched and this area used as a park location, for the following reasons:
   A) California Redwoods are an endangered species.
   B) The trees are 50 years old, with the seedlings planted circa 1973-1976.
   C) These trees were likely planted in celebration of the Bicentennial.
   D) There is a good possibility these trees were grown from seeds carried on board Apollo 14, and be "Moon Trees".
   E) Given C & D, these California Redwoods also have historical value and should be preserved from destruction.

35-4

Thank you for consideration of my comments.

Renee Lloyd

4433 Dogwood Avenue
Seal Beach, CA 90740

DRAFT

Responses to Comment 35

Lloyd, Renee, dated June 08, 2024.

35-1 The commenter attaches comments which are responded to below and expresses concerns with increased traffic along Lampson and Seal Beach Boulevard. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns.

35-2 The commenter expresses concerns with the apartments located within the 60 dBA zone in the northwest corner of the Project and recommends eliminating the apartments in this zone and using the area for parking. Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*, for noise concerns related to proximity to the JFTB.

35-3 The commenter states that any gates proposed would need to be approved by JFTB and be locked every evening. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

35-4 The commenter incorrectly states that there was no mention in the Draft EIR of existing California redwood trees growing at the southwest corner of the site. The commenter requests the redwood trees remain untouched due to their endangered species status, age, and historical value. The commenter proposes this area be used as a park location.

As discussed in Section 4.3, *Biological Resources*, of the Draft EIR, coast redwood (*Sequoia sempervirens*) is listed as one of the tree types under existing conditions (refer to Page 4.3-3 of the Draft EIR). Refer to Response to Comment 11-22 above regarding the redwood trees onsite; the existing redwood trees are not considered endangered species nor are they designated a historical resource. The commenter's suggestion for the park is noted and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project.

36-1

May 21, 2024

Mr. Tom Oliver, Associate Planner
City of Los Alamitos
Planning Department
3191 Katella Avenue
Los Alamitos, California 90720

Subject: Review Comments on the Draft Environmental Impact Report (DEIR) for the 4665 Lampson Avenue Project

Dear Mr. Oliver:

Thank you for the opportunity to review the DEIR for the 4665 Lampson Avenue Project in the City of Los Alamitos. I am a graduate of Los Alamitos High School and have lived in the College Park East neighborhood of Seal Beach for 36 years. I believe that the proposed housing project will have serious environmental and safety impacts that need to be further addressed before the project is approved. Please see my specific comments below.

36-2

Sincerely,

Herbert Lundblad
4200 Ironwood Avenue
Seal Beach, California 90740

1. <u>On-site School Bus Stop</u>. There appears to be no plan to construct an onsite school bus stop at the project site. The DEIR estimates that 647 people will be living at the project site. A large percentage of this population will be school-aged children attending elementary, middle, and high schools in the Los Alamitos Unified School District. The relatively long distance to these schools from the project site will require many children to take school buses to and from school. The lack of a school bus stop at the project location will force many of these children to cross Lampson Avenue to utilize existing school bus stops in College Park East (CPE). Lampson Avenue is a dangerous, high-speed, four-lane highway with a history of numerous fatal collisions. Forcing children to cross this highway to and from school (even with the protection of crossing guards) is a serious safety risk.

The lack of a safe process for school children to access a bus stop violates goals and policies in the Los Alamitos General Plan. As presented on DEIR page 4.15-10, Policy 1.2 (Transportation Decisions) states that "Decisions should balance the comfort, convenience, and safety of pedestrians, bicyclists, and motorists of all ages and abilities." The decision to not construct a school bus stop at the project site does not comply with this policy and instead endangers the safety of school children on their way to and from school. In addition, the intent of Goal 3 (DEIR page 4.15-11) is "Safe and convenient access to schools and parks that promote healthy and active living." Forcing children to cross Lampson Avenue is not safe and convenient and is in fact very dangerous and inconvenient.

36-3

DRAFT

It is strongly recommended that an on-site school bus stop be installed at the project site to protect the health and safety of children commuting to Los Alamitos schools. The bus stop should be designed so that it does not block traffic and bike lanes on Lampson Avenue.

36-3 (CONT.)

2. On-Site Parking. As described by the Onsite Parking Analysis in the DEIR, the proposed project would violate the onsite parking requirements of both the City of Los Alamitos and the City of Seal Beach. The proposed project includes a total of 557 parking spots, which is 122 parking spots fewer than what is required by Los Alamitos city ordinance. The proposed project provides 98 parking spots for the affordable housing portion of the project. This is 20 parking spots below what is required by Seal Beach city ordinance for affordable housing projects. Assuming that the parking ordinances used by Los Alamitos and Seal Beach are based on sound justification, there will be a severe parking shortage at the proposed project. This shortage will result in serious safety and environmental impacts for project residents and nearby residents in CPE.

There is no on-street parking on Lampson Avenue. All overflow parking will occur in the residential areas of CPE which are across Lampson Avenue from the proposed project. This will require those using off-site parking, whether project residents or visitors to the project, to walk across the four traffic lanes of Lampson Avenue to access the project. Many of these crossings will be during night time hours after on-site parking has filled. The speed limit on Lampson Avenue is 45 mph with many drivers exceeding this limit. The DEIR has not addressed this serious safety issue. How many people will be crossing Lampson Avenue during night time hours? How many accidents will result? How many pedestrian fatalities will result? In addition, what are the safety and noise impacts to CPE residents caused by project residents parking their cars on CPE streets during night time hours?

36-4

The DEIR states that "the project's proposed parking supply is appropriate to serve the needs of the development." This conclusion is based solely on comparing the number of proposed parking spots to the number recommended by a national parking publication. The Onsite Parking Analysis does not include an empirical analysis of actual parking issues caused by similar-sized projects in Orange County or Southern California. We are all familiar with the terrible off-site parking congestion that occurs around many apartment complexes in our area. The DEIR should tell us why this project would be any different by using empirical comparisons to similar existing housing developments.

3. Drainage of Storm Water from Project Site. It is estimated by the DEIR that the proposed project will increase the impervious surface coverage at the site by 48% resulting in a significant increase in storm water runoff from the site. The proposed method for removing storm water from the project site is to direct it into an existing drainage system on the adjacent Joint Forces Training Base (JFTB). This antiquated drainage system consists of earthen ditches and pipes that eventually drain to the Old Ranch golf course. The DEIR states that the project does not yet have JFTB permission to use this antiquated system, however, and that the project is proposing that it be allowed to pump storm water runoff directly onto Lampson Avenue as an alternative. As proposed, this large quantity of water would flow to the west on the north side of Lampson Avenue for an estimated 2,200 feet until it flows into an existing storm drain and onto the Old Ranch golf course. The preliminary hydrology study included in the DEIR estimates that this alternative drainage option would result in flooding of the bike lane and one lane of traffic on this section of Lampson Avenue during heavy rain events. This would create a dangerous situation for traffic traveling west on Lampson Avenue.

36-5

DRAFT

It is recommended that the project be amended to include an adequate off-site storm water drainage system that provides a long-term solution for removing storm water from the site. Possible options include installation of a proper drainage system under Lampson Avenue that flows to the east to the large Bolsa Chica flood control channel, or to the west to Old Ranch golf course. Another option is to reach an agreement with the Navy golf course that abuts the project to allow drainage to this nearby area. Pumping of storm waters onto Lampson Avenue creates a safety hazard and should not be allowed under any circumstances.

36-5 (CONT.)

4. Lower- Density Housing Project Alternative. The DEIR includes three development alternatives to the proposed project: a) Project with higher housing density, b) Project with the same housing density but with senior housing rather that low-come housing, and c) Project with no housing at all. The DEIR does not include a lower housing density alternative. Such an alternative would have fewer environmental impacts than the proposed project and would be a preferred alternative.

It is recommended that the DEIR be revised to include a project alternative that consists of a lower number of housing units. Such an alternative would mitigate many of the environmental and safety impacts resulting from the proposed project.

36-6

5. Location for Low-Income Housing. It would be difficult to choose a worse location for a low-income housing project than the proposed location. This location is essentially an island on Lampson Avenue with no connection to public transportation and no proximity to supermarkets or other stores and services. Low-income residents will be forced to use private transportation to access work and neighborhood services. This will further aggravate the serious parking shortage at the proposed site.

36-7

DRAFT

Responses to Comment 36

Lundblad, Herbert, dated May 22, 2024.

36-1 The commenter attaches comments on the Draft EIR which are responded to below.

36-2 The commenter expresses gratitude for the opportunity to review the Draft EIR and provides comments that are responded to below.

36-3 The commenter expresses concerns about the lack of an on-site school bus stop and states that children would have to cross Lampson Avenue to utilize existing stops at College Park East. The commenter asserts that the lack of a safe bus stop violates the City's General Plan and is dangerous and inconvenient. The commenter recommends that a bus stop be installed at the Project site to protect the health and safety of children commuting.

No bus stop is proposed at the Project site. It is anticipated that children using the school bus to get to school would cross at Heather Street and use the existing school bus stop at Heather Park which serves the following schools: McGaugh Elementary, Weaver Elementary, McAuliffe Middle, and Los Alamitos Hight School. Refer also to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for pedestrian safety concerns.

36-4 The commenter expresses concerns with on-site parking and pedestrian safety. The commenter opines that the Project violates the onsite parking requirements of the cities of Los Alamitos and Seal Beach and results in a severe parking shortage. The commenter expresses concern that residents utilizing off-site parking must cross Lampson Avenue and states that the DEIR does not address this safety issue. The commenter questions what the safety and noise impacts are to College Park East residents caused by residents of the Project parking vehicles on College Park East streets during nighttime hours. The commenter suggests the Draft EIR use empirical comparisons with similar existing housing developments for the parking analysis. Refer to Master Response 2.1.3, *Parking*, for parking concerns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue,* for pedestrian safety concerns.

36-5 The commenter expresses concerns with drainage of stormwater from the Project site and states that the alternative drainage option would result in flooding of the bike lane and one lane of traffic on Lampson Avenue, which would create a safety concern for those traveling west on Lampson Avenue. The commenter recommends that the Project be amended to include an adequate off-site storm water drainage system that provides a long-term solution for removing storm water from the site and suggests two possible options. Refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, for hydrology concerns.

36-6 The commenter recommends the Draft EIR be revised to include a Project alternative that consists of a lower housing density alternative and states that this would have fewer environmental impacts and would be the preferred alternative.

DRAFT

Section 6.3.3 of the Draft EIR analyzed a reduced housing density alternative (refer to Page 6-6 of the Draft EIR), which was considered and rejected from further analysis because it would not substantially reduce the Project's environmental impacts. Although a Reduced Density Alternative would have the ability to partially meet most of the Project objectives, it was rejected from further consideration because it would not avoid or substantially lessen the Project's significant impacts. More specifically, this alternative would not avoid the Project's significant and unavoidable VMT impacts. VMT impacts are evaluated based on VMT per capita (population). Although the Reduced Density Alternative would reduce vehicle trips and VMT, it would also result in a proportional reduction in population, resulting in substantially the same VMT per capita and VMT impact as compared to the Project. In other words, because both the number of trips and the population generated would be proportionally reduced, the ultimate VMT calculation would be the same as the Project.

In addition, as evaluated in this EIR, the Project's significant impacts related to biological resources, cultural resources, geology and soils, and tribal cultural resources, would be less than significant with implementation of mitigation measures. The Reduced Density Alternative would have similar impacts to the Project related to biological resources, cultural resources, geology and soils, and tribal cultural resource because the development area under the Reduced Density Alternative would be the same. Because the Reduced Density Alternative would not avoid or substantially lessen the Project's significant and unavoidable VMT impacts, it was rejected from further consideration (refer to Page 6-6 of the Draft EIR).

36-7 The commenter expresses concerns with the Project location due to lack of public transportation and the proximity to supermarkets or other stores and services for the low-income housing units.

The nearest OCTA bus stop from the Project site is Route 123, approximately 1.2 miles at the intersection of Valley View Street and Lampson Avenue.

As discussed in 4.15, *Transportation*, of the Draft EIR, implementation of Mitigation Measure MM 4.15-1 would be required to reduce trip distances per resident by providing pedestrian and bicycle improvements; coordinating with the OCTA whether providing new or re-routing existing transit services to the site would be feasible; installation of broadband infrastructure or other communication technologies that encourages telecommuting and working from home (refer to Page 4.15-19 of the Draft EIR).

Subject: Lampson Project
Date: Monday, April 29, 2024 10:49:15 AM
Attachments: Outlook-jku4vcfi.jpg

Dear Mr. Oliver,

I am writing to add my voice to the chorus of opposition to the Lampson Project. While I understand the need to build more housing, I feel this project is way too ambitious for the area. When two state agencies (CalTrans Division of Aeronautics and California Airport Land Use Commision) find that the location is not suitable for residential development, it's incumbent on the City to heed the warnings of public safety and heath risks resulting from activities at the JFTB. There are already so many traffic accidents in this part of Lampson, I shudder to think of the impact of still more traffic. I would not object to a smaller-scale development on that land (although it pains me to imagine the loss of those lovely sycamores lining West Ed), but the project as proposed strikes me as a terrible overreach. Furthermore, should the project go through as planned, I predict that many of the residents in this part of College Park East and Parkewood would drastically reduce their patronage of businesses on Seal Beach Boulevard because of traffic concerns.

37-1

37-2

37-3

Thank you for paying attention to the concerns of your constituents.
Sincerely,
Tamara Madison

Responses to Comment 37

Madison, Tamara, dated April 29, 2024.

37-1 The commenter expresses general opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

37-2 The commenter states that two state agencies Caltrans Division of Aeronautics and California Airport Land Use Commission had found the location of the Project site not suitable for residential development and expresses concern with public safety and health risk associated with the Project's proximity to JTFB. Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*. Thus, no further response is required.

37-3 The commenter expresses concern with traffic due to past traffic accidents on Lampson Avenue and expresses support for a smaller-scale development on the Project site. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, related to traffic collision in the Project area.

comment on draft EIR for Lampson Park Place proposal

N Manzo <nmanzo333@gmail.com>
Mon 6/10/2024 4:41 PM
To:Tom Oliver <Toliver@cityoflosalamitos.org>

Dear Mr. Oliver,

I hope you are having a good day.

I was trying to get a look at the reports regarding the Lampson Avenue project. (I regret that I was not able to get to this earlier. It is a busy time.)

Just so you know, it is difficult to read these documents. I use a tablet most of the time, and somehow, I could only use about half the screen. (Of course, I understand that this is not your fault personally - perhaps this is some kind of new software.)

As that may be, I am *very concerned* about this project. 38-1

Lampson Avenue is the only way I can drive my family members to the Emergency Room on Katella Avenue. (I have had to do this multiple times already - and I know we are very lucky to have the hospital relatively close.)

If you have ever had to make such a journey, then you will know how uncomfortable it is - and how any additional delay just adds to the worry.

I am sure that in the reports I wasn't able to effectively access, it will say something about how burdening our access to emergency medical care is regrettable but necessary (to someone). (I tried to do a search for "mitigation" but that did not work. I used the search box right on the page. Command + F did not work either. I am not a traffic engineer, but I was interested to see what the report would say on the subject. Perhaps I just didn't wait long enough - sometimes with large documents, the search takes a while to work. I don't know why.) 38-2

Adding hundreds more housing units to an already impacted road does not seem wise. (In fact, I don't know that this is a good place to put new residents at all. It is hard to access already.)

If the report says that this development will not cause any serious traffic problems, then I respectfully disagree. We already have traffic problems in this area, and it can be a life-or-death matter.

Even on an ordinary day, there is too much traffic and on occasion, I have even seen other drivers behave badly on Lampson - this never used to happen here.

Further, as I understand, this development will also be too close to an airfield flight path. This is another excellent reason for this project to be rejected. 38-3

Thank you for listening.

Sincerely,
N Manzo

Comment Letter 39

From: Tom Maulhardt
To: Tom Oliver
Subject: DEIR Lampson Project
Date: Monday, April 29, 2024 2:56:32 PM

Mr Oliver

The Lampson project, if passed and implemented, would adversely affect the residents of Seal Beach in College Park East and Garden Grove. The addition of these housing units would greatly increase the traffic and congestion on Lampson Avenue and change the character of the area. Public expenditures on infrastructure (sewers, water, utilities, etc.) and other services would be considerable and unjustified. 39-1

A particularly irritating factor is that this project is nowhere near any Los Alamitos housing, so that city's citizens will not be directly affected by the above-mentioned impacts.

I think the project should be rejected or drastically reduced in scope. 39-2

Sincerely,

Thomas Maulhardt
College Park East resident

Responses to Comment 39

Maulhardt, Thomas, dated April 29, 2024.

39-1 The commenter expresses concern with the increase in traffic and congestion on Lampson Avenue, changes to the character of the area, and public expenditures on infrastructure (sewers, water, utilities, etc.) and other services. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic congestion concerns. As discussed in Section 4.1, *Aesthetics*, of the Draft EIR, provides an analysis of the Project's aesthetic impacts. The Project proposes a number of site design, architectural, and landscaping elements that would be consistent with the surrounding residential land uses. Moreover, as discussed in Section 4.13, *Utilities and Service Systems*, of the Draft EIR, there is sufficient capacity in utility services to serve the Project site.

39-2 The commenter states that the Project is not located in an area that will have an impact on City of Los Alamitos residents and requests that the Project be rejected or drastically reduced in scope. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

Mr Oliver

The 4665 Lampson Avenue Project, if passed and implemented, would adversely affect the residents of Seal Beach in College Park East and Garden Grove. The addition of these housing units would greatly increase the traffic and congestion on Lampson Avenue and change the character of the area. We have lived in our home in College Park East for 50 years, and the traffic on Lampson has considerably changed for the worse in the last few years. Public expenditures on infrastructure (sewers, water, utilities, etc.) and other services would be considerable and unjustified. 40-1

A particularly sad situation is that this project is not going to affect a great number of Los Alamitos housing units, so that city's citizens will not be directly affected by the above-mentioned impacts.

I think the project should be rejected or drastically reduced in scope. 40-2

To: Tom Oliver <Toliver@cityoflosalamitos.org>
Subject: Lampson Project

I have lived off Lampson Ave. for most of my 72 years. I have watched our community grow and change with enthusiasm and support. However, the proposed building project of multiple units on Lampson is too much. Traffic is already a serious problem. parking for the 1000 units will overflow into the neighborhoods. And local shopping will be overcrowded. It is time these huge, greedy developers move on. Our community has consistently fought them. 41-2

Responses to Comment 41

Maurer, Robbi, dated April 30, 2024.

41-1 The commenter expresses gratitude to the City's Associate Planner and frustration on low participation from the public. It should be noted that several residents provided comments throughout the CEQA process. Comments received during the NOP and Scoping Meeting are presented on Tables 1-1 and 1-2 of the Draft EIR; additionally, 74 residents submitted comments on the Draft EIR, which are included and responded to in this Final EIR. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

41-2 The commenter expresses concern with traffic, parking, and overcrowding at local shopping. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic congestion concerns and 2.1.3, *Parking*, for parking impacts. Overcrowding at local shopping is not an environmental issue analyzed under CEQA; however, this comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. Thus, no further response is required.

Regarding 4665 Lampson Ave,
Draft Enviromental Impact Report Dated April 24, 2024

Mr. Oliver,
In response to the Notice seeking Comments to the Draft Environmental Report for 4665 Lampson Ave, please see below for our comments and questions:

Public Health - Of concern, is near road exposures to tire and brake wear. I am attaching a study from US Environmental Protection Agency, CRC Mobile Source Air Toxics Workshop, dated February 14, 2024. The report notes, "Tire and/or brake wear contains many toxic pollutants including metals, PAHs, microplastics, nanomaterials, and the emerging compounds of concerns 6PPD/6PPD quinone". Tire wear particles (TWPs) can be coarse, fine and ultrafine and thus transport hundreds of meters to/ from the roads." The California Air Resources Board report attached notes "brake-ware PM, which is currently the largest source of primary PM from non-road vehicles, is predicted to increase over time". 42-1

The reports note that non-exhaust PM can deposit in soils near roadsides or transport downwind. Road dust from tire and brake-wear can be absorbed into plants, gardens, and lawns. The roadway dust is then carried by wind and stormwater run-off. College Park East and Old Ranch Country Club have stormwater flooding issues. Since we are flooding, that would suggest we are already at drain capacity and cannot handle the Lampson Park Place project. 42-2

The EIR which was used for the Old Ranch Town Center Development (from the 1990's) stated that the corner of Lampson and Seal Beach Blvd were at capacity post the completion of that project. Indeed, the traffic builds up at that corner and at times, the line of cars extends to more than 40 cars staging east on Lampson. What mitigation will be completed to reduce the added congestion on the corner and Lampson as a whole? As a 40-year 1st responder, without a doubt, this effects emergency vehicle response times; when seconds matter, lives are at stake. Where are the mapping response times needed for an accurate evaluation?
College Park East housing is not on a grid system, which in itself, causes slower response times, and the streets are not through streets (which also increases responses times). The increased traffic from the proposed

42-3

42-4

DRAFT

development must be mapped in conjunction with existing development in order to evaluate the response times and therefore the safety of the current residents. Existing condition as it relates to our Lampson concrete medians with the bolders and trees, firetrucks cannot cross over the medians. The firetrucks would be potentially stuck in traffic. This needs to be taken into consideration during the mapping of emergency responses. As College Park East is an aging community, medical emergency responses are expected to increase and quick response times are very important.

42-4 (CONT.)

Further, the EIR from the 1990's also stated that post that development, we were at 100-year flood capacity. Even with the mitigation implemented during that development, during 2023/2024, College Park East had significant flooding. As the proposed project would be concrete instead of grassland that was used as mitigation to absorb some of the rain, please explain the mitigation measures to be used to increase the rain runoff capacity which is being displaced by this project. The Lampson Park Place project must be able to contain stormwater and not allow it to freely flow back across Lampson Street into College Park East.

42-5

Safety - To our knowledge, what was not mentioned, was the high-pressure gas line that runs along Lampson Ave. Has that been removed? If not, what are the plans to mitigate this hazard? If that line were to burst, say during a 7-magnitude earthquake, there would be significant fires along Lampson Ave. College Park East residents have only 5 exits. With approximately 1700 homes and 2800 residents, the necessary quick evacuation is already a challenge. If you are adding even more cars and people across from College Park East, which also only has Lampson in which to evacuate, what is the mitigation plan to quickly move even more vehicles? Has mapping been completed to show the impact of increased development?

42-6

Although I searched the DEIR for data regarding the capacity needed for emergency water and daily usage water, it doesn't seem to be included in the DEIR. With the added development, do the current fire hydrants meet the required fire flow?

42-7

Thank you in advance for your responses.

DRAFT

,
Wishing you Many Blessings,
Donna Barron-McGuire
562-881-0793

"You can't live a perfect day without doing something for someone who will never be able to repay you."

John Wooden

Responses to Comment 42

McGuire, Donna and Dean, dated June 10, 2024.

42-1 The commenter expresses concern related to public health from tire and brake wear. As discussed in the Project's Air Quality Impact Analysis (*Technical Appendix B1* to the Draft EIR), mobile source emissions include fugitive dust related to vehicle travel. Vehicles traveling on paved roads would be a source of fugitive emissions the generation of road dust inclusive of brake and tire wear particulates. The emissions estimates for travel on paved roads were considered in the air quality analysis (refer to Section 3.5.3 of *Technical Appendix B1* of the Draft EIR). The emissions estimates for travel on paved roads were calculated using CalEEMod. As discussed in Section 4.2, *Air Quality*, of the Draft EIR, construction and operation of the Project would not exceed criteria pollutant thresholds established by the South Coast AQMD for emissions of any criteria pollutant and impacts would be less than significant (refer to Page 4.2-23 to 4.2-25 of the Draft EIR).

42-2 The commenter expresses concerns related to road dust and flooding and storm drain capacity. Refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, for storm drainage impacts and Response to Comment 42-1 above related to air quality impacts from tire and brake wear.

42-3 The commenter references an EIR conducted for the Old Ranch Town Center Development Project from the 1990s which stated that the intersection of Lampson Avenue and Seal Beach Boulevard will be at capacity at Project buildout. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic congestion concerns. The updated Traffic Analysis (*Attachment G* of this Final EIR) identifies the Project's contribution to a deficiency at Seal Beach Boulevard and Lampson Avenue. The recommended improvement is to restripe the number 2 westbound left as a shared left-right turn lane, which will improve the level of service (see Table 6-3 of *Attachment G* of this Final EIR). The Project Applicant would be required to pay fair share fees towards this improvement.

42-4 The commenter expresses concern with emergency response times due to the increase in traffic. As discussed in Section 4.13, *Public Services*, of the Draft EIR, per correspondence with the Orange County Fire Authority (OCFA), there are currently no deficiencies in fire protection service provided to the Project site. Additionally, response times would not decrease or necessitate the construction of a new fire station. To maintain acceptable service ratios, OCFA uses a fair share approach to mitigate fire service response impacts and facility/equipment needs (refer to Page 4.13-9 of the Draft EIR).

42-5 The commenter expresses concern with flooding and stormwater capacity at the Project site. Refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*. Thus, no further response is required.

DRAFT

42-6 The commenter expresses concern with safety related to the existing pressure gas line that runs along Lampson Avenue. Construction of the Project would not involve trenching that would affect the existing gas line. In the alternatives considered for the proposed drainage design, constructing storm drain pipe under Lampson Avenue to west and east was found to be infeasible due to conflicts with existing utilities (refer to Page 4.9-21 of the Draft EIR).

42-7 The commenter inquires about capacity for emergency water and fire hydrants meeting the required fire flow. Figure 4.8-3, *Fire Master Plan*, of the Draft EIR, depicts the location of the proposed fire hydrants that will serve the Project site. Additionally, as discussed in Section 4.13, *Public Services*, of the Draft EIR, the Project would be required to comply with all applicable fire code and ordinances for construction, access, water mains, fire flows, and fire hydrants. For example, site plans would be submitted to OCFA to ensure compliance with OCFA standard conditions, including fire flow requirement based upon the tenant type, building size, and building type. Access to and around structures would meet OCFA and CFC requirements. Compliance with OCFA requirements would ensure adequate provision of resources such as access, water mains, fire flows, and fire hydrants.

To:Tom Oliver <Toliver@cityoflosalamitos.org>
Tom Oliver, Associate Planner
toliver@cityoflosalamitos.org

Re: Draft Environmental Impact Report (DEIR) for the 4665 Lampson Avenue Project (Project)

Dear Mr. Oliver:

I was the Seal Beach District 4 City Council Member from 2008 through 2016 and I offer the comments below regarding the DEIR.

Arbor Park: The City of Seal Beach obtained a grant from the US Army in 1981 for the park and in 2003 that grant was extended to December 31, 2028. I know of no reason why the City of Seal Beach will not request the grant be extended again. The City of Los Alamitos has never been involved in any way with the park since its inception in 1981.

It is nice the Project offers a ten foot easement to accommodate AYSO parking, however, that is a Joint Forces Training Base (JFTB) installation security perimeter fence the Project proposes to move. Without giving the land to the Federal government, it is unlikely they would want to let the Project move the fence. I believe the 10 feet would better serve the Project by providing additional parking and recreation. I am sure the City of Seal Beach would welcome a donation from the Project to expand the parking in the park, subject to approval of JFTB. Plus, there is probably an option to use some of the grass area for parking. The pedestrian gate at the park was not approved by JFTB or the City of Seal Beach, but it was allowed to remain as long as it was locked when the park was not in use by AYSO. The perimeter fence is required by the U.S. Army for the security of the JFTB. Pedestrian gates are not permitted and the current pedestrian gate should be removed when the Project construction begins, only the drive-in-gate to the park should remain.

City of Los Alamitos Municipal Code does not have jurisdiction over Federal land where the park is located. The park modification are subject to JFTB approval and JFTB has approved all of the City of Seal Beach improvements over the years, including the construction of the parking lot.

43-1

Storm Water: The impervious surface of the Project is over 100% greater than post-Project conditions, which means the Project will create double the amount of storm water. Currently, storm water from the existing Project site flows to the Join Forces Training Base (JFTB). Before this Project is approved there must be a permanent agreement with the JFTB for all Project storm water to flow to JFTB. Otherwise, all storm water must be stored at the Project property until it can be released onto Lampson Avenue in a manner as not to add to the flooding in College Park East (CPE) of Seal Beach, even if this means the Project must be downsized to satisfy this requirement.

Storm water on Lampson Avenue flows into CPE at Heather Street and Candleberry Avenue. Thus, storm water from the Project onto Lampson during significant rain will add to potential flooding or the flooding of Ironwood Avenue and contiguous streets to Ironwood Avenue.

43-2

Traffic: The Project traffic analysis failed to consider that Old Ranch Country Club's proposal also includes 51 senior housing units, a 150 room hotel, and a large medical facility, all of which are located on Lampson Avenue.

43-3

DRAFT

Affordable Housing/ Senior Housing Alternatives: Residents for either alternative that do not have their own transportation will be faced with very difficult situations to contend with due to the location of the Project. Public transportation is just over a mile away from Project and grocery stores are just under two miles away. There is limited opportunity for employment within one mile of the Project. The plan to provide an electric vehicle for use by Affordable Housing residents for transportation to local grocery stores would seem to be more of a problem than a solution. The DEIR does not address possible transportation needs of Senior Housing residents.

43-4

Parking: Since 10 feet of Project property likely cannot be combined with existing Arbor Park Federal land in the manner proposed by the Project, it could be used to provide additional parking for the benefit of Project residents.

Please confirm receipt of this email today, June 10, 2024.

Regards,

43-5

Gary Miller

DRAFT

Responses to Comment 43

Miller, Gary, dated June 10, 2024.

43-1 The commenter provides information on the history of Arbor Park's ownership and states that it is unlikely that the JFTB would allow the Project to move the fence for the 10-foot dedication. The commenter suggests that the 10-foot dedication be used for more parking and recreation for the Project and the exiting pedestrian gate be removed during Project construction since it was not approved by the JFTB or City of Seal Beach. These comments do not raise CEQA related issues; however, these comments are noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

43-2 The commenter states that there should be an agreement with JFTB for the Project stormwater to flow onto the JFTB or it must be stored onsite until it can be released onto Lampson Avenue. Stormwater flow onto JFTB will need to be approved by JFTB. The commenter also expresses flooding due to storm drain during significant rain events. Refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, for the proposed storm drainage systems and stormwater runoff impacts.

43-3 The commenter asserts that the Project's Traffic Analysis failed to consider the Old Ranch Country Club. Refer to Response to Comment D-9 regarding inclusion of Old Ranch Country Club in the Project's cumulative impact analysis.

43-4 The commenter expresses concern that the Draft EIR does not address transportation needs, such as public transit, for residents of affordable housing or senior housing alternative. The Draft EIR correctly identifies the nearest transit options near the Project site. The future residents' specific transportation needs would be determined by the future tenant when deciding whether to reside at the Project site. The transportation analysis in the Draft EIR followed the required methodology in accordance with the State CEQA Guidelines and City procedures, which included City of Los Alamitos' requirements and the City of Seal Beach's Transportation Analysis Guidelines. It should be noted that implementation of Mitigation Measure MM 4.15-1 includes implementing CAPCOA strategies such as coordination with the OCTA to determine whether providing new or re-routing existing transit services to the site would be feasible, as determined by OCTA pursuant to OCTA's standards (refer to Page 4.15-19 of the Draft EIR).

43-5 The commenter states since the 10-foot dedication would most likely not combine with the existing Arbor Park Federal land in the manner proposed by the Project, it should be used to provide additional parking for the benefit of Project residents. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues

DRAFT

concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

Subject: Lampson Avenue Project
Date: Wednesday, May 1, 2024 2:33:46 PM

Thank you for the notice of the DEIR.
I am a resident of College Park East and am very concerned about the community, societal and environmental implications of destroying green park space to put in more living spaces without plans for the functionality and well being of the people who will be living there (and here).
Thanks,
Suzy Mokhtari

Responses to Comment 44

Mokhtari, Suzy, dated May 1, 2024.

44-1 The commenter expresses concerns about the community, societal and environmental implications of replacing green park space to put in more living spaces without plans for the functionality and well-being of the people who will be living there. The Project site is currently not used as a park space. As shown in Figure 3-3, *Aerial Photograph*, of the Draft EIR, the Project site is currently developed with a vacant two-story, 88,000 sf commercial office building located centrally within the Project site and surface parking lot located within the western portion of the Project site. As such, the Project would not replace or destroy any green park space. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

DRAFT

Comment Letter 45

From: Ed V. Morgan
To: toliver@cityoflosalamitos.org
Subject: RE: the WestEd property on Lampson
Date: Monday, May 20, 2024 7:07:02 AM

Hi,
We are Ed and Sylvia Morgan and live in College Park East.
We DO NOT WANT THE PROPERTY DEVELOPED on the WestEd site.
It will 1) busy our neighborhood, 2) over load Lampson, 3) add congestion, 4) cause our Park on Heather to be used, 5) bring more cars that will occasionally park by our house on Lampson, 6) restrict the AYSO Soccer parking, 7) it will add yet ANOTHER SIGNAL to our already over signaled area, 8) AND NOT ONE PERSON THAT WE'VE TALKED TO WANTS IT!
Please be considerate of our neighborhood and consider our request!

Thank-you,

Ed and Sylvia Morgan
562-221-2362

45-1

Responses to Comment 45

Morgan, Ed and Sylvia, dated May 20, 2024.

45-1 The commenter expresses opposition to the Project and is concerned with congestion, overcrowding on Lampson Avenue, usage of Heather Park, overflow parking into College Park East, AYSO parking, and the additional of a traffic signal into the over signalized area. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, related to congestion concerns, Master Response 2.1.3, *Parking*, related to onsite parking and Arbor Park parking. Additionally, as discussed, Section 4.14, *Recreation*, of the Draft EIR, the projected number of Project visitors to these parks are well within the carrying capacity, there is sufficient capacity at existing nearby neighborhood parks to accommodate the Project residents. With full occupancy of the Project, the designed neighborhood open spaces within the Project site, the capacity and existing maintenance and usage of existing parks, and the estimated visitation of the Project residents to the existing parks; the Project is not anticipated to increase the use of the existing parks such that substantial additional use or physical deterioration of the existing parks would occur or be accelerated (refer to Page 4.14-9 of the Draft EIR). Refer to Response to Comment 17-10 and Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for traffic signal concerns.

Subject: Lampson project
Date: Sunday, May 5, 2024 12:19:12 PM

To whom it may concern,

I am writing this knowing it will fall on deaf ears, nonetheless, I feel it necessary. Building on Lampson will obviously bring more traffic and with it more criminal activity. College park east has always been a small, tight knitt community. It is a hidden gem and I had the pleasure of growing up here and now I have a house of my own and hop my children will have the same safe upbringing. With the addition of anything except one family homes, the increase in traffic and people will jeopardize our small community. Everyone is against building apartments or condos, but as we all know money is all that matters not maintaining small happy finally oriented communities. Everyone knows the impact and no one wants it except those who will profit from it financially, who do not live in our community.

46-1

I wish these concerns would be taken into consideration,

Sent from my iPhone

Responses to Comment 46

Naime, Bayan, dated May 5, 2024.

46-1 The commenter expresses concern with the increase in traffic and crime. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, related to traffic congestion concerns and 2.1.6, *Public Safety*, related to the increase in crime. Thus, no further response is required.

Comment Letter 47

Lampson Project

mnikuta@aol.com <mnikuta@aol.com>
Wed 5/15/2024 1:40 PM
To:Tom Oliver <Toliver@cityoflosalamitos.org>

IRONSCALES couldn't recognize this email as this is the first time you received an email from this sender mnikuta@aol.com

I am very concerned about the Lampson Project.

The traffic created with that many unit will be unbearable. The corner of Lampson and Los Al Blvd is already very busy.

The safety of the people living in the proposed properties so close to the Airbase has not been addressed. There are also health concerns being right under the flight path.

We would loose this open space for sports.

The proposal fails to provide adequate setbacks and areas for community outdoor use. Parking will be a nightmare with this overbuilding.

We already pay some of the highest taxes in the area and our taxes will increase due to the increases of infrastructure (sewer, electricity, storm drains, etc) need to complete this project.

This project is NOT good for Los Alamitos and the surrounding communities.

Please reconsider your decision and keep the area a great place to live/thrive.

Thank you for your time

Mary Noud-Ikuta

47-1

DRAFT

Responses to Comment 47

Noud-Ikuta, Mary, dated May 15, 2024.

47-1 The commenter expresses concern with traffic, safety from the proximity to JFTB, loss of open space for sports, lack of onsite outdoor spaces, parking, and increase in taxes. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic congestion concerns, 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*, for airport safety impacts, 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, for recreation impacts and 2.1.3, *Parking*, for parking impacts. The increase in taxes from infrastructure need to complete the Project is not a foreseeable consequence of the Project and not an environmental issue analyzed under CEQA; however, this comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. Thus, no further response is required.

1 attachments (237 KB)
TomOliver.pdf;

Tom,

Attached are my comments to the draft EIR. If I'm conveying something that does not make sense (I'm not a civil engineer) could you please let me know.
I can rewrite it so the people who are responding are able to understand what I am trying to say.
Also, can the responders reply in layman's terms so that I can understand their response?

Thanks much,
Jean Orland

48-1

DRAFT

June 4, 2024

Mr. Tom Oliver, Associate Planner
City of Los Alamitos
Planning Department
3191 Katella Avenue
Los Alamitos, CA 90720

Mr. Oliver,

My comments are enclosed regarding the draft environmental report (DEIR) for the Lampson Park Place development. I'm focusing on section 4.6 – Geology and Soils and 4.9 – Hydrology and Water Quality.

I do not understand how the DEIR can state that flooding is considered not a significant issue because Seal Beach does not have a plan, but yet it acknowledges that flooding is a problem. Please explain this inconsistency.

48-2

I don't understand how a technical report cannot be completed until after the contractor grades the site. How does the contractor plan to build/grade/reinforce the structures due to the high water table? Depending on how this is completed, it will cause major flooding problems for College Park East. Can you please describe/list the various grading options with the pro's and cons for each option? Please see below P4.6.1 in that the technical report can't determine this until the grading is completed.

How can the contractor address these issues and help correct the water problem?

48-3

P4.6.1 (p.276) c. soil is very moist to wet. Later in the DEIR it states the need to shore up infrastructure but the technical report says they can't determine this depending on how the site is graded?

P4.6.2 (p277) d. groundwater – How does the contractor prevent/stop surface seepage? DEIR states that seepage may develop once site development is completed. E. tsunamis/flooding – A Seal Beach City study shows that due to climate change, flooding will occur over essentially the entire City where retreating is an option. Can you provide/review the study from the Joint Forces

48-4

DRAFT

Training Base and the Naval Weapons Station? What were the conclusions and what can you do to help prevent/slow down climate change flooding on this project?

48-4 (CONT.)

P4.6.5 (p280) Second paragraph – what did SHMA find and what are the mitigation measures? Mitigation measures are needed prior to permitting developments designed for human occupancy. Number 3, what did the site specific investigations find? The DEIR states that local agencies can be more restrictive than state law requires. What is Los Alamitos City's position on this?

P4.6.9 (p284) Liquefaction – seems to be a serious issue. The DEIR states "to reduce liquefaction impacts to an acceptable level". Since this seems serious can there be a higher/more rigorous level to meet other than just "acceptable"? Please explain.

48-5

P4.6.13 (p288) Cumulative impact analysis – paragraph 2 states that a proposed development project are not influenced by … other, offsite properties. These hazards and the measures to address them would have no direct/indirect connection to similar issues to or from other properties. This is simply not true. When the first option of creating a storm flow through the Joint Forces Training Base and a change is made, or blockage occurs and the storm water cannot flow through that area which is more than likely to occur, the second and more realistic option of having the water flow down Lampson Avenue will occur. Lampson Avenue will turn into a river because the streets in College Park East are already above a 100 year storm event – currently the streets are rivers where the water is easily flowing above the curb. Can the flow of water on Lampson Avenue flow onto the Los Alamitos/Joint Forces Training Base side of the street rather than the College Park East side of the street? Can Lampson Avenue be regraded? Please explain.

48-6

P4.9.1 (p349) The DEIR does not list any flood control facilities for Seal Beach. Flood control facility cities are located around Seal Beach but not Seal Beach. However, this project directly impacts Seal Beach. How can a discussion/strategy begin with the Cities of Seal Beach/Los Alamitos, Orange County, State of California, the Federal government and the developer in coming up with an alternative and addressing this issue? Seal Beach City has stated in the DEIR that water flow exceeds the top of the curbs. Knowing this information, has the

48-7

DRAFT

contractor responded with higher or more rigorous standards that are necessary to not make the problem worse? If so, what are they and if not, why?

48-7 (CONT.)

P4.9.7 (p355) Does Executive Order 11988 place any conditions on this project? If so, what are they and if not, why? It seems that bullet two – help with finance and assist in construction would be beneficial to all involved entities. Who is responsible and is it feasible to make the aquafer larger? Can another aquafer be built on the Joint Forces Training Base/Base golf course? Seal Beach City has stated that when the aquafer is full it drains back into College Park East which defeats the purpose. Having this project and a possibility of another larger project draining into the aquafer makes no sense. With help from the State of California and the Federal Government does this project have the ability to directly drain into other nearby creeks, rivers or other locations? If no, why?

48-8

P4.9.14 (p362) Regarding PDF HYD-1 the DEIR states that the buildings will be set at a one foot minimum above the water surface elevation. Can this number be increased for a more rigorous requirement since the site is over a 100 year storm event? If no, why not?

P4.9.19 (p367) Since a storm water sump pump is being built and the site has over a 100 year storm event, can the sump pump be built to hold more than 38,800 cf of water? Could it provide an additional 25 or 30 percent factor of safety? Please explain.

48-9

In the F1 Geotechnical report:

P24/25 (p27/28) Section 4.6 discusses prevention of ponding within 5 feet of the foundation. Section 4.7 discusses that in general, the vast majority of … issues are directly related to improper drainage. Can the site be graded so that no ponding occurs and that the water flows toward the Joint Forces Training Base/Base golf course? Please explain.

48-10

DRAFT

Responses to Comment 48

Orland, Jean, dated June 4, 2024.

48-1 The commenter provides introductory remarks for the attached comment letter. Thus, no further response is required.

48-2 The commenter inquires about the conclusion of the Draft EIR related to flooding not being a significant issue, but it acknowledges that flooding is a problem. Refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, for flooding impacts. Both the proposed and alternative storm drain facilities would be designed to detain the increased flows from the proposed condition and ensure that peak flows are less than existing conditions during all storm events. Therefore, the Project would not substantially increase the rate or amount of surface runoff in a manner that would result in flooding on- or off-site.

48-3 The commenter states they do not understand why a technical report cannot be completed until after the contractor grades the site and about the various grading options due to high water table.

A geotechnical report was prepared for the Project (included as *Technical Appendix F1* of the Draft EIR) to analyze geotechnical and soils impacts and identify recommendations during grading and construction. As described in Section 4.6, *Geology and Soils*, of the Draft EIR, with implementation of Mitigation Measure MMM 4.6-1, verification of all recommendations provided in the geotechnical report will be required prior to the issuance of grading permits (refer to Page 4.6-15 of the Draft EIR). These recommendations will be confirmed and modified as needed based on actual as-graded conditions. The final grading plan will be updated as needed during the construction drawing (CD) review process upon Project approval. During the CD process that is subjected to City review and approval, all Project plans including grading and structural drawings will be evaluated to ensure compliance with all applicable regulatory building safety standards and guidelines issuance of a building permit.

Section 4.0 of the Geotechnical Report (*Technical Appendix F1*) identifies design recommendations to reduce liquefaction impacts (due to the high water table) to an acceptable level. The recommendations include seismic design parameters for the site, prevention of the intentional infiltration of storm water into subsurface soils and require foundations to be constructed based on the expansion index and shear strength of on-site soils. The estimated seismic settlement can be mitigated by performing the recommended remedial grading and constructing the buildings with the recommended post-tensioned slab and interconnecting isolated pad footings with grade beams.

DRAFT

The Project would be required to be designed and constructed in accordance with applicable seismic safety guidelines, including the standard requirements of the CBSC. Furthermore, as stated in the LAMC Section 15.04.020, the Project would be required to comply with the grading and construction recommendations contained within the geotechnical report. Therefore, a technical report was completed (see *Technical Appendix F1* of the Draft EIR), however, as stated in the Geotechnical Report, the recommendations shall be confirmed and modified as needed based on actual as-graded conditions. Furthermore, the grading plan for the Project is shown in Figure 3-26, *Grading Plan*, of the Draft EIR. Final grading plans would be completed following Project approval, which will be subject to City review and approval.

48-4 The commenter asserts that the Draft EIR states the need to shore up infrastructure but the technical report says it cannot determine this depending on how the site is graded. The commenter inquires about the potential for seepage and states that the past Seal Beach study shows that due to climate change, flooding will occur over the entire City where retreating is an option. The commenter also asked to review a study from the JFTB and Naval Weapons Station.

Refer to Response to Comment 48-3 regarding the mitigation required to ensure that the geotechnical recommendations are implemented. Additionally, the Geotechnical Report (*Technical Appendix F1* of the Draft EIR) recommendations are intended to protect against the potential damaging effects of geotechnical phenomena, including groundwater seepage. The commenter does not provide citation details (e.g. title, date, or author name) of the Seal Beach or JFTB studies being referenced. Refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, for flooding impacts. In any event, the Draft EIR evaluated the potential for flooding due to tsunamis and determined that impacts would be less than significant due to distance from the Pacific Ocean (refer to Page 4.9-24 of the Draft EIR).

48-5 The commenter inquires about the results of the Seismic Hazards Mapping Act and the results of the site-specific geotechnical investigations, expresses concern with liquefaction, and requests whether there can be a more rigorous level to meet other than just acceptable. As discussed in Section 4.6, *Geology and Soils*, of the Draft EIR, the Project site is not located within the State of California Earthquake Fault Zone (Alquist-Priolo) and no faults were identified on the site during the site evaluation. Moreover, as indicated in the Geotechnical Report (*Technical Appendix F1* of the Draft EIR), the Project site is not at an increased risk relative to the surrounding areas. The Project would incorporate the construction recommendations contained within the geotechnical report as required by the LAMC Section 15.04.020. Project-related structures and buildings would be required to be designed and constructed in compliance with the California Building Code (CBC [California Code of Regulations, Title 24, Part 2]), which contains provisions for earthquake safety based on factors including occupancy type, the types of soil and rock onsite, and the probable strength of ground motion. Therefore, as structures would be designed to meet or exceed CBC standards for earthquake resistance, development of the Project would create less than significant impacts

DRAFT

related to seismic ground shaking and no mitigation is required (refer to Page 4.6-8 of the Draft EIR).

Section 4.0 of the Geotechnical Report (*Technical Appendix F1*) identifies design recommendations to reduce liquefaction impacts to an acceptable level. The term "acceptable level," means in accordance with the California Building Code seismic criteria and is the appropriate standard for which to analyze geotechnical hazard risks under CEQA and ensure the Project would not result in the risk of loss, injury, or death.

48-6 The commenter disagrees with the Draft EIR stating that potential hazardous effects related to geologic and soil conditions addressed under Thresholds a, c, d, and e are unique to the Project site and inherently restricted to the specific property proposed for development. The commenter states this is untrue and describes potential stormwater/flooding events. The commenter further asserts that Lampson Avenue will turn into a river and inquires about whether water on Lampson Avenue can flow onto the JFTB.

The cumulative impact discussion on Page 4.6-13 of the Draft EIR is specific to geological hazards. The commenter concern is related to flooding which is discussed under Section 4.9, *Hydrology and Water Quality*, of the Draft EIR, not Section 4.6, Geology and Soils. Refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, for flooding impacts.

48-7 The commenter states that the Draft EIR does not list any flood control facilities for the City of Seal Beach and whether the contractor has responded with higher and more rigorous standards that are necessary to not make the issue of flooding worse. Refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, for flooding impacts.

48-8 The commenter inquiries whether Executive Order 11988 places any conditions on the Project. Executive Order 11988 requires agencies to protect against the risk of flood loss and to avoid to the extent possible the long and short term adverse impacts associated with the occupancy and modification of floodplains and to avoid direct or indirect support of floodplain development wherever there is a practicable alternative. The commenter also inquiries about the potential to build another aquifer on the JFTB and golf course.

As discussed in Section 4.9, *Hydrology and Water Quality*, of the Draft EIR, FEMA Flood Insurance Rate Maps identify flood zones and areas that are susceptible to 100-year (1% annual chance of occurrence) and 500-year floods (0.2% annual chance of occurrence). These areas are referred to as Special Flood Hazard Areas and Moderate Flood Hazard Areas respectively. According to FEMA FIRM No. 06059C0116J (effective 12/03/2009), the Project site is located within FEMA Flood Zone D. Flood Zone D is correlated with areas with a possible risk of flooding, but the probability has not been determined. It should be noted that the Project site is not in proximity to an area within a flood zone (refer to Page 4.9-24 of the Draft EIR).

DRAFT

Therefore, Executive Order 11988 does not place any conditions on the Project site as it is not designated as a floodplain. The commenter also inquiries about the potential to build another aquifer on the JFTB and golf course. The commenter does not provide evidence for the need for an additional aquifer. However, this comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. Thus, no further response is required.

48-9 The commenter inquires whether the finished floor elevation for the onsite buildings can be set higher than what is stated under Project Design Feature (PDF) HYD-1 and whether the sump pump under the alternate storm drain facilities can be increased to hold more than 38,800 cubic feet (cf) of water for an additionally 25 to 30 percent factor of safety. The Project site is designed to protect against a 100-year storm event; therefore, there is no justification for increasing the finished floor elevations on site. As discussed in the updated Hydrology Study (*Attachment E* to this Final EIR), a proposed stormwater pump system with upstream detention storage has been incorporated into the onsite drainage design to provide onsite peak flow and volume mitigation for the development for all storm events. The pump system will control the outflow discharge rate matching the existing 2-year peak flow at approximately 8.9 cfs. The stormwater system has been designed with a 20% factor of safety, which is above requirements.

48-10 The commenter inquires whether the Project would be graded to avoid ponding onsite based on the conclusion from the Project' geotechnical report. The Project will be graded to avoid ponding onsite. As discussed above, the Project would be constructed in accordance with the recommendations of the Project's Geotechnical Investigation (*Technical Appendix F1 of the Draft EIR*).

DRAFT

Comment Letter 49

Request to obtain new unbiased enviornmental impact reports for Lampson project

Justin Osburn <justin.osburn@gmail.com>
Mon 6/10/2024 8:18 PM
To:Tom Oliver <Toliver@cityoflosalamitos.org>

IRONSCALES finds this email suspicious! We know Justin Osburn by name, but the email was sent from an unfamiliar address justin.osburn@gmail.com | Know this sender?

Hi Tom,

I'm a resident of the College Park East neighborhood in Seal Beach, which as you know borders the Lampson Project. I'm writing this email to request a new unbiased environmental impact report for the Lampson project. It appears that these reports were prepared by consultants hired by the Lampson LLC property developer and not by independent consultants hired by the City of Los Alamitos. 49-1

I understand that finding sites for California's required affordable housing projects is important for each city, but I feel that this is not the right place for a housing project, due to its proximity to the Joint Forces Training Base. Placing homes next to commercial and military airports is very dangerous due to the potential public health and safety problems such as crash risks, air pollution, hearing loss and much more. 49-2

I believe that this site will also cause severe traffic to Lampson St. which will make it hard for residents like myself to commute back and forth and more importantly take first responders more time to respond to any emergencies within our community. I have a 4 year old daughter and this probably concerns me more than anything.

I appreciate your time and hope you can consider this request for a new unbiased environmental impact report for the Lampson project, for the benefit of Los Alamitos and neighboring communities like Seal Beach CPE and West Garden Grove that can be truly affected by this. 49-3

Sincerely,

Justin Osburn
3860 Rose St.
Seal Beach, CA 90740

DRAFT

Responses to Comment 49

Osburn, Justin, dated June 10, 2024.

49-1 The commenter requests a new unbiased environmental impact report for the Project due to the preparation of the document being hired by the Project applicant and not by the City. Refer to Response to Comment 16-16, above, related to the preparation of the Draft EIR and conflicts of interest.

49-2 The commenter expresses concern with the Project due to its proximity with the JFTB. Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*, for airport safety impacts.

49-3 The commenter expresses concern with the increase in traffic on Lampson Avenue leading to a decrease in emergency response times. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic congestion concerns. As discussed in Section 4.13, *Public Services*, of the Draft EIR, per correspondence with the Orange County Fire Authority (OCFA), there are currently no deficiencies in fire protection service provided to the Project site. Additionally, response times would not decrease to necessitate the construction of a new fire station. To maintain acceptable service ratios, OCFA uses a fair share approach to mitigate fire service response impacts and facility/equipment needs (refer to Page 4.13-9 of the Draft EIR).

Comment Letter 50

Lampson Draft Environmental Impact Report - Written Comments

J Penney <jpenn927@icloud.com>
Mon 6/10/2024 1:43 PM
To:Tom Oliver <Toliver@cityoflosalamitos.org>
Cc:J Penney <jpenn927@icloud.com>

Good afternoon Mr. Oliver,

Please review written comments to the Lampson Draft Environmental Impact Report:

Firstly, the report should be conducted by an UNBIASED party - not by a firm contracted by the Developer, in the interests of the Developer and not of the city or its residents - whether they be current or future. 50-1

The preliminary Environmental Impact Report (EIR) fails to adequately acknowledge and address the documented safety concerns highlighted by OCALUC. Moreover, it neglects to sufficiently examine the significant strain on public health, safety, emergency services, and significantly diminished quality of life that would be imposed on all residents in the area. There is a massive lack of Public Disclosure of Known Safety Issues with Proximity to Military Airport - why? 50-2

Hearing loss caused by proximity to military base necessitates additional insulation in windows, walls, ceilings, in all construction. 50-3

Overbuilding of on 12+ acres will create runoff and flooding issues in existing neighborhoods. Tax payers should not fund any element of Developer's infrastructure. 50-4

The setback should be increased from street and the site plan creates a dangerous situation for any children, bicyclists, pedestrians, and drivers on Lampson. 50-5

Parking count is too low and will not accommodate the actual parking needs. What is the plan to mitigate parking along Lampson and within adjacent neighborhoods? How will increased pedestrian and vehicle traffic and accidents created by this overflow be addressed? 50-6

Public disclosure of State Declared Known Health and Safety Risks must be included in sales and escrow documents. 50-7

These critical omissions must be rectified in the EIR to ensure a comprehensive assessment of the project's ramifications are completed and the negative impacts are adequately mitigated.

It is customary for reviews and reports, particularly the significant undertaking of an Environmental Impact Report to be conducted by independent third parties contracted by the city. Any departure from this standard is perceived as a clear conflict of interest.

I strongly urge you to reassess the situation and commission a new EIR to be drafted by an UNBIASED, impartial third party, contracted by the city but financially supported by the developer, prior to any additional environmental determinations being made. 50-8

Thank you for your time and reflection on these decisions that will impact the future of our communities and our children.

Jennifer Penney

DRAFT

Responses to Comment 50

Penney, Jennifer, dated June 10, 2024.

50-1 The commenter states that the Draft EIR should be prepared by an unbiased party not by a firm contracted by the Developer in the interests of the Developer and not of the City or its residents. Refer to Response to Comment 16-16, above, related to the preparation of the Draft EIR and conflicts of interest.

50-2 The commenter states the Draft EIR fails to adequately acknowledge and address the document safety concerns highlighted by ALUC and examine the impacts on public health, safety, emergency services, and quality of life. The commenter also states that there is a lack of public disclosure of known safety issues with proximity to military airport. Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*, for airport safety impacts and buyer's awareness, and 2.1.8, *Public Safety*, for public safety impacts. Quality of life is not an environmental issue analyzed under CEQA; however, this comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. Thus, no further response is required.

50-3 The commenter is concerned about hearing loss caused by the proximity to military base necessitates additional insulation in windows, walls, and ceiling in all construction. Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*, for noise impact from the JFTB. The Project would be designed to achieve a 25 dBA reduction and meet the 45 dBA CNEL interior noise standard with PDF-N-2, which includes the use of windows with a STC rating of 29 on all second floor facades adjacent to Lampson Avenue and JFTB Los Alamitos.

50-4 The commenter states that overbuilding on 12 acres will create runoff and flooding issues for existing neighborhoods. Refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, for flooding and storm drain concerns.

50-5 The commenter requests the setback to be increased from the street to avoid dangerous situation for any children, bicyclist, pedestrian, and drivers on Lampson Avenue. As shown in Table 4.1-1, *Zoning Development Standards Consistency Analysis*, the Project would comply with the minimum setback requirements under the City's Municipal Code (refer to Page 4.1-14 of the Draft EIR). Refer also to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*.

50-6 The commenter states that the parking count is too low and inquires about the overflow parking to adjacent neighborhoods and increase in pedestrian and vehicle traffic and accidents. Refer to Master Response 2.1.3, *Parking*, for impacts related to onsite parking, 2.1.1, *Transportation and Traffic Congestion*, for traffic congestion concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, for pedestrian safety impacts.

DRAFT

50-7 The commenter requests that public disclosure of State declared known health and safety risk to be included in sales and escrow documents. The Draft EIR evaluated and determined that there were no health and safety risks associated with the Project. In California, sellers are required to disclose the presence of any known environmental hazards. Refer also to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*, related to notifications to potential buyers.

50-8 The commenter provides concluding remarks and asserts again that a new Draft EIR be drafted by an unbiased impartial third party. Refer to Response to Comment 16-16 related to the preparation of the Draft EIR and conflicts of interest. Thus, no further response is required.

DRAFT

COMMENT LETTER 51

From: Jessica Polye
To: Tom Oliver
Subject: Re: Notice of Availability of a Draft Environmental Impact Report for the 4665 Lampson Avenue Project

As a resident of CPE, it is incredibly disappointing that a City adjacent to us would allow for such a monstrosity that is going to have a huge negative impact on us. Lampson is already overly impacted with traffic, I can't understand how this would go through. 51-1

Responses to Comment 51

Polve, Jessica, dated April 24, 2024.

51-1 The commenter expresses general opposition to the Project and states that Lampson is already overly impacted with traffic. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns.

DRAFT

COMMENT LETTER 52

From: Janet A. Riness
To: Tom Oliver
Subject: Land Use
Date: Tuesday, May 7, 2024 11:02:07 AM

Dear Mr. Oliver,

We are opposed to the land use plan for the Lampson Ave project. Here are our reasons: 52-1

1. Way too many housing units are planned for the use area 52-2
2. We don't have a drought issue too much this year but lots more people will use more water in our drier years. 52-3
3. There is not enough parking for new housing - estimate two cars minimum per household. 52-4
4. Not enough open space for parks and general recreation 52-5
5. This is located right next to the military base which is our emergency "headquarters" for earthquakes, attacks, or other disasters. They have advised AGAINST the project. 52-6
6. AND LAMPSON IS THE ONLY WAY OUT OF OUR AREA IF WE NEED TO ESCAPE. Check a map! Too many cars trying to use one street. 52-7

Thank you for your attention.

Janet and Dennis Riness

3750 Oleander Street

Seal Beach, CA 90740

Responses to Comment 52

Riness, Janet and Dennis, dated May 7, 2024.

52-1 The commenter provides introductory remarks and expresses opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

52-2 The commenter states that there are too many housing units planned for the use area. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

52-3 The commenter expresses concern with water supply during dry years. As discussed in Section 4.17, *Utilities and Service Systems*, of the Draft EIR, Golden State Water Company West Orange's waters supplies would be sufficient for the Project's estimated water demand of 50.63 acre-feet of water per year (AFY) in normal, single dry years, and five consecutive dry year conditions through 2045 (refer to Pages 4.17-16 to 4.17-17 of the Draft EIR).

52-4 The commenter expresses concern with the lack of onsite parking. Refer to Master Response 2.1.3, *Parking*, for parking impacts.

52-5 The commenter states that there is a lack of open space for parks and general recreation. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*.

52-6 The commenter expresses concern with the Project being located next to JFTB and that ALUC have advised against the Project. Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*, for airport safety impacts,

52-7 The commenter expresses concern that Lampson Avenue is the only way out of College Park East and there are too many cars using one street. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns.

image002.png

Hello Tom,

We are against this Project because it will have significant impact on environmental resources, and it will disturb our quiet and green community. 53-1

This project will help in the increase of Greenhouse Gas (GHG) emissions within a local area of the project. Some construction work may result in the exceed of some hazardous waste thresholds established by the California Code of Regulation (CCR) and may produce toxic fumes when heated which is very dangerous on Health.
Some soil disturbance may result in Aerially Deposited Lead (ADL) which is very contaminated substance and toxic to human health. Soil disturbance also may result in toxic dust.

Please keep our community safe, sustainable and green to enhance our health and livability. 53-2

Regards,
Abraam & Mirna

(562) 431-3538 x303

Responses to Comment 53

Saad, Abraam and Mirna, dated April 25, 2024.

53-1 The commenter provides introductory remarks and expresses opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

53-2 The commenter states that the Project will increase greenhouse gas emissions in the area, construction work may result in the exceedance of some hazardous waste thresholds, and soil disturbance may result in Aerially Deposited Lead and toxic dust.

As discussed in Section 4.7, *Greenhouse Gas Emissions*, of the Draft EIR, construction and operation of the Project would generate a 2,757.11 $MTCO_2e/yr$; the Project would not exceed the significance threshold of 3,000 $MTCO_2e/yr$. Thus, impacts would be less than significant and no mitigation is required (refer to Page 4.7-27 of the Draft EIR). Refer to Response to Comment 16-4 regarding hazardous waste, aerial deposited lead and toxic dust.

Date: Sunday, May 5, 2024 6:22:04 PM

To Whom it may concern,

We live in a neighborhood on Lampson a block from this proposed project. Mornings are already a nightmare when heading to schools in Seal Beach/ Los Alamitos and this will surely make it so much worse. Not to mention AYSO and other sports play on the field right there and it was a perfect solution as the business park was not open on the weekends which allows for parking that is almost always full... now it will be the other way with residents parking at the park and all of the kids sports will need to park in the neighborhoods and cross lampson which will create a dangerous situation for families and children. Additionally, the air base is right there which restricts all of us of only having a 2 story, this will be even closer to the runway but can be taller which does not makes sense. In my research, it seems it has been deemed unsafe to build residential there for the residence as well, so I am not sure why that is being disregarded. I do not see a single benefit to building this yet I can easily point out many ways in which this will be terrible for our already backed-up lampson (for your own research, go ahead and drive down lampson heading towards Seal Beach Blvd when we are trying to get our kids to school, it's a nightmare and I have already been rear ended while driving my child to Hopkinson because people drive so aggressively at that time already due to the gridlock. PLEASE, PLEASE, PLEASE reconsider this; this is a TERRIBLE idea for our community!

54-1

54-2

Thank you,

Brittany Sakkubf

Responses to Comment 54

Sakkubf, Brittany, dated May 5, 2024.

54-1 The commenter expresses concerns with traffic, parking and safety for AYSO participants crossing Lampson. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, for traffic congestion concerns, 2.1.2, *Roadway Safety on Lampson Avenue*, for safety, and 2.1.3, *Parking*, for parking impacts regarding AYSO.

54-2 The commenter expresses concern for the proposed residential use onsite due to its proximity to JFTB and traffic congestion. Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*, for airport safety impacts; 2.1.1, *Transportation and Traffic Congestion*, for traffic congestion concerns; and 2.1.2, *Roadway Safety on Lampson Avenue*, for Lampson Avenue safety concerns.

COMMENT LETTER 55

Sent by email: toliver@cityoflosalamitos.org

June 10, 2024

Mr. Tom Oliver
Planning Department
City of Los Alamitos
3191 Katella Ave.
Los Alamitos, Ca 90720

Regarding: Draft EIR Report April 24, 2024, for 4665 Lampson Ave. (Lampson Park Place)

Mr. Oliver,

In response to the Notice seeking comments to the DEIR report for 4665 Lampson Ave, (Lampson Park Place), I have the following comments:

1) **The project's 3rd Party Peer Reviewed DEIR Report was not made public.** This report should have been available to the public during this comment period. The Peer Review would have been informative to the public in their evaluation of the project and their comments. 55-1

2) **Cumulative Impacts were not evaluated.** The Lampson Park Place DEIR does not consider the Old Ranch Country Club (ORCC) proposed project which is on the Seal Beach website. These projects are in close proximity and share the same roadway. The cumulative impacts that need to be analyzed include public safety, public health and capacity of city services (sewer and stormwater drainage), Lampson road maintenance and traffic congestion. The Lampson Park Place DEIR is silent about cumulative project impacts and need to be addressed. 55-2

3) **Public Safety on Lampson**. The Seal Beach Police Department (SBPD) response to questionnaire notes SBPD has concerns about the cumulative impact of multiple projects on Lampson relative to the flow of traffic and safety. This road has a long history of accidents and tragic fatalities. Traffic safety must be improved if hundreds more car trips are to be added to Lampson. 55-3

4) **Parking Impacts** – The SBPD response to questionnaire noted concerns about parking impacts to College Park East and visitors to Arbor Park. They noted existing personnel levels may not be adequate to manage traffic safety concerns on Lampson. SBPD also noted the only additional overflow parking is College Park East, placing a cost burden on SBPD for enforcement. Having mores car parked next to Heather Park will create a public safety nuisance for our families, dog walkers and bike riders due to increased moving cars on our quiet residential street. Another safety consideration is pedestrians crossing a busy street after they park cars in College Park East. 55-4

5) **No traffic mitigation was presented.** The imposed traffic congestion from the Lampson Park Place development must be considered with the Old Ranch Country Club proposed 55-5

RECEIVED
CITY OF LOS ALAMITOS
2024 JUN 10 PM 4:31

project for cumulative impacts. Lampson Street was not designed to handle the amount of traffic that is projected from both projects. The traffic congestion creates needless idling of cars.

55-5 (CONT.)

6) **Emergency response times.** Lampson is the only street available to College Park East residents to get in/out of our housing track. With no traffic mitigation options available – what is the impact to response times for our first responders (police, fire, ambulance). The surrounding communities of Leisure World, Rossmoor, Seal Beach and West Garden Grove will be impacted if response times are delayed by our first responders being held up in traffic. The majority of ambulances on their return emergency trip go to Los Alamitos Hospital via Seal Beach Blvd or Valley View. The added traffic congestion puts our communities at risk in emergency situations when every second matters.

55-6

7) **Bike Riders Safety**. Seal Beach is expanding the bike lanes on Lampson Street. What are the impacts to the bike riders for public health and public safety with hundreds of more car trips?

55-7

Thank you for your written response to address my questions/concerns.

Patty Senecal
College Park East Resident

Responses to Comment 55

Senecal, Patty, dated June 10, 2024.

55-1 The commenter states that the peer review Draft EIR should have been made available to the public. Refer to Response to Comment 16-16, above.

55-2 The commenter states that cumulative impacts were not evaluated, specifically the Old Ranch Country Club project, and that public safety, public health, capacity of City services, Lampson Road maintenance, and traffic congestion need to be analyzed. Refer to Response to Comment D-9 regarding cumulative impacts from the proposed Old Ranch Country Club project. Additionally, cumulative impacts for all environmental topics under the CEQA Guidelines are addressed in each section of the Draft EIR. Section 4.0, *Environmental Analysis*, of the Draft EIR, discusses the scope of cumulative effects analysis (refer to Pages 4-3 to 4-6 of the Draft EIR).

55-3 The commenter states that SBPD had concerns about the cumulative impact of traffic and safety on Lampson Avenue and that traffic safety must be improved if vehicles are added to Lampson. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for Lampson Avenue safety concerns.

55-4 The commenter states that SBPD had concerns with parking impacts to College Park East and visitors to Arbor Park and that existing personnel may not be adequate to manage traffic safety concerns on Lampson. The commenter also asserts that SBPD noted that the only additional overflow parking is College Park East which places a cost burden on SBPD for enforcement. The commenter expresses concern that more vehicles parked next to Heather Park will create a public safety nuisance due to additional moving cars and also expresses concern for pedestrians crossing a busy street after parking cars in College Park East. Refer to Master Response 2.1.8, *Public Safety*, for concerns regarding existing public safety personnel adequacy. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*. Refer to Master Response 2.1.3, *Parking*, for impacts related to onsite parking.

55-5 The commenter states that no traffic mitigation was presented. The commenter requests that the traffic congestion from the Lampson Park Place development must be considered with the Old Ranch Country Club proposed project in regard to cumulative impacts. The commenter expresses concerns with traffic congestion creating idling of cars.

Refer to Response to Comment D-9 regarding cumulative impacts from the proposed Old Ranch Country Club project. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic congestion concerns. As discussed in 4.15, *Transportation*, of the Draft EIR, the Project would result in significant VMT impacts and Mitigation Measure MM 4.15-1 is proposed to reduce impacts to the extent feasible (refer to Page 4.15-20 of the Draft EIR).

DRAFT

55-6 The commenter expresses concerns with emergency response times on Lampson Avenue and states that the surrounding communities of Leisure World, Rossmoor, Seal Beach and West Garden Grove would be impacted by delayed response times. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic congestion concerns. As discussed in Section 4.13, *Public Services*, of the Draft EIR, per correspondence with the Orange County Fire Authority (OCFA), there are currently no deficiencies in fire protection service provided to the Project site. Additionally, response times would not decrease to necessitate the construction of a new fire station. In order to maintain acceptable service ratios, OCFA uses a fair share approach to mitigate fire service response impacts and facility/equipment needs (refer to Page 4.13-9 of the Draft EIR).

55-7 The commenter expresses concerns for bicyclists' health and safety on Lampson Avenue with the addition of cars. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*.

DRAFT

Comment Letter 56

From: Marc Serlin
To: Tom Oliver
Subject: Lampson Park Place LLC
Date: Sunday, May 5, 2024 4:38:05 PM

Hi Tom,

I am a resident of Seal Beach and reside in the College Park East (CPE) neighborhood adjacent to the proposed housing development and I am writing to you to share my concerns over the proposed residential housing development on the West Ed property on Lampson. My key concerns are: 56-1

1) The housing development lacks sufficient recreation space(s) - With the lack of adequate recreation space for children and adults, I fear that the residents of the development will cross Lampson to use facilities for the residents of CPE. As it is, the parks and facilities in our neighbor are inadequate and many have deferred maintenance. Sharing the available capacity with an additional set of neighbors will increase the wear and tear on the facilities. As it is, Seal Beach residents pay a 10% utility tax (one of the highest in California) to help cover city maintenance and it's not enough to keep our neighborhood parks and equipment in excellent condition. A steady stream of residents from the new housing development who have no "skin in the game" when it comes to the treatment of CPE parks and equipment is not a value add for my neighborhood. Why isn't the City of Los Alamitos requiring the developer to set aside a detailed recreation plan for the development? 56-2

2) Parking - The parking provided by the developer is inadequate for the number of units and expected residents let alone visitors for the residents. Most of the lots in CPE are +- 5,200 Sq.Ft. and around 52' wide. At best, that leaves room for one and in some cases two cars that can park in front of each home. When CPE was developed, most families had one or two cars. Today, with packed garages and the proliferation of trucks and SUV's as well as cars for children still living at home, it is not uncommon for a homeowner to have three or four cars and it can be challenging, at times, to find a place to park in front of your home. For residents of the proposed development, they will be no different and the homeowners and apartment dwellers will be challenged to find a spot to park in their development. Further, for the apartment dwellers, there is no way near enough parking available in the planned parking. So, what will the new residents do without a place to park? They will park their cars in CPE in front of resident homes on Ironwood, Heather, surrounding Heather Park and other nearby streets. What happens when the residents of the new development host a holiday event or have a party? It will be even more burdensome. If the development goes through as planned, the next step will be for my neighbors to reach out to the City of Seal Beach to Issue parking stickers so that any of the residents from the new development parking on our streets will get their cars towed (Seal Beach will have a new revenue stream sharing tow fees with the tow operator). If that were to happen, the development residents will come running to the City of Los Alamitos to complain. 56-3

3) Traffic on Lampson - As it is, Lampson is a very crowed street. With 240+ new units, figure another 600+ cars travelling on Lampson at least one time per day. Further, a big problem is that one can only make a right turn out of the proposed new signal is not approved What to do if the residents want to travel towards Garden Grove? They can attempt to make a U turn at the signal on Heather or Candleberry which is even more dangerous. Further, Lampson is not that wide and many cars can't seamlessly complete the U turn without having to stop, back up and then continue, which will further impact traffic on Lampson and those exiting CPE. The other option is to drive into CPE at Heather or Candleberry and then maneuver their way back to Lampson. Of the 600 or more cars that belong to residents of the new development, what percentage are wanting to head toward Valley View and how many times a day would they need to do this? Clearly, this is accidents waiting to happen that the developer clearly didn't take into consideration or could care less about. 56-4

4) Sewer and Storm Drains – the storm drains in CPE were inadequately engineered which has resulted in flooding during rain events. The existing drains empty into Old Ranch Country Club (ORCC) and run-off on Lampson flows east and onto Ironwood in CPE adding to the flooding. The City of Seal Beach is 56-5

considering a hotel development, proposed by the owner of ORCC, that would reduce/eliminate one of the drainage sites. Either way, this will most likely have an impact on the new Lampson Park development.

56-5 (CONT.)

In closing, I understand that the developer purchased the land to develop and maximize profit through the more relaxed conditions of the California housing mandate. That doesn't mean that it's development plan can be approved by the City of Los Alamitos without considering existing adjacent developments, traffic and safety impacts, etc.

56-6

Thank you for taking the time to learn about my concerns.

DRAFT

Responses to Comment 56

Serlin, Marc, dated May 05, 2024.

56-1 The commenter provides an introduction and shares concerns which are responded to below.

56-2 The commenter expresses concerns with lack of sufficient recreation space and states that the existing parks in CPE neighborhood are inadequate and many have deferred maintenance. Questions why the developer does not have a detailed recreation plan for the Project. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*.

56-3 The commenter expresses concerns with inadequate parking provided for the Project and that residents will utilize parking in nearby neighborhoods. Refer to Master Response 2.1.3, *Parking*, for parking impacts.

56-4 The commenter expresses concerns about traffic congestion and states that the Project will result in 600+ cars on Lampson at least one time per day. The commenter questions the safety aspect of only being able to make a right turn out of the proposed new signal and questions what should be done if residents want to travel toward Garden Grove.

As discussed in Section 3.0, *Project Description*, of the Draft EIR, Project is anticipated to generate 1,658 two-way trip-ends per day with 112 AM peak hour trips and 147 PM peak hour trips, which is well within the capacity of Lampson Avenue even at General Plan Buildout (refer to Page 3-17 of the Draft EIR). Vehicle access to the Project site would be provided via two driveways on Lampson Avenue, one for the apartment entry on the western side and one for the primary neighborhood entry central to the site. Additionally, a restricted emergency vehicle access point with Lampson Avenue would be provided at the eastern end of the site. The Project would implement stop controls for the southbound approach at all driveways on Lampson Avenue. The driveway for the apartment entry would be restricted to right in/right-out access only (refer to Page 3-4 of the Draft EIR). The Project proposes a cross-street stop-controlled intersection at the primary neighborhood entry, which will allow for full access, including left turns for eastbound vehicles.

The Project initially proposed to install a traffic signal at the primary neighborhood to alleviate neighborhood concerns related to safety. Subsequent public comments received on the Draft EIR during the 45-day public review period expressed concern with installing a traffic signal and after further traffic signal warrant and safety analyses, it was determined that the proposed traffic signal is not warranted (see *Attachment G* of this Final EIR). Therefore, the Project no longer proposes a traffic signal at this entryway.

56-5 The commenter expresses concerns that storm drains in College Park East were inadequately engineered, resulting in flooding during rain events. The commenter states that existing drains empty into Old Ranch Country Club and run-off on Lampson flows onto Ironwood, adding to the flooding. The commenter adds that the City of Seal Beach is considering a hotel

DRAFT

development that would reduce or eliminate one of the drainage sites and opines that this would have an impact on the new development proposed by the Project. Refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, for flooding impacts.

A hydrologic analysis and street capacity analysis per Orange County Hydrology & Hydraulics Manuals were prepared for Lampson Avenue along the site frontage (see *Attachment E* of this Final EIR). Calculation results indicate that Lampson Avenue flooding does not occur along the Project site, but rather downstream at the sump condition near the Old Ranch Country Club. The hydrologic analysis and street capacity analysis for Lampson Avenue has been expanded downstream to determine the depth of flow. Both street capacity analysis indicate that the 100-year water surface elevation is held within the street and less than the existing top of curb elevations.

The Project has been designed to ensure that proposed stormwater flows do not exceed existing and therefore will not contribute to additional flooding events downstream. The Old Ranch Country Club will also be required to detain stormwater on-site to ensure stormwater flows do not exceed existing conditions.

56-6 The commenter concludes the comment letter. No further response is required.

Comment Letter 57

From: JULIA SHORES
To: Tom Oliver
Subject: Lampson Project
Date: Tuesday, May 7, 2024 10:23:31 AM

Mr. Oliver: We know that housing is very much needed in California, but Lampson Avenue is not the answer. We encourage the city to look elsewhere. Every open-space area may look like a great place to build multiple houses, but there was a reason this space was left open with one large structure on it. Here are some of the reasons....

57-1

1) Lampson Avenue is a road adequate for the number of cars and houses that were built for it. Additional housing will change this road to a 'boulevard' that will not be able to accommodate the traffic it will create.

57-2

2) CPE has parking and housing for homeowners living in the tract. The additional houses planned will bring additional cars into the CPE neighborhood causing problems for homeowners that have to find parking for their own cars.

57-3

3) The noise from the base is not always a problem for CPE homeowners, but it will be a constant problem for homes that are next to the base. Again, this land was left open for a reason.

57-4

4) CPE is dealing with flooding issues on some of their streets during the heavier rainstorms. This housing will only add to the problem and may create a larger one.

57-5

Only people that live in and around CPE are fully concerned with this project. We believe if your councilmembers lived in this area, they would also feel concern for this project and strongly fight against the new development.

57-6

4833 Fir Ave.
Seal Beach, CA

Responses to Comment 57

Shores, Julia and James, dated May 07, 2024.

57-1 The commenter opposes the Project and shares concerns which are responded to below.

57-2 The commenter expresses concerns that Lampson Avenue will not be able to accommodate the traffic the proposed Project would create. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic congestion concerns.

57-3 The commenter expresses concerns that the Project will bring additional cars into the College Park East neighborhood looking for places to park. Refer to Master Response 2.1.3, *Parking*, for parking concerns.

57-4 The commenter expresses concerns that noise from the JFTB will be a problem for residents of the Project. Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB).*

57-5 The commenter expresses concerns that flooding issues in College Park East will increase with the addition of housing from the Project. Refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, for hydrology concerns.

57-6 The commenter expresses concerns with the Project. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

DRAFT

COMMENT LETTER 58

June 4, 2024

Tom Oliver, Associate Planner
City of Los Alamitos
Planning Department
3191 Katella Avenue
Los Alamitos, CA 90720

RE: Draft Environmental Impact Report for the 4665 Lampson Avenue Project

Dear Mr. Oliver:

Upon reading the DEIR, I offer the following comments for consideration. The report states that the traffic caused by the Project on Lampson Avenue cannot be mitigated. That in itself is a death knell for this Project! If traffic cannot be mitigated, noise and air pollution cannot be contained and will only grow worse over time. Traffic and pedestrian safety will deteriorate in the area. All of this is common sense. It doesn't require a planning or engineering degree to recognize it.

The 12.3 acre Project site with 246 residential units is not conducive to the space. Too much housing is crowded into the area. Simply put, the Project does not fit within the confines of the space. The two roadways leading into and out of the Project onto Lampson are inadequate to handle not only the demand of those living there but others who are visiting or participating in sports events. Arbor Park with AYSO soccer games and the dog area will generate trips. The abolishment of the current West Ed parking lot creates a serious problem. Parking is inadequate especially on weekends. No doubt, cars will be parking in College Park East as a result of the increased activity across Lampson and this is not acceptable. It is not a credible or realistic solution to the problem. Adequate parking must be available within the Project grounds to handle the demand. 58-1

The City of Seal Beach cannot afford to share the sewer and water drainage systems with the City of Los Alamitos. The infrastructure is old and decaying throughout Seal Beach and current budgeted funds are not adequate to sustain much less replace rusting pipes and damaged equipment. This Project does not benefit the City of Seal Beach in any way. If it goes forward, the scope of it would impact the Old Ranch development that is coming in the near term. As you are well aware, they are both located on Lampson Avenue, just down the street from one another, and cumulative impacts cannot be predicted at this time. Even though the City of Los Alamitos Lampson Project is projected to be constructed over 39 months (over three years), the DEIR states that some of the buildings will be completed by early 2025. How does that schedule impact the yet unknown impacts of the Old Ranch development? 58-2

The Project cannot go forward unless the City of Seal Beach makes three critical concessions. I urge diligent and legal review of these requested concessions by the City of Seal Beach staff, Planning Commission and City Council. We cannot afford to subsidize the City of Los Alamitos! We simply cannot accommodate another city's request to use our limited resources.

I appreciate that there is now mention of a telecommuting workspace in the Project, even though no specifics are provided. I am also encouraged with the mention of the State of California required solar roofs and some accommodation for charging electric vehicles within the Project. However, one electric car to be shared by hundreds of residents is a far cry for a successful neighborhood program. How will that service be managed or is it not a serious plan of action? It is stated that natural gas will not be used 58-3

DRAFT

in the Project. Really? Does that mean that all the kitchens will have electric stoves? All the heating and air conditioning equipment will be electric? How can this be? Am I misunderstanding that tenet?

58-3 (CONT.)

With these comments, my attempt is to point out areas that are at the heart of the Project moving forward without repeating the hundreds of negative comments you have already received by concerned residents. In particular, those living in College Park East have the most to lose if this Project development moves forward as described. It doesn't stop there, however. Those living in other Districts of Seal Beach and the surrounding areas of Rossmoor, Cypress and East Garden Grove also have quality of life issues at stake. Unfortunately, I understand that there are ways to get around common sense arguments by filing density related appeals with the State of California. I am appalled to learn that the Project developer has already filed for that appeal process to begin! Do public comments even matter at this point?

I understand that the need for more housing to meet density requirements is here and now but please take into account the serious consequences, both intended and unintended, in finalizing the Project. Reduce the size of the housing units by 50% for a development that is more suited to the area and will not cause such severe environmental impacts. The health and safety of our neighborhood communities should be first and foremost in the minds of the City of Los Alamitos decision makers.

Thank you for the opportunity to comment on the released DEIR. I am aware of the June 10, 2024 deadline for comments to be submitted but I hope you will are willing to accept comments beyond that date. Please let me know if July 1, 2024 would be an acceptable extension of time. The highest priority for many families at the moment is attending and celebrating graduations across the country due in no small part to the excellent education provided by our Los Alamitos School District. I look forward to hearing from you.

58-4

Sincerely,

Catherine L. Showalter
Resident of College Park East
Member, City of Seal Beach Environmental Quality Control Board
District Four

DRAFT

Responses to Comment 58

Showalter, Catherine, dated June 04, 2024.

58-1 The commenter expresses concerns with traffic, pedestrian safety, noise and air pollution, and parking. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for pedestrian safety concerns. Refer to Master Response 2.1.3, *Parking*, for parking concerns.

As discussed in Section 4.2, *Air Quality*, of the Draft EIR, the Project would not exceed the South Coast AQMD localized significance thresholds for assessing localized health impacts from criteria air pollutants during construction. Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations during Project construction. Further, Project traffic would not create or result in a CO "hotspot." Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations due to the Project, and impacts would be less than significant (refer to Pages 4.2-26 through 4.2-29 of the Draft EIR).

As discussed in Section 4.11, *Noise*, of the Draft EIR, the Project would not exceed significance thresholds for construction noise levels, operational noise levels, and off-site traffic noise levels. As such, the Project would not generate substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies. Impacts would be less than significant (refer to Pages 4.11-23 through 4.11-29 of the Draft EIR).

58-2 The commenter expresses concerns with Seal Beach's limited resources, such as sharing old sewer and drainage systems with the City of Los Alamitos. The commenter states that the Project would impact the Old Ranch Country Club Specific Plan development and that cumulative impacts cannot be predicted at this time. Refer to Response to Comment 56-5, for sewer concerns and Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, for hydrology concerns.

58-3 The commenter appreciates the mention of a telecommuting workspace, solar roof and electric vehicle charging stations within the Project. However, the commenter inquiries about the management of one shared community vehicle. The commenter questions the feasibility of no natural gas use onsite and inquires whether kitchens will have electric stoves and if heating and air conditioning will be electric. These comments are acknowledged and the commenter accurately represents components of the project including commuting workspace, solar roof and electric vehicle charging stations, community vehicle, and no natural gas. Kitchens will have electric stovetops, and all heating and air conditioning equipment will also be electric.

58-4 The commenter expresses concerns with State density related appeals and the proposed density and requests that the size of the housing units be reduced to decrease environmental impacts. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment

DRAFT

does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

Los Alamitos, CA 90720

To Whom it May Concern,

I oppose any additional housing being build on Lampson. Lampson isn't a big enough street to accommodate additional traffic. The stores where residents between Seal Beach Blvd. and Valley View cannot accommodate additional shoppers. The lines are long enough now to be a problem.

Plz don't destroy our nice neighborhood. We have lived here for 40 years and don't want to be forced to move due to overcrowding, increased crime, etc. I believe it will reduce our property value to turn this into an inner-city neighborhood.

59-1

Thank you for your consideration,

Paulette M. Smith

Responses to Comment 59

Smith, Paulette, dated May 04, 2024.

59-1 The commenter expresses general opposition and concerns with traffic, overcrowding and increased crime. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns. Refer to Master Response 2.1.8, *Public Safety*. As discussed in Section 4.12, *Population and Housing*, of the Draft EIR, the Project would not result in substantial unplanned growth in the area because: 1) the Project is within the growth projections of the City's General Plan, 2) the planned housing is a requirement of State Housing Law and in response to an existing unmet need for housing, 3) the Project is consistent with the existing General Plan land use and zoning designations, and 4) the Project improves the City's job-housing balance by developing housing in a currently jobs-rich and housing-poor area. Therefore, implementation of the Project would not result in substantial unplanned population growth, and impacts would be less than significant (refer to Pages 4.12-8 through 4.12-10 of the Draft EIR).

COMMENT LETTER 61

From: epcb4@roadrunner.com
To: Tom Oliver
Subject: Concerns Regarding the High-Density Project(s)
Date: Monday, April 29, 2024 1:18:47 PM

To Whom it May Concern,

I am resident at 4916 Ironwood Avenue, Seal Beach, I understand the housing mandates dictated by the State of California; however, the plans outlined by the cities of Seal Beach and Los Alamitos will excessively impacting the communities north of the 405 Freeway. There are already problems with the current traffic and environment concerns which will only be exacerbate by these projects. Below are some of my concerns regarding the housing developments. 61-1

-Current traffic congestion on Lampson Avenue between Basswood Street and Tulip Street and the intersection of Seal Beach Boulevard and Lampson Avenue are already a concern with the traffic volume, ongoing traffic collisions and the speed of vehicles. This has already caused increasing safety concerns for bicycles, pedestrians, and motorists over the last ten years. 61-2

-The standing cars especially in the morning and evening hours will increase the carbon emissions footprint in the area and add to the levels already increased by the recently completed 405 Freeway expansion project. 61-3

-New housing developments estimate the number of parking space on the number of residents who should occupy the home not the actual number. When factoring adult children/families returning to their childhood homes and rental units, the true occupancy of the household is much larger. For example, the high-density housing long the east side of Montecito Road for years has increasing encroached on the side street west of Montecito Road, on adjacent streets and within the adjacent shopping center. 61-4

As a concerned citizen of Seal Beach, decisions that are made today will have long-term effects on our community which cannot be undone. Please reconsider the size/footprint of these project. 61-5

Sincerely,

Eric Smitson

DRAFT

Responses to Comment 61

Smitson, Eric, dated April 29, 2024.

61-1 The commenter expresses general traffic concerns on proposed housing developments in the cities of Los Alamitos and Seal Beach impacting communities north of the 405 Freeway. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

61-2 The commenter expresses safety concerns for bicycles, pedestrians, and motorists with the current traffic congestion on Lampson Avenue between Basswood Street and Tulip Street and the intersection of Seal Beach Boulevard and Lampson Avenue due to traffic volume, ongoing traffic collisions and the speed of vehicles. Refer to Master Responses 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, for pedestrian safety impacts.

61-3 The commenter states that standing cars especially in the morning and evening hours will increase the carbon emissions footprint in the area and add to the levels already increased by the recently completed 405 Freeway expansion project. As discussed in Section 4.2, *Air Quality*, of the Draft EIR, construction and operation of the Project would not exceed criteria pollutant thresholds established by the South Coast AQMD for emissions of any criteria pollutant and impacts would be less than significant (refer to Page 4.2-23 to 4.2-25 of the Draft EIR).

61-4 The commenter states that new housing developments simply estimate the number of parking space needed for the number of residents who should occupy the home, rather than determining the true occupancy. The commenter provides an example of high-density housing along the east side of Montecito Road, which has increasingly encroached on adjacent streets and the shopping center. Refer to Master Response 2.1.3, *Parking*, for a detail discussion on parking impacts. Thus, no further response is required.

61-5 The commenter provides concluding remarks and requests that the City reconsider the size/footprint of the Project. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

Lampson EIR

Marty Sprong <marty@sprongcpa.com>
Mon 6/10/2024 4:34 PM
To:Tom Oliver <Toliver@cityoflosalamitos.org>

Hi Tom,

I'm disappointed to see that they expect AYSO to play on less fields and spread the games to times when it's the hottest. They also recommend to play on Sundays, when that is not going to happen. It's God's day for many.

Reality is that people who live in CPE know that the traffic is going to be a huge issue. Those in Los Al have no clue because they don't live near this area except for the town homes. It's a shame that once this monster is built, it's too late. All the " I told you so" will continue to fall on deaf ears.

62-1

My one question about the EIR is this:

Please make sure, as I DON'T SEE IT CURRENTLY, is please tell us what the impact of the Lampson Project AND the proposed development at Old Ranch. The two together will be a complete disaster to our area. It needs to be addressed.

62-2

Thanks

Marty Sprong

DRAFT

Responses to Comment 62

Sprong, Marty, dated June 10, 2024.

62-1 The commenter expresses concerns regarding the impact to AYSO operations and traffic. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for impacts related to traffic. Comments regarding AYSO operation is not an environmental issue analyzed under CEQA; however, this comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. Thus, no further response is required.

62-2 The commenter notes that the impact of both the Lampson Project and the proposed development at Old Ranch must be addressed. Refer to Response to Comment D-9 for a detailed discussion on the cumulative impacts of the Project. As discussed, the Project would not cumulatively contribute to environmental impacts associated with buildout of Old Ranch Country Club.

Lampson Proposed Project

Dora Stathopoulos <dorastat1@gmail.com>
Tue 5/14/2024 11:26 AM
To:Tom Oliver <Toliver@cityoflosalamitos.org>

Just want to let you know that my family and I are very much against the proposed projects that are looking to happen on Lampson.

I understand you don't live in the area so you will not be impacted personally.

Please try and understand our frustrations. I don't need to go into detail as you are very aware of all the concerns all of my neighbors have. Please do right by all of us and do what is right for this community. Put yourself in our shoes. What has been proposed is way too much for that much area of land. It needs to be scaled back.

I appreciate your time.

Thank you.

Dora Stathopoulos.

Subject: Lampson Project

Dear Tom –

Our family has owned our home in College Park East since 1976. Our home is on Hazelnut Avenue.

Under no circumstances does the proposed Lampson project make sense.

We have heard from the experts that the proposed plan is not lawful, it's a hinderance, and recommended.

We do not support the current Lampson project.

We support the recommendation of the experts – residential units being built in the proposed location is not in the city's, neighbors, or local community's best interest. In fact – it's unlawful.

Regards,

Timothy I. Still

To:ssustarsic@sealbeachca.gov <ssustarsic@sealbeachca.gov>;Tom Oliver <Toliver@cityoflosalamitos.org>

Dear Council Member Sustarsic and Mr. Oliver,

I am a CPE resident and am writing against the Lampson Park Place Project. I insist that you require the Los Alamitos City Manager to obtain unbiased new environmental reports, provide environmental remediation measures, and release the “Peer Review” Report before any environmental decisions are made on the Lampson Project. The quality of life we enjoy now will be greatly impacted by this project. 65-1

Thank you for your time and efforts to protect our community.

Michelle Stohler

Subject: New residential developments on Lampson in seal Beach/Los Alamitos
Date: Friday, May 17, 2024 4:35:28 PM

IRONSCALES couldn't recognize this email as this is the first time you received an email from this sender tomsugi@verizon.net

This letter is to present my protest in the development of new residential buildings in the college Park East/Los Alamitos area. I have lived here all my life and have seen traffic increasing slowly. I have also worked for a traffic engineering company that helped plan Lampson as a traffic engineer. The street is not designed for the capacity of the increase of traffic that these residence would bring. These type of high density have not been taken into consideration by the planners of the city and could be better located on the outskirts of our cities. Please do not build these residents and further, increased traffic for us longtime residence who have put up with much in the past, but refused to concede this much damage to our quality of life. 66-1

Sincerely,

Tom Sugihara
College Park East resident

Mr. Oliver,

My comments for the Draft EIR for 4665 Lampson are attached.

Thank you very much.

Schelly Sustarsic

67-1

DRAFT

June 10, 2024

To: Tom Oliver

City of Los Alamitos

Re: Comments regarding Draft Environmental Impact Report for 4665 Lampson Avenue:

My foremost concern with this project is **safety**. Safety for the Joint Forces Training Base (JFTB or base), safety for drivers on our streets, safety for children, and keeping residents safe in our homes. Progress is fine, but the cost should not be making us all more vulnerable.

Early on, as the developers made their plans for development of the property, it was suggested that they donate the northern 10 feet of their property to be added to the Arbor Park parking lot to enable AYSO soccer to be able to continue their games at Arbor Park, even though the West Ed parking lot was being developed. This was a helpful, generous potential solution to a problem regarding continued use of the Arbor Park soccer field. According to this document, it seems that that donation of land to the park will give control of the park over to the City of Los Alamitos – not just new residents using the park, but control of the park. Perhaps the developer should keep the 10 feet of property and use it for parking for the residents of their project, especially the apartments since they have an extremely low number of parking spaces allotted to them.

67-2

Arbor Park has been leased from the Army Corps of Engineers by the City of Seal Beach for almost 43 years. Because College Park East was built out with only four small park spaces (a total of 5.3 acres) our city worked with the base and Los Alamitos to secure a lease on base property to allow a larger space for recreation such as soccer and baseball to be played (Los Alamitos received space from the base for their Los Alamitos Youth Baseball field). Seal Beach put in baseball and soccer fields, allowing the community to also enjoy the open space. When an agreement with AYSO gave them exclusive rights to the soccer fields in exchange for upkeep, the dog park at Arbor Park was constructed, to keep dogs off the playing field.

Seal Beach has been a good tenant. It has provided space for sports as well as space for dog owners to run their dogs off leash. They have also followed the rules placed on them by the Army to protect the base: no lights for the playfield, no permanent structures such as a restroom, all in case the park needed to be reverted to the Army in case of needed military use or emergency. Seal Beach has followed the rules to keep the park protected, securing the 7-foot-high fence with barbed wire and locking the entrance during the hours from dusk to dawn.

We should not compromise the security of the base. Discussions with the military may not have included such important issues as security, drainage, and encroachment of their operations. This property abuts the southern border of a military installation and proper concern should be with that.

67-3

Lampson is a street on which drivers travel fast, and has multiple accidents each year due to speed, as well as unsafe turns. The addition of more vehicles to the area will mean a greater chance of accidents. More eastbound traffic means more difficulty making left turns into College Park East at Candleberry, Heather, Rose and Tulip. Vehicles need to be careful entering and exiting our tract because of speeds on Lampson. However, most everyone seems to be in a hurry and drivers often drive late through yellow

67-4

DRAFT

lights. Lampson is the only access both for residents of College Park East and to the new residents of the proposed development. Whenever an accident occurs, traffic is either diverted through College Park East, or all the way around via Westminster or Katella to Valley View.

67-4 (CONT.)

I would prefer a place inside this property to allow a **school bus** to stop and pick up students for school. With 246 housing units in a small area, there would undoubtedly be many students. Our school district is a draw, with parents and would be parent moving here to be in the Los Alamitos Unified School District. Lampson is a busy, fast street and a bus should not stop on the street to load students. Although I have no problem with an adult walking a child or children over to the bus stop at Heather Park, I have doubts that most students would get there in that manner. Probably quite a number would be in a hurry and their caregivers drive over to Heather Street, which would add to congestion there; A mix of automobiles, kids, and everyone in a rush would increase concerns for the safety of children. Heather Park is presently a bus stop for McGaugh Elementary, Weaver Elementary, McAuliffe and Oak, and Los Alamitos High School students. At some point, children will begin to walk unaccompanied. However, crossing Lampson is still a safety concern, with drivers concentrating on other things. Please keep all our children safe.

67-5

Parking will be a problem in the present project plan. The cluster homes and townhomes may be fine in that they have garages, driveway spots and some free parking spots for guests and additional occupants. However, 102 spots for 77 apartments will not be adequate for guest parking, and probably even for residents. This will lead to an overflow of parking into the College Park East neighborhood, especially on Heather and Rose Streets. On Rose Street, this would mean competition for spaces that those residents use for guests and extra family members; On Heather, street spaces are used as bus stops, parking for park use such as Special Events, recreation classes, sports practices, tennis, and use by the residents for their guests as well. Supplying additional parking in the development, or decreasing density, would help to prevent overflow parking from impacting our neighborhood. Children needing to walk between cars to board the bus is not optimal.

67-6

Lampson is a secondary arterial which could hold more Average Daily Traffic. However, traffic stacks up in the mornings at Seal Beach Blvd, as drivers head off to work and drive students to school. The idea of the center lane (#2) becoming a left-turn right-turn lane could possibly help this, but only to a small degree. The right lane would probably still be favored by those turning right as they could turn right at the red light. Those in the # 2 lane would be held up by the first driver who intends to turn left onto Seal Beach Blvd. Traffic in the DEIR is presented as Cumulative for 2026. This apparently adds this project's traffic to the existing traffic but is only including traffic from 120 proposed housing units being added at Old Ranch Country Club; that project is currently proposed to add 167 housing units, probably in 2027-2028 from 116 multifamily apartments exiting their property during peak morning hours as well as 51 senior apartments. Exits from these properties near the corner of Lampson and Seal Beach Blvd will act to increase the number of vehicles and impair traffic flow, and a left-turn right-turn #2 may no longer make this mitigation to the intersectional functional. The Old Ranch Country Club proposed plan also includes a hotel and medical offices with traffic impacts unknown at this time, but include employees, guests, diners, vendors deliveries and patients.

67-7

DRAFT

The answer is less density, more parking, or possibly **the Senior Housing Option would be better**. There would be fewer residents and more parking spaces offered. Although many may be still be working, their hours may not be the traditional 9 to 5, and varied hours would mean the addition of fewer vehicles to those present at peak times. Seniors' recreation needs may be simpler as well. For those who are more active, they may become members of the Seal Beach Tennis and Pickleball Center, just down the street within biking distance.

67-8

There seems to be a discrepancy in the discussion over which noise contours to use in the document. The newest studies, such as a 2020 AICUZ study, may not be the ones used in planning (that would be the 2017 AELUP that the ALUC would use). Regardless of how much of the 60-decibel noise contour covers the project, aircraft noise will be present for these residents. Helicopters fly all around the base, in closed loops, both on and off the base. Visiting aircraft do not always follow the fixed flight paths and fixed-wing aircraft take off every morning and during the day. CNEL is measured over 24 hours, while the base does not operate flights in the late night or very early morning hours. A noisy helicopter is not an event averaged over time. There are plenty of opportunities for annoyance to bother the residents who will be living there. I have heard people complain about aircraft noise while trying to work from home. It is not ideal to place children in a noisy environment or low-income residents. The outdoor environment will be unavoidably noisy for residents of the project.

67-9

Drainage – Hydrology:

This project will result in a large increase in the amount of coverage of the property by buildings and hardscape. This will be a change from the present office building and parking lot (42% impervious) to the project (90% impervious) with a corresponding reduction of permeable space from the current (58%) to the project (10%) (Preliminary WQMP, Appendix, page 6). This means that most of the rain from storms will run-off and will need to go somewhere.

Two proposals are presented to handle stormwater runoff. One of them proposes stormwater travel across the JFTB to the Old Ranch Country Club, which acts as a retention basin for the area, including College Park East. It is noted that this proposal depends on acceptance by the JFTB as they have control over their property. A second method of drainage is through underground boxes with microfilters, which would store excess rainwater until after the storm, then release it onto Lampson Avenue.

67-10

College Park East neighborhood has been dealing with drainage problems and rising stormwater levels, with some homes with water intrusions and multiple automobiles damaged. There is not adequate ability to transfer stormwater over to Old Ranch golf course retention basin. In addition, stormwater comes off Lampson, into our tract on Heather St. and Candleberry Ave. Any runoff from this project that adds to flooding on Lampson Avenue could exacerbate our drainage problems in College Park East.

Also, College Park East depends upon not only the ability to export water to Old Ranch golf course, but the ability of the golf course to be able to accept our runoff. Additional projects such as 4665 Lampson and Old Ranch's own proposed development projects will both be adding stormwater to the retention basin. Cumulative impacts of both projects should be considered in the combined amount of stormwater being sent to Old Ranch golf course and its ability to accept this runoff (and transfer it to the Federal channel).

67-11

DRAFT

Recreation and Park Use:

Seal Beach has 75.5 acres of park space, community centers and sport fields. Quite a bit of it is not actually city property but leased or shared by joint use agreements (Arbor Park, Mc Gaugh Elementary School gymnasium, swimming pool, tennis courts, and baseball field). In Planning Area 4, park space was judged to be deficient, as during development of the CPE neighborhood, some identified recreation was not developed by the builder, and only resulted in four small neighborhood parks, three with tot lots to serve the 1,739 homes and approximately 5,000 residents (a total of 5.3 acres). In 1981, Seal Beach obtained a lease from the Army Corps of Engineers for a section of base property that Seal Beach developed as Arbor Park, a larger recreation area with space for baseball and soccer games and practices.

It has been suggested that the developer would donate 10 feet at the northern edge of the property, adjacent to Arbor Park, to that parking lot, for additional parking due to the loss of the present West Ed lot for games on weekends. However, there would still be a need to consult with AYSO to see if it would be a workable solution to spread games out later into the day, or on Sunday. It is also stated that this donation, because it is a donation of property in the City of Los Alamitos, would necessitate control of the parks to the City of Los Alamitos. I am not in favor of this if it would result in a loss of park space for Seal Beach. The City of Seal Beach signed a lease with the Army Corps of Engineers in 1981 for the lease of Federal base property. This lease was renewed in 2003 and the current lease extends until December 31, 2028. (The City of Los Alamitos has also received the use of base property for sport purposes, for Los Alamitos Youth Baseball).

67-12

Construction Impacts: the area surrounding I-405 has been having construction for the last 5-6 years, almost constantly on Lampson. This includes trucks, lane closures, and detours. This project would add more (until 2026) and a project at Old Ranch would add even more, if approved, through 2027-2028.

Adding vehicles to Lampson will generate more **Vehicle Miles Traveled (VMT).** This will generate more Green House Gases and more air pollution, with potential health impacts to all nearby residents. VMT is something that cannot be mitigated with this project unless the project density is reduced, or an Alternative is selected.

67-13

Senior Housing appears to be a better alternative with possibly fewer vehicles and some coming and going at non-peak travel times. There would also be more parking spaces required, which would be a positive.

67-14

Thank you for your consideration of my comments.

Sincerely,

Schelly Sustarsic

4288 Candleberry Ave, Seal Beach, CA 90740

(562) 431-32466

DRAFT

Responses to Comment 67

Sustarsic, Schelly, dated June 10, 2024.

67-1 The commenter makes introductory comments to the attached comment letter. Response to comments made are discussed below; thus, no further response is required.

67-2 The commenter raises concerns regarding safety and suggests that the 10-foot dedication to the north be used for parking for the Project instead. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for impacts to motorist and pedestrian safety and Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*, for safety impacts related to the JFTB. The commenter's suggestion for the 10-foot dedication is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

67-3 The commenter provides background information about Arbor Park and the agreements between the City of Seal Beach and the Army Corps of Engineers. The commenter also raises concerns regarding the security of the military base. This comment is not an environmental issue analyzed under CEQA; however, this comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

67-4 The commenter states that the addition of more vehicles to the area will lead to more accidents on Lampson Avenue, and accessibility into and out of College Park East will be more difficult due to those potential accidents. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, regarding the impact of the Project on collision rates.

67-5 The commenter suggests that a school bus stop be included within the Project site and expresses concerns regarding the safety of children walking to the existing bus stop at Heather Park and crossing Lampson Avenue. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for pedestrian safety concerns.

67-6 The commenter states that the parking provided for the apartments is inadequate and will lead to overflow parking in College Park East on Heather and Rose Streets and competition with CPE residents. The commenter suggests increasing parking within the Project or decreasing the density of the Project. Refer to Master Response 2.1.3, *Parking*, for parking concerns.

67-7 The commenter challenges the functionality of making the center lane (#2) of Lampson into a left-turn right-turn lane and states that the Cumulative Analysis for traffic through 2026 excludes impacts from additional proposed units and other uses at Old Ranch Country Club that will be added after 2026. Refer to Response to Comment D-9 for cumulative traffic impacts

DRAFT

and D-38 for the feasibility of restriping the number two westbound left turn lane as a shared left-right turn lane on Seal Beach Boulevard & Lampson Avenue.

67-8 The commenter suggests that the Senior Housing Alternative be adopted and provides reasons to adopt the alternative, including fewer residents, fewer vehicles at peak times, and simpler recreational needs. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

67-9 The commenter notes the discrepancy between noise contours used in the most recent studies and in the Draft EIR, points out that CNEL is measured over 24 hours, despite the base ceasing flights in the late night and early morning, and states that aircraft noise will be an annoyance for residents of the Project. Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*, for impacts related to noise from JFTB. The analysis of exposure of excessive noise levels due to proximity to airport operations is evaluated by determining whether the Project places residents or workers within noise contours deemed incompatible for sensitive land uses. This analysis included a review of the City's General Plan, JFTB Los Alamitos AELUP, and the State of California, Division of Aeronautics' California Airport Land Use Planning Handbook (refer to Page 4.1-19 of the Draft EIR).

The noise compatibility criteria in the AELUP are guidelines to evaluate the land use compatibility of aircraft-related noise, which does rely on CNEL. CNEL represents a composite 24-hour noise level which is a weighted average of the intensity of a sound, with corrections for time of day, and averaged over 24 hours. The time-of-day corrections require the addition of 5 decibels to dBA Leq sound levels in the evening from 7:00 p.m. to 10:00 p.m., and the addition of 10 decibels to dBA Leq sound levels at night between 10:00 p.m. and 7:00 a.m. These additions are made to account for the noise sensitive time periods during the evening and night hours when sound appears louder. CNEL does not represent the actual sound level heard at any time, but rather represents the total sound exposure (refer to Section 2.2, Noise Descriptors of *Technical Appendix K*, Noise Study, of the Draft EIR).

67-10 The commenter summarizes the changes in the percentage of impervious and permeable surfaces from existing to proposed conditions and the two proposed stormwater drainage systems. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required. Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis* for flooding and drainage impacts.

67-11 The commenter states that College Park East has drainage problems, runoff from the Project will exacerbate the problems, and Old Ranch Golf Course may not have capacity to accept runoff from additional developments. Refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis* for flooding and drainage impacts. Refer to Response to Comment 56-5 regarding cumulative impacts from Old Ranch Golf Course.

DRAFT

67-12 The commenter provides background information about Arbor Park and the City of Seal Beach's property lease from the Army Corps of Engineers. The commenter opposes the transfer of control of Arbor Park from the City of Seal Beach to the City of Los Alamitos resulting from the Project's 10-foot dedication for additional parking and states that AYSO must still be consulted about the timing of games. These comments are noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

67-13 The commenter expresses concerns regarding current and future construction including the Old Ranch Country Club Development and the VMT, GHG, and air pollution impacts caused by routing vehicles onto Lampson. Refer to Response to Comment D-9 for cumulative traffic impacts.

As discussed in Section 4.15, *Transportation*, of the Draft EIR, the Project would result in significant VMT impacts with the implementation of Mitigation Measure MM 4.15-1. Even where the TDM measures are implemented to their maximum effectiveness of 10%, the Project would still not be able to reduce its VMT impact to a level of less than significant which requires a 31.8% reduction for baseline (2022) conditions and 27.7% for buildout (2045) conditions. Therefore, the Project is found to have a significant and unavoidable VMT impact on a direct and cumulatively considerable basis. (refer to Page 4.15-20 of the Draft EIR).

As discussed in Section 4.7, *Greenhouse Gas Emissions*, of the Draft EIR, construction and operation of the Project would generate a 2,757.11 $MTCO_2e$/yr; the Project would not exceed the significance threshold of 3,000 $MTCO_2e$/yr. Thus, impacts would be less than significant, and no mitigation is required (refer to Pages 4.7-26 through 4.7-27 of the Draft EIR).

As discussed in Section 4.2, *Air Quality*, of the Draft EIR, implementation of the Project would not: 1) exceed applicable South Coast AQMD localized criteria pollution emissions thresholds during construction and operation; 2) would not cause or measurably contribute to the formation of a CO "hot spot;" and 3) would not result in a health risk for nearby residents during construction (refer to Pages 4.2-26 through 4.2-29 of the Draft EIR).

67-14 The commenter reiterates the benefits of the Senior Housing Alternative and makes concluding remarks. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

Subject: DEIR

Dear Mr. Oliver,

First of all, thank you for providing information regarding the DEIR to us here in College Park East, Seal Beach. As a resident of this neighborhood, I hope you can understand the impact the proposed development at the West Ed site will have on our community. My husband and I have numerous concerns about this project and are saddened that such a large project is being approved. After reviewing many documents and attending numerous meetings, we continue to have the following concerns:

- Air quality during construction with large trucks coming and going. Air quality after construction as there will be an increase in population and vehicle use polluting our air.
- Traffic during construction and after. Again, large trucks coming and going down Lampson. The number of proposed units will have a big impact on traffic on Lampson.
- Strain on services with regards to police, fire, schools, libraries.
- Natural resources impacted such as an increase demand for water, waste management impact, increase need for electricity, etc.

Also, we are concerned that this project doesn't include a park or adequate parking. During construction, we are worried about the traffic, noise, dirt, air pollution and the possibility of rodents and other animals moving into our neighborhood.

Again, thank you for reaching out to those of us who will be directly impacted.

Sincerely,

Thom and Elizabeth Thomas

4572 Hazelnut Ave.

Seal Beach, CA 90740

68-1

68-2

DRAFT

Responses to Comment 68

Thomas, Thom and Elizabeth, dated June 3, 2024.

68-1 The commenters make introductory remarks, express opposition to the Project, and raise concerns regarding the impact to air quality and traffic during and after construction. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for impacts related to traffic. As discussed in Section 4.2, *Air Quality*, of the Draft EIR, the Project would not exceed the South Coast AQMD localized significance thresholds for assessing localized health impacts from criteria air pollutants during construction. Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations during Project construction. Further, Project traffic would not create or result in a CO "hotspot." Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations due to the Project, and impacts would be less than significant (refer to Pages 4.2-26 through 4.2-29 of the Draft EIR).

68-2 The commenters express concerns regarding the impact on police, fire, school, and library services; the impact on demand for water, waste management, and electricity; the adequacy of the Project's provided parking; the impact of construction on traffic, noise, dirt, air pollution; and the potential for rodents to move into College Park East. Regarding impacts to police services, refer to Master Response 2.1.8, *Public Safety*. Refer to Response to Comment 68-1 regarding traffic and air quality impacts. Refer to Master Response 2.1.3, *Parking*, for parking concerns.

Regarding impacts to fire services, schools, and libraries, as discussed in Section 4.13, *Public Services*, implementation of the Project would result in an increased requirement for public services. However, considering the existing resources available, the Project is not expected to result in the need for new or physically altered governmental facilities, and impacts would be less than significant (refer to Pages 4.13-9 through 4.13-12 of the Draft EIR).

Regarding impacts to water demand, as discussed in Section 4.17, *Utilities and Service Systems*, of the Draft EIR, based on the water supplies available and the estimated water demand, there are sufficient water supplies available to serve the Project during average, single dry, and multiple dry years. Additionally, the Project is subject to connection and service fees to offset increased demand and assist in facility expansion and service (at the time of need). Accordingly, there would be sufficient water supplies available to serve the Project and impacts would be less than significant (refer to Pages 4.17-15 through 4.17-17 of the Draft EIR).

Regarding impacts to waste management, as discussed in Section 4.17, *Utilities and Service Systems*, of the Draft EIR, solid waste from the City is transported to Frank R. Bowerman Sanitary Landfill in the City of Irvine and the Olinda Alpha Sanitary Landfill near the City of Brea. The two landfills have a combined permitted disposal capacity of 19,500 tons per day. The Project's estimated solid waste generation represents approximately 0.0077 % of the two landfill's capacity and therefore, would not contribute significantly to both landfill's daily

DRAFT

capacity. Additionally, the Project is subject to connection and service fees to offset increased demand and assist in facility expansion and service (at the time of need). Accordingly, impacts would be less than significant, and no mitigation is required (refer to Pages 4.17-19 through 4.17-20 of the Draft EIR).

Regarding the impact to electricity demand, as discussed in Section 4.5, *Energy*, operations for the Project would result in approximately 1,131,132 kWh of electricity annually and would offset the demand through the use of on-site photovoltaic solar power which is expected to generate 1,229,520 kWh of electricity annually – which results in a net electricity demand of 98,388 kWh/year of electricity (refer to Page 4.5-10 of the Draft EIR).

Regarding impacts to noise during construction, as discussed in Section 4.11, *Noise*, of the Draft EIR, the construction noise analysis shows that noise impacts at the nearest receiver locations will be less than the daytime 80 dBA L_{eq} significance threshold during Project construction activities. Because the highest construction related noise level is 63.31 dBA L_{eq} at the nearest sensitive receiver, the noise impacts due to Project construction noise are considered less than significant and no mitigation is required (refer to Pages 4.11-23 through 4.11-24 of the Draft EIR).

Regarding the impact of construction as to "dirt," as discussed in Section 4.6, *Geology and Soils*, of the Draft EIR, the Project would be required to implement erosion and dust control measures pursuant to South Coast AQMD Rule 403 to minimize water- and windborne erosion. Mandatory compliance with the SWPPP and the erosion control and dust control measures would reduce, prevent, or minimize soil erosion from Project-related construction activities (refer to Page 4.6-6 of the Draft EIR).

Regarding the potential for rodents and small animals to move into CPE, refer to Response to Comment 9-21 related to the potential of rodents. Additionally, as discussed in Section 4.3, *Biological Resources*, of the Draft EIR, the Project site is not located within or part of a wildlife movement corridor. Therefore, the Project would not substantially interfere with an established migratory wildlife corridor. (refer to Page 4.3-33 through 4.3-34 of the Draft EIR). This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

Comment Letter 69

Objection to The Lampson Park Place Project

Jeff T <jefftilson.77@gmail.com>
Mon 5/13/2024 11:24 AM

To:Tom Oliver <Toliver@cityoflosalamitos.org>
Cc:Jordan Nefulda <JNefulda@cityoflosalamitos.org>

The purpose of this letter is to voice my objection to The Lampson Park Place Project. As a long time resident of Seal Beach, College Park East, I see this development a serious problem for my family and many of my neighbors due to the following reasons:

- Parking overflow is already congested and we see cars parking in the neighborhood from patrons of the tennis and gold club as it is already. With the large increase in new residents, this will only get even worse.
- With the increased traffic, emergency response times would be delayed.
- Stop lights would impact traffic flow due to increased crossing of people on Lampson using the parks in CPE.
- Child and bicycle safety is a concern of higher traffic rates.

69-1

- Infrastructure will increase sewer, storm drain, water and other draining problems we already face in this part of Seal Beach.
- Loss of open space and failure to provide on-site adequate areas for community outdoor use by over-building, inadequate setbacks, and lack of adequate trash disposal bins for rental units.
- Seems there is a general safety issue with proximity to the military airport, crash risk, hearing loss due to noise impacts.
- **This project has has zero negative impact to Los Alamitos residents and businesses considering the land is separated from the rest of the city by the military base. Seal Beach residents are left with their hands tied to absorb all the negative ramifications. If the voting residents and business of Los Alamitos were impacted, this project would not exist. That is not right.**

69-2

Thank you for your consideration.

Jeffrey Tilson
4157 Banyan Ave
Seal Beach, CA 90740
562-310-3096

DRAFT

Responses to Comment 69

Tilson, Jeffrey, dated May 13, 2024.

69-1 The commenter expresses opposition to the Project and raises concerns about overflow parking, emergency response times, stop lights interrupting traffic flow, and child and bicycle safety. Refer to Master Response 2.1.3, *Parking*, for parking concerns, 2.1.7, *Emergency Vehicle Access*, for impacts to emergency response times, 2.1.1, *Transportation and Traffic Congestion*, for traffic concerns, and 2.1.2, *Roadway Safety on Lampson Avenue*, for impacts to child and bicycle safety.

69-2 The commenter raises concerns regarding exacerbation of sewer, stormwater, and water drainage problems; loss of open space; lack of on-site community outdoor space; lack of trash bins for rental units; and safety, crash risk, and noise due to proximity to the military airport. The commenter states that Los Alamitos residents and business are not impacted by the Project due to separation from the City by the military base. Refer to Master Response 2.1.4, *Hydrology and Wastewater Infrastructure Analysis*, for drainage concerns, 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, for open and outdoor space concerns, and 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*, for concerns related to proximity to the military base.

As discussed in Section 4.2, *Air Quality*, of the Draft EIR, Project-generated solid waste (refuse) would be stored in covered containers and removed at regular intervals in compliance with current solid waste regulations. The proposed Project would also be required to comply with South Coast AQMD Rule 402 to prevent occurrences of public nuisances. (Refer to Page 4.2-29 of the Draft EIR) Thus, the Project is required to provide adequate trash bins for rental units, and the impact of refuse associated with Project operations would be less than significant.

Regarding the lack of impact on Los Alamitos residents and businesses, this comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

Comment Letter 70

From: Teresa Werner
To: Tom Oliver
Subject: Lampson project
Date: Monday, May 6, 2024 6:54:30 AM

I would like to comment on the new housing projects planned by Los alamitos and seal beach. Please reconsider and do not do this! I am sure you see that Lampson is a very busy street with no parking. It is unique because of the limited access out of the area making emergency vehicles and too much congestion a real problem. It has had more accidents than any other area in Los Al or Seal Beach. If this project is built children will go to the only park, Heather park, crossing this busy street! A terrible plan! Where are their visitors to park? Most homes have two cars so really how does this really work? They will park in neighborhood across from them making problems for those people. What about the two studies that said building here next to the Joint Forces Training base is not recommended. Are you ready for the law suits any problems will give the city? There are more problems but let me just end this email saying we should never fix a problem by making so many other problems. I hope you will consider all the safety issues, the impact on water, medical/emergencies and the community welfare and stop this plan. Thank you Tom for giving this much more time and consideration. Teresa Werner

70-1

70-2

Responses to Comment 70

Werner, Teresa, dated May 6, 2024.

70-1 The commenter expresses opposition to the Project and raises concerns about emergency vehicle access, vehicle congestion and accidents, pedestrian safety, and overflow parking in the neighborhood due to inadequate on-site parking. Refer to Master Response 2.1.7, *Emergency Vehicle Access*, for impacts related to emergency vehicle access 2.1.1, *Transportation and Traffic Congestion*, 2.1.2, *Roadway Safety on Lampson Avenue*, for impacts related to vehicle accidents and pedestrian safety, and 2.1.3, *Parking*, for on-site parking concerns.

70-2 The commenter expresses concerns regarding the two studies recommending against development next to the JFTB, makes concluding remarks, and asks for the consideration of impacts on safety, water, emergencies, and community welfare. Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*, for impacts related to proximity to the JFTB. The concluding remarks are noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. The concluding remarks do not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

IRONSCALES couldn't recognize this email as this is the first time you received an email from this sender curtw.curtw@gmail.com

Hi. We live at 2641 Copa De Oro Dr in Rossmoor. I was horrified to see that very large, ~50 acres, bulldozed on the base, off Lampson, without any warning or discussion or environmental impact study done. This was a beautiful and important wildlife sanctuary. I've seen a dozen Kestrels hovering simultaneously over the area-amazing and beautiful and now gone and wiped out. Tragic-nothing to see here!! Curt & Cindy Wheeler

71-1

Responses to Comment 71

Wheeler, Curt, dated May 22, 2024.

71-1 The commenter states that 50 acres of land were bulldozed on the base without warning or completion of an environmental impact study and that American Kestrels were flying over the bulldozed area. The 50-acre project that the commenter is referring to is independent from the proposed Project. The Project will be confined to the Project Site with the exception of offsite infrastructure improvements. However, this comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

DRAFT

Comment Letter 72

From: Nancy Wiest
To: Tom Oliver
Subject: Lampson Project
Date: Friday, May 17, 2024 2:10:43 PM

I have been a resident of College Park East "CPE" for 55 years. I am very concerned about the impact that the Lampson Project "project" will cause. The City of Los Alamitos needs to be aware of the following problems: 72-1

1. Traffic on Lampson will be intolerable. There will be at 500 plus additional cars on Lampson at all times of the day and night. As it is traffic
is too heavy on that street. Residents of CPE only have access to our homes via Lampson. 72-2

2. As a result of additional cars on Lampson, emergency services will not be able to access CPE homes (and those new Project residences)
and lives might be lost since emergency services will not be able to enter CPE and the new residences. 72-3

3. There are health and safety issues due to so many additional residences planned by the Project. 72-4

4. I demand public disclosure of state declared health and safety risks due to the Project. 72-5

5. Stop lights on Lampson will be impacted. Residents living in the Project will be crossing Lampson to access our parks. 72-6

6. The plans for the Project do not provide enough free space so the residents will be accessing Heather Park and other parks in CPE. 72-7

7. Residents of CPE will be required to obtain parking permits to park on our own streets since the residents of the Project will be parking on our streets 72-8

8. Noise will be magnified due to additional residents and traffic. Air quality will also be lowered for everyone in the area. 72-9

9. Building new residences next to the flight path at the military base will put numerous people in constant danger. 72-10

Those are just a few of the problems the Project will cause. Should there be victims due to the military base or emergency vehicles not able to enter CPE and the new residences the City will be liable such as what happened in Cerritos many years ago. Your budget will be blown away should any of that occur.

I implore you to reconsider the Project. I have attended many of the City Council meetings and was extremely upset that your City Council still voted to proceed with the Project. Thank you for your consideration. 72-11

NANCY WIEST
562/431-7874

9.

Responses to Comment 72

Wiest, Nancy, dated May 17, 2024.

72-1 The commenter makes introductory remarks for concerns with the Project, which are responded below.

72-2 The commenter raises concerns regarding traffic on Lampson. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for impacts related to traffic.

72-3 The commenter asserts that emergency services will be unable to access CPE homes and the Project's homes due to heavier traffic. Refer to Master Response 2.1.7, *Emergency Vehicle Access*, for impacts to emergency services; and 2.1.8, *Public Safety*, for safety concerns.

72-4 The commenter asserts that additional residences will cause health and safety issues. As discussed in Section 4.2, *Air Quality*, of the Draft EIR, implementation of the Project would not: 1) exceed applicable South Coast AQMD localized criteria pollution emissions thresholds during construction and operation; 2) would not cause or measurably contribute to the formation of a CO "hot spot;" and 3) would not result in a health risk for nearby residents during construction. (Refer to Pages 4.2-30 through 4.2-31 of the Draft EIR) Refer to Master Responses 2.1.2, *Roadway Safety on Lampson Avenue*, and 2.1.8, *Public Safety*, for safety concerns.

72-5 The commenter demands disclosure of state-declared health and safety risks due to the Project. The Draft EIR discloses health and safety risks throughout the environmental analysis sections, as appropriate, and concluded impacts would be less than significant. Refer to Response to Comment 72-4 above.

72-6 The commenter states that residents from the Project will cross Lampson to access Heather Park, impacting stop lights on Lampson. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

72-7 The commenter asserts that the Project lacks free space and that residents of the Project will utilize parks in College Park East. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, for impacts related to open space and park use.

72-8 The commenter claims that residents of CPE will be required to obtain parking permits for street parking because residents of the Project will park in CPE. Refer to Master Response 2.1.3, *Parking*, for impacts related to overflow parking. Parking permits for street parking in CPE is not an environmental issue analyzed under CEQA; however, this comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any

DRAFT

issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

72-9 The commenter states that noise will increase due to more residents and traffic, and that air quality will decrease.

As discussed in Section 4.11, *Noise*, of the Draft EIR, the Project would not exceed significance thresholds for construction noise levels, operational noise levels, and off-site traffic noise levels. As such, the Project would not generate substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies. Impacts would be less than significant (refer to Pages 4.11-23 through 4.11-29 of the Draft EIR).

As discussed in Section 4.2, *Air Quality*, of the Draft EIR, the Project would not exceed the South Coast AQMD localized significance thresholds for assessing localized health impacts from criteria air pollutants during construction. Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations during Project construction. Further, Project traffic would not create or result in a CO "hotspot." Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations due to the Project, and impacts would be less than significant (refer to Pages 4.2-26 through 4.2-29 of the Draft EIR).

72-10 The commenter asserts that the Project's proximity to the JFTB will put people in danger. Refer to Master Response 2.1.9, *Proximity to the Los Alamitos Joint Forces Training Base (JFTB)*, regarding safety concerns related to proximity to JFTB Los Alamitos.

72-11 The commenter warns about the liability of the City should there be victims due to the military base or failure of emergency vehicle access and makes concluding remarks regarding opposition to the Project. This comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

DRAFT

Comment Letter 73

Comments on 4665 Lampson Ave Project

Ksatria Williams <ksatria@gmail.com>
Sun 6/2/2024 3:41 PM
To:Tom Oliver <Toliver@cityoflosalamitos.org>

Hello Tom,
I would like to submit the following comments for the 4665 Lampson Ave Project DEIR.

1. The DEIR Park Impact analysis only accounted for visits and not types of usage. The tennis courts are a highly limited feature of Heather Park which are frequently at capacity for residents of College Park East. This development will further strain utilization without equivalent facilities being added to the new development. Please recognize this impact and require the developers to mitigate it in the project plan.
2. The report makes it clear that the existing parking situation at Arbor park is insufficient once the parking spots available at 4665 are removed. This will frustrate the AYSO community, College Park East Residents, and the residents of the new project. Please require that option 2 is funded and constructed as part of the development plan and/or that AYSO permits are limited to events where parking can be accommodated completely within what is available at the park instead of the documents 9 simultaneous games.

Thank You,
Ksatria Williams
College Park East Resident

73-1

DRAFT

Responses to Comment 73

Williams, Ksatria, dated June 2, 2024.

73-1 The commenter states that the Park Impact analysis did not take type of usage into account, believes that recreational facilities will be strained without equivalent facilities such as tennis courts within the Project, and asks for the developer to be required to mitigate the impact. The commenter also states that parking at Arbor Park will be insufficient and asks that the funding and construction of Option 2 as part of the development plan be required and/or that AYSO permits are limited to events where on-site parking is sufficient.

Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, for impacts related to park use and mitigation of impacts. Refer to Master Response 2.1.3, *Parking*, for impacts related to parking at Arbor Park. The commenters suggestion to require Option 2 and/or that AYSO permits are limited to events where on-site parking is sufficient is acknowledged and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. This comment does not raise any issues concerning the environmental analysis provided in the Draft EIR and thus no further response is required.

DRAFT

COMMENT LETTER 74

4665 Lampson Avenue Project

John Williams <johnwwii@yahoo.com>
Thu 6/6/2024 10:15 PM
To:Tom Oliver <Toliver@cityoflosalamitos.org>

IRONSCALES couldn't recognize this email as this is the first time you received an email from this sender johnwwii@yahoo.com

As a longtime resident of College Park East . I would like to voice my concerns with this project.

I am keenly aware of the need to provide more housing for California residents but quality of life and way of life has to be taken into consideration. Having looked through the proposal for this project I do not believe **quality of life and way of life has been taken into account.**

My first concern is the parking to be provided for the proposed housing. Given where the neighborhood will be located and how Californians commute by automobile their is a severe shortage of parking. **To provide for quality of life and way of life there should be a minimum of 3 parking spots per household. Also if street cleaning services (which is necessary) are to be provided where would the vehicles move to?** 74-1

My second concern is access to Lampson. The two exit and entrances will create many automobile accidents either pulling out into the north bound lanes or when the they attempt u-turns at Heather. **We are anticpating over 500+ vehicles which will eventually feed into Seal Beach Blvd or Valley View. If we assume a minimum of 100-200 vehicles per morning the traffic going to school /work will cause anxiety every morning. Also there needs to be a third lane on the Northbound side to allow for residents to merge onto Lampson not interrupt the bicycle lane.** 74-2

My third concern is the Neighborhood Open Space. Given the number of people anticipated to reside in the neighborhood there would need to be an additional space of 10,000 - 20,000 square feet. **If this is not provided it would cause additional anxiety with the residents for securing time at the Open Space. Also they would attempt to use the parks in CollegePark East which is not part of the city of Los Alamitos.** 74-3

My fourth concern is the Public Park behind the neighborhood. If the Park is still used for other activities parking would be greatly reduced as people now park in the current parking lot. **This would create additional anxiety as people using the park and Dog Park would park in the neighborhood. Additonal parking would need to be built to accomodate the park users.** 74-4

My fifth concern is Lampson only has 2 lanes per direction. **Without traffic lights there is not a merge lane and people trying to exit would block the bicycle lane on the northbound side. Also from a policing standpoint who will support tyhe Los Alamitos residents? Response Times?** 74-5

My sixth concern is where the entrance/exits of the neighborhood are located. In no way should these exits be considered from a safety stand point. **Either traffic accidents or the need for emergency services highly compromise residents abilities to enter/exit.** 74-6

DRAFT

Given my concerns I believe that this project needs to be revamped to accomadate less people and more parking , traffic lanes and open space.

I appreciate the developer wanting to be helpful and profitable but too many times these type of projects do not work well for the residents of the new and surrounding communities. The developer will make their money and disappear. Another thing to consider is have the developer take out a $20 million dollar insurance policy to cover any "improvements " that would be neceassary once it is determined that changes are necessary for quality of life. **If the goal is to improve the way people live and their perception of living in Los Alamitos these concerns need to be accounted for.**

74-7

Regards,

John
John Williams

DRAFT

Responses to Comment 74

Williams, John, dated June 6, 2024.

74-1 The commenter states that quality of life and way of life have not been considered, suggests that a minimum of three parking spots be provided per household for quality and way of life, and questions where vehicles will be moved to during street cleaning. Refer to Master Response 2.1.3, *Parking*, for impacts related to on-site parking. Quality of life is not an environmental issue analyzed under CEQA; however, this comment is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. Thus, no further response is required.

74-2 The commenter raises concerns that the two exits/entrances to the Project Site will cause accidents, expresses concerns with traffic, and recommends adding a third lane on the northern side of Lampson to avoid interference with the bike lane. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for impacts related to vehicle accidents and bicycle facilities. Refer to Master Response 2.1.1, *Transportation and Traffic Congestion*, for impacts related to traffic.

74-3 The commenter states that an additional 10,000 to 20,000 square feet of open space is needed for residents of the Project and raises concerns that without the additional open space, residents of the Project would utilize parks in College Park East, which is not part of the City of Los Alamitos. Refer to Master Response 2.1.10, *Loss of Existing Open Space and Provision of On-Site Amenities*, for concerns regarding impacts to open space and local parks.

74-4 The commenter raises concerns about the possible shortage of parking at Arbor Park and overflow parking in College Park East and states that additional parking is needed to accommodate park users. Refer to Master Response 2.1.3, *Parking*, for concerns regarding parking at Arbor Park.

74-5 The commenter expresses concerns regarding the lack of a merge lane on Lampson and states that people exiting the Project would block the bicycle lane. The commenter also questions police services for Los Alamitos residents and how response times will be affected. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for impacts to bicycle facilities and safety.

As discussed in Section 4.13, *Public Services*, of the Draft EIR, implementation of the Project would increase the overall demand on fire and emergency services in the City. Per correspondence with the OCFA, response times would not decrease to necessitate the construction of a new fire station. To maintain acceptable service ratios, OCFA uses a fair share approach to mitigate fire service response impacts and facility/equipment needs. Similarly, implementation of the Project would result in an increase in calls for police service; however, Los Alamitos Police Department has indicated that this increase would not adversely

DRAFT

impact Los Alamitos Police Department's existing resources. Therefore, impacts to public services would be less than significant (refer to Page 4.13-9 to 4.13-10 of the Draft EIR).

74-6 The commenter states that the proposed locations of the Project entrances and exits are unsafe due to potential for traffic accidents or the need for emergency services access. Refer to Master Response 2.1.2, *Roadway Safety on Lampson Avenue*, for concerns regarding sight distance and 2.1.7, *Emergency Vehicle Access*, for concerns regarding emergency services.

74-7 The commenter makes concluding remarks regarding the concerns addressed above and suggests that the developer take out an insurance policy to cover additional improvements needed for quality of life. The commenter's suggestion is noted for the record and will be forwarded to the decision makers for their required review and consideration prior to any action being taken on the Project. Thus, no further response is required

DRAFT

4.0 CLARIFICATION AND REVISIONS

Corrections to the Draft Environmental Impact Report (EIR) text generated either from responses to comments or independently by the City, are stated in this section of the Final EIR. The information included in this section does not constitute substantial new information that requires recirculation of the Draft EIR. Section 15088.5 of the State CEQA Guidelines states in part:

> *(a) A lead agency is required to recirculate an EIR when significant new information is added to the EIR after public notice is given of the availability of the draft EIR for public review under Section 15087 but before certification. As used in this section, the term "information" can include changes in the project or environmental setting as well as additional data or other information. New information added to an EIR is not "significant" unless the EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative) that the project's proponents have declined to implement. "Significant new information" requiring recirculation includes, for example, a disclosure showing that:*
>
> *(1) A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented.*
>
> *(2) A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.*
>
> *(3) A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the significant environmental impacts of the project, but the project's proponents decline to adopt it.*
>
> *(4) The draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded.*
>
> *(b) Recirculation is not required where the new information added to the EIR merely clarifies or amplifies or makes insignificant modifications in an adequate EIR.*

None of the information contained in this section constitutes significant new information or changes to the analysis or conclusions of the Draft EIR. There were no new significant environmental impacts identified following circulation of the Draft EIR. Likewise, there were no substantial increases in the severity of environmental impacts identified after circulation of the Draft EIR. Therefore, recirculation of the Draft EIR is not required because no new information was added to the EIR.

DRAFT

CLARIFICATIONS AND REVISIONS TO THE DRAFT EIR

This section includes recommended clarifications and revisions to the Draft EIR. This section is organized by respective sections of the Draft EIR. Deleted text is shown as strikeout and new text is underlined.

Section S.0 Executive Summary

1. Page S-3 is hereby modified due to typographical error.

   The Project Applicant, Lampson Park Place, LLC, proposes to redevelop the Project site with a residential development consisting of a variety of housing product types, including single family detached homes, townhomes, and apartments. The unit mix proposes 55 single family detached homes, 114 townhomes, and 77 for rent affordable multi-family apartment homes. The Project would include a total of 246 units and the overall density for the Project would be 20 dwelling units per acre. Vehicle access to the Project site would be provided via two driveways on Lampson Avenue, one for the apartment entry on the western side and one for the primary neighborhood entry central to the site. The Project would provide 577 parking spaces (475 spaces for the single family detached and townhomes and 102 for the apartments) in exceedance of the ~~440~~441 parking spaces that would be required pursuant to the State's Density Bonus Law. Refer to EIR Section 3.0, *Project Description*, for a detailed description of the Project.

2. Page S-12 is hereby modified due to typographical error.

THRESHOLD	LEVEL OF SIGNIFICANCE BEFORE MITIGATION	MITIGATION MEASURES (MMS)	LEVEL OF SIGNIFICANCE AFTER MITIGATION
		~~MM 4.6-3~~ If the discovery is determined to be significant by the paleontologist based on the Society of Vertebrate Paleontology guidelines, a monitoring and recovery plan shall be initiated, which will include notification of appropriate personnel involved and monitoring of earth disturbance activities.	

Section 1.0 Introduction

1. Page 1-37 is hereby modified as follows in Response to Comment D-2.

   For the Project, the City of Seal Beach, Orange County Airport Land Use Commission (ALUC), Regional Water Quality Control Board (RWQCB), Orange County Sanitation District (OCSD), Southern California Gas Company (SoCalGas), Southern California Edison

DRAFT

(SCE), and the South Coast Air Quality Management District (SCAQMD) are identified as Responsible Agencies. Regardless, this EIR can be used by any Trustee Agency or Responsible Agency, whether identified in this EIR or not, as part of their decision-making processes in relation to the proposed Project.

Section 2.0 Environmental Setting

1. Page 2-11 is hereby modified as follows in Response to Comment F-1.

~~The Project site is currently served by~~ Orange County Transit Authority (OCTA) ~~with~~ currently provides bus service along Seal Beach Boulevard, Valley View Street, and Lampson Avenue (east of Valley View Street). ~~The Project site is served by OCTA bus routes 42 and 123.~~ The nearest OCTA bus stops to the Project site is Route 123, located at the intersection of Valley View Street and Lampson Avenue (approximately 1.2 miles from the Project site) and Route 42, located at the intersection of Seal Beach Boulevard and Lampson Avenue (approximately 1.6 miles from the Project site).

Section 3.0 Project Description

1. Page 3-4 is hereby modified due to typographical error.

The Project would provide 577 parking spaces (475 spaces for the single family detached and townhomes and 102 for the apartments) in exceedance of the ~~440~~441 parking spaces that would be required pursuant to the State's Density Bonus Law.

2. Page 3-4 is hereby modified as follows in Response to Comment D-3.

Vehicle access to the Project site would be provided via two driveways on Lampson Avenue, one for the apartment entry on the western side and one for the primary neighborhood entry central to the site. Additionally, a restricted emergency vehicle access point with Lampson Avenue would be provided at the eastern end of the site. The Project would implement stop controls for the southbound approach at all driveways on Lampson Avenue. The driveway for the apartment entry would be restricted to right-in/right-out access only. Vehicular circulation would be unrestricted throughout the Project site. The primary neighborhood entry is not anticipated to meet a peak hour or planning level (daily volume) based traffic signal warrants. ~~However, per the request of the City of Seal Beach and in response to public comments during scoping, the Project will install a traffic signal at the primary neighborhood entry in coordination with both the City of Los Alamitos and City of Seal Beach.~~

3. Page 3-8 is hereby modified due to typographical error.

PDF N-1 Prior to the issuance of occupancy permits, the Project will construct a 7-foot-high noise control barrier along Lampson Avenue. The noise control barrier will be constructed so that the top of each wall and /or berm combination

DRAFT

extends to the planned height above the pad elevation of the lot it is shielding. Since the pad elevations varies, the top of each wall and /or berm combination will be 7' above each applicable pad elevation. When the roadway or terrain is elevated above the pad elevation, the barrier shall extend to the recommended height above the highest point between the residential home and the roadway. The barrier shall be built with a material surface weight of at least 4 pounds per square foot, with no decorative cutouts, perforations, or line-of-sight openings between residences and Lampson Avenue. The noise barrier shall be constructed using the following materials:

- Masonry block;
- Stucco veneer over wood framing (or foam core), or 1-inch-thick tongue and groove wood of at least 4 pounds per square foot;
- Material with sufficient weight per square foot capable of providing a minimum transmission loss of ~~20~~25 dBA;
- Earthen berm; or,
- Any combination of these construction materials

4. Page 3-9 is hereby modified as follows in Response to Comment D-4.

Golden State Water Company would provide water service to the Project. Domestic water lines would be provided as shown in Figure 3-23, *Utility Plan*. In addition, the Project would include a 1,200 feet watermain extension between the eastern driveway and the existing GSWC watermain at the intersection of Lunar and Lampson. The Project would include, at a minimum, an 8" watermain size for the extension. The proposed water infrastructure would require an encroachment permit from the City of Seal Beach and Agreement of Franchise Facilities between GSWC and the City of Seal Beach.

5. Page 3-9 is hereby modified as follows in Response to Comment D-5.

Although the Project site is in the City of Los Alamitos, sanitary sewer will be served by the City of Seal Beach via the Rossmoor-Los Alamitos Area Sewer District. The Rossmoor/Los Alamitos Sewer District would provide wastewater conveyance and treatment services to the Project. A lift station and force main is proposed at the southeast corner of the Project site (refer to Figure 3-23, *Utility Plan*). The Project would connect the force main to the existing 8-inch sanitary sewer line at the southeast corner of the site. All connections to existing sanitary sewer lines require approval by the City of Seal Beach and would be constructed in accordance with the City of Seal Beach standards. Additionally, an agreement between the Rossmoor/Los Alamitos Area Sewer District and the City of Seal Beach would be required for Inter-Jurisdictional Wastewater Services.

DRAFT

D. Stormwater Drainage Infrastructure

1. Preferred Stormwater Drainage

The proposed Project site's stormwater runoff would be conveyed by roof downspouts or street surface flow to the proposed gutters and collected by thru-curb inlet bio-filtration devices or catch basin inlets for water quality treatment. The bio-filtration devices include internal overflow bypass that direct flows via on-site underground storm drain system to an underground detention system located under parking areas at the southwest portion of the Project site. From the detention system, a stormwater sump pump located in the southwest corner of the Project site would outlet flow into the existing 18" outlet storm drain pipe at the southwest corner of the site, which conveys stormwater runoff to ~~match the historical flow pattern across the~~ Los Alamitos Joint Forces Training Base (JFTB) property directly west of the site. The detention system and pump will be sized so that the outlet flows from the developed site will be equal to, or less than, existing conditions for all storm events. In the event the stormwater pump fails or the outlet pipe becomes clogged, the emergency overflow for the site will be conveyed through a parkway drain discharging flow onto Lampson Avenue, matching historical drainage patterns.

2. Alternate Stormwater Drainage

An alternate plan for stormwater conveyance is proposed in the event the preferred route (historical flow) across the JFTB, as described above, is not available. The alternate would include stormwater outflow onto Lampson Avenue, which would subsequently flow west to an existing stormwater catch basin approximately 2,200 feet west of the Project site. Due to existing flooding concerns on Lampson Avenue, the onsite pump system would allow for low flows to enter Lampson Avenue up until the time that the flows begin to exceed the allowed 25-year storm event in Lampson Avenue. At that point, peak flows would be detained onsite. Once the flows are no longer above the allowed 25-year storm event in Lampson Avenue, onsite flows to Lampson Avenue would resume. Under the Alternate Off-Site Storm Drain plan, stormwater will be detained and mitigated onsite such that Lampson Avenue meets OC Hydrology flooding standards. Approximately 33,106 ~~32,300~~ cf of water would need to be detained onsite to ensure that offsite 25-year flows are not exceeded. Detained volumes would be discharged from the site via a pump system at flow rates that do not exceed the existing condition flow rates.

6. Page 3-10 is hereby modified as follows in Response to Comment D-6.

An alternate plan for stormwater conveyance is proposed in the event the preferred route (historical flow) across the JFTB, as described above, is not available. The alternate would include stormwater outflow onto Lampson Avenue within Seal Beach right-of-way, which would subsequently flow west to an existing stormwater catch basin approximately 2,200 feet west of the Project site. Stormwater outflow onto Lampson Avenue would require approval

DRAFT

and/or an encroachment permit from the City of Seal Beach. Due to existing flooding concerns on Lampson Avenue, the onsite pump system would allow for low flows to enter Lampson Avenue up until the time that the flows begin to exceed the allowed 25-year storm event in Lampson Avenue. At that point, peak flows would be detained onsite. Once the flows are no longer above the allowed 25-year storm event in Lampson Avenue, onsite flows to Lampson Avenue would resume. Under the Alternate Off-Site Storm Drain plan, stormwater will be detained and mitigated onsite such that Lampson Avenue meets OC Hydrology flooding standards. Approximately 32,300 cf of water would need to be detained onsite to ensure that offsite 25-year flows are not exceeded. Detained volumes would be discharged from the site via a pump system at flow rates that do not exceed the existing condition flow rates.

7. Page 3-12 is hereby modified due to an amendment to the Density Bonus Law Request to the City.

A. Concession Request

The Project Applicant is requesting three concessions pursuant to the State's Density Bonus Law.

- ~~Concession #1:Reduction in Setback Distance Between Structures~~
- Concession #1~~2~~:Exception for Building Step Back Requirements
- Concession #2~~3~~:Reduction in Minimum Storage Space

~~As to Concession #1, LAMC, Section 17.08.030, Table 2-03 requires a 10-foot minimum distance between structures. Though most of the Project's single-family residential setback distances between structures meet or exceed the minimum distances, the setback distance is reduced to 6 feet at certain locations within the Project site plan. Meeting the required 10-foot minimum setback distance would require a significant change to the site plan and likely result in a reduction of residential units. As such, the Applicant is requesting as Concession #1 that the setback requirement in certain locations identified on the site plan be reduced to 6 feet.~~

As to Concession #1~~2~~, LAMC Section 17.08.045.A.1 requires that for buildings higher than two stories, the third story must have a minimum 5-foot step back from the story below to minimize building bulk and create façade articulation. This requirement appears to govern regardless of building location within a project site or surrounding land uses. While the City interprets this requirement as applying only to perimeter buildings (i.e., buildings that are located along the perimeter of a Project site), however, given the requirement's ambiguity, the Applicant is requesting as Concession #2 an exception from the required minimum 5-foot step back requirement for those structures identified on the site plan.

As to Concession #2~~3~~, LAMC Section 17.08.030, Table 2-03, requires a minimum storage space in a garage or carport of 200 cubic feet per unit. For certain units within the Project, this storage space requirement will be difficult to satisfy because of limitations in garage and carport space. As such, the Applicant is requesting as Concession #3 that the minimum storage

DRAFT

space requirement be reduced to 175 cubic feet per unit for market rate units and 50 cubic feet per unit for affordable units identified on the site plan.

8. Page 3-13 is hereby modified due to due to an amendment to the Density Bonus Law Request to the City and typographical error.

B. Waiver Request

The State's Density Bonus Law specifies that an applicant may submit to a local government a proposal for the waiver or reduction of development standards that will have the effect of physically precluding the construction of a development providing the requisite amount of affordable housing at the densities or with the concessions permitted under the Density Bonus Law. A waiver request can be denied only if the waiver would (i) have a specific, adverse impact upon health or safety, and for which there is no feasible method to satisfactorily mitigate or avoid the specific adverse impact; (ii) have an adverse impact on any real property that is listed in the California Register of Historical Resources (CRHR); or (iii) be contrary to state or federal law. (Government Code Section 65915(e)(1))

The Applicant requests one waiver pursuant to the State's Density Bonus Law:

- Waiver #1: Reduced Common Area Requirement
- Waiver #2: Reduction in Setback Distance Between Structures

As to Wavier #1, LAMC Section 17.08.030, Table 2-03 requires a minimum 200 square feet of common area and 60 square feet of private space per unit. The Project will be able to comply with the minimum private space requirement, but the Project will not be able to comply with the common area requirement. This is due to the proposed dedication or grant of easement related to the northerly 10 feet strip of land abutting Arbor Park and Arbor Dog Park, which comprises an area of approximately 10,000 square feet of property. When this area is dedicated to the City, then the Project will be unable to comply with the common area requirement because compliance with this requirement would physically preclude construction of the Project at the densities allowed and with the concessions described above. Therefore, the Applicant is requesting as a waiver a reduction in the common area requirement from 200 to 150 square foot per unit.

As to Wavier #2, Section 17.08.030, Table 2-03 of the City's Municipal Code requires a 10-foot minimum distance between structures. Though most of the Project's single-family residential setback distances between structures meet or exceed the minimum distances, at certain locations within the Project site plan, the setback distance is 6 feet. Meeting the required 10-foot minimum setback distance would require a significant change to the site plan and would result in a reduction of residential units. We estimate that the Project could lose up to seven units, and potentially more units, if the Project were required to comply with this

DRAFT

requirement. Moreover, to meet the required 10-foot minimum setback distance, the Project would require a reduction in private yard space, and likely an even further reduction in common area requirement. As such, compliance with this requirement would physically preclude construction of the Project at the densities allowed and with the concessions described above. Therefore, the Applicant is requesting as a waiver a reduction in setback distance between structures.

B. Parking Reduction Request

The Project would provide 577 parking spaces, which is below the City's required 679 parking spaces pursuant to LAMC Section 17.22.030, Required Parking Spaces. The State's Density Bonus Law specifies that for housing developments that qualify for a density bonus the local government shall not require a vehicular parking ratio, inclusive of parking for persons with a disability and guests, that exceeds the following ratios: (A) zero to one bedroom: one onsite parking space; (B) two to three bedrooms: one and one-half onsite parking spaces; and (C) four and more bedrooms: two and one-half parking spaces. (Gov't Code Section 65915(p)(1).)
The Applicant requests that the City require no more than 2.35 spaces per unit for a total of 577 parking spaces for the Project, which is significantly more than the ~~440~~441 parking spaces that would be required pursuant to the State's Density Bonus Law.

9. Page 3-17 is hereby modified due to changes to the approving body for the Project.

3.7 SUMMARY OF REQUEST ACTIONS

The City of Los Alamitos has primary approval responsibility for the Project. As such, the City serves as the Lead Agency for this EIR pursuant to CEQA Guidelines Section 15050. The City Council~~Planning Commission~~ serves as the approval body for the Project and will consider the Project along with the Planning staff's recommendations within its staff report. The City Council~~Planning Commission~~ will make a decision to approve, approve with changes, or deny the Project. In the event of approval of the Project and certification of the EIR, the City would conduct future administrative reviews and grant ministerial permits and approvals to implement Project requirements and conditions of approval.

DRAFT

10. Page 3-18 is hereby modified due to changes to the approving body for the Project and in Response to Comment D-3 and D-4.

Table 4-1 Table 3-6 Project-Related Approvals/Permits

Public Agency	Approvals and Decisions
City of Los Alamitos	
Proposed Project – City of Los Alamitos Discretionary Approvals	
~~Planning Commission~~ City of Los Alamitos	• Certify the Project's EIR and adopt the Mitigation Monitoring and Reporting Program and Findings and Statement of Overriding Considerations. • Approval of a Site Development Permit - Major • Approval of Tentative Parcel Map No. 2022-113 • Approval of Vesting Tentative Tract Map No. 19263 • Approval of Affordable Housing Unit Application for Density Bonus Request, Concessions, and a Waiver
Subsequent City of Los Alamitos Discretionary and Ministerial Approvals	
City of Los Alamitos Subsequent Implementing Approvals	• Approval of Landscaping/Irrigation Plan • Issuance of Demolition Permits • Issuance of Grading Permits • Issuance of Building Permits • Approval of Road Improvement Plans • Issuance of Encroachment Permits • Approval of Infrastructure Plans • Approval of public right-of-way dedications • Approval of Water Quality Management Plan • Approval of connections to the municipal sewer system
Responsible Agencies – Approvals and Permits	
Regional Water Quality Control Board (RWQCB)	• Issuance of a Construction Activity General Construction Permit. • Issuance of a National Pollutant Discharge Elimination System (NPDES) Permit.
Rossmoor Los Alamitos Area Sewer District.	• Issuance of a Sewer Connection Permit • Agreement between the Rossmoor/Los Alamitos Area Sewer District and the City of Seal Beach for Inter-Jurisdictional Wastewater Services.
City of Seal Beach	• Issuance of Public Works Permit (encroachment permit) for infrastructure improvements within the Lampson Ave. right-of-way. • Agreement of Franchise Facilities between GSWC and the City of Seal Beach for water service.

DRAFT

Public Agency	Approvals and Decisions
	• Agreement between the Rossmoor/Los Alamitos Area Sewer District and the City of Seal Beach for Inter-Jurisdictional Wastewater Services. • Approval of stormwater discharge/conveyance. • Approval of a Water Quality Management Plan • Approval of infrastructure plans directly/indirectly related to Seal Beach
South Coast Air Quality Management District	• Issuance of permits that allow for the construction and operation of the Project.
JFTB	• Issuance of encroachment permit for stormwater improvements.
GSWC	• Agreement of Franchise Facilities between GSWC and the City of Seal Beach for water service.

Cumulative Location Development Map

Section 4.8 Hazards and Hazardous Materials

1. Page 4.8-16 is hereby modified as follows in Response to Comment E-4.

Title 17, CCR, Division 1, Chapter 8: Accreditation, Certification and Work Practices for Lead-Based Paint and Lead Hazards, defines and regulates lead-based paint. Any detectable amount of lead is regulated. During the demolition of the existing structure, there is a potential for exposing construction workers to health hazards associated with lead. The Project would be required to comply with Title 17, CCR, Division 1, Chapter 8, which includes requirements such as employer-provided training, air monitoring, protective clothing, respirators, and handwashing facilities. Mandatory compliance with these requirements would ensure that construction workers and the public are not exposed to significant LBP health hazards or upset during demolition and/or during transport of demolition waste to an appropriate disposal facility and would ensure that impacts related to LBP remain less than significant.

Moreover, EFI prepared a Phase II ESA for the Project site dated September 22, 2022 based on a geological survey and soil sampling conducted on August 16, 2022. Select soil samples were collected and analyzed for Total Petroleum Hydrocarbons (TPH) as gasoline (TPHg), TPH as diesel (TPHd), TPH as oil (TPHo), volatile organic compounds (VOCs), PCBs, organochlorine pesticides (OCPs), arsenic, and lead (Pb). Analytical results for PCBs indicated concentrations were not detected above the laboratory reporting limits in any of the soil samples analyzed (refer to Page 4.8-5 of the Draft EIR). However, caulk containing PCBs were used in buildings in the 1950s through the 1970s and may be present in the existing building. Therefore, the Project would be required to comply with all applicable federal, State, and local hazardous materials regulation, which includes mandatory provisions for the safe removal, transport, and disposal of PCBs including Title 40, Code of Federal Regulations, Part 761.

There is also a potential for mercury containing products at the existing buildings. When a mercury-containing product breaks and the mercury is released, the exposed mercury can evaporate and become an invisible, odorless toxic vapor. Mercury-containing products exhibit hazardous characteristics as described in the California Code of Regulations, Title 22, chapter 11 and are classified as a type of hazardous waste called "universal waste." Universal wastes are hazardous wastes that pose a lower immediate risk to people and the environment when handled properly. Due to this lower risk, universal wastes can be handled and transported under more relaxed rules compared to other hazardous wastes.[7] The Project would be required to comply with all applicable federal, State, and local hazardous materials regulations including California Health and Safety Code Section 25214.8.16, to prevent mercury releases.

[7] *https://dtsc.ca.gov/toxics-in-products/mercury-waste/*

DRAFT

Compliance with the above regulatory requirements would ensure that removal of ACMs, ~~or~~ LBPs, PCBs, or mercury would result in a significant hazard to the public or the environment through routine transport, use, or disposal of hazardous materials, and impacts would be less than significant. No mitigation is required.

Section 4.9 Hydrology and Water Quality

1. Pages 4.9-17 and 4.9-19 are hereby modified as follows to reflect the changes made in the updated Hydrology Study.

The combined, total 100-year peak flow rate for the Project site is 31.51~~40.28~~ cfs under existing conditions. The combined, total 100-year peak flow rate for the Project Site is approximately 42.15~~44.31~~ cfs under the proposed conditions without improvements. Figure 4.9-4, *Proposed Conditions Hydrology Map* illustrates the post development drainage conditions of the Project site. The proposed drainage design would follow the existing drainage pattern with surface flows to on-site drainage facilities that would ultimately outlet into the existing storm drain pipe at the southwest corner of the Project site. The results from the hydrology study demonstrate that the proposed conditions of the Project site of 42.15~~44.31~~ cfs would generate a higher peak runoff flowrate than the existing condition of the site of 31.51~~40.28~~ cfs.

Due to increased peak runoff flows created from the proposed change in land use and increased impervious coverage by 48%, stormwater would need to be detained and minimized ~~mitigated~~ on-site to match existing conditions. ~~By matching the maximum flows conveyed by the outlet pipe and providing a 20 percent factor for safety for preliminary sizing, approximately 10,000 cubic feet (cf) would be required to be detained on-site based on a conservative 100-year storm event.~~ To prevent overflow into Lampson Ave, the detention system will be sized to match the maximum flows conveyed by the outlet pipe, approximately 33,106 cubic feet. In addition, a proposed stormwater pump system with upstream detention storage has been incorporated into the onsite drainage design to provide onsite peak flow and volume detention for the development for all storm events. The pump system will control the outflow discharge rate matching the existing 2-year peak flow at approximately 8.9 cfs. As such, the proposed on-site detention facilities will be designed to detain ~~a minimum volume of 10,000 cf and detained~~ volumes that would be discharged from the site via a pump system at flow rates that do not exceed the existing condition flow rates. As such, downstream facilities would not be hydrologically impacted by the proposed Project. Impacts would be less than significant and no mitigation is required.

2. Alternate Storm Drain Facilities

In the event the preferred route (historical flow across the JFTB) is not available, an alternate treatment of stormwater runoff for the Project would be conveyance to offsite storm drain facilities. Figure 4.9-5, *Proposed Alternate Conditions Hydrology Map*, illustrates the post-development drainage conditions for this drainage and detention alternate. The proposed site's

DRAFT

stormwater runoff would be conveyed by roof downspouts or street surface flow to proposed gutters and collected by thru-curb inlet bio-filtration devices or catch basin inlets for water quality treatment. The bio-filtration devices include internal overflow bypass that direct flows via on-site underground storm drain system to an underground detention system located under parking areas at the southwest portion of the site. From the detention system, a stormwater sump pump located in the southwest corner of the site will outlet flows onto Lampson Avenue via a parkway culvert. Due to existing flooding concerns on Lampson Avenue, the onsite pump system would allow for low flows to enter Lampson Avenue up until the time that the flows begin to exceed the pre-development ~~allowed~~ 25-year storm event in Lampson Avenue. At that point, peak flows would be detained onsite. Once the flows are no longer above the pre-development ~~allowed~~ 25-year storm event in Lampson Avenue, onsite flows would continue pumping to Lampson Avenue normally.

Under the Alternate Storm Drain plan, stormwater will need to be detained and minimized ~~mitigated~~ onsite such that Lampson Avenue meets OC Hydrology flooding standards. Onsite and offsite small unit hydrographs were analyzed using AES Rational Method Analysis to identify the time that the flows exceed the allowed offsite 25-year storm event flows to prevent flooding of one travel lane of the half-street per the OC Local Drainage Manual. Approximately 33,106 ~~32,300~~ cf of water would need to be detained onsite to ensure that offsite 25-year flows are not exceeded. By matching the maximum flows and providing an additional 20 percent factor of safety for preliminary sizing, approximately 38,800 cf of water would be detained onsite. Detained volumes would be discharged from the site via a pump system at flow rates that do not exceed the existing condition flow rates. Downstream facilities would not be hydrologically impacted by the proposed improvements. Additionally, the proposed finished floor elevations for the onsite buildings would be set 1-foot minimum above the 100-year storm event water surface elevation in accordance with Orange County Flood Protection Requirements.

2. Page 4.9-21 is hereby modified as follows to reflect the changes made in the updated Hydrology Study.

3. Outlet Runoff to Arbor Park to North: Arbor Park is within the JFTB and drains south to the same earthen channel outlet as the project site. If the proposed flows from the Project are not allowed to outlet to the JFTB at the southwest corner of the site, proposed flows from the Project would not be allowed to outlet to the JFTB to the north of the site either since they are essentially the same outlet location. In addition, the existing site does not flow in the northerly Arbor Park/ JFTB area as the site drains in the southwesterly direction, therefore directing stormwater runoff to the north would change the historic drainage pattern which can potentially cause downstream flooding.

4. Outlet Runoff to Golf Course to East: The golf course to the east is within the JFTB and drains east, ultimately ~~outletting~~ to the Bolsa Chica Channel. ~~Outletting~~Discharging to the east does not match the historical drainage pattern and the Bolsa Chica Channel was not designed

DRAFT

to accommodate flows from the Project site; therefore, potentially cause downstream flooding. In addition, the golf course and Bolsa Chica Channel are upstream from the site, therefore not feasible due to elevation differences.

5. Construct storm drain pipe under Lampson Avenue to east: ~~Outletting~~Discharing to the east does not match the historical drainage pattern and the Bolsa Chica Channel was not designed to accommodate flows from the site. Additionally, installation of underground storm drain pipe within Lampson Avenue is infeasible due to conflicts with existing utilities, maintenance concerns, and head losses as described above (see #1). Similarly to item #4, changing the historical drainage pattern may potentially cause unforeseen drainage impacts.

3. Page 4.9-23 of the Draft EIR is hereby modified as follows to reflect the changes made in the updated Hydrology Study.

1. On-Site Storm Drain Facilities

The results from the hydrology report demonstrate that the proposed drainage conditions would generate a higher peak runoff flowrate than the existing conditions on the Project site due to an increase in impervious area and change in land use. The preferred detention facilities would be designed to detain the increased peak flow between the existing outlet pipe flows and proposed conditions. Detained volumes would be discharged from the site via a pump system at flow rates that do not exceed the existing condition flow rates. Downstream facilities would not be hydrologically impacted by the proposed Project site improvements (C&V, 2024a).

2. Alternate Storm Drain Facilities

A second hydrology report was prepared for the alternate stormwater conveyance plan. The results from the report demonstrated that the proposed condition of the alternate would generate a ~~10 percent (44.31 cfs proposed/40.28 cfs existing)~~ higher 100-year storm event peak runoff flowrate than the existing condition of the site due to an increase in impervious area and change in land use. The proposed underground detention facilities would be designed to detain the increased flows under the proposed conditions, which would be discharged from the site via a pump station at flow rates that would not exceed the existing condition flow rates. Downstream facilities would not be hydrologically impacted by the proposed Project site improvements. ~~(C&V, 2023)~~ (C&V, 2024a).

Section 4.10 Land Use and Planning

1. Page 4.10-27 is hereby modified as follows in Response to Comment F-2.

Policy 4.7 **Transit stops.** Improve and maintain safe, clean, comfortable, well-lit, and rider friendly transit stops that are well marked and visible to motorists.	**Not Applicable.** The nearest OCTA Route 123 bus stop from the Project site is approximately 1.2~~1.6~~ miles walking distance at the intersection of Valley View Street and

DRAFT

	Lampson~~Champman~~ Avenue. The nearest OCTA Route 42 bus stop from the Project site is approximately 1.6~~3.5~~ miles walking distance at the intersection of Seal Beach Boulevard and Lampson Avenue.~~Katella Avenue and Los Alamitos Boulevard~~ Therefore, this policy is not applicable to the Project.

2. Page 4.10-33 is hereby modified as follows in Response to Comment D-23.

4. City of Seal Beach General Plan

Table 4.10-3, *Seal Beach General Plan Consistency Analysis*, provides an analysis of the Project's consistency with all applicable General Plan goals and policies that were adopted for the purpose of avoiding or mitigating an environmental effect. As shown in Table 4.10-3, the Project would not conflict with any of the applicable General Plan goals and policies. Accordingly, the Project would have a less-than-significant impact with respect to a conflict with the City of Los Alamitos General Plan and mitigation is not required.

Table 4.10-3 Seal Beach General Plan Consistency Analysis

General Plan Policy	Consistency
Circulation Element	
Objective: Provide a citywide system of safe, efficient, and attractive bicycle and pedestrian routes for commuter, school, and recreational use.	
Policy: Maintain existing pedestrian facilities and require new development to provide pedestrian walkways between developments, schools, and public facilities.	**No Conflict.** The Project would promote future residents of the Project to walk, bike, or ride the bus to and from developments, schools, and public facilities. Project frontage improvements such as sidewalk improvements, the existing bike lanes on Lampson Avenue adjacent to the Project site, and bike storage would promote residents and students to utilize these facilities. Therefore, the Project would not conflict with this policy.
Growth Management Element	
Goal 3: Cooperate with Neighboring Jurisdictions and the County of Orange and County of Los Angeles to Achieve Reduction in Regional Traffic Congestion.	
Policy 3.1 - The City shall participate in inter-jurisdictional planning forums within its established growth management areas as adopted	**No Conflict.** The City of Seal Beach is a responsible agency for the Project. Table 3-6, *Project-Related Approval/Permits*, lists all

DRAFT

by the Regional Advisory Planning Council and will continue to participate in forums with neighboring or affected jurisdictions to address transportation or other planning issues.	approvals and decisions required by the City of Seal Beach for the Project. Additionally, the City of Los Alamitos and City of Seal Beach have been in coordination throughout the planning process for this Project including the preparation of the Traffic Analysis. Therefore, the Project would not conflict with this policy.

Section 4.11 Noise

1. Page 4.11-22 is hereby modified due to typographical error.

PDF N-1 Prior to the issuance of occupancy permits, the Project will construct a 7-foot-high noise control barrier along Lampson Avenue. The noise control barrier will be constructed so that the top of each wall and /or berm combination extends to the planned height above the pad elevation of the lot it is shielding. Since the pad elevations varies, the top of each wall and /or berm combination will be 7' above each applicable pad elevation. When the roadway or terrain is elevated above the pad elevation, the barrier shall extend to the recommended height above the highest point between the residential home and the roadway. The barrier shall be built with a material surface weight of at least 4 pounds per square foot, with no decorative cutouts, perforations, or line-of-sight openings between residences and Lampson Avenue. The noise barrier shall be constructed using the following materials:

- Masonry block;
- Stucco veneer over wood framing (or foam core), or 1-inch-thick tongue and groove wood of at least 4 pounds per square foot;
- Material with sufficient weight per square foot capable of providing a minimum transmission loss of ~~20~~25 dBA;
- Earthen berm; or,
- Any combination of these construction materials

2. Page 4.11-26 is hereby modified to reflect the changes made in the updated Noise Impact Analysis.

As shown on Table 4.11-7, *Existing Off-Site Project-Related Traffic Noise Impacts*, the Existing 2023 with Project will generate a noise level increase of up to 0.3~~4~~ dBA CNEL on the study area roadway segments. Based on the significance criteria for off-site traffic noise impacts, the Project-related noise level increases are considered less than significant under Existing plus Project conditions at the land uses adjacent to roadways conveying Project traffic. Table 4.11-8, *Opening Year Off-Site Project-Related Traffic Noise Impacts*, shows that the Opening Year Project off-site traffic noise level increases of up to 0.2~~4~~ dBA CNEL. Based on

DRAFT

the significance criteria for off-site traffic noise presented for off-site traffic noise impacts, land uses adjacent to the study area roadway segments would experience less than significant noise level increases due to unmitigated Opening Year Project-related traffic noise levels.

Table 4.11-9, *General Plan Buildout Off-Site Project-Related Traffic Noise Impacts*, shows that the General Plan Buildout Project off-site traffic noise level with the Project increases of up to 0.2~~3~~ dBA CNEL. Based on the significance criteria for off-site traffic noise presented for off-site traffic noise impacts, land uses adjacent to the study area roadway segments would experience less than significant noise level increases due to unmitigated General Plan Buildout Project-related traffic noise levels with the Project.

DRAFT

DRAFT

Section 4.12 Population and Housing

1. Page 4.12-10 is hereby modified due to typographical error.

   The jobs-housing ratio is a general measure of the number of jobs versus housing in a defined geographical area and the recommended target is 1.0. As shown in Table 4.12-5, above, the City is "jobs-rich" and at a ratio of 3.4 jobs/housing, it is currently well above the target ratio. At Project buildout, the Project's addition of ~~647~~247 units would be expected to beneficially affect the City's jobs- housing balance, by increasing more housing to the City and reducing the jobs-housing ratio from 3.33 to 3.17 at Project buildout (see Table 4.12-5).

Section 4.13 Public Services

1. Page 4.13-15 is hereby modified for clarification purposes.

   As discussed in Section 4.14, Recreation, cumulative development will increase the demand in parks and recreational facilities. Recreational needs of future residents of the Project would add to citywide and regional demand for park and recreational facilities. As discussed in Section 4.14, Recreation, Project impacts to recreation would be less than significant. As shown in Table 4.14-1, there is a total of 317.49 acres of park and recreation facilities in Los Alamitos and 35.05 acres of park and recreational facilities in Rossmoor, for a total of 389.02 acres of park and recreational facilities in the City and its SOI. Pursuant to the City's General Plan Update EIR, Table 5.10-2, buildout of the General Plan (14,204 residents in the City and 10,540 residents in Rossmoor) would be accommodated by the existing parkland in the City and its SOI and no significant impacts would occur related to the physical deterioration of recreational facilities. Therefore, with the increase of projected population in 2027 at Project buildout, there is sufficient parkland and recreational facilities to serve City residents. The Project would not cumulatively contribute to deterioration of recreational facilities or the construction of recreational facilities which might have an adverse physical effect on the environment.

Section 4.14 Recreation

1. Page 4.14-10 is hereby modified for clarification purposes.

   The recreational needs of future residents of the proposed Project would add to citywide and regional demand for park and recreational facilities, which could contribute to a deterioration of recreational facilities. As shown in Table 4.14-1, there is a total of 316.83 acres of park and recreation facilities in Los Alamitos and 35.05 acres of park and recreational facilities in Rossmoor, for a total of 351.88 acres of park and recreational facilities in the City and its SOI available to meet the needs of City residents. To determine the cumulative public park and recreational impacts, citywide growth forecasts were considered. As shown in Table 4.12-6, *Cumulative Projects Population, Housing, and Employment Growth Trends in Los Alamitos*, the projected population at Project buildout, combined with related projects in the City, would be 13,806 by 2027. Pursuant to the City's General Plan Update EIR, Table 5.10-2, the buildout of the General Plan (14,204 residents in the City and 10,540 residents in Rossmoor) would be

DRAFT

accommodated by the existing parkland in the City and its SOI and no significant impacts would occur related to the physical deterioration of recreational facilities. Therefore, with the increase of projected population in at Project buildout, there is sufficient parkland and recreational facilities to service city residents. The Project would not cumulatively contribute to deterioration of recreational facilities or the construction of recreational facilities which might have an adverse physical effect on the environment.

Section 4.15 Transportation

1. Page 4.15-1 is hereby modified as follows in Response to Comment F-3.

   As shown in Figure 4.15-1, *Existing Transit Routes*, ~~the Project site is currently served by the~~ Orange County Transportation Authority (OCTA) ~~with~~ currently provides bus service along Seal Beach Boulevard, Valley View Street, and Lampson Avenue (east of Valley View Street). OCTA route 42 runs along Seal Beach Boulevard and serves Seal Beach to Orange with an existing stop provided at the intersection of Seal Beach Boulevard and Lampson Avenue ~~Katella Avenue and Los Alamitos Boulevard~~. The existing stop is approximately 1.6~~3.5~~ miles ~~walking distance~~ from the Project site. Bus service frequency is approximately 20-minute intervals during the peak commute hours and 40 minutes during other times of the day during a typical weekday. OCTA Route 123 serves the city of Anaheim to city of Huntington Beach via Malvern Avenue, Valley View Street, and Bolsa Chica. There are existing stops along Valley View Street with an existing stop at Chapman Avenue. The nearest OCTA Route 123 existing stop is located approximately 1.2~~1.6~~ miles ~~walking distance~~ from the Project site to the intersection of Lampson~~Champman~~ Avenue and Valley View Street. Bus service frequency is approximately 60-minute intervals on a typical weekday for OCTA Route 123.

2. Page 4.15-13 is hereby modified as follows in Response to Comment F-4.

Policy 4.7 **Transit stops.** Improve and maintain safe, clean, comfortable, well-lit, and rider friendly transit stops that are well marked and visible to motorists.	**Not Applicable.** The nearest OCTA Route 123 bus stop from the Project site is approximately 1.2~~1.6~~ miles walking distance at the intersection of Valley View Street and Lampson~~Champman~~ Avenue. The nearest OCTA Route 42 bus stop from the Project site is approximately 1.6~~3.5~~ miles walking distance at the intersection of Seal Beach Boulevard and Lampson Avenue.~~Katella Avenue and Los Alamitos Boulevard~~ Therefore, this policy is not applicable to the Project.

DRAFT

3. Page 4.15-15 is hereby modified due to typographical error.

The Project includes 77 affordable housing units, which generate vehicle trips at a lower rate per unit as compared to market rate housing. As the reduction in trips and associated VMT could not be accurately accounted for by the calculations conducted using the OCTAM model, these adjustments are made through calculations as described in the Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity (CAPCOA, 2021) Specifically, "Land Use – T-4. Integrate Affordable and Below Market Rate Housing"; requires multifamily residential units to be permanently dedicated as affordable for lower income families. Additionally, the Project's parking supply will be limited to 577 parking spaces, which is 12 parking spaces below the 589 parking spaces required by the lead agency. This would reduce project-generated VMT by 0.28% or 39 VMT. This results in a Project generated VMT of 12,55912,598 in the baseline condition and 12,17412,213 in the cumulative condition as shown in Table 4.15-2.

Section 4.17 Utilities and Service Systems

1. Page 4.17-12 is hereby modified as follows to reflect the changes made in the updated Sewer Sanitary Analysis.

For the sewer monitoring analysis, flow monitoring was conducted under the existing conditions of the three manholes from August 23, 2022 to September 5, 2022: 1) Basswood and Aster Street (Manhole B03-A-16); 2) Candleberry Avenue and Aster Street (Manhole B06-A-21); and 3) Elder Avenue (Manhole B08-A-25). However, the monitored manholes by CVC showed a lower flow average than the monitoring flows conducted AKM Consulting Engineers (AKM) who prepared the City of Seal Beach Sewer Master Plan. Therefore, using the results from AKM, ratios were used from the flow monitored averages to calculate the flows for all reaches upstream of the monitored manholes. For reaches downstream of the monitored manholes, the delta flow value was added to the last monitored manholes to calculate the flow for the remaining reaches. ~~The existing Project site peak flow was subtracted from the projected Project site flow. The delta flow was then added to the existing monitored peak flows to obtain the proposed development conditions.~~ (C&V, 20242022)

2. Pages 4.17-17 is hereby modified as follows to reflect the changes made in the updated Sewer Sanitary Analysis.

Although the Project site is in the City of Los Alamitos, sanitary sewer services are currently provided by and will be provided by the City of Seal Beach. Per the City of Seal Beach Sewer Master Plan 2018, the City provides sewer service throughout the City in a service area that collects and conveys wastewater from the service area for treatment by the OCSD.

A Sanitary Sewer Analysis was prepared for the Project and investigates the sewer discharge route for the proposed development to the existing sewer mains of three manholes: 1) Basswood and Aster Street (Manhole B03-A-16); 2) Candleberry Avenue and Aster Street (Manhole B06-A-21); and 3) Elder Avenue (Manhole B08-A-25). (C&V, 20242022)

DRAFT

3. Page 4.17-19 is hereby modified as follows to reflect the changes made in the updated Sewer Sanitary Analysis.

4. Sanitary Sewer Update

A revised Sanitary Sewer Analysis (*Attachment M* of the FEIR) was prepared in response to comment from the City of Seal Beach. A Sewer Demand Memorandum (*Attachment L* of the FEIR) was prepared to address the updates in the sanitary sewer analysis and respond to comments on the DEIR related to the Old Ranch Country Club.

The City of Seal Beach's updated Sewer Master Plan (September 2022) identified the sewer loads for potential development areas within the City of Seal Beach. Those sewer loads are summarized in Table 1 of that Sewer Master Plan. The Old Ranch Country Club is listed as Site B-5, and it is identified as comprising 150 acres, five of which are indicated as "redevelopment area," with a potential for 120 dwelling units and a sewer load of 19,200 gallons per day (gpd).

Since 2022, the proposed development of the Old Ranch Country Club Project has been further refined, and as of January 2023 now includes more than the residential component identified in Table 1 of the Sewer Master Plan. Per the Initial Study dated February 7, 2023, prepared to support the Old Ranch Country Club Specific Plan, the anticipated redevelopment area has increased from 5 acres to approximately 35 acres over the existing site, and includes a 116-unit multi-family housing development, a 51-unit senior housing complex including an approximately 25,340 square foot medical office facility on the ground floor, a 150-key overnight accommodation, an approximately 2,650 square foot relocated maintenance facility, a parking structure, and a new clubhouse pool and associated structures (21,000 square feet) abutting the existing clubhouse.

This more refined development proposal for the Old Ranch Country Club project would result in an increase in the sewer demand by approximately 32,246 gpd, totaling 51,626 gpd (see *Attachment L* of the FEIR).

The revised Sanitary Sewer Analysis, prepared in March 2024 (*Attachment M* of the FEIR), used sewer system model data provided by the City of Seal Beach (AKM's City wide sewer study). The data was based on an area calculation method which indicated there are 16 sewer segments shown to have a d/D level above 0.5. Because the area calculation is used to calculate flows for large areas and is not necessarily representative of actual flows, actual monitored flows were determined and evaluated. Using the actual monitored flows indicated that there are only 7 segments estimated to exceed the City's peak dry weather flows (PDWF) d/D criteria after the proposed project is implemented. The remaining capacity above a PDWF d/D of 0.50 is reserved for wet weather flows. Flows over the d/D criteria range from 0.51 to 0.55 and represent approximately 56% of the pipe's flow capacity, which is well within the capacity of the downstream sewer lines.

DRAFT

No additional pipe segments in the AKM study were found to be undersized. The nine (9) segments that were found to be undersized in AKM's study were determined to be acceptable after analysis using the actual monitored flows. The d/D levels are shown to be higher because the existing segments have flat slopes, ranging from 0.16% - 0.22%. However, the pipe size can handle proposed flow levels, and sewer pipe upgrades are not required.

To evaluate a potential increase in the flow depth to pipe diameter ratio (d/D) based on the increase in total demand associated with the further refined Old Ranch Country Club project and after taking into consideration the amount of sewer discharge associated with the Project, C&V Consulting, Inc. applied the increase in total demand from the further refined Old Ranch Country Club Project to manhole (MH) IDs B03-A14 and B01-A13 through B01-A02A, as shown in *Attachment L* of the FEIR. These manholes and their associated pipeline segments are located downstream of the three manholes that were monitored for the Project and as such include the upstream sewer flows anticipated by the Project and currently existing development. As shown in *Attachment L* of the FEIR, the overall d/D is anticipated to be less than 0.5 for the identified segments with the increased demand added to the system. This means that when the sewer flows from the further refined Old Ranch Country Club Project are added to the sewer flows from the Project based on the downstream monitored manhole flows, the depth of flow to pipe diameter ratio is less than 50%. This in turn means that even with the Old Ranch Country Club Project, the sewer pipe system capacity remains capable of maintaining an adequate flow well below 50% of its flow depth capacity. As such, adequate capacity exists to serve the Project's projected demand in addition to the sewer pipe systems existing commitments, even after taking into account the further refined Old Ranch Country Club project. The anticipated d/D increase determined from the 4665 Lampson Avenue Project plus the Old Ranch Country Club Project is approximately 2.6-3.4%, which is considered negligible.

As a result, the proposed flows from the Project, in addition to the observed flows, create a proposed depth of flow that would not impact the existing surrounding sanitary sewer systems, and that the existing sewer system has adequate capacity for the proposed development. Accordingly, impacts would be less than significant and no mitigation is required.

DRAFT

Section 5.0 Other CEQA Considerations

1. Page 5-3 is hereby modified due to typographical error.

   Because no significant non-renewable natural resources occur within the Project site, the Project would also not reduce the availability of any non-renewable natural resources associated with long-term operational activities. Accordingly, the Project would not result in a significant, irreversible change to the environment related to energy use.

Attachments

The following technical appendices have been updated and do not contain new significant information or change the findings of the Draft EIR. The updated technical appendices further support the conclusions in the Draft EIR and do not present any new or substantially more severe impacts, which were not previously disclosed. These technical appendices are incorporated herein as Attachments B, C, E – G, and M of this Final EIR:

- B, VMT Analysis
- C, Updated Phase I Environmental Site Assessment
- E, Updated Hydrology and PWQMP
- F, Updated Noise Impact Analysis
- G, Traffic Analysis
- M, Updated Sewer Analysis

1.0 INTRODUCTION AND PURPOSE

The 12.3-acre Project site, as described under Section 1.2.1 below, is in the City of Los Alamitos, Orange County. The City of Los Alamitos (the "City") in approving the 4665 Lampson Avenue Project (the "Project") makes the Findings described below. The Findings are based upon the entire record before the City, as described in Subsection 1.3, below, including but not limited to the Environmental Impact Report ("EIR") prepared for the Project with the City acting as lead agency under the California Environmental Quality Act ("CEQA").

Hereafter, the Notice of Preparation ("NOP"), Notice of Availability ("NOA"), Draft EIR ("DEIR"), Technical Studies, and Final EIR ("FEIR") (containing responses to public comments on the DEIR and textual revisions to the DEIR), will be referred to collectively herein as the "EIR" unless otherwise specified.

1.1 FINDINGS REQUIRED UNDER CEQA

Public Resources Code Section 21002 provides that "public agencies should not approve projects as proposed if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of such projects[.]" The statute also provides that the procedures required by CEQA are "intended to assist public agencies in systematically identifying both the significant effects of proposed projects and the feasible alternatives or feasible mitigation measures which will avoid or substantially lessen such significant effects." Finally, Section 21002 indicates that "in the event [that] specific economic, social, or other conditions make infeasible such project alternatives or such mitigation measures, individual projects may be approved in spite of one or more significant effects thereof."

The mandate described in Public Resources Code Section 21002 is implemented, in part, through the requirement that for projects with one or more significant environmental effects, agencies must adopt written findings before approving projects for which EIRs are required. For each significant environmental effect identified in an EIR for a project, the approving agency must issue a written finding reaching one or more of three permissible conclusions. The first such finding is that changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the final EIR. The second finding is that such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding, and that such changes have been adopted by such other agency or can and should be adopted by such other agency. The third finding is that specific economic, legal, social, technological, or other considerations make infeasible the mitigation measures or project alternatives identified in the EIR (CEQA Guidelines Section 15091(a)). Public Resources Code Section 21061.1 defines "feasible" to mean "capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, and technological factors." As stated in CEQA Guidelines Section 15093(a), "[i]f the specific economic, legal, social, technological, or other benefits, including region-wide or statewide environmental benefits, of a proposed project outweigh the unavoidable adverse environmental effects, the adverse environmental effects may be considered `acceptable.'"

1.2 PROJECT SUMMARY

1.2.1 SITE LOCATION

The 12.3-acre Project site is in the City of Los Alamitos, Orange County, California. The City of Los Alamitos (City) is in the northwestern corner of Orange County, bordering the county lines of Orange and Los Angeles. The City is located east of the city of Long Beach, southwest of the city of Cypress, west of the city of Garden Grove, and north of the city of Seal Beach. The Project site is located approximately 0.47-mile north of I-405/State Route 22 (SR-22), approximately 0.83-mile northwest of SR-22, and approximately 2.36 miles east of I-605. Regional access to the Project site is provided from Seal Beach Boulevard via I-405, I-605, and SR-22 Freeways and Valley View Steet via I-405 and SR-22. At the local scale, the Project site is located north of and adjacent to Lampson Avenue and northwest of the intersection of Lampson Avenue and Rose Street. The legal address for the Project site is 4665 Lampson Avenue, Los Alamitos, CA 90720, and the Project site's Assessor Parcel Number (APN) is 130-012-35.

1.2.2 PROJECT OVERVIEW

The Project Applicant, Lampson Park Place, LLC, proposes to redevelop the Project site with a residential development consisting of a variety of housing product types, including single family detached homes, townhomes, and apartments. The unit mix proposes 55 single family detached homes, 114 townhomes, and 76 for rent affordable multi-family apartment units, as well as one for rent market rate manager's apartment unit. The Project would include a total of 246 units and the overall density for the Project would be 20 dwelling units per acre. Vehicle access to the Project site would be provided via two driveways on Lampson Avenue, one for the apartment entry on the western side and one for the primary neighborhood entry central to the site. The Project would provide 577 parking spaces (475 spaces for the single family detached and townhomes and 102 for the apartments) in exceedance of the 441 parking spaces that would be required pursuant to the State's Density Bonus Law.

1.2.3 PROJECT OBJECTIVES

The underlying purpose of the Project is to redevelop the site with a residential community that will serve the City of Los Alamitos. The following is a list of specific objectives that the proposed Project is intended to achieve.

A. Provide residential development consistent with the City's General Plan, including the 2021-2029 Housing Element, to help meet the City's RHNA requirement.

B. Provide a variety of housing types and affordability (for lower income and above moderate income households) that satisfies the residential market and accommodates increased demand for housing.

C. Provide a variety of affordable housing types to support middle-income workers, providing an opportunity for residents to live closer to where they work.

D. Improve the City's jobs housing balance to support reduced commute distances consistent with the Southern California Association of Governments' Connect SoCal.

E. Create a residential character that provides for a high quality architectural design.

1.2.4 CITY OF LOS ALAMITOS ACTIONS COVERED BY THE EIR

The following discretionary and administrative actions are required of the City, as Lead Agency, to implement the Project. The EIR prepared for the Project covers all discretionary and administrative approvals which may be needed to construct or implement the Project, whether or not they are explicitly listed. They include:

- Site Development Permit – Major;
- Tentative Parcel Map (for finance and conveyance purposes);
- Vesting Tentative Tract Map (for Condominium Purposes); and
- Affordable Housing Unit Application for Density Bonus and/or Incentives or Concessions pursuant to the State's Density Bonus Law (Government Code Section 65915) and the City's Municipal Code Section 17.28.050.

1.2.5 APPROVALS FROM OTHER AGENCIES

The California Public Resource Code (Section 21104) requires that all EIRs be reviewed by responsible and trustee agencies (see also CEQA Guidelines Section 15082 and Section 15086(a)). As defined by CEQA Guidelines Section 15381, "the term 'Responsible Agency' includes all public agencies other than the Lead Agency which have discretionary approval power over the project." A "Trustee Agency" is defined in CEQA Guidelines Section 15386 as "a state agency having jurisdiction by law over natural resources affected by a project which are held in trust for the people of the State of California."

The anticipated agencies expected to use the EIR are described below. However, the EIR can be used by any Responsible or Trustee Agency, whether identified in the EIR or not, as part of their decision-making processes in relation to the Project.

Public Agency	Approvals and Decisions
City of Los Alamitos	
Proposed Project – City of Los Alamitos Discretionary Approvals	
City of Los Alamitos	• Certify the Project's EIR and adopt the Mitigation Monitoring and Reporting Program, , Findings and Statement of Overriding Considerations. • Approval of a Site Development Permit - Major • Approval of Tentative Parcel Map No. 2022-113 • Approval of Vesting Tentative Tract Map No. 19263

Public Agency	Approvals and Decisions
	• Approval of Affordable Housing Unit Application for Density Bonus Request, Concessions, and Waivers
Subsequent City of Los Alamitos Discretionary and Ministerial Approvals	
City of Los Alamitos Subsequent Implementing Approvals	• Approval of Landscaping/Irrigation Plan • Issuance of Demolition Permits • Issuance of Grading Permits • Issuance of Building Permits • Approval of Road Improvement Plans • Issuance of Encroachment Permits • Approval of Infrastructure Plans • Approval of public right-of-way dedications • Approval of Water Quality Management Plan • Approval of connections to the municipal sewer system
Responsible Agencies – Approvals and Permits	
City of Seal Beach	• Issuance of Public Works Permit (encroachment permit) for infrastructure improvements within the Lampson Ave. right-of-way. • Agreement of Franchise Facilities between Golden State Water Company (GSWC) and the City of Seal Beach for water service. • Agreement between the Rossmoor/Los Alamitos Area Sewer District and the City of Seal Beach for Inter-Jurisdictional Wastewater Services. • Approval of stormwater discharge/conveyance. • Approval of a Water Quality Management Plan • Approval of infrastructure plans directly/indirectly related to Seal Beach
Regional Water Quality Control Board (RWQCB)	• Issuance of a Construction Activity General Construction Permit. • Issuance of a National Pollutant Discharge Elimination System (NPDES) Permit.
Rossmoor Los Alamitos Area Sewer District.	• Issuance of a Sewer Connection Permit • Agreement between the Rossmoor/Los Alamitos Area Sewer District and the City of Seal Beach for Inter-Jurisdictional Wastewater Services.
South Coast Air Quality Management District	• Issuance of permits that allow for the construction and operation of the Project.
JFTB	• Issuance of encroachment permit for stormwater improvements.
GSWC	• Agreement of Franchise Facilities between GSWC and the City of Seal Beach for water service.

1.3 ENVIRONMENTAL REVIEW AND PUBLIC PARTICIPATION

The City conducted an extensive environmental review of the Project to ensure that the City's decision makers and the public are fully informed about the potential significant environmental effects of the Project; to identify ways that environmental damage can be avoided or significantly reduced; and to prevent significant, avoidable damage to the environment by requiring changes in the Project using mitigation measures which have been found to be feasible. To do this, the City, acting as Lead Agency under CEQA, undertook the following:

- Circulated a Notice of Preparation (NOP) to the California Office of Planning and Research (the "State Clearinghouse"), Responsible Agencies, Trustee Agencies, and other interested parties on September 26, 2022, for a 30-day review period between October 3, 2022 and November 2, 2022;

- The NOP was posted on the City's website and City of Los Alamitos Planning Division on September 26, 2022;

- The NOP was posted at the Orange County Clerk's office on September 26, 2022;

- Published the NOP in the Event News Enterprise, which is the newspaper of general circulation in the area affected by the Project, on September 21, 2022;

- Held a publicly noticed EIR Scoping Meeting in the City Council Chamber of the City of Los Alamitos, and open to public attendance on October 20, 2022, to solicit comments from the public on the environmental issue areas that should be analyzed in the EIR;

- Sent a Notice of Availability (NOA) and Notice of Completion (NOC) and electronic copies of the DEIR to the California Office of Planning and Research, State Clearinghouse, on April 24, 2024;

- Mailed via certified mail a copy of the NOA to all Responsible Agencies, Trustee Agencies, and other interested parties and organizations to inform recipients that the DEIR was available for a 45-day review period beginning on April 24, 2024, and ending on June 10, 2024;

- The NOA was posted on the City's website and at the Orange County Clerk's office on April 24, 2024;

- Published the NOA in the Event News Enterprise, which is the newspaper of general circulation in the area affected by the Project, on May 1, 2024;

- The DEIR was posted on the City's website at https://cityoflosalamitos.org/203/Planning-Commission-Projects during the public review period for the DEIR;

- Prepared responses to comments on the DEIR received during the 45-day comment period on the DEIR, which have been included in the FEIR;

- Provided the FEIR, including individual responses to agencies that commented on the DEIR in the Staff Report for Planning Commission on September 18, 2024; and

- Held a Planning Commission hearing on September 25, 2024;

The Record of Proceedings for the Project consist of those items listed in CEQA Section 21167.6(e), along with other items contained within the City's files that are relevant to the consideration of the Project. The Record of Proceedings for the City's decision on the Project consists of the following documents, at a minimum and without limitation, which are herein incorporated by reference and made part of the record supporting these Findings:

- The NOP, NOA, and all other public notices issued by the City in conjunction with the Project;

- The DEIR for the Project and all technical appendices and documents cited, relied upon or incorporated by reference;

- All written comments submitted by agencies, organizations, or members of the public during the public review comment period on the DEIR and the City's responses to those comments;

- The DEIR for the Project and all technical appendices and documents cited, relied upon or incorporated by reference;

- The Mitigation Monitoring and Reporting Program for the Project;

- All reports, studies, memoranda, maps, staff reports, or other planning documents relating to the Project prepared by the City or consultants to the City with respect to the City's compliance with the requirements of CEQA and with respect to the City's action on the Project;

- All documents submitted to the City by public agencies, organizations or members of the public in connection with the DEIR;

- Any minutes and/or verbatim transcripts of all information sessions, public meetings, and public hearings held by the City in connection with the Project;

- Any documentary or other evidence submitted to the City at such information sessions, public meetings, and public hearings;

- All findings and resolutions adopted by the City regarding the project, all documents, cited or referred to therein and all staff reports, analyses, and summaries related to the adoption of those resolutions;

- Matters of common knowledge to the City, including, but not limited to federal, state, and local laws and regulations;

- Any documents expressly cited in these Findings, in addition to those cited above; and any other materials required for the record of proceedings by CEQA Section 21167.6(e).

All the documents identified above and all the documents which constitute the Record of Proceedings for the City's actions related to the Project pursuant to Public Resources Code Section 21167.6(e) are located at the City of Los Alamitos, Development Services Department – Planning Division, 3191 Katella Avenue, Los Alamitos, California 90720. Questions should be directed to Tom Oliver, Associate Planner.

2.0 ENVIRONMENTAL IMPACTS AND FINDINGS

The EIR was prepared by T&B Planning, Inc., a professional consulting firm. The professional qualifications and reputation of the EIR Consultant, the supervision and direction of the EIR Consultant by City staff and its peer review consultants, the thorough and independent peer review of the EIR, including comments and responses by City staff and its consultants, and the review and careful consideration of the EIR by the City, including comments and responses; all demonstrate that the EIR is the product of and reflects the independent judgment and analysis of the City as the Lead Agency.

Based on the NOP, *Technical Appendix A* to the DEIR, and the responses of the NOP, the EIR analyzed 17 potential areas where significant environmental impacts could result from implementation of the Project. These environmental topics were analyzed in the EIR and include aesthetics, air quality, biological resources, cultural resources, energy, geology and soils, greenhouse gas emissions, hazards and hazardous materials, hydrology and water quality, land use and planning, noise, population and housing, public services, recreation, transportation, tribal cultural resources, and utilities and service systems.

Having received, reviewed, and considered the information in the DEIR, as well as any and all other information in the record, the City hereby makes findings pursuant to and in accordance with CEQA Sections 21081, 21081.5, and 21081.6.

3.0 ENVIRONMENTAL IMPACTS NOT REQUIRING MITIGATION

The City hereby finds that the following potential environmental impacts associated with the implementation of the Project are less-than-significant and therefore do not require the imposition of mitigation measures.

3.1 AESTHETICS

Project impacts for Aesthetics do not result in significant impacts, and related findings are discussed below.

3.1.1 THRESHOLD A

Impact Statement: The Project would not have a substantial adverse effect on a scenic vista.

❑ Findings

Potential impacts of the Project related to Threshold a are discussed in Section 4.1.5 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold a; therefore, no mitigation is required.

❑ Substantial Evidence

The Project site is located in the southwestern portion of the City immediately north of Lampson Avenue. The Project site is not adjacent to or bounded by Katella Avenue and Los Alamitos Boulevard, which are identified as scenic corridors for the City and provide distant scenic views to the San Gabriel, San Bernardino, and San Jacinto Mountains. The City's General Plan does not designate any other scenic resources within the City and does not identify the Project site as a scenic resource nor Lampson Avenue as a scenic corridor. (DEIR, p. 4.1-8)

The Project site is currently occupied by a vacant two-story, 88,000 sf commercial office building, surface parking lot, ornamental landscaping and open space. Overall, the Project site is relatively flat and provides distant, partially obstructed views of the San Gabriel Mountains from Lampson Avenue. Views of the San Gabriel Mountains from Lampson are not panoramic and do not provide a focal view (visual access to a particular object, scene, or feature of interest) of the landform. (DEIR, pp. 4.1-8 to 4.1-9)

The Project would demolish the existing building and surface parking lot and remove all ornamental trees on-site. The Project would result in the redevelopment of the Project site with two- and three-story residential buildings and extensive landscaping. The maximum building height for the Project is approximately 41 feet with the typical single family dwelling ranging from 25.9 feet to 36 feet in height, typical townhomes are approximately 35.5 to 37 feet in height, and typical multi-family ranging approximately 37 to 39 feet in height. As shown on DEIR Figure 3-18, a variety of trees, shrubs, accent plants, and ground cover are proposed along the perimeter of the Project site, in common areas, recreational amenities, open space areas, and parking areas. A total of 441 trees, including 51 36" box

focal trees, 190 15-gallon trees, 5 10 x10'specimen canopy trees, and 195 24/36" box trees, would be planted throughout the Project site. (DEIR, p. 4.1-9)

DEIR Figure 4.1-2, *Visual Renderings on Lampson Looking Northeast*, and DEIR Figure 4.1-3, *Visual Renderings on Lampson Looking Northwest*, provide visual simulations of the proposed Project from Lampson Avenue based on the existing conditions of the Project site. As shown in DEIR Figure 4.1-2, the multi-family units would be located along the western edge of the Project site and a wall would be constructed along the Project's perimeter. DEIR Figure 4.1-3 depicts the proposed single-family homes from the southeastern corner of the Project site. Upon implementation of the Project, views of the townhomes and cluster homes from Lampson Avenue would consist of the three-story buildings, street trees, shrubs and groundcover. The Project would be attractive and of quality design, and provide visual interest through varied architectural detailing, including but not limited to building massing, heights, building materials, and decorative features. Architectural materials include vertical siding, composite shingle roof, stucco light sand finish, faux wood trim, decorative faux vent, barge board, decorative gable end outlooker, vinyl windows, wood railing, stone veneer, decorative fiberglass entry door, and metal utility door. Refer to DEIR Figures 3-12, 3-13, and 3-14 for a complete list of the materials. (DEIR pp. 4.1-9 to 4.1-10)

In the existing condition, views of the San Gabriel Mountains from Lampson Avenue are partial and distant, and obscured by existing mature ornamental trees and the vacant commercial office building, Arbor Park, Navy Golf Course. The Project site is not part of a designated scenic vista. The Project development would block the partial and distant views of the San Gabriel Mountains from Lampson Avenue along the Project frontage. However, redevelopment of the Project site would not result in a substantial adverse effect on a scenic vista, because background views of the San Gabriel Mountains are distant and limited due to existing development and landscaping and the Project site is not considered to be part of a designated scenic vista. Therefore, impacts would be less than significant. (DEIR, p. 4.1-10)

3.1.2 THRESHOLD B

Impact Statement: The Project would not substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway.

❑ Findings

Potential impacts of the Project related to Threshold b are discussed in Section 4.1.5 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts with respect to Threshold b; therefore, no mitigation is required.

❑ Substantial Evidence

The Project site does not contain any special or unique scenic attributes, such as rock outcroppings, native vegetation, or historic buildings. The Project site does contain a number of ornamental trees onsite that will be removed and replaced. As shown in DEIR Figure 3-18, *Landscape Plan*, a total of 441 replacement trees would be planted throughout the Project site. (DEIR, p. 4.1-10)

The Project site is not located near any designated State scenic highways. The closest State-eligible highway is State Route 1 (SR-1) located approximately 3.8 miles southwest of the Project site. Due to distance and intervening topography and development, the Project site is not visible from SR-1. Accordingly, implementation of the Project would not adversely impact the scenic resources within a State scenic highway corridor. No impact would occur. (DEIR p. 4.1-10)

3.1.3 THRESHOLD C

Impact Statement: The Project would not, in a non-urbanized area, substantially degrade the existing visual character or quality of public views of the site and its surroundings. The Project would not, in an urbanized area, conflict with applicable zoning and other regulations governing scenic quality.

❑ Findings

Potential impacts of the Project related to Threshold c are discussed in Section 4.5-1 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold c; therefore, no mitigation is required.

❑ Substantial Evidence

The Project site is located in an area that meets the U.S. Census Bureau's definition of an "urbanized area" and is planned for urban uses by the City General Plan; therefore, for purposes of evaluation herein, the Project is considered to be located in an urbanized area. The following discussion analyzes the Project's potential to conflict with applicable zoning and other regulations governing scenic quality. (DEIR, p. 4.1-10)

The Project would result in construction activities that would temporarily change the visual character of the Project site and its surroundings. Construction activities would involve demolition, grading and site clearing activities and building and site improvements. Construction staging areas on the Project site, including earth stockpiling, storage of equipment and supplies, and related activities would contribute to a generally "disturbed site," which may be perceived by some as a visual impact. Construction activities would occur over an approximate three-year timeframe with first occupancy occurring approximately one year following Project approval. Construction activities may be unsightly during the site preparation and construction phases; however, they are not considered significant because they are temporary in nature and would not conflict with zoning or other regulations governing scenic quality. Additionally, as a condition of approval, prior to the start of any construction activities, temporary construction chain link fencing with a privacy screen approximately eight feet in height would be erected to secure the site and shield the construction areas and public views. (DEIR, p. 4.1-13)

The Project-applicable goals and policies and a discussion of the Project's potential to conflict with applicable General Plan policies with the purpose of avoiding or mitigating an environmental effect related to aesthetics are discussed in DEIR Section 4.10, *Land Use and Planning*, Table 4.10-2, *General Plan Consistency Analysis*. As shown, the Project would not conflict with General Plan policies governing scenic quality. (DEIR, p. 4.1-13)

The Project's design, including the site layout, architecture, and landscaping is discussed and illustrated in detail in DEIR Section 3.0, *Project Description*. The Project site's underlying zoning classification is Multi-Family Residential Zone (R-3). DEIR Table 4.1-1, *Zoning Development Standards Consistency Analysis*, discusses the Project's consistency with the development standards provided within Los Alamitos Municipal Code (LAMC) Chapter 17.08.030 (Development Standards in Residential Zones).

Buildout of the Project would change the existing visual character of the site from a two-story, 88,000 sf commercial office building to a two- to three-story residential development consisting of 246 units. As shown in DEIR Figures 4.1-2 and 4.1-3, the Project would be attractive and of quality design and visually compatible with the existing residential and park uses in the Project site's vicinity. Additionally, as shown in DEIR Table 4.1-1, the Project would be compliant with the zoning development standards and City requirements pertaining to scenic quality. Accordingly, the Project would not conflict with applicable zoning and other regulations governing scenic quality. Impacts would be less than significant. (DEIR, p. 4.1-18)

3.1.4 THRESHOLD D

Impact Statement: The Project would not create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area.

❑ Findings

Potential impacts of the Project related to Threshold d are discussed in Section 4.5.1 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold d; therefore, no mitigation is required.

❑ Substantial Evidence

Currently, the Project site is developed with a use that previously produced artificial light. The Project would redevelop the Project site with residential uses which would produce artificial light. The Project would be required to adhere to the light and glare requirements as set forth in the LAMC (Chapter 8.48 - Lighting Performance Standards and Section 17.24.040 Light and Glare). Chapter 8.48 addresses the visual impacts of exterior lighting on adjacent property owners and neighborhoods. The chapter outlines guidelines for the design, scale, location, and illumination level of lighting fixtures. The guidelines aim to reduce light trespass and prevent glare. Section 17.24.040 would require shielding of light sources to reduce impacts on surrounding land uses. The City would confirm compliance with applicable lighting requirements during future review of building permit applications/plans. Mandatory compliance with LAMC Chapter 8.48 and Section 17.24.040 would ensure that the Project would not introduce any permanent design features that would adversely affect day or nighttime views in the area. Thus, light and glare impacts from the Project would be less than significant. (DEIR, p. 4.1-19).

3.1.5 CUMULATIVE IMPACTS

Impact Statement: The Project would not result in a cumulatively considerable impact related to aesthetics.

❑ **Findings**

Potential cumulative impacts of the Project related to aesthetics are discussed in detail in Section 4.1.6 of the DEIR. The City finds that the development of the proposed Project would not result in significant cumulative impacts related to aesthetics; therefore, no mitigation is required.

❑ **Substantial Evidence**

The CEQA Guidelines define a "cumulative impact" as "two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts" (CEQA Guidelines § 15355). The Project's impacts to partial distant views of the San Gabriel Mountains, would be localized to the immediate Project site area and would not extend beyond the public viewing area that immediately abuts the Project site (Lampson Avenue). The views that would be affected only occur abutting the Project site and the Project site does not contain off-site components that could adversely affect scenic views that occur elsewhere in the City. (DEIR, p. 4.1-19)

As noted under the analysis of Threshold b, the Project site is not located within close proximity to any designated State scenic routes. Therefore, the Project has no potential to contribute to a cumulatively significant impact to scenic resources within a designated scenic route corridor. (DEIR, p. 4.1-19)

Under existing conditions, the area surrounding the Project site is entirely developed with residential land uses, the Los Alamitos Joint Forces Training Base (JFTB), Arbor Park, and the Navy Golf Course. There are portions of undeveloped land within the JFTB between and adjacent to its runways. However, these areas are not readily visible from elsewhere in the City and therefore do not have an existing substantial impact on the visual setting of other portions of Los Alamitos. No new or pending development projects are known to occur adjacent to the Project site. Accordingly, the Project would not contribute to cumulatively considerable impacts to local visual quality. Notwithstanding, as with the Project, any redevelopment in the surrounding area would be subject to applicable development regulation and design standards including, but not limited to the LAMC and General Plan. Mandatory compliance with applicable development regulations and design standards would ensure that development would incorporate high quality building materials, site design, and landscaping to preclude potential conflicts with applicable zoning and other regulations governing visual quality. (DEIR, p. 4.1-19)

With respect to potential cumulative light and glare impacts, the Project would be required to comply with LAMC Chapter 8.48 - Lighting Performance Standards and Section 17.24.040 Light and Glare. Development projects with artificial light sources in surrounding jurisdictions would be required to comply with the light reduction requirements applicable in their respective jurisdictions. Although cumulative development in the Project's surrounding area is expected to introduce new sources of lighting and potentially reflective materials, the required compliance with the applicable legal standard

and code requirements would ensure that future cumulative development does not introduce substantial sources of lighting or glare. As such, the Project would not contribute to cumulatively-considerable, adverse impacts to the existing daytime or nighttime views of the Project site or its surroundings. (DEIR, p. 4.1-20)

3.2 AGRICULTURAL AND FORESTRY RESOURCES

Project impacts for Agricultural and Forestry Resources do not result in significant impacts. Findings are discussed below.

3.2.1 THRESHOLD A

Impact Statement: The Project would not convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency to non-agricultural use.

❑ Findings

Potential impacts of the Project related to Threshold a are discussed in detail in Section 5.4.1 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold a; therefore, no mitigation is required.

❑ Substantial Evidence

According to mapping information available from the California Department of Conservation (CDC) Farmland Mapping and Monitoring Program (FMMP), the Project site is designated as Urban and Built-Up land and does not contain any Prime Farmland, Unique Farmland or Farmland. The nearest area of any FMMP significance is adjacent to the Project site, within the Los Alamitos JFTB. Given that the Project would not convert Prime Farmland, Unique Farmland, or Farmland, as shown on maps prepared pursuant to the FMMP, to non-agricultural use, no impact would occur. (DEIR, p. 5-7)

3.2.2 THRESHOLD B

Impact Statement: The Project would not conflict with existing zoning for agricultural use, or a Williamson Act contract.

❑ Findings

Potential impacts of the Project related to Threshold b are discussed in Section 5.4.1 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold b; therefore, no mitigation is required.

❑ Substantial Evidence

The Project site is currently zoned as "Multi-Family Residential (R-3)." The Project's implementation will not result in a loss of land zoned for agriculture. There are no farming activities occurring at the Project site. As discussed above, the Project site is designated as Urban and Built-Up land. As a result,

the Project will not conflict with existing agricultural zoning or Williamson Act contracts. No impact would occur. (DEIR, p. 5-7)

3.2.3 THRESHOLD C

Impact Statement: The Project would not conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g)).

❑ **Findings**

Potential impacts of the Project related to Threshold c are discussed in Section 5.4.1 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold c; therefore, no mitigation is required.

❑ **Substantial Evidence**

The Project site is located within the City of Los Alamitos and has a zoning designation of R-3. The Project site does not contain forest land. Therefore, the Project would not conflict with existing zoning for forest land or timberland. Accordingly, no impact would occur. (DEIR, p. 5-8)

3.2.4 THRESHOLD D

Impact Statement: The Project would not result in the loss of forest land or conversion of forest land to non-forest use.

❑ **Findings**

Potential impacts of the Project related to Threshold d are discussed in Section 5.4.1 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold d; therefore, no mitigation is required.

❑ **Substantial Evidence**

The Project site and surrounding areas do not consist of forest land. Therefore, the Project would not result in the loss of forest land or result in the conversion of forest land to non-forest use. Accordingly, no impact would occur. (DEIR, p. 5-8)

3.2.5 THRESHOLD E

Impact Statement: The Project would not involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use.

❑ Findings

Potential impacts of the Project related to Threshold e are discussed in detail in Section 5.4.1 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold e; therefore, no mitigation is required.

❑ Substantial Evidence

The Project would not result in changes in the environment which, due to their location and nature, could result in conversion of forest land to non-forest use. Accordingly, no impact would occur. (DEIR, p. 5-8)

3.3 AIR QUALITY

Project impacts for Air Quality do not result in significant impacts. Findings are discussed below.

3.3.1 THRESHOLD A

Impact Statement: The Project would not conflict with or obstruct implementation of the applicable air quality plan.

❑ Findings

Potential impacts of the Project related to Threshold a are discussed in detail in Section 4.2.6 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold a; therefore, no mitigation is required.

❑ Substantial Evidence

In December 2022, the South Coast Air Quality Management District (AQMD) released the Final 2022 Air Quality Management Plan (2022 AQMP). The 2022 AQMP continues to evaluate current integrated strategies and control measures to meet the National Ambient Air Quality Standards (NAAQS), as well as explore new and innovative methods to reach its goals. Some of these approaches include utilizing incentive programs, recognizing existing co-benefit programs from other sectors, and developing a strategy with fair-share reductions at the federal, state, and local levels. Similar to the 2016 AQMP, the 2022 AQMP incorporates scientific and technological information and planning assumptions, including the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), a planning document that supports the integration of land use and transportation to help the region meet the federal CAA requirements. The Project's consistency with the AQMP will be determined using the 2022 AQMP as discussed below. (DEIR, p. 4.2-22)

Criteria for determining consistency with AQMP are defined in Chapter 12, Section 12.2 and Section 12.3 of the 1993 CEQA Handbook. These indicators are discussed below:

- ***Consistency Criterion No. 1:*** *The proposed Project will not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, or delay the*

timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.

Consistency Criterion No. 1 refers to violations of the California Ambient Air Quality Standards (CAAQS) and NAAQS. CAAQS and NAAQS violations would occur if regional or localized significant thresholds were exceeded. As evaluated under Thresholds b and c below, the Project's localized and regional construction-source and operation-source emissions would not exceed applicable regional significance thresholds. As such, the Project is consistent with this criterion, and impacts would be less than significant. (DEIR, p. 4.2-22)

- ***Consistency Criterion No. 2:*** *The Project will not exceed the assumptions in the AQMP based on the years of project build-out phase.*

The 2022 AQMP demonstrates that the applicable ambient air quality standards can be achieved within the timeframes required under federal law. Growth projections from local general plans adopted by the applicable cities are provided to SCAG, which develops regional growth forecasts, which are then used to develop future air quality forecasts for the AQMP. Development consistent with the growth projections in City of Los Alamitos General Plan is considered to be consistent with the AQMP. (DEIR, p. 4.2-22)

Peak day emissions generated by construction activities are largely independent of land use assignments, but rather are a function of development scope and maximum area of disturbance. Irrespective of the site's land use designation, development of the site to its maximum potential would likely occur, with disturbance of the entire site occurring during construction activities. As such, when considering that no emissions thresholds will be exceeded, the Project is consistent with this criterion, and a less than significant impact would result. (DEIR, p. 4.2-22 to 4.2-23)

The City of Los Alamitos General Plan designates the Project site for "Multi-Family Residential-25" land uses. The "Multi-Family Residential-25" land use designation is defined as "single family detached and attached residences, including all development permitted in other residential categories as well as stacked flats and other building types with 4 or more units. Other uses such as convalescent hospitals, churches, and mobile home parks are also permitted subject to special procedures. (DEIR, p. 4.2-23)

The Project consists of the development of 55 single family detached residential dwelling units (cluster homes), 114 multifamily (low-rise) residential dwelling units, and 76 affordable apartment dwelling units, as well as one market rate manager's unit (total of 246 dwelling units). The Project's proposed uses are consistent with the site's land use designations. Development consistent with the growth projections in City of Los Alamitos General Plan is considered to be consistent with the AQMP. As such, the Project is determined to be consistent with the second criterion. (DEIR, p. 4.2-23)

The Project does not have the potential to result in or cause NAAQS or CAAQS violations. Construction and operational-source emissions would not exceed the applicable South Coast AQMD

regional thresholds for emissions of any criteria pollutant. Additionally, the Project is consistent with the City's General Plan. As such, the Project is considered to be consistent with the AQMP. (Urban Crossroads, 2023a, pp. 46-47). Impacts would be less than significant, and no mitigation is required. (DEIR, p. 4.2-23)

3.3.2 THRESHOLD B

Impact Statement: The Project would not result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard.

❑ Findings

Potential impacts of the Project related to Threshold b are discussed in detail in Section 4.2.6 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold b; therefore, no mitigation is required.

❑ Substantial Evidence

Construction

The latest version of California Emissions Estimator Model (CalEEMod) has been used for this Project to determine construction and operational air quality emissions. Refer to DEIR Appendices 3.1 through 3.2 of the Project's Air Quality Impact Analysis (*Technical Appendix B1* of the DEIR) for Criteria Air Pollutant CalEEMod Output Files. Construction emissions impacts could result from demolition activities, grading activities, and offsite utility and infrastructure improvements. (DEIR, p. 4.2-23)

CalEEMod calculates maximum daily emissions for summer and winter periods. As such, the estimated maximum daily construction emissions without mitigation for both summer and winter periods are summarized in DEIR Table 4.2-5, *Overall Construction Emission Summary*. Under the assumed scenarios, emissions resulting from the Project construction would not exceed criteria pollutant thresholds established by the South Coast AQMD for emissions of any criteria pollutant and impacts would be less than significant. No mitigation is required. (DEIR, p. 4.2-23)

Operation

Operational emissions would be expected from Area Source Emissions, Energy Emissions, and Mobile Source Emissions. For additional information regarding the calculation of Project operational emissions, please refer to Appendix 3.2 of the Project's Air Quality Analysis (*Technical Appendix B1* of the DEIR). Operational emission impacts from the Project would include area source emissions as a result of architectural coatings, consumer products, and landscape maintenance equipment, and mobile source emissions. (DEIR, p. 4.2-24)

Project mobile source emissions impacts are dependent on both overall daily vehicle trip generation and the effect of the Project on peak hour traffic volumes and traffic operations in the vicinity of the Project. The estimated operational-source emissions from mobile sources and area sources for the

Project are summarized in DEIR Table 4.2-6, *Summary of Peak Operational Emissions*. As shown, Project operations would not exceed criteria pollutant thresholds established by the South Coast AQMD for emissions of any criteria pollutant and impacts would be less than significant. No mitigation is required. (DEIR, p. 4.2-24)

3.3.3 THRESHOLD C

Impact Statement: The Project would not expose sensitive receptors to substantial pollutant concentrations.

❑ Findings

Potential impacts of the Project related to Threshold c are discussed in detail in Section 4.2.6 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold c; therefore, no mitigation is required.

❑ Substantial Evidence

Construction Localized Impact Analysis

Criteria Pollutant Emissions

DEIR Table 4.2-7, *Localized Construction-Source Emissions,* identifies the localized impacts at the nearest receptor location in the vicinity of the Project. As shown, localized construction emissions would not exceed the applicable South Coast AQMD Localized Significance Thresholds (LSTs) for emissions of any criteria pollutant, and as such, impacts would be less than significant and no mitigation is required. (DEIR, p. 4.2-26)

DPM Source Cancer and Non-Cancer Risks Impact Analysis

The land use with the greatest potential exposure to Project construction-source diesel particulate matter (DPM) emissions is Location R3 which is located approximately 86 feet south of the Project site at an existing residence located at 4625 Ironwood Avenue. R3 is placed in the private outdoor living areas (backyard) facing the Project site. At the Maximally Exposed Individual Receptor (MEIR), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 2.59 in one million, which is less than the South Coast AQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be less than 0.01, which would not exceed the applicable threshold of 1.0. Location R3 is the nearest receptor to the Project site and would experience the highest concentrations of DPM during Project construction due to meteorological conditions (wind speed and direction) at the site. Because all other modeled receptors would experience lower concentrations of DPM during Project construction, all other receptors in the vicinity of the Project would be exposed to less emissions and therefore less risk than the MEIR identified for location R3. As such, the Project will not cause a significant human health or cancer risk to adjacent land uses as a result of Project construction activity. Accordingly, impacts would be less than significant and no mitigation is required. (DEIR, pp. 4.2-26 to 4.2-27)

Operation Localized Emissions Impact Analysis

Criteria Pollutant Emissions

According to South Coast AQMD LST methodology, LSTs would apply to the operational phase of a proposed project, if the project includes stationary sources, or attracts mobile sources that may spend long periods queuing and idling at the site (e.g., transfer facilities and warehouse buildings). The proposed Project does not include such uses, and thus, due to the lack of significant stationary source emissions, no long-term localized analysis is needed. (DEIR, p. 4.2-27)

CO Hot Spot Analysis

To establish a more accurate record of the baseline carbon monoxide (CO) concentration affecting the South Coast Air Basin (SCAB), a CO "hot spot" analysis was conducted in 2003 for four busy intersections in Los Angeles at the peak morning and afternoon time periods. This "hot spot" analysis did not predict any exceedance of the 1-hour (20.0 parts per million (ppm)) or 8-hour (9.0 ppm) CO standards. For example, of the 8.4 ppm 8-hr CO concentration measured at the Long Beach Boulevard/Imperial Highway intersection (i.e., the highest CO generating intersection within the "hot spot" analysis), only 0.7 ppm was attributable to the traffic volumes and congestion at this intersection; the remaining 7.7 ppm were due to the ambient air measurements at the time the 2003 AQMP was prepared. In contrast, an adverse CO concentration, known as a "hot spot," would occur if an exceedance of the state one-hour standard of 20 ppm or the eight-hour standard of 9 ppm were to occur. (DEIR, pp. 4.2-27 to 4.2-28)

The ambient 1-hr and 8-hr CO concentration within the Project study area is estimated to be 1.9 ppm and 1.5 ppm, respectively (data from Central Orange County station for 2021). Therefore, even if the traffic volumes for the proposed Project were ten times the traffic volumes generated at the Long Beach Boulevard/Imperial Highway intersection, due to the on-going improvements in ambient air quality and vehicular emissions controls, the Project would not be capable of resulting in a CO "hot spot" at any study area intersections. As noted above, only 0.7 ppm were attributable to the traffic volumes and congestion at one of the busiest intersections in the SCAB. Therefore, if these traffic volumes were multiplied by ten times, it could be expected that the CO attributable to traffic would increase tenfold as well, resulting in 7 ppm – even if this were added to either the 1-hour or 8-hour CO concentrations within the Project study area, this would result in 9.1 ppm and 8.5 ppm for the 1-hr and 8-hr timeframes, respectively. Neither of which would exceed the applicable 1-hr standard of 20 ppm or the 8-hr standard of 9 ppm. As discussed further below, the Project would not result in an increase of traffic in these amounts. (DEIR, p. 4.2-28)

Furthermore, and to inform this analysis, the Bay Area Air Quality Management District (BAAQMD) concluded that under existing and future vehicle emission rates, a given project would have to increase traffic volumes at a single intersection by more than 44,000 vehicles per hour (vph) - or 24,000 vph where vertical and/or horizontal air does not mix—in order to generate a significant CO impact. The busiest intersection evaluated in South Coast AQMD's 2003 AQMP was that at Wilshire Blvd and Veteran Ave., which had AM/PM traffic volumes of 8,062 vph and 7,719 vph respectively. (DEIR, p. 4.2-28)

The highest trips on a segment of road for the Project operation is the intersection of Driveway 2 and Lampson Avenue with traffic volumes of 91 vph during AM peak hours and 133 vph during PM peak hours. As such, Project-related traffic volumes are less than the traffic volumes identified in the 2003 AQMP. The proposed Project would not produce the volume of traffic required to generate a CO "hot spot" either in the context of the 2003 Los Angeles hot spot study or based on representative BAAQMD CO threshold considerations. Localized air quality impacts related to mobile-source emissions would therefore be less than significant. Based on the foregoing analysis, the Project would result in less-than-significant impacts related to the creation of CO Hot Spots. No mitigation is required. (DEIR, pp. 4.2-28 to 4.2-29)

Potential Health Impact of the Project

Based on the foregoing analysis, the Project would not exceed the South Coast AQMD localized significance thresholds for assessing localized health impacts from criteria air pollutants during construction. Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations during Project construction. Further, Project traffic would not create or result in a CO "hotspot." Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations due to operation of the Project, and impacts would be less than significant. No mitigation is required. (DEIR, pp. 4.2-28 to 4.2-29)

3.3.4 THRESHOLD D

Impact Statement: The Project would not result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

❑ **Findings**

Potential impacts of the Project related to Threshold d are discussed in detail in Section 4.2.6 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold d; therefore, no mitigation is required.

❑ **Substantial Evidence**

Land uses generally associated with odor complaints include agricultural uses (livestock and farming), wastewater treatment plants, food processing plants, chemical plants, composting operations, refineries, landfills, diaries, and fiberglass molding facilities. The Project does not contain land uses typically associated with emitting objectionable odors. (DEIR, p. 4.2-29)

Construction

Potential odor sources associated with the Project may result from construction equipment exhaust and the application of asphalt and architectural coating during construction activities. The Project would be subject to standard construction requirements, including the use of low-VOC architectural coatings as required by South Coast AQMD Rule 1113, Table of Standards; and compliance with South Coast AQMD Rule 402, Nuisance, which requires that a person shall not discharge air contaminants or other materials that would cause health or safety hazards to any considerable number of persons or the public.

Compliance with these standard construction requirements would minimize odor impacts from construction. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and thus would be less than significant. No mitigation is required. (DEIR, p. 4.2-29)

Operation

Potential sources of operational odors generated by the Project would include temporary storage of typical solid waste (refuse). Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with current solid waste regulations. The proposed would also be required to comply with South Coast AQMD Rule 402 to prevent occurrences of public nuisances. Therefore, odors associated with the Project operations would be less than significant and no mitigation is required. (DEIR, p. 4.2-29)

3.3.5 CUMULATIVE IMPACTS

Impact Statement: The Project would not result in a cumulatively considerable impact related to air quality.

❑ **Finding**

Potential cumulative impacts of the Project related to air quality are discussed in detail in Section 4.2.7 of the DEIR. The City finds that the development of the proposed Project would not result in significant cumulative impacts related to air quality; therefore, no mitigation is required.

❑ **Substantial Evidence**

With exception of the issue of odors, the cumulative study area for air quality includes the City of Los Alamitos and the SCAB. The SCAB is designated as a nonattainment area for State standards of ozone (O_3), Fine Particulate Matter (10 microns or smaller) (PM_{10}), and Fine Particulate Matter (2.5 microns or smaller) ($PM_{2.5}$). The region is also designated as a nonattainment area for federal standards of O_3 and $PM_{2.5}$. Cumulative growth in population and vehicle use could inhibit efforts to improve regional air quality and attain ambient air quality standards. Thus, with the exception of odors, the setting for this cumulative analysis consists of the SCAB and associated growth and development anticipated in the air basin. For the issue of odors, the cumulative study area includes the Project site and lands in the immediate vicinity to the Project site, as odors diminish rapidly with distance from the source. (DEIR, p. 4.2-29)

According to South Coast AQMD, projects that exceed the project-specific significance thresholds are considered by the South Coast AQMD to be cumulatively considerable. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant. As shown in DEIR Table 4.2-5, *Overall Construction Emission Summary*, construction activities associated with the Project would not exceed South Coast AQMD thresholds for any criteria pollutants. Therefore, impacts associated with Project-related construction emissions would be less than cumulatively considerable. (DEIR, p. 4.2-30)

Similarly, as shown in DEIR Table 4.2-6, *Summary of Peak Operational Emissions*, Project operation-source emissions would not exceed the South Coast AQMD regional thresholds of significance for any criteria pollutants. Therefore, impacts associated with the Project-related operational emissions would be less than cumulatively considerable. (DEIR, p. 4.2-30)

As shown in DEIR Table 4.2-7, *Localized Construction-Source Emissions*, emissions would not exceed the South Coast AQMD Localized Threshold for CO, Nitrogen Oxides (NO_x), PM_{10}, or $PM_{2.5}$. Pursuant to the South Coast AQMD's CEQA Air Quality Significance Thresholds, projects with daily emissions that exceed any of the indicated thresholds should be considered as having an individually and cumulatively significant impact; therefore, the Project's emissions during construction would be less than significant on a direct and cumulative basis. (DEIR, p. 4.2-30)

The Project does not include uses that generate stationary sources, or that attract mobile sources that may spend long periods queuing and idling at the site. Therefore, the Project would have a less-than-cumulatively considerable LST impact during long-term operation. Additionally, the Project would have no potential to result in or contribute to a CO "Hot Spot." Accordingly, impacts associated with CO "Hot Spots" would be less than cumulatively considerable. (DEIR, p. 4.2-30)

Cumulatively considerable odor impacts could occur if the Project in combination with other nearby projects resulted in combined construction- or operational-related odor impacts. However, the Project's compliance with South Coast AQMD Rules 1113 and 402 would ensure that the Project does not generate substantial odors adversely affecting a substantial number of people during construction and operation. Additionally, there are no nearby related projects that generate substantial odors that could combine to create a cumulatively considerable odor impact. Therefore, impacts associated with odors would be less than cumulatively considerable. (DEIR, p. 4.2-30)

The Project includes the following Project Design Features (PDFs) that serve to reduce the Project's impacts. This will also be included as a Conditional of Approval for the Project.

PDF AQ-1 The Project will utilize Tier 4 Interim construction equipment during construction activities.

3.4 BIOLOGICAL RESOURCES

Project impacts for Biological Resources Thresholds b, c, e, and f do not result in significant impacts. Findings are discussed below.

3.4.1 THRESHOLD B

Impact Statement: The Project would not have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service.

❑ Findings

Potential impacts of the Project related to Threshold b are discussed in Section 4.3.6 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold b; therefore, no mitigation is required.

❑ Substantial Evidence

Temporary Construction-Related Activities

The Project site contains no riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service. Thus, construction-related activities would not result in significant impacts on any riparian or special-status vegetation alliances. (DEIR, p. 4.3-32)

The Project site does not support natural vegetation communities, only non-native ornamental vegetation. The development of the proposed Project would remove 5.97 acres of Developed/Ornamental lands and 6.40 acres of Disturbed/Ornamental lands. Removal of 12.37 acres of developed/ornamental and disturbed/ornamental lands would not result in a substantial adverse effect on any sensitive communities. No significant impact would occur and no mitigation is required. (DEIR, p. 4.3-32)

Long-Term Operation

The Project site contains no riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service. The Project site does not support natural vegetation communities, only non-native ornamental vegetation. Long-term operation would not result in significant impacts on any riparian or special-status vegetation alliances. No impact would occur, and no mitigation is required. (DEIR, p. 4.3-32)

3.4.2 THRESHOLD C

Impact Statement: The Project would not have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.

❑ Findings

Potential impacts of the Project related to Threshold c are discussed in Section 4.3.6 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold c; therefore, no mitigation is required.

❑ Substantial Evidence

The Project site does not contain any wetlands as defined under the federal Clean Water Act (CWA) or by the State of California. Based on the results of the Jurisdictional Delineation prepared by Glen

Lukos Associates, Inc. (GLA), the shallow concrete drainage ditch does not meet the Corps' definition of wetland or other waters of the U.S. because the concrete feature has no soils or vegetation. In addition, the area is excluded from Corps jurisdiction by rule under Section 328.3(b)(3) of Title 33 of the Code of Federal Regulations as "*Ditches (including roadside ditches) excavated wholly in and draining only dry land and that do not carry a relatively permanent flow of water*". In addition to the concrete feature having no wetland characteristics, it also does not carry relatively permanent flow. (DEIR, p. 4.3-32)

Additionally, the concrete feature is not a wetland under the State Water Regional Control Board (SWRCB)'s definition, and the feature also would not be considered a water of the state. In particular, the concrete feature is not a wetland under the SWRCB's definition which states: (1) the area has continuous or recurrent saturation of the upper substrate caused by groundwater, or shallow surface water, or both; (2) the duration of such saturation is sufficient to cause anaerobic conditions in the upper substrate; and (3) the area's vegetation is dominated by hydrophytes or the area lacks vegetation. The area comprising the concrete feature lacks soil which is assumed in the term "saturation" since concrete cannot become saturated. Moreover, the SWRCB does not consider artificial features to be waters of the state if they were constructed and currently used and maintained primarily for the detention, retention, infiltration, or treatment of stormwater runoff subject to regulation under a municipal, construction, or industrial stormwater permitting program (Procedures, Section II.3.d.iii). The concrete ditch serves these purposes of accommodating stormwater runoff. (DEIR, p. 4.3-33)

In addition, the concrete feature is not a "stream" in accordance with the definitions of a stream in the California Fish and Game Code as the drainage feature does not exhibit a bed, bank, or channel. The feature is an approximately two-inch-deep linearly shaped concrete slab that support no vegetation. As such, the concrete feature is not subject to California Department of Fish and Wildlife (CDFW) jurisdiction under Fish and Game Code Section 1602. (DEIR, p. 4.3-33)

Therefore, the Project would not result in a substantial adverse effect on state or federally protected wetlands during both construction and operational activities. No impact would occur, and mitigation is not required. (DEIR, p. 4.3-33)

3.4.3 THRESHOLD E

Impact Statement: The Project would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.

❑ **Findings**

Potential impacts of the Project related to Threshold e are discussed in detail in Section 4.3.6 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold e; therefore, no mitigation is required.

❑ **Substantial Evidence**

On April 18, 2022, the City of Los Alamitos adopted a Parkway Tree Master Plan as part of its Urban Forest Program. This plan addresses City parkway trees. There are currently no parkway trees along the Project's frontage. The Project would not result in an impact to the City parkway trees. Therefore, the Project would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance. No impact would occur, and mitigation is not required. (DEIR, p. 4.3-34)

3.4.4 THRESHOLD F

Impact Statement: The Project would not conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

❑ **Findings**

Potential impacts of the Project related to Threshold f are discussed in detail in Section 4.3.6 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold f; therefore, no mitigation is required.

❑ **Substantial Evidence**

The Project site is not subject to any Habitat Conservation Plans, Natural Community Conservation Plans, or other approved local, regional, or state habitat conservation plans. No impact would occur, and mitigation is not required. (DEIR, p. 4.3-34)

3.4.5 CUMULATIVE IMPACTS

Impact Statement: The temporary direct and/or indirect impacts of the Project would not result in significant cumulative impacts related to biological resources.

❑ **Findings**

Potential cumulative impacts of the Project related to biological resources are discussed in detail in DEIR Section 4.3.7. The City finds that development of the proposed Project would not result in significant cumulative impacts related to biological resources; therefore, no mitigation is required.

❑ **Substantial Evidence**

As stated in CEQA Guidelines Section 15130(a)(1), "a cumulative impact consists of an impact which is created as a result of the combination of the project evaluated in the EIR together with other projects creating related impacts". The phrase "Related projects" refers to past, present, and reasonably foreseeable probable future projects, which would have similar impacts to the proposed project. (DEIR, p. 4.3-34)

The Project site does not contain any special-status plant species nor does the site have the potential to support such species. Therefore, the Project would not impact any special-status plant and, thus, the Project would have no potential to contribute to a cumulative impact to special-status plant species.

The Project site currently supports approximately just over four acres of open field, previously consisting of maintained turf, that may be used occasionally by raptor species for foraging. Nevertheless, the site does not constitute regionally important foraging habitat for raptors, given the large range (a few to many squire miles depending on the species) required by raptors and limited size of the potential foraging area. Thus, the loss of approximately four acres of potential foraging raptor habitat would not be a significant impact. Additionally, the adjacent and surrounding areas to the Project site including Arbor Park, Navy golf course, Old Ranch Country Club, JFTB and the Seal Beach Naval Weapons Station provide larger (approximately over 5,000 acres combined nearly all of which is undeveloped and includes agricultural lands and wetland habitats) and generally better quality raptor foraging habitat associated with lack of developed areas. (DEIR, pp. 4.3-34 to 4.3-35)

The Project site and surrounding areas consist of mostly developed lands. The Project site is developed and is adjacent to residential and other urban developed areas. An approximately 100-acre solar farm is currently under construction within the JFTB. Although undeveloped land, the site for the solar farm on the JFTB is disturbed with limited habitat capacity or potential. Other future developments relevant to this analysis and within the area, depicted on DEIR Figure 4.0-1, *Cumulative Location Development Map*, include LA 1-4 in Los Alamitos, GG 1-4 in Garden Grove, and SB 1-7 in Seal Beach. These projects are already developed or are proposed for redevelopment and are part of the existing built environment. (DEIR, p. 4.3-35)

Two sensitive (State watch list) animal species, Cooper's hawk and wintering merlin were detected onsite but would not be subject to significant impacts. No sensitive plant species or sensitive habitats were detected onsite. Two CDFW special-status bat species, the western red bat and western yellow bat were detected acoustically offsite within the Navy golf course but did not roost onsite based on focused emergent surveys on the Project site. The Project would not result in an impact to special-status bat species on a project-specific or cumulative level, because the Project site supports limited potential roosting habitat onsite for these two species, the Project will incorporate larger sized box tree species as a project design feature (including the western sycamore and cottonwood trees) that foliage specialist bats prefer and will plant the trees on the fringes of the development adjacent to current open space areas. (DEIR, p. 4.3-35)

One CDFW special-status bird species, the Vermilion flycatcher was not detected on site but is known to breed adjacent to the Project site and environs. The Project will incorporate larger sized box tree species (including the western sycamore) as a project design feature and will plant these trees on the fringes of the development, adjacent to Arbor Park and the Navy golf course (PDF B-1). Additionally, as shown in DEIR Figure 3-18, *Landscape Plan*, and pursuant to PDF B-2, the Project will plant approximately 441 trees onsite (excluding shrubs and ground cover), including the western sycamore *(Platanus racemosa*), paperbark melaleuca (*Melelauca quinquenervia*), olive (Olive sp.), southern magnolia (*Magnolia grandiflora*), Crape myrtle (*Lagerstroemia indica*), Brisbane box (*Lophostemon*

confertus), Australian willow *(Geijera parviflora*), Italian cypress (*Cupressus sempervirens*), yew pine (*Podocarpus macrophyllus*) and other species. When mature, these tree species are expected to provide nesting habitat for numerous nesting bird species, with some potential for the Vermilion flycatcher. Therefore, with the project design features incorporated, no cumulative impacts to these species would occur. (DEIR, p. 4.3-35)

Additionally, other developments would be subjected to regulations related to biological resources such as Migratory Bird Treaty Act (MBTA), California Fish and Game Codes, California Endangered Species Act (CESA), Clean Water Act, and other statutes that protect biological resources. (DEIR, p. 4.3-36)

Given the surrounding built environment, the fact that unbuilt nearby properties include better habitat for species located in the area, the Project would not result in any significant impacts to biological resources, and redevelopment would occur on an already built site; the Project would not result in a cumulative impact to biological resources, nor would any incremental effect of the Project be cumulatively considerable. (DEIR, p. 4.3-36)

The Project would not impact any riparian or sensitive natural communities; therefore, there is no potential for the Project to contribute to a cumulatively considerable impact to these resources. (DEIR, p. 4.3-36)

The Project would not impact any State-protected or federally-protected wetlands. Accordingly, the Project has no potential to contribute to a cumulatively considerable impact to State or federally protected wetlands. (DEIR, p. 4.3-36)

The Project would remove ornamental trees on site that have the potential to support nesting birds protected by federal and State regulations. The Project would not result in the removal of trees off-site or in the surrounding area and would therefore not cumulatively contribute to impacts to nesting birds. Additionally, related projects are required to comply with the MBTA (Mitigation Measure MM 4.3-2), which protects nesting birds. Therefore, the Project would not result in a cumulatively considerable impact to nesting birds. (DEIR, p. 4.3-36)

The Project would not conflict with any local policies or ordinances protecting biological resources. Other development projects in the cumulative study area would be required to comply with applicable local policies and/or ordinances related to the protection of biological resources as a standard condition of review/approval. Because the Project and cumulative development would be prohibited from violating applicable, local policies or ordinances related to the protection of biological resources, a cumulatively considerable impact would not occur. (DEIR, p. 4.3-36)

The Project site is not located within the boundaries of any adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan. Because there is no conservation plan applicable to the Project impact area, there is no potential for

the Project to contribute to the violation of a conservation plan. No cumulative impact would occur. (DEIR, p. 4.3-36)

3.5 CULTURAL RESOURCES

Project impacts for Cultural Resources Threshold a does not result in significant impacts and related findings are discussed below.

3.5.1 THRESHOLD A

Impact Statement: The Project would not cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5.

❑ Findings

Potential impacts of the Project related to Threshold a are discussed in detail in Section 4.4.5 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold a; therefore, no mitigation is required.

❑ Substantial Evidence

Implementation of the Project would require demolition of all structures that are located on the Project site under existing conditions. Because the existing building on site was constructed in 1972, a historical resources evaluation was prepared by LSA Associates to determine the historical significance of the property based on California Register of Historical Resources (CRHR) criteria. (DEIR, p. 4.4-14)

Criterion 1: Is it associated with the events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States?
The Southwest Regional Laboratory was part of a post-WWII shift by the federal government to actively support R&D but was not at the forefront of this trend and does not appear to have made any significant contributions to it. Although the 1972 building was the first non-campus facility constructed solely for educational research and development in the nation, no evidence was found that it started a trend for off-campus facilities or that such a trend would be an important historical event. The Project also used an experimental fast-tracking construction process that was intended to be a model for future similar projects, but no evidence was found that this model was employed in subsequent similar projects. For these reasons, the building is not significant under this criterion. (DEIR, p. 4.14-15)

Criterion 2: Is it associated with the lives of persons important to local, California, or national history?

No evidence was found indicating that the building is directly associated with the lives of any person or persons important to local, State, or national history. It is not significant under this criterion. (DEIR, p. 4.14-15)

Criterion 3: Does it embody the distinctive characteristics of a type, period, region, or method or construction, or represent the work of a master, or possess high artistic values?

The existing building retains a high degree of integrity and embodies many of the characteristics of the Corporate International style such as the boxy form, flat roof with no eave, smooth exterior wall surfaces lacking ornamentation and decoration, and the flush metal-framed windows arranged in horizontal bands. It is a nice example of a comparatively modest Corporate International style building, but it does not express the design concepts of the Corporate International style more fully than the many other buildings of its type. Because of the prevalence of outstanding examples of the style, the Southwest Regional Laboratory building does not rise to a level beyond the ordinary. Although it was designed by the master architectural firm Skidmore, Owings & Merrill (SOM), it is not one of the best or most representative examples of the firm's highly awarded work. SOM is credited with solidifying the aesthetic of the Corporate International style. The firm, which has won over 1,700 awards, is especially known for their Corporate International style skyscrapers. Noteworthy historic-period buildings by SOM include the Manhattan House (1951), the National Register-listed Lever House (1952), Inland Steel building (1956), One Chase Manhattan Plaza (1961), One Wilshire (1966), John Hancock Center (1969), and Willis Tower (1973). The design and scale of the Southwest Regional Laboratory building does not reach the same level of exceptionalism as these buildings or many others designed by SOM and the firm does not list the Southwest Regional Laboratory building among its many noteworthy and influential designs. The building does not possess high artistic values because it does not express the design concepts of the Corporate International style more fully than other buildings of its type. For these reasons, it is not significant under this criterion. (DEIR, p. 4.14-15)

Criterion 4: Has it yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation?

This building was constructed in 1972 using common methods and materials and is unlikely to yield any important information to the history of the local area, California, or the nation. It is not significant under this criterion. (DEIR, p. 4.14-16)

Summary

The existing building is not eligible for listing in the CRHR under any criteria and therefore does not qualify as a historical resource as defined by CEQA. No evidence was found that the property has any important associations with significant historical trends, events, or people, and it does not appear to have the potential to yield important historical information. Although it retains a high degree of architectural integrity and was designed by the master architectural firm SOM, it is not a particularly distinctive example of the Corporate International style or an important example of SOM's work. Therefore, the Project would not cause a substantial adverse change in the significance of a historical resource. No impacts would occur, and no mitigation is required. (DEIR, p. 4.14-16)

3.5.2 CUMULATIVE IMPACTS

Impact Statement: The Project would not result in a cumulatively considerable impact related to cultural resources for Thresholds a through c.

❑ Findings

Potential cumulative impacts of the Project related to cultural resources are discussed in detail in Section 4.4.6 of the DEIR. The City finds that the development of the proposed Project would not result in significant cumulative impacts related to cultural resources; therefore, no mitigation is required.

❑ Substantial Evidence

The potential for implementation of the Project to contribute to cumulative impacts to historical resources was analyzed in conjunction with other projects located in the immediate vicinity of the Project site. The Project site does not contain historical resources, and there are no related projects in the immediate vicinity that would have an effect on historical resources. Therefore, implementation of the Project has no potential to contribute towards a cumulative impact to significant historical sites and/or resources. (DEIR, p. 4.4-17)

As discussed, implementation of the Project would not impact any known archaeological resources and the likelihood of uncovering previously unknown archaeological resources during Project construction is low due to past grading activities associated with the existing development. Impacts to previously undiscovered subsurface archeological resources are typically site specific from ground disturbing activities at the site and generally do not combine to result in cumulative impacts unless resources are identified immediately adjacent to the Project site. Nonetheless, the potential exists that a significant archaeological resource could be discovered during grading into native soils. There are no related projects in the vicinity that would affect archaeological resources. It should be noted that site-specific archeological resource investigations would be required for other projects before the City would permit ground disturbances or demolition or substantial alteration of existing structures. Such investigations would include some degree of surface-level surveying and identify resources on the affected project sites that are or appear to be eligible for listing on the national or state registers for historic resources. Such investigations would also recommend mitigation measures to protect and preserve cultural resources. Therefore, cumulative impacts to archaeological resources would be less than significant. (DEIR, pp. 4.4-17 to 4.4-18)

Mandatory compliance with the provisions of California Health and Safety Code Section 7050.5 as well as Public Resources Code Section 5097 et seq., would assure that all future development projects within the region treat human remains that may be uncovered during development activities in accordance with prescribed, respectful and appropriate practices, thereby avoiding significant cumulative impacts. (DEIR, p. 4.4-18)

3.6 ENERGY

Project impacts for Energy Thresholds a and b do not result in significant impacts. Findings are discussed below.

3.6.1 THRESHOLD A

Impact Statement: The Project would not result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during Project construction or operation.

❑ Findings

Potential impacts of the Project related to Threshold a are discussed in detail in Section 4.5.6 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold a; therefore, no mitigation is required.

❑ Substantial Evidence

Construction

The Project's construction process would consume electrical energy and fuel. Project-related construction would represent a short-term energy demand and would not require on-going or permanent commitment of electricity or fuel resources. Construction of the Project is expected to commence in January 2024 and would last through April 2027. Project construction-related activities are estimated to consume approximately 593,784 kilowatt hours (kWh) of electricity and approximately 188,030 gallons of diesel fuel. Construction worker trips for full construction of the Project would result in the estimated fuel consumption of 90,130 gallons of fuel. Additionally, fuel consumption from construction vendor trips will total approximately 30,928 gallons. Detailed calculations are provided in subsection 4.3 of the Project's Energy Analysis (refer to *Technical Appendix E* of the DEIR). (DEIR, p. 4.5-7)

Construction equipment fuel use would be typical for the type of construction proposed because there are no aspects of the Project's proposed construction process that are unusual or energy-intensive, and Project construction equipment would conform to the applicable California Air Resources Board (CARB) emissions standards. In 2014, CARB adopted the nation's first regulation aimed at cleaning up off-road construction equipment such as bulldozers, graders, and backhoes. These requirements ensure fleets gradually turnover the oldest and dirtiest equipment to newer, cleaner models and prevent fleets from adding older, dirtier equipment. Construction contractors would be required to comply with applicable CARB regulation regarding retrofitting, repowering, or replacement of diesel off-road construction equipment. Additionally, CARB has adopted the Airborne Toxic Control Measure to limit heavy-duty diesel motor vehicle idling in order to reduce public exposure to diesel particulate matter and other Toxic Air Contaminants. Compliance with anti-idling and emissions regulations would result in a more efficient use of construction-related energy and the minimization or elimination of wasteful or unnecessary consumption of energy. Idling restrictions and the use of newer engines and equipment would result in less fuel combustion and energy consumption. (DEIR, p. 4.5-7)

Use of materials in bulk reduces energy demands associated with preparation and transport of construction materials as well as the transport and disposal of construction waste and solid waste in general. (DEIR, p. 4.5-8)

Limitations on idling of vehicles and equipment and requirements that equipment be properly maintained would result in fuel savings. California Code of Regulations, Title 13, Sections 2449 and 2485, limit idling from both on-road and off-road diesel- powered equipment and are enforced by the Air Resources Board (ARB). Additionally, given the cost of fuel, contractors and owners have a strong financial incentive to avoid wasteful, inefficient, and unnecessary consumption of energy during construction. (DEIR, p. 4.5-8)

Due to the temporary nature of construction and the financial incentives for developers and contractors to use energy-consuming resources in an efficient manner, the construction phase of the proposed Project would not result in wasteful, inefficient, and unnecessary consumption of energy. Therefore, construction-related impacts related to electricity and fuel consumption would be less than significant. No mitigation is required. (DEIR, p. 4.5-8)

Operation

Energy consumption in support of or related to Project operations would include transportation fuel demands (fuel consumed by passenger car and truck vehicles accessing the Project site), fuel demands from operational equipment, and operational energy demands (energy consumed by building operations and site maintenance activities). (DEIR, p. 4.5-8)

Transportation Energy

The estimated transportation energy demands are summarized on DEIR Table 4.5-1, *Total Project-Generated Traffic Annual Fuel Consumption*. The Project would result in 9,655,902 annual vehicle miles traveled (VMT) and an estimated annual fuel consumption of 353,819 gallons of fuel. (DEIR, p. 4.5-8)

Fuel would be provided by current and future commercial vendors. Trip generation and VMT generated by the Project are consistent with other residential, park, and commercial uses of similar scale and configuration, as reflected respectively in the Institute of Transportation Engineers (ITE) Trip Generation Manual (11th Ed., 2021); and CalEEMod. (DEIR, p. 4.5-9)

The Project is located on an infill site that is surrounded by existing urban uses; the existing transportation facilities and infrastructure would provide future residents, visitors, and employees associated with the Project access to a mix of land uses in close proximity to the Project, thus further reducing fuel consumption demand. Additionally, the Project will also be providing a community electric vehicle for use by residents of the affordable housing component (PDF-GHG-3) as well as providing parking and EV infrastructure (PDF-GHG-4) that would further promote fuel efficient vehicles. For these reasons, operational-related transportation fuel consumption would not result in a significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy

resources. Therefore, the operational impact related to vehicle fuel consumption would be less than significant. (DEIR, p. 4.5-9)

Enhanced fuel economies realized pursuant to federal and state regulatory actions, and related transition of vehicles to alternative energy sources (e.g., electricity, natural gas, biofuels, hydrogen cells) would likely decrease future gasoline fuel demands per VMT. The location of the Project proximate to regional and local roadway systems tends to reduce VMT within the region, acting to reduce regional vehicle energy demands. The Project would implement sidewalks, facilitating and encouraging pedestrian access. Facilitating pedestrian and bicycle access would reduce VMT and associated energy consumption. In compliance with the California Green Building Standards Code and City requirements, the Project would promote the use of bicycles as an alternative means of transportation by providing short-term and/or long-term bicycle parking accommodations. As such, Project transportation energy consumption would not be considered inefficient, wasteful, or otherwise unnecessary. (DEIR, pp. 4.5-9 to 4.5-10)

Operational Energy Demands

Project building operations would result in the consumption of electricity, which would be supplied to the Project by Southern California Edison (SCE). Building operations would involve energy consumption for multiple purposes including, but not limited to, building heating and cooling, refrigeration, lighting, and electronics. As summarized on DEIR Table 4.5-2, *Project Annual Operational Energy Demand Summary*, operations for the Project would result in approximately 1,131,132 kWh of electricity annually and would offset the demand through the use of on-site photovoltaic solar power which is expected to generate 1,229,520 kWh of electricity annually (PDF-GHG-1) – which results in a net electricity demand of 98,388 kWh/year of electricity. No natural gas will be used as the Project will be all electric (PDF-GHG-2). (DEIR, p. 4.5-10)

Future development projects would be designed and constructed in accordance with the City's latest adopted energy efficiency standards, which are based on the California Title 24 energy efficiency standards. Title 24 standards include a broad set of energy conservation requirements that apply to the structural, mechanical, electrical, and plumbing systems in a building. For example, the Title 24 Lighting Power Density requirements define the maximum wattage of lighting that can be used in a building based on its square footage. Title 24 standards are widely regarded as the most advanced energy efficiency standards, would help reduce the amount of energy required for lighting, water heating, and heating and air conditioning in buildings and promote energy conservation. The Project would incorporate the PDFs GHG-1 through GHG-4. Therefore, the Project would not result in a significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, and impacts would be less than significant. No mitigation is required. (DEIR, p. 4.5-10)

CEQA Guidelines Appendix F

An analysis of the factors identified in CEQA Guidelines Appendix F is provided in DEIR Table 4.5-3, *CEQA Guidelines Appendix F Energy Analysis*. As shown, the Project would not result in potentially significant environmental impacts due to wasteful, inefficient, or unnecessary consumption of energy

resources, during Project construction or operation; and impacts would be less than significant. No mitigation is required. (DEIR, p. 4.5-11)

The Project includes the following Project Design Features (PDFs) that serve to reduce the Project's impacts.

PDF GHG-1 The Project will include solar photovoltaic panels with the capability to generate up to 1,229,520 kWh/annually.

PDF GHG-2 The Project will be 100% electric and will not include natural gas.

PDF GHG-3 The Project will provide a community electric vehicle for the affordable housing component for residents to drive short distance trips to the local grocery store.

PDF GHG-4 The Project's parking areas will be designed to provide electric vehicle (EV) charging stations. At minimum, the number of EV charging stations will equal the Tier 2 Residential Voluntary Measures of the California Green Building Standards Code, Section A4.106.8.2.1.

3.6.2 THRESHOLD B

Impact Statement: The Project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency and impacts would be less than significant.

❑ Findings

Potential impacts of the Project related to Threshold b are discussed in detail in Section 4.5.6 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold b; therefore, no mitigation is required.

❑ Substantial Evidence

The following section analyzes whether the Project would conflict with or obstruct applicable plans and regulations for renewable energy or energy efficiency.

Construction

The Project would result in energy consumption through the combustion of fossil fuels in construction vehicles, worker commute vehicles, and construction equipment, and the use of electricity for temporary buildings, lighting, and other sources. California Code of Regulations Title 13, Sections 2449 and 2485, limit idling from both on- road and off-road diesel-powered equipment and are enforced by the ARB. The Project would be required to comply with these regulations. There are no policies at the local level applicable to energy conservation specific to the construction phase. Therefore, the Project would not conflict with or obstruct a state or local plan for renewable energy or

energy efficiency; and impacts would be less than significant. No mitigation is required. (DEIR, p. 4.5-13)

Operation

California's Renewables Portfolio Standard (RPS) establishes a goal of renewable energy for local providers to be 44 percent by 2040. Similarly, the State is promoting renewable energy targets to meet the 2022 Scoping Plan greenhouse gas emissions reductions. The Project would result in approximately 1,131,132 kWh of electricity demand annually and would offset the demand through the use of on-site photovoltaic solar power which is expected to generate 1,229,520 kWh of electricity annually – which results in a net electricity demand of 98,388 kWh/year of electricity. No natural gas will be used as the Project will be all electric. (DEIR, p. 4.5-13)

The Project would be designed and constructed in accordance with the City's latest adopted energy efficiency standards, which are based on the California Title 24 energy efficiency standards. Title 24 standards include a broad set of energy conservation requirements that apply to the structural, mechanical, electrical, and plumbing systems in a building. For example, the Title 24 Lighting Power Density requirements define the maximum wattage of lighting that can be used in a building based on its square footage. Title 24 standards are widely regarded as the most advanced energy efficiency standards, would help reduce the amount of energy required for lighting, water heating, and heating and air conditioning in buildings and promote energy conservation. Additionally, the Project would incorporate project design features PDFs GHG-1 through GHG-4. (DEIR, p. 4.5-13)

City of Los Alamitos General Plan

The Project's consistency with the City's General Plan is shown in DEIR Table 4.5-4, *General Plan Consistency Analysis*. As shown, the Project would not result in any inconsistency with any of the applicable General Plan goals and policies. (DEIR, p. 4.5-14)

Compliance with the aforementioned mandatory measures would ensure that the Project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency; and impacts would be less than significant. No mitigation is required. (DEIR, p. 4.5-14)

3.6.3 CUMULATIVE IMPACTS

Impact Statement: The Project would not result in a cumulatively considerable impact related to energy.

❑ Findings

Potential cumulative impacts of the Project related to energy are discussed in detail in Section 4.5.7 of the DEIR. The City finds that the development of the proposed Project would not result in significant cumulative impacts related to energy; therefore, no mitigation is required.

❑ **Substantial Evidence**

Cumulative impacts result if the Project, along with cumulative projects, taken together could result in wasteful, inefficient, or unnecessary use of energy. The areas considered for cumulative impacts to electricity and natural gas supplies are the service areas of the SCE and SoCalGas, respectively, described above in Section 4.5.1. (DEIR, p. 4.5-14)

The Project, related projects, and additional forecasted growth in SCE's service area would cumulatively increase the demand for electricity supplies and infrastructure capacity. As with the Project, during construction and operation, other future development projects would be expected to incorporate energy conservation features and comply with applicable regulations including California Green Building Standards Code (CALGreen) and state energy standards under Title 24, which would contribute to minimizing wasteful energy consumption. As such, the Project's contribution to cumulative impacts related to wasteful, inefficient, and unnecessary use of electricity would not be cumulatively considerable and, thus, would be less than significant. (DEIR, p. 4.5-15)

Buildout of the Project, related projects, and additional forecasted growth would cumulatively increase the demand for transportation-related fuel in the state and region. As with the Project, other future development projects would be expected to reduce VMT by encouraging the use of alternative modes of transportation and other design features that promote VMT reductions. Therefore, the Project's contribution to cumulative impacts related to wasteful, inefficient, and unnecessary use of transportation fuel would not be cumulatively considerable and, thus, would be less than significant. (DEIR, p. 4.5-15)

As indicated above, the Project would not conflict with or obstruct a federal or State plan for renewable energy or energy efficiency. The Project and other new development projects within the cumulative study area would be required to comply with all of the same applicable federal, State, and local regulatory measures aimed at reducing fossil fuel consumption and the conservation of energy. Accordingly, the Project would not cause or contribute to a significant cumulatively considerable impact related to conflicts with a State or local plan for renewable energy or energy efficiency. (DEIR, p. 4.5-15)

3.7 GEOLOGY AND SOILS

Project impacts for Geology and Soils Thresholds b and e do not result in significant impacts. Findings are discussed below.

3.7.1 THRESHOLD B

Impact Statement: The Project would not result in substantial soil erosion or loss of topsoil.

❑ Findings

Potential impacts of the Project related to Threshold b are discussed in Section 4.6.5 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold b; therefore, no mitigation is required.

❑ Substantial Evidence

Construction-Related Activities

Redevelopment of the Project site would result in the demolition of all structures on-site and removal of ornamental landscaping. Grading and construction activities would occur that would expose and disturb soils that are currently covered by impervious surfaces and ground covering. Disturbed soils would be subject to potential erosion during rainfall events or high winds due to the removal of stabilizing vegetation and building materials (e.g., existing concrete foundations) and exposure of these erodible materials to wind and water. (DEIR, p. 4.6-9)

Pursuant to the requirements of the State Water Resources Control Board, the Project Applicant would be required to obtain coverage under the State's General Construction Storm Water Permit for construction activities (NPDES permit). The NPDES permit is required for all development projects that include construction activities, such as clearing, grading, and/or excavation, that disturb at least one (1) acre of total land area. In addition, the Project would be required to comply with the Santa Ana Regional Water Quality Control Board (RWQCB)'s Santa Ana River Basin Water Quality Control Program. (DEIR, pp. 4.6-9 to 4.6-10)

Compliance with the NPDES permit and the Santa Ana River Basin Water Quality Control Program involves the preparation and implementation of a Stormwater Pollution Prevention Plan (SWPPP) for construction-related activities. The SWPPP will specify the Best Management Practices (BMPs) that the Project Applicant will be required to implement during construction activities to ensure that waterborne pollution – including erosion/sedimentation – is prevented, minimized, and/or otherwise appropriately treated prior to surface runoff being discharged from the subject property. Examples of BMPs that may be utilized during construction include, but are not limited to, sandbag barriers, geotextiles, storm drain inlet protection, sediment traps, rip rap soil stabilizers, and hydro-seeding. In addition, the Project would be required to implement erosion and dust control measures pursuant to South Coast AQMD Rule 403 to minimize water- and windborne erosion. Mandatory compliance with the SWPPP and the erosion control and dust control measures would reduce, prevent, or minimize soil erosion from Project-related construction activities. Therefore, impacts related to substantial soil erosion or the loss of topsoil would be less than significant and no mitigation is required. (DEIR, p. 4.6-10)

Long-Term Operational Activities

Following construction, wind and water erosion on the Project site would be minimized, as the areas disturbed during construction would be landscaped or covered with impervious surfaces (i.e., building

foundations and paved parking areas). Minimal areas of exposed soil would occur in the Project site's landscaped areas. (DEIR, p. 4.6-10)

The Project Applicant is required to prepare and submit to the City a Project-specific Water Quality Management Plan (WQMP). The Preliminary WQMP is appended to the DEIR (*Technical Appendix I2*) and an updated report was included in the FEIR (*Attachment E*) and has been submitted for City approval. The WQMP is required to identify and implement an effective combination of erosion control and sediment control measures (i.e., BMPs) to reduce or eliminate discharge to surface water from stormwater and non-stormwater discharges. Adherence to the requirements noted in the Project's required WQMP (DEIR *Technical Appendix I2*; FEIR *Attachment E*), and LAMC Chapter 8.44, Stormwater and Urban Runoff Pollution Controls as explained in Section 4.9, would ensure that the Project's potential erosion impacts during operation would be less than significant. No mitigation is required. (DEIR, p. 4.6-10)

3.7.2 THRESHOLD E

Impact Statement: The Project would not have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water.

❑ Findings

Potential impacts of the Project related to Threshold e are discussed in Section 4.6.5 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold e; therefore, no mitigation is required.

❑ Substantial Evidence

The Project would connect to the existing wastewater system. The Project would not utilize septic tanks or alternative wastewater systems. No impact would occur, and no mitigation is required. (DEIR, p. 4.6-12)

3.7.3 CUMULATIVE IMPACTS

Impact Statement: The Project would not result in a cumulatively considerable impact related to geology and soils.

❑ Findings

Potential cumulative geology and soils impacts of the Project related to risk of loss due to earthquakes, substantial loss of topsoil, unstable soil, expansive soil or septic tanks are discussed in detail in Section 4.6.6 of the DEIR. The City finds that the development of the proposed Project would not result in significant cumulative impacts related to these topics; therefore, no mitigation is required.

- **Substantial Evidence**

All potential Project-related direct and indirect impacts related to geology and soils would be addressed through mandatory compliance with the California Building Standards Code (CBSC), LAMC, other standard regulatory requirements, and the site-specific recommendations identified in the Geotechnical Report contained within *Technical Appendix F1* of the DEIR. (DEIR, p. 4.6-13)

With the exception of erosion hazards, potential hazardous effects related to geologic and soil conditions addressed under Thresholds a, c, d, and e are unique to the Project site and inherently restricted to the specific property proposed for development. That is, issues including fault rupture, seismic ground shaking, liquefaction, landslides, and expansive soils would involve effects to (and not from) a proposed development project, are specific to conditions on the subject property, and are not influenced or exacerbated by the geologic and/or soil hazards that may occur on other, off-site properties. Because of the site-specific nature of these potential hazards and the measures to address them, there would be no direct or indirect connection to similar potential issues or cumulative effects to or from other properties. (DEIR, p. 4.6-13)

As discussed under Threshold b, regulatory requirements mandate that the Project incorporates design measures during construction and long-term operation to ensure that significant erosion impacts do not occur. Other development projects in the vicinity of the Project site would be required to comply with the same regulatory requirements as the Project to preclude substantial adverse water and wind erosion impacts. Because the Project and other projects within the cumulative study area would be subject to similar mandatory regulatory requirements to control erosion hazards during construction and long-term operation, cumulative impacts associated with wind and water erosion hazards would be less than significant. (DEIR, p. 4.6-13)

This cumulative impact analysis considers development of the proposed Project in conjunction with other development projects and planned development in the vicinity of the Project site that have a potential for uncovering paleontological resources. Generally, impacts relating to paleontological resources are site-specific and addressed on a site-by-site basis. Therefore, as discussed under Threshold f, while there is potential for an impact on a specific site, the impact would not ordinarily extend beyond the site or the immediate surrounding area. Additionally, Mitigation Measures MM 4.6-1 through MM 4.6-2 would ensure Project-specific paleontological impacts are reduced to less than significant. There could be circumstances in which a paleontological resource extends over more than one property. Therefore, a cumulative impact could occur to paleontological resources if grading on the Project site in combination with grading activities at an adjacent cumulative project would impact a paleontological resource. However, there are no adjacent cumulative related projects that could potentially combine with the Project to result in impacts to unknown paleontological resources that may lie in the subsurface. Therefore, there would be no cumulative impacts related to paleontological resources. (DEIR, pp. 4.6-13 to 4.6-14)

3.8 GREENHOUSE GAS EMISSIONS

Project impacts for Greenhouse Gas Emissions do not result in significant impacts and related findings are discussed below.

3.8.1 THRESHOLD A

Impact Statement: The Project would not generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment.

❑ Findings

Potential impacts of the Project related to Threshold a are discussed in detail in Section 4.7.6 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold a; therefore, no mitigation is required.

❑ Substantial Evidence

Construction

For construction phase Project emissions, Greenhouse Gas emissions (GHGs) are quantified and amortized over the life of the Project. To amortize the emissions over the life of the Project, the South Coast AQMD recommends calculating the total GHG emissions for the construction activities, dividing it by a 30-year Project life then adding that number to the annual operational phase GHG emissions. As such, construction emissions were amortized over a 30-year period and added to the annual operational phase GHG emissions. The amortized construction emissions are presented in DEIR Table 4.7-3, *Amortized Annual Construction Emissions*. (DEIR, p. 4.7-26)

Operation

The annual GHG emissions associated with the operations of the Project would result in direct and indirect emissions of carbon dioxide (CO_2), methane (CH_4), and Nitrous Oxide (N_2O), and would not generate other GHGs of sufficient quantity to affect the analysis. Therefore, this analysis focuses on CO_2, CH_4, and N_2O. (DEIR, p. 4.7-26)
Direct Project-related GHG emissions include emissions from construction activities, area sources, and mobile sources, while indirect sources include emissions from energy source, water usage, and solid waste generation. GHG emissions are also emitted during the generation of electricity from fossil fuels; these emissions are considered to be indirect emissions. Electricity usage associated with the Project was calculated by CalEEMod using default parameters. Pursuant to project design feature PDF-GHG-1, Project will include the installation of solar, which is expected to generate approximately 1,229,520 kWh per year. (DEIR, p. 4.7-27)

Project-related GHG emissions were quantified with CalEEMod, which relies upon vehicle trip rates and Project-specific land use data to calculate emissions. As shown on DEIR Table 4.7-4, *Project GHG Emissions*, construction and operation of the Project would generate a 2,757.11 Metric Tons of Carbon Dioxide Equivalent per year ($MTCO_2e/yr$); the Project would not exceed the SCAQMD screening

threshold of 3,000 $MTCO_2e$/yr. Thus, impacts would be less than significant and no mitigation is required. (DEIR, p. 4.7-27)

The Project includes the following PDFs that serve to reduce the Project's impacts.

PDF GHG-1 The Project will include solar photovoltaic with the capability to generate up to 1,229,520 kWh/annually.

PDF GHG-2 The Project will be 100% electric and would not include natural gas.

PDF GHG-3 A community electric vehicle for the affordable housing component shall be provided for residents to drive short distance trips to the local grocery store.

PDF GHG-4 The Project's parking areas will be designed to provide electric vehicle (EV) charging stations. At minimum, the number of EV charging stations will equal the Tier 2 Residential Voluntary Measures of the California Green Building Standards Code, Section A4.106.8.2.1.

3.8.2 THRESHOLD B

Impact Statement: The Project would not conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

❑ Findings

Potential impacts of the Project related to Threshold b are discussed in detail in Section 4.7.6 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold b; therefore, no mitigation is required.

❑ Substantial Evidence

The 2022 Scoping Plan lays out a framework to determine Project-level consistency when there is not a CEQA-qualified Climate Action Plan (CAP) available to tier from. CARB recommends that the first approach for determining whether a proposed residential or mixed-use residential development would align with the State's climate goals is to examine whether the project includes key project attributes that reduce operational GHG emissions while simultaneously advancing fair housing. The 2022 Scoping Plan goes on to note that Projects that can demonstrate consistency with the priority areas identified on Table 3 Key Residential and Mixed-Use Project Attributes that Reduce GHGs from the 2022 Scoping Plan would be aligned with the State's priority GHG reduction strategies and would be deemed consistent with the Scoping Plan. As such, these Projects are considered to be consistent with the Scoping Plan or other plans, policies, or regulations adopted for the purposes of reducing GHGs. Therefore, the GHG emissions associated with such projects would result in a less-than-significant GHG impact under CEQA. (DEIR, p. 4.7-28)

The Project's consistency with the Key Residential and Mixed-Use Project Attributes that Reduce GHGs from the 2022 Scoping Plan is summarized in DEIR Table 4.7-5, *Project Consistency With 2022 Scoping Plan Key Residential And Mixed-Use Project Attributes That Reduce GHGs*. As shown, the Project would be consistent with the 2022 Scoping Plan's key residential and mixed-use project attributes to reduce GHGs. As such, the Project would not impede the State's progress towards carbon neutrality by 2045 under the 2022 Scoping Plan. The Project would be required to comply with applicable current and future regulatory requirements promulgated through the 2022 Scoping Plan, such as California Code of Regulations (CCR) Title 24 and Energy Code. The Project would not have the potential to conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs. Accordingly, impacts are less than significant, and no mitigation is required. (DEIR, p. 4.7-28)

3.8.3 CUMULATIVE IMPACTS

Impact Statement: The Project would not result in a cumulatively considerable impact related to greenhouse gases.

❑ Findings

Potential cumulative impacts of the Project related to GHG emissions are discussed in detail in Section 4.7.7 of the DEIR. The City finds that the development of the proposed Project would not result in significant cumulative impacts related to these topics; therefore, no mitigation is required.

❑ Substantial Evidence

Because no single project is large enough to result in a measurable increase in global concentrations of GHG emissions, climate change impacts of a project are considered on a cumulative basis consistent with the requirements outlined in CEQA Guidelines 15064(h)(3). As discussed, implementation of the Project would comply with the 2022 Scoping Plan and would not result in net annual emissions that exceed the GHG emissions significance threshold of 3,000 MT CO_2e/yr. Therefore, Project-related GHG emissions and their contribution to global climate change would not be cumulatively considerable, and GHG emissions impacts would be less than significant. (DEIR, p. 4.7-31)

3.9 HAZARDS AND HAZARDOUS MATERIALS

Project impacts for Hazards and Hazardous Materials Thresholds a through g do not result in significant impacts. Findings are discussed below.

3.9.1 THRESHOLDS A AND THRESHOLD B

Impact Statement (Threshold a): The Project would not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials.

Impact Statement (Threshold b): The Project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment.

❑ Findings

Potential impacts of the Project related to Threshold a and Threshold b are discussed in detail in Section 4.8.5 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold a or Threshold b; therefore, no mitigation is required.

❑ Substantial Evidence

Implementation of the Project would result in the demolition of the existing building and surface parking lot and the construction and long-term operation of 246 residential units. In the event that any hazards or hazardous materials were to be present on the Project site or any hazardous materials were to be used or stored on the Project site during construction or long-term operation, the Project's activities would have the potential to expose workers or residents on the site, the public, and/or the environment to a hazardous environmental condition. An evaluation of this potential is provided below. (DEIR, p. 4.8-15)

Potential Hazards in Demolition Materials

The use of asbestos-containing materials (ACM) (a known carcinogen) and lead-based paint (LBP) (a known toxic), both of which are considered hazardous materials, was a common building construction method prior to 1978 and may be present in the existing building. All proposed demolition activities would be required to comply with all applicable federal, State, and local hazardous materials regulation, which includes mandatory provisions for the safe removal, transport, and disposal of PCBs, ACMs and LBP. (DEIR, p. 4.8-16)

Additionally, the Project is required to comply with South Coast AQMD Rule 1403 (Asbestos Emissions) and Title 17 of the CCR, Division 1, Chapter 8: Accreditation, Certification, and Work Practices for Lead-Based Paint and Lead Hazards applies. South Coast AQMD Rule 1403 establishes survey requirements, notification, and work practice requirements to prevent asbestos emissions from emanating during building renovation and demolition activities. Assuming that ACMs are present in the existing structure located on-site, then Rule 1403 requires notification of the South Coast AQMD prior to commencing any demolition activities. Rule 1403 also sets forth specific procedures for the removal of asbestos and requires that an on-site representative trained in the requirements of Rule 1403 be present during the stripping, removing, handling, or disturbing of ACM. Mandatory compliance with the provisions of Rule 1403 would ensure that construction-related grading, clearing, and demolition activities do not expose construction workers or nearby sensitive receptors to significant health risks associated with ACMs. Because future development on the Project site would be required to comply with AQMD Rule 1403 during demolition activities, impacts due to ACMs would be less than significant. (DEIR, p. 4.8-16) (DEIR, p. 4.8-16)

Title 17, CCR, Division 1, Chapter 8: Accreditation, Certification and Work Practices for Lead-Based Paint and Lead Hazards, defines and regulates lead-based paint. Any detectable amount of lead is regulated. During the demolition of the existing structure, there is a potential for exposing construction workers to health hazards associated with lead. The Project would be required to comply with Title 17, CCR, Division 1, Chapter 8, which includes requirements such as employer-provided training, air

monitoring, protective clothing, respirators, and handwashing facilities. Mandatory compliance with these requirements would ensure that construction workers and the public are not exposed to significant LBP health hazards or upset during demolition and/or during transport of demolition waste to an appropriate disposal facility and would ensure that impacts related to LBP remain less than significant. (DEIR, p. 4.8-16)

Moreover, EFI prepared a Phase II ESA for the Project site dated September 22, 2022, based on a geological survey and soil sampling conducted on August 16, 2022. Select soil samples were collected and analyzed for Total Petroleum Hydrocarbons (TPH) as gasoline (TPHg), TPH as diesel (TPHd), TPH as oil (TPHo), volatile organic compounds (VOCs), PCBs, organochlorine pesticides (OCPs), arsenic, and lead (Pb). Analytical results for PCBs indicated concentrations were not detected above the laboratory reporting limits in any of the soil samples analyzed (refer to Page 4.8-5 of the Draft EIR). However, caulk containing PCBs were used in buildings in the 1950s through the 1970s and may be present in the existing building. Therefore, the Project would be required to comply with all applicable federal, State, and local hazardous materials regulation, which includes mandatory provisions for the safe removal, transport, and disposal of PCBs including Title 40, Code of Federal Regulations, Part 761. (DEIR, p. 4.8-16, as revised in Section 4.0 of the FEIR)

There is also a potential for mercury containing products at the existing buildings. When a mercury-containing product breaks and the mercury is released, the exposed mercury can evaporate and become an invisible, odorless toxic vapor. Mercury-containing products exhibit hazardous characteristics as described in the California Code of Regulations, Title 22, chapter 11 and are classified as a type of hazardous waste called "universal waste." Universal wastes are hazardous wastes that pose a lower immediate risk to people and the environment when handled properly. Due to this lower risk, universal wastes can be handled and transported under more relaxed rules compared to other hazardous wastes. The Project would be required to comply with all applicable federal, State, and local hazardous materials regulations including California Health and Safety Code Section 25214.8.16 to prevent mercury releases. (DEIR, p. 4.8-16, as revised in Section 4.0 of the FEIR)

Compliance with the above regulatory requirements would ensure that removal of ACMs, or LBPs, PCBs, or mercury would result in a significant hazard to the public or the environment through routine transport, use, or disposal of hazardous materials, and impacts would be less than significant. No mitigation is required. (DEIR, p. 4.8-16, as revised in Section 4.0 of the FEIR)

On-Site Conditions and Impacted Soils

Based on a review of regulatory databases and a site reconnaissance, the Project site does not contain any hazards, nor is the Project site affected by any off-site hazards. The Phase I ESA and Limited Phase II ESA identified no Recognized Environmental Condition (RECs), historical recognized environmental conditions (HRECs), or controlled recognized environmental conditions (CRECs) during the course of the assessment. The potential chemicals of concern detected in the soil in the areas assessed do not indicate that a significant subsurface chemical release occurred. The detected concentrations found during the investigation are considered to be de minimis for the proposed residential redevelopment. Therefore, past and present uses do not represent a significant

environmental concern for the Project site. As a result, implementation of the Project would result in less than significant impacts. No mitigation is required. (DEIR, pp. 4.8-16 to 4.8-17)

Potential Temporary Construction-Related Activities

Heavy equipment (e.g., dozers, excavators, tractors) would be operated on the Project site during demolition and construction activities. This heavy equipment likely would be fueled and maintained by petroleum-based substances such as diesel fuel, gasoline, oil, and hydraulic fluid, which are considered hazardous if improperly stored or handled. In addition, materials such as paints, adhesives, solvents, and other substances typically used in building construction would be located on the Project site during construction. Improper use, storage, or transportation of hazardous materials can result in accidental releases or spills, potentially posing health risks to workers, the public, and the environment. (DEIR, p. 4.8-17)

This is a standard risk on all construction sites, and there would be no greater risk for improper handling, transportation, or spills associated with the Project than would occur on any other similar construction site. Construction contractors would be required to comply with all applicable federal, State, and local laws and regulations regarding the transport, use, and storage of hazardous construction-related materials, including but not limited requirements imposed by the Environmental Protection Agency (EPA), Department of Toxic Substances Control (DTSC), and the Santa Ana RWQCB. With mandatory compliance with applicable hazardous materials regulations, the Project would not create significant hazard to the public or the environment through routine transport, use, or disposal of hazardous materials during the construction phase. A less than significant impact would occur and no mitigation is required. (DEIR, p. 4.8-17)

Impact Analysis for Long-Term Operation

The long-term operation of the proposed Project would not include any components associated with the transport, use, or disposal of hazardous materials beyond those typical of a residential development, which would be conducted in accordance with all applicable local, State, and federal regulations. Operation of the proposed residential uses would involve the use of small quantities of hazardous materials for cleaning and maintenance purposes, such as paints, household cleaners, fertilizers, and pesticides. With mandatory regulatory compliance, the Project would not pose a significant hazard to the public or the environment through the routine transport, use, storage, emission, or disposal of hazardous materials, nor would the Project increase the potential for accident conditions which could result in the release of hazardous materials into the environment. Based on the foregoing, potential hazardous materials impacts associated with long-term operation of the Project are regarded as less than significant and no mitigation is required. (DEIR, p. 4.8-17)

3.9.2 THRESHOLD C

Impact Statement: The Project would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school.

❑ **Findings**

Potential impacts of the Project related to Threshold c are discussed in Section 4.8.5 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold c; therefore, no mitigation is required.

❑ **Substantial Evidence**

The Project site is not located within a one-quarter mile of an existing or proposed school. As discussed under Thresholds a and b, construction of the Project would be required to comply with all applicable federal, State, and local laws and regulations and would not create significant hazard to the public or the environment through routine transport, use, or disposal of hazardous materials. Past and present uses do not represent a significant environmental concern for the Project site. Construction contractors would be required to comply with all applicable federal, State, and local laws and regulations regarding the transport, use, and storage of hazardous construction-related materials, including but not limited requirements imposed by the South Coast AQMD, EPA, DTSC, and the Santa Ana RWQCB. Operation of the proposed residential uses would involve the use of small quantities of hazardous materials for cleaning and maintenance purposes, such as paints, household cleaners, fertilizers, and pesticides. The nearest existing school to the Project site is the Montessori Greenhouse School, located approximately one mile northeast of the Project site. Accordingly, the Project has no potential to emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within a one-quarter mile of an existing or proposed school. Thus, no impact would occur, and no mitigation is required. (DEIR, pp. 4.8-17 to 4.8-18)

3.9.3 THRESHOLD D

Impact Statement: The Project site is not located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would not create a significant hazard to the public or the environment.

❑ **Findings**

Potential impacts of the Project related to Threshold d are discussed in detail in Section 4.8.5 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold d; therefore, no mitigation is required.

❑ **Substantial Evidence**

Government Code Section 65962.5 requires DTSC, the State Department of Health Services, State Water Resources Control Board, and the State Department of Resources Recycling and Recovery to maintain a list of hazardous materials sites that fall within specific, defined categories. The Project site is not located on any list of hazardous materials compiled pursuant to Government Code Section 65962.5. As such, no impact would occur, and no mitigation is required. (DEIR, p. 4.8-18)

3.9.4 THRESHOLD E

Impact Statement: The Project site is not within two miles of an airport and the Project site is not identified as within an airport influence area.

❑ Findings

Potential impacts of the Project related to Threshold e are discussed in Section 4.8.5 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold e; therefore, no mitigation is required.

❑ Substantial Evidence

The Project site falls within the airport planning area of the Los Alamitos JFTB. In 1975 the Orange County Airport Land Use Commission (ALUC) amended the AELUP for the JFTB to protect the public around the JFTB while ensuring operation of the JFTB. The AELUP was most recently amended in 2017, which reflected updates based on changes made to the California Airport Land Use Planning Handbook. The Project site is not located within a Clear Zone or accident potential zone (APZ) (refer to DEIR Figure 4.8-1, *JFTB Impact Zones*). The northwestern vertex of the Project site intersects the JFTB 60-65 A-weighted Decibels (dBA) Community Noise Equivalent Level (CNEL) noise contour. Land uses within the airport planning-area boundaries such as the Project site are required to conform to safety, height, and noise restrictions established in the AELUP for the JFTB. (DEIR, p. 4.8-18)

The maximum building height of the Project is approximately 41 feet. Project site elevations range from 21 feet to 39 feet. The proposed Project would not exceed the established Part 77 Horizontal Surface for the primary JFTB runway of 150 feet above airport elevation. Also, on January 26, 2022, the FAA issued Determinations of No Hazard to Air Navigation (DEIR *Technical Appendix J2*) after its aeronautical study of the Project revealed that the structures would not exceed obstruction standards and would not be a hazard to air navigation. Additionally, as shown in DEIR Figure 4.8-2, *Los Alamitos JFTB Flight Patterns*, the Project site is not located within any of the flight pattern in the JFTB. Buyer awareness is required as part of the City's approval process for the Project. The buyer awareness notification process is built into the real estate disclosure laws of the State to ensure that potential buyers are fully informed before buying a home near an airport if they are sensitive to the types of annoyances or disruptions that may come with the location. Therefore, the City meets the overflight notification requirements as suggested by the Handbook, State law, the AICUZ and AELUP, and the Project would not result in a safety hazard for people residing or working in the Project area. (DEIR, pp. 4.8-18 to 4.8-19)

As discussed in DEIR Section 4.11, *Noise*, based on a review of noise level contours for the JFTB a small portion of the proposed residential uses would be located within the conditionally consistent 60-65 dBA noise contour under projected conditions. Exposure of exterior use areas to noise levels in excess of 70 dBA CNEL would be considered significant, and exposure of residential land uses to noise levels in excess of 65 dBA CNEL would be significant unless noise levels in interior habitable rooms are reduced to 45 dBA CNEL. Typical modern residential construction can achieve a noise level reduction of 25 dBA with windows closed. Thus, with the implementation of PDF N-2 (Refer to DEIR

Section 3.0, *Project Description*, for the discussion of PDF N-2), a windows closed condition was evaluated, which indicates maximum interior noise levels would range from 35 to 40 dBA CNEL from aircraft noise exposure. Therefore, the Project would not result in excessive noise for people residing or working in the Project area. (DEIR, p. 4.8-19)

The currently adopted General Plan contains Policies 1.4, 3.1, 3.5, 3.6, and 3.7 from the Growth Management Element, and Policies 4.1 and 4.6 from the Public Facilities and Safety Element to assure future development will be consistent with the AELUP. Compliance with the policies and land use regulations would further minimize safety hazards for people residing and working near the Los Alamitos JFTB. Refer to DEIR Table 4.10-2, *General Plan Consistency Analysis*, for an analysis of the Project's consistency with the policies above. Thus, impacts would be less than significant and mitigation is not required. (DEIR, p. 4.8-19)

Compliance with FAA Regulation Part 77 Notification Area and Horizontal Imaginary Surface for the Los Alamitos JFTB is provided in Section 4.10, *Land Use and Planning*, of the DEIR. Based on the FAA's Determination of No Hazard to Air Navigation (DEIR *Technical Appendix J2*), the proposed structures do not exceed obstruction standards and would not be a hazard to air navigation. Therefore, no impact would occur. (DEIR, p. 4.8-19)

3.9.5 THRESHOLD F

Impact Statement: The Project would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan.

❑ Findings

Potential impacts of the Project related to Threshold f are discussed in Section 4.8.5 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold f; therefore, no mitigation is required.

❑ Substantial Evidence

During construction, the Project would result in roadway improvements along Lampson, including replacement of the existing median curb and construction of the two proposed driveways. Construction on Lampson will require an encroachment permit and approval from the City Engineer Lane closures that may be required for median improvements would be temporary and require a permit and compliance with LAMC 12.08.200, Safety precautions–Obstruction of traffic. Compliance with LAMC 12.08.200 would ensure safe crossing and access for all vehicle and pedestrians at all times. (DEIR, p. 4.8-21)

The City adopted an Emergency Operations Plan (EOP) in 2015. The EOP identifies the City's emergency planning, organizational structure, and response policies/procedures to natural disasters and incidents of terrorism. The purpose of the EOP is to mitigate the effects of hazards, identify measures to be taken which will preserve life and minimize damage, enhance response capabilities, provide necessary assistance during emergencies, and establish a recovery system in order to return the City to

its normal state of affairs. The City currently does not have any designated evacuation routes, however, the EOP recognizes that during a major evacuation event, all major roadways would be available for evacuation purposes. Implementation of the Project would not result in changes to the existing roadways that would impair or physically interfere with the EOP or evacuation routes. (DEIR, p. 4.8-21)

The Project site does not contain any emergency facilities. During construction and long-term operation, the proposed Project would be required to maintain adequate access for emergency vehicles. The effectiveness of emergency response and firefighting operations is directly related to the proper installation and maintenance of fire access roadways, the proper sitting of hydrants, adequate water supply, and access to structures. In accordance with Orange County Fire Authority (OCFA) Guideline B-09, Fire Master Plans for Commercial & Residential Development, Firesafe Planning Solutions prepared a Fire Master Plan for the Project (see DEIR Figure 4.8-3, *Fire Master Plan*). The Fire Master Plan demonstrates the Project's compliance with the California Fire and Building Codes and other regulations governing water availability for firefighting and emergency access to the Project site, including but not limited to fire access and roadway design, fire lane identification, and access to structures. Accordingly, the Project would not impair implementation of or physically interfere with an adopted emergency response plan or an emergency evacuation plan. Thus, impacts would be less than significant and mitigation is not required. (DEIR, p. 4.8-21)

3.9.6 THRESHOLD G

Impact Statement: The Project would not expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires.

❑ Findings

Potential impacts of the Project related to Threshold g are discussed in detail in Section 4.8.5 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold g; therefore, no mitigation is required.

❑ Substantial Evidence

The City's General Plan identifies very little risk of wildland fire hazards due to the urban nature of Los Alamitos, Rossmoor, and the surrounding communities. The primary fire hazard is urban fires–those that burn in developed areas and include commercial, industrial, and residential structures. The Project would result in the development of the Project site with residential buildings that would remove the vegetation which would reduce the presence of fuel in the event of a wildfire. The proposed residential structures would be designed to comply with State and local fire safety requirements. DEIR Figure 4.8-3, *Fire Master Plan*, demonstrates compliance with all codes and other regulations governing water availability for firefighting and emergency access to the Project site and structures. In addition, the Project site is not located within a very fire hazard severity zone. Therefore, the Project would not expose people or structures, directly, or indirectly, to a risk of loss, injury or death involving wildland fire, and no impact would occur. (DEIR, pp. 4.8-21 to 4.8-22)

3.9.7 CUMULATIVE IMPACTS

Impact Statement: The Project would not result in a cumulatively considerable impact related to hazards and hazardous materials.

❑ Findings

Potential cumulative impacts of the Project related to hazards and hazardous materials are discussed in detail in Section 4.8.6 of the DEIR. The City finds that the development of the proposed Project would not result in significant cumulative impacts related to hazards and hazardous materials; therefore, no mitigation is required.

❑ Substantial Evidence

As discussed above under the responses to Thresholds a and b, the Project's construction and operation would be required to comply with all applicable federal, State, and local regulations to ensure proper use, storage, and disposal of hazardous substances. Such uses also would be subject to additional review and permitting requirements by the Orange County Health Care Agency, Environmental Health Division. Similarly, any other developments in the area proposing the construction of uses with the potential for use, storage, or transport of hazardous materials also would be required to comply with applicable federal, State, and local regulations, and such uses would be subject to additional review and permits from their local oversight agency. Therefore, the potential for release of toxic substances or hazardous materials into the environment, either through accidents or due to routine transport, use, or disposal of such materials, would be less than cumulatively considerable. (DEIR, p. 4.8-22)

As discussed above under Threshold c, no existing or planned schools are located within a one-quarter mile of the Project site, and therefore, the Project has no potential to emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within a one-quarter mile of an existing or proposed school, and no impact would occur. Therefore, the Project has no potential to combine with other development projects to result in substantial hazardous materials-related impacts within one-quarter mile of the Project site. (DEIR, p. 4.8-22)

As indicated under Threshold d, the Project site is not listed on any hazardous materials sites lists compiled pursuant to Government Code Section 65962.5; no impact would occur. Because the Project site is not classified as a hazardous materials site, there is no potential for the Project to contribute to, or exacerbate, adverse environmental effects resulting from other hazardous materials sites in the Project vicinity. (DEIR, p. 4.8-22)

As discussed above under Threshold e, the Project would not violate the standards outlined in the Airport Environs Land Use Plan (AELUP) for the Los Alamitos JFTB. Because the Project and cumulative development within the airport planning area are subject to compliance with the policies and land use regulations in the AELUP, the potential for a cumulative impact to occur related to potential safety hazards for people residing and working near the Los Alamitos JFTB would be minimized. (DEIR, p. 4.8-22)

As discussed above under Threshold f, the Project site does not contain any emergency facilities nor does it serve as an emergency evacuation route; therefore, it has no potential to impair implementation of or physically interfere with an adopted emergency response plan or an emergency evacuation plan and would result in no impact. Thus, the Project would have no effect on emergency access and there is no potential for the proposed Project to contribute to any cumulative impacts associated with emergency facilities or emergency evacuation routes. (DEIR, p. 4.8-24)

As discussed above under Threshold g, the Project site is not located in an area that is susceptible to wildland fire hazards, and therefore would result in no impact related to significant risk of loss, injury, or death involving wildland fires. As such, the Project would not contribute to any cumulative impact related to wildland fires. (DEIR, p. 4.8-24)

3.10 HYDROLOGY AND WATER QUALITY

Project impacts for Hydrology and Water Quality Thresholds a through e do not result in significant impacts and related findings are discussed below.

3.10.1 THRESHOLD A

Impact Statement: The Project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality.

❑ Findings

Potential impacts of the Project related to Threshold a are discussed in detail in Section 4.9.6 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold a; therefore, no mitigation is required.

❑ Substantial Evidence

The Project Applicant would be required to comply with Section 402 of the Clean Water Act, which authorizes the NPDES permit program that regulates point sources of pollution discharging to a water body. The NPDES program would require the Project Applicant and/or construction contractor to prepare a SWPPP and obtain authorization to discharge stormwater under an NPDES construction stormwater permit because the Project would result in construction on a site that is larger than one acre. The Project Applicant also would be required to comply with the California Porter-Cologne Water Quality Control Act (Section 13000 et seq., of the California Water Code), which requires that comprehensive water quality control plans be developed for all waters within the State of California. The Project site is located within the jurisdiction of the Santa Ana RWQCB. (DEIR, p. 4.9-14)

Construction-Related Water Quality Impacts

Construction of the Project would involve demolition, clearing, grading, paving, utility installation, building construction, and landscaping activities, which have the potential to generate silt, debris, organic waste, chemicals, paints, and other solvents; should these materials come into contact with water that reaches the groundwater table or flows off-site, the potential exists for the Project's

construction activities to adversely affect water quality. As such, short-term water quality impacts have the potential to occur during Project construction in the absence of any protective or avoidance measures. (DEIR, p. 4.9-14)

Pursuant to the requirements of the Santa Ana RWQCB and LAMC Chapter 8.44, the Project Applicant would be required to obtain coverage under the State's General Construction Storm Water Permit for construction activities (NPDES permit). The NPDES permit is required for all development projects that include construction activities, such as clearing, grading, and/or excavation, that disturb at least one (1) acre of total land area. In addition, the Project Applicant would be required to comply with the Santa Ana RWQCB's Santa Ana River Basin Water Quality Control Program. Compliance with the NPDES permit and the Santa Ana River Basin Water Quality Control Program involves the preparation and implementation of a SWPPP for construction-related activities. The SWPPP will specify the BMPs that the Project's construction contractors would be required to implement during construction activities to ensure that potential pollutants of concern are prevented, minimized, and/or treated appropriately prior to being discharged from the subject property. Examples of BMPs that may be utilized during construction include, but are not limited to, sandbag barriers, geotextiles, storm drain inlet protection, sediment traps, rip rap soil stabilizers, and hydro-seeding. (DEIR, pp. 4.9-14 to 4.9-15)

Mandatory compliance with the SWPPP would ensure that Project construction does not violate any water quality standards or waste discharge requirements. Therefore, water quality impacts associated with construction activities would be less than significant and no mitigation is required. (DEIR, p. 4.9-15)

Operational Water Quality Impacts

Pursuant to the LAMC Chapter 8.44, the Project Applicant would be required to implement a WQMP to demonstrate compliance with the City's NPDES municipal stormwater permit, and to minimize the release of potential waterborne pollutants, including pollutants of concern for downstream receiving waters. The WQMP is a site-specific post-construction water quality management program designed to address the pollutants of concern of a development project via BMPs, implementation of which ensures the on-going protection of the watershed basin. The Project's preliminary WQMP is included as *Technical Appendix I2* of the DEIR and an updated report was included in the FEIR (*Attachment E*) and includes both storm drain scenarios. As identified in the Project's preliminary WQMP, the proposed Project is designed to include evapotranspiration, rainwater harvesting BMPs, biotreatment BMPs, non-structural source control BMPs, and structural source control BMPs. The Project site would be divided into seven (7) Drainage Management Areas (DMA). Each drainage area would have an area drain system to convey runoff from landscape and roof drainage along curb inlet Modular Wetlands Systems to intercept surface runoff from surrounding walkways and drive aisles. The area drain system design would be determined during final engineering and would connect directly to the proposed water quality treatment devices. Non-structural source control BMPs include education for property owners, tenants and occupants, activity restrictions, common area landscape management, BMP maintenance, title 22 CCR compliance, uniform fire code implementation, common area litter control, employee training, common area catch basin inspection, and street sweeping private streets and parking lots.

Structural source control BMPs include storm drain system stenciling and signage, trash and waste storage areas, efficient irrigation systems & landscape design, water conservation, smart controllers, and source control. (DEIR, p. 4.9-15)

Based on the foregoing analysis, the Project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality during long-term operation. Impacts would be less than significant, and no mitigation is required. (DEIR, p. 4.9-15)

Groundwater Quality

During soil sampling conducted for the Project, groundwater was encountered at depths of approximately 11 to 13 feet below existing grade. Additionally, historic high groundwater is estimated to be about 10 feet below existing grade. Excavation associated with the Project's grading activities have the potential to encounter groundwater. However, the Project would comply with regulatory requirements, including the Construction General Permit which would address potential groundwater quality impacts. Project Construction would not adversely affect groundwater on or off site. (DEIR, pp. 4.9-15 to 4.9-16)

Conclusion

Based on the foregoing analysis, the Project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality during construction or long-term operation. Impacts would be less than significant, and no mitigation is required. (DEIR, p. 4.9-16)

The Project includes the following PDF that will result in a reduction of the Project's impacts.

PDF HYD-1 The Project will be built such that the finished floor elevation for the onsite buildings is set 1 foot minimum above the peak 100-year storm event water surface elevation in accordance with Orange County Flood Protection Requirements.

3.10.2 THRESHOLD B

Impact Statement: The Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project would impede sustainable groundwater management of the basin.

❑ Findings

Potential impacts of the Project related to Threshold b are discussed in detail in Section 4.9.6 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold b; therefore, no mitigation is required.

- **Substantial Evidence**

According to the Project's Geotechnical Evaluation, groundwater was encountered at depths of approximately 11 to 13 feet below existing grade. Additionally, historic high groundwater is estimated to be about 10 feet below existing grade. The Project Applicant does not propose the use of any wells or other groundwater extraction activities. Therefore, the Project would not directly draw water from the groundwater table. (DEIR, p. 4.9-16)

Sources of Orange County Water District (OCWD) groundwater recharge supplies include Santa Ana River – Base Flow and Storm Flow, Santiago Creek – Storm Flow/Santa Ana River, Natural Recharge – Precipitation and subsurface inflow, Recycled water – Groundwater Replenishment System and Water Replenishment District of Southern California and Imported Water – Untreated and Treated. (DEIR, p. 4.9-16)

Development of the Project would increase impervious surface coverage by 48% on the Project site, which would, in turn, reduce the amount of water percolating down into the underground aquifer that underlies the Project site and a majority of the City and surrounding areas (i.e., Orange County Groundwater Basin). The Project site, however, is located in the western portion of the Orange County Groundwater Basin and would not physically impact any of the major groundwater recharge supplies discussed above in the Basin. Additionally, the Project site is not within or a part of a recharge facility for the Orange County Groundwater Basin. Therefore, the Project's reduction in percolation at the site would not impact groundwater recharge supplies. The Project would not result in substantial, adverse effects to local groundwater levels. (DEIR, p. 4.9-16)

Based on the infiltration testing conducted within the Geotechnical Investigation (DEIR *Technical Appendix F1*), the infiltration rates were approximately 0.03 inches per hour and 0.04 inches per hour. Therefore, due to the extremely low measured infiltration rate, low permeability fine-grained soils at depth, shallow groundwater, and site liquefaction potential, infiltration is not feasible at the Project site. Accordingly, buildout of the Project would not interfere substantially with groundwater recharge or impede sustainable groundwater management of the Orange County Groundwater Basin. Based on the foregoing information, the Project would not interfere substantially with groundwater recharge. (DEIR, p. 4.9-16)

For the reasons stated above, the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project would impede sustainable groundwater management of the basin. Impacts would be less than significant, and no mitigation is required. (DEIR, pp. 4.9-16 to 4.9-17)

3.10.3 THRESHOLD C

Impact Statement: The Project would not substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would result in substantial erosion or siltation on- or off-site; substantially increase the rate or amount of surface runoff in a manner which would result in flooding

on- or offsite; create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or impede or redirect flood flows.

❑ Findings

Potential impacts of the Project related to Threshold c are discussed in detail in Section 4.9.6 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold c; therefore, no mitigation is required.

❑ Substantial Evidence

Proposed Storm Drain Facilities

Two stormwater drainage facility plans have been proposed to accommodate stormwater runoff associated with the increase in this amount of impervious surface: on-site storm drain facilities and an alternate off-site storm drain facilities. The analysis below demonstrates that the Project has been designed to capture and treat stormwater runoff such that it would not impact downstream facilities. (DEIR, p. 4.9-17)

Storm Drain Facilities – Preferred Route

The preferred treatment of stormwater runoff for the Project would be conveyance by roof downspouts or street surface flow to proposed gutters and collected by thru-curb inlet bio-filtration devices or catch basin inlets for water quality treatment. The bio-filtration devices include an internal overflow bypass that direct flows via onsite underground storm drain system to an underground detention system located under parking areas at the southwest portion of the site. From the detention system, a stormwater sump pump located in the southwest corner of the site will outlet flows into the existing 18" storm drain pipe at the southwest corner of the site to outlet to the JFTB. The detention system and pump will be sized so that the outlet flows from the developed site will be equal to, or less than, existing flows. In the event the stormwater pump fails or the outlet pipe becomes clogged, the emergency overflow for the site will flow onto Lampson Avenue matching historical drainage patterns. (DEIR, p. 4.9-17)

The combined, total 100-year peak flow rate for the Project site is 31.51 cfs under existing conditions. The combined, total 100-year peak flow rate for the Project site is approximately 42.15 cfs under the proposed conditions without improvements. DEIR Figure 4.9-4, *Proposed Conditions Hydrology Map* illustrates the post-development drainage conditions of the Project site. The proposed drainage design would follow the existing drainage pattern with surface flows to on-site drainage facilities that would ultimately outlet into the existing storm drain pipe at the southwest corner of the Project site. The results from the hydrology study demonstrate that the proposed conditions of the Project site of 42.15 cfs would generate a higher peak runoff flowrate than the existing condition of the site of 31.51 cfs. (DEIR, p. 4.9-17, as revised in Section 4.0 of the FEIR)

Due to increased peak runoff flows created from the proposed change in land use and increased impervious coverage by 48%, stormwater would need to be detained and minimized on-site to match existing conditions. To prevent overflow into Lampson Ave, the detention system will be sized to

match the maximum flows conveyed by the outlet pipe, approximately 33,106 cubic feet. In addition, a proposed stormwater pump system with upstream detention storage has been incorporated into the onsite drainage design to provide onsite peak flow and volume detention for the development for all storm events. The pump system will control the outflow discharge rate matching the existing 2-year peak flow at approximately 8.9 cfs. As such, the proposed on-site detention facilities will be designed to detain volumes that would be discharged from the site via a pump system at flow rates that do not exceed the existing condition flow rates. As such, downstream facilities would not be hydrologically impacted by the proposed Project. Impacts would be less than significant, and no mitigation is required. (DEIR, p. 4.9-19)

Alternate Storm Drain Facilities

In the event the preferred route (historical flow across the JFTB) is not available, an alternate treatment of stormwater runoff for the Project would be conveyed to offsite storm drain facilities. DEIR Figure 4.9-5, *Proposed Alternate Conditions Hydrology Map* illustrates the post-development drainage conditions for this drainage and detention alternate. The proposed site's stormwater runoff would be conveyed by roof downspouts or street surface flow to proposed gutters and collected by thru-curb inlet bio-filtration devices or catch basin inlets for water quality treatment. The bio-filtration devices include an internal overflow bypass that direct flows via on-site underground storm drain system to an underground detention system located under parking areas at the southwest portion of the site. From the detention system, a stormwater sump pump located in the southwest corner of the site will outlet flows onto Lampson Avenue via a parkway culvert. Due to existing flooding concerns on Lampson Avenue, the onsite pump system would allow for low flows to enter Lampson Avenue up until the time that the flows begin to exceed the pre-development 25-year storm event in Lampson Avenue. At that point, peak flows would be detained onsite. Once the flows are no longer above the pre-development 25-year storm event in Lampson Avenue, onsite flows would continue pumping to Lampson Avenue normally. (DEIR, p. 4.9-19)

Under the Alternate Storm Drain plan, stormwater will need to be detained and minimized onsite such that Lampson Avenue meets OC Hydrology flooding standards. Onsite and offsite small unit hydrographs were analyzed using AES Rational Method Analysis to identify the time that the flows exceed the allowed offsite 25-year storm event flows to prevent flooding of one travel lane of the half-street per the OC Local Drainage Manual. Approximately 33,106 cf of water would need to be detained onsite to ensure that offsite 25-year flows are not exceeded. By matching the maximum flows and providing an additional 20 percent factor of safety for preliminary sizing, approximately 38,800 cf of water would be detained onsite. Detained volumes would be discharged from the site via a pump system at flow rates that do not exceed the existing condition flow rates. Downstream facilities would not be hydrologically impacted by the proposed improvements. Additionally, the proposed finished floor elevations for the onsite buildings would be set 1-foot minimum above the 100-year storm event water surface elevation in accordance with Orange County Flood Protection Requirements. (DEIR, p. 4.9-19, as revised in Section 4.0 of the FEIR)

Storm Drain Facilities Considered but Determined Infeasible

As part of the Project's hydrology analysis, the following drainage designs with different outlet locations were reviewed but found to be infeasible:

1. Construct storm drain pipe under Lampson Avenue to west: The proposed installation of approximately 2,400 feet of 30-inch underground gravity storm drain pipe in Lampson Avenue to directly connect to the closest downstream existing 36-inch storm drain pipe (north of Guava Avenue extended) was found to be infeasible due to conflicts with existing utilities; including existing 16-inch water, 8-inch sewer, and 34-inch gas main. Installing 2,400 feet of force main, as opposed to gravity main, may also create long-term maintenance concerns. In addition, the installation of 2,400 feet of force main is not desirable due to head losses (pressure loss causing a reduction in flow) created by such a long length of pipe.

2. Construct storm drain pipe under Heather Street, Hazelnut Avenue, and Guava Avenue to south and west: Since there is no existing underground storm drain to connect to within Heather Street or Hazelnut Avenue, a new storm drain pipe would need to be extended 3,000 feet through these streets to connect to the existing 36-inch storm drain pipe in Guava Avenue. The existing storm drain system is undersized according to the City of Seal Beach Master Plan of Drainage Update dated August 2008. Future City of Seal Beach capital improvements to the downstream storm drain system are recommended in the Master Plan of Drainage Update at this location, but there is no current timeline to install any capital improvements. Without the capital improvements in place, redirecting stormwater runoff flows from the site to the currently undersized storm drain system in Guava Avenue is infeasible since it would exacerbate the existing flooding condition at this location adjacent to single family homes.

3. Outlet Runoff to Arbor Park to North: Arbor Park is within the JFTB and drains south to the same earthen channel outlet as the Project site. If the proposed flows from the Project are not allowed to outlet to the JFTB at the southwest corner of the site, proposed flows from the Project would not be allowed to outlet to the JFTB to the north of the site either since they are essentially the same outlet location. In addition, the existing site does not flow in the northerly Arbor Park/ JFTB area as the site drains in the southwesterly direction, therefore directing stormwater runoff to the north would change the historic drainage pattern which can potentially cause downstream flooding.

4. Outlet Runoff to Golf Course to East: The golf course to the east is within the JFTB and drains east ultimately to the Bolsa Chica Channel. Discharing to the east does not match the historical drainage pattern and the Bolsa Chica Channel was not designed to accommodate flows from the Project site; therefore potentially cause downstream flooding. In addition, the golf course and Bolsa Chica Channel are upstream from the site, therefore not feasible due to elevation differences.

5. Construct storm drain pipe under Lampson Avenue to east: Discharging to the east does not match the historical drainage pattern and the Bolsa Chica Channel was not designed to accommodate flows from the site. Additionally, installation of underground storm drain pipe within Lampson Avenue is infeasible due to conflicts with existing utilities, maintenance concerns, and head losses as described above (see #1). Similarly to item #4, changing the historical drainage pattern may potentially cause unforeseen drainage impacts. (DEIR, p. 4.9-21, as revised in Section 4.0 of the FEIR)

The following analysis evaluates the potential for Project-related development activities to adversely affect water quality or cause or exacerbate local flooding.

Erosion or Siltation On- or Off-site

The Project would not substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would result in substantial erosion or siltation on- or off-site. As discussed in Threshold a, compliance with the NPDES permit and the Santa Ana River Basin Water Quality Control Program involves the preparation and implementation of a SWPPP for construction-related activities. The SWPPP will specify the BMPs that would be required to be implemented during construction activities to ensure that waterborne pollution – including erosion/siltation – is prevented, minimized, and/or otherwise appropriately treated prior to surface runoff being discharged from the subject property. (DEIR, p. 4.9-22)

Mandatory compliance with the SWPPP would ensure that the Project's construction does not violate any water quality standards or waste discharge requirements. Based on the foregoing information, erosion and sedimentation impacts associated with Project construction activities would be less than significant. No mitigation is required. (DEIR, p. 4.9-22)

As discussed under Threshold a, during operation of the Project, the Project Applicant would be required to prepare and implement a WQMP, which is a site-specific post-construction water quality management program that will be implemented to minimize erosion and siltation, pursuant to LAMC Chapter 8.44, Stormwater and Urban Runoff Pollution Controls. The WQMP is required to identify an effective combination of erosion control and sediment control measures (i.e., BMPs) to reduce or eliminate sediment discharge to surface water from storm water and non-storm water discharges. The WQMP also is required to establish a post-construction implementation and maintenance plan to ensure on-going, long-term erosion protection. Compliance with the WQMP is required as a condition of approval for the Project, as will the long-term maintenance of erosion and sediment control features. Because the Project Applicant would be required to utilize erosion and sediment control measures to preclude substantial, long-term soil erosion and loss of topsoil, Project operation would result in less than significant impacts related to soil erosion and sedimentation. No mitigation is required. (DEIR, p. 4.9-22)

Runoff and Flooding On- or Off-site

The Project would not substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would substantially increase the rate or amount of surface runoff resulting in flooding on- or offsite. (DEIR, p. 4.9-22)

On-Site Storm Drain Facilities

The results from the hydrology report demonstrate that the proposed drainage conditions would generate a higher peak runoff flowrate than the existing conditions on the Project site due to an increase in impervious area and change in land use. The preferred detention facilities would be designed to detain the increased peak flow between the existing outlet pipe flows and proposed conditions. Detained volumes would be discharged from the site via a pump system at flow rates that do not exceed the existing condition flow rates. Downstream facilities would not be hydrologically impacted by the proposed Project site improvements. (DEIR, p. 4.9-23)

Alternate Storm Drain Facilities

A second hydrology report was prepared for the alternate stormwater conveyance plan. The results from the report demonstrated that the proposed condition of the alternate would generate a higher 100-year storm event peak runoff flowrate than the existing condition of the site due to an increase in impervious area and change in land use. The proposed underground detention facilities would be designed to detain the increased flows under the proposed conditions, which would be discharged from the site via a pump station at flow rates that would not exceed the existing condition flow rates. Downstream facilities would not be hydrologically impacted by the proposed Project site improvements. (DEIR, p. 4.9-23, as revised in Section 4.0 of the FEIR)

Based on the foregoing information, the Project would not substantially increase the rate or amount of surface runoff in a manner that would result in flooding on- or off-site. Impacts would be less than significant, and no mitigation is required. (DEIR, p. 4.9-23)

Stormwater Drainage System Capacity & Polluted Runoff

The Project would not substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff. The Project's preferred storm drain system and alternate storm drain system would be sized and designed in accordance with the City's drainage requirements and Orange County Hydrology Manual to ensure that off-site flows are conveyed through the Project site and flows originating off-site are discharged from the site at a volume and rate that can be accommodated by existing and planned downstream storm drain facilities. (DEIR, p. 4.9-23)

As discussed under Threshold a, the Project Applicant would be required to comply with a SWPPP and the Project's WQMP (DEIR *Technical Appendix I2*; FEIR *Attachment E*) which identify required

BMPs to be incorporated into the Project's design and operation to ensure that near-term construction activities and long-term post-development activities of the proposed Project would not result in substantial amounts of polluted runoff. Therefore, with mandatory compliance with the Project's SWPPP and WQMP, the proposed Project would not create or contribute substantial additional sources of polluted runoff, and impacts would be less than significant. No mitigation is required. (DEIR, p. 4.9-23)

Flood Flows

The Project would not substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would impede or redirect flood flows. Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps identify flood zones and areas that are susceptible to 100-year (1% annual chance of occurrence) and 500-year floods (0.2% annual chance of occurrence). These areas are referred to as Special Flood Hazard Areas and Moderate Flood Hazard Areas respectively. According to FEMA Flood Insurance Rate Map (FIRM) No. 06059C0116J (effective 12/03/2009), the Project site is located within FEMA Flood Zone D. Flood Zone D is correlated with areas with a possible risk of flooding, but the probability has not been determined. Additionally, the City's General Plan identifies the Project site as an undetermined risk area. It should be noted that the Project site is not in proximity to an area within a flood zone. (DEIR, p. 4.9-24)

On-Site Storm Drain Facilities

According to the Hydrology Report, during a peak 100-year storm event, stormwater flows would be detained within the on-site underground detention basin. Detained volumes will be discharged from the site via a pump system at flow rates that do not exceed the existing condition flow rates. Additionally, the Project's proposed finished floor elevations would be set at least 1 foot above the peak 100-year storm event water surface elevation in accordance with Orange County Flood Protection requirements. (DEIR, p. 4.9-24)

Alternate Storm Drain Facilities

According to the Hydrology Report for the alternate stormwater conveyance plan, during a peak 100-year storm event, stormwater flows would be detained with the proposed detention facilities. Detained volumes would be discharged from the site via a pump system at flow rates that do not exceed the existing condition flow rates. Downstream facilities would not be hydrologically impacted by the proposed improvements. Additionally, proposed floor elevations for the onsite buildings would be set at least 1 foot above the peak 100-year storm event water surface elevation in accordance with Orange County Flood Protection requirements. (DEIR, p. 4.9-24)

Moreover, as previously discussed, the Project was designed to maintain the approximate existing drainage pattern to the extent feasible. Accordingly, the Project is not expected to impede flood flows. Impacts would be less than significant, and no mitigation is required. (DEIR, p. 4.9-24)

3.10.4 THRESHOLD D

Impact Statement: The Project would not result in flood hazard, tsunami, or seiche zones, risk release of pollutants due to inundation.

❑ Findings

Potential impacts of the Project related to Threshold d are discussed in Section 4.9.6 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold d; therefore, no mitigation is required.

❑ Substantial Evidence

The Project site is located approximately 4.22 miles northeast of the Pacific Ocean; therefore, there is minimal potential for the Project site to be impacted by a tsunami. A seiche occurs when a wave oscillates in lakes, bays, or gulfs as a result of seismic disturbances. The Project site is also not subject to flooding hazards associated with a seiche because there are no large bodies of water within the vicinity of the Project site. Furthermore, as stated above under Threshold c, the Project's storm drainage infrastructure would adequately detain 100-year flows, discharge detained flows at rate that do not exceed existing flows, and the Project's finish floor elevations would be at least 1 foot above the water surface elevation. Accordingly, the Project is not anticipated to risk the release of pollutants due to inundation. Impacts would be less than significant and no mitigation is required. (DEIR, pp. 4.9-24 to 4.9-25)

3.10.5 THRESHOLD E

Impact Statement: The Project would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan.

❑ Findings

Potential impacts of the Project related to Threshold e are discussed in detail in Section 4.9.6 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold e; therefore, no mitigation is required.

❑ Substantial Evidence

The Project site is located within the jurisdiction of the Santa Ana RWQCB. Project-related construction and operational activities would be required to comply with the Santa Ana RWQCB's Santa Ana River Basin Water Quality Control Plan by preparing and adhering to a SWPPP and WQMP. As also discussed in Threshold a above, implementation of the Project would not conflict with or obstruct the Santa Ana River Basin Water Quality Control Plan and impacts would be less than significant. (DEIR, p. 4.9-25)

The Project site is within the Coastal Plain or Orange County Groundwater Basin (Basin 8-1). The Department of Water Resources (DWR) classifies this basin as a medium-priority basin. Under the

Sustainable Groundwater Management Act (SGMA), local agencies are required to form Groundwater Sustainability Agencies (GSAs) for the high and medium priority basins. GSAs develop and implement GSPs to avoid undesirable results and mitigate overdraft within 20 years. The GSA for Basin 8-1 is comprised of OCWD, city of La Habra, and Irvine Ranch Water District. These agencies collaborated and submitted an Alternative to a GSP titled Basin 8-1 Alternative 2022 Update on January 1, 2022, to the DWR (Alternative). This Alternative documents the basin conditions; basin management is based on measurable objectives and minimum thresholds defined to prevent significant and unreasonable impacts on the sustainability indicators defined in the Alternative. (DEIR, p. 4.9-25)

According to the Project's Geotechnical Evaluation, groundwater was encountered at depths of approximately 11 to 13 feet below existing grade. Additionally, historic high groundwater is estimated to be about 10 feet below existing grade. The Project Applicant does not propose the use of any wells or other groundwater extraction activities. The Project's potable water would by supplied by Golden State Water Company (GSWC), which relies on the Orange County Groundwater Basin and imported water from the Municipal Water District of Orange County. (DEIR, p. 4.9-25)

The 2021-2029 Housing Element includes the Project site in its housing opportunity sites. The Housing Element concluded that based on the 2020 Municipal Water District of Orange County (MWDOC) Urban Water Management Plan (UWMP) analysis and discussion with the City's water service provider, sufficient water capacity is available to provide water service for additional units constructed to meet the City's Regional Housing Needs Allocation (RHNA) allocation for the planning period. Therefore, the Project would not have the potential to conflict with or obstruct implementation of the Basin 8-1 Alternative. Refer also to DEIR Section 4.17, *Utilities and Service Systems*, for a detailed discussion related to water supply. Impacts would be less than significant and no mitigation is required. (DEIR, p. 4.9-25)

3.10.6 CUMULATIVE IMPACTS

Impact Statement: The Project would not result in cumulatively considerable impacts related to hydrology and water quality.

❑ Findings

Potential cumulative impacts of the Project related to hydrology and water quality are discussed in detail in Section 4.9.7 of the DEIR. The City finds that the development of the proposed Project would not result in significant cumulative impacts related to hydrology and water quality; therefore, no mitigation is required.

❑ Substantial Evidence

This cumulative impact analysis considers development of the proposed Project in conjunction with other development projects in the vicinity of the Project site and projects located in San Gabriel-Coyote Creek Watershed and the Orange County Groundwater Basin. (DEIR, p. 4.9-26)

Water Quality

Project construction and the construction of other projects in the cumulative study area would have the potential to contribute waterborne pollution, including erosion and siltation, to the San Gabriel-Coyote Creek Watershed. Pursuant to the requirements of the State Water Resources Control Board and the Santa Ana RWQCB, all construction projects that disturb one (1) or more acres of land area are required to obtain coverage for construction activities under the State's General Construction NPDES Permit. In order to obtain coverage, an effective site-specific SWPPP is required to be developed and implemented. The SWPPP must identify potential on-site pollutants and identify an effective combination of erosion control and sediment control measures to reduce or eliminate discharge of pollutants to surface waters. In addition, the Project Applicant and all cumulative developments in the Santa Ana River Basin would be required to comply with the Santa Ana RWQCB's Santa Ana River Basin Water Quality Control Program, which establishes water quality standards for ground and surface waters of the region. Compliance with these mandatory regulatory requirements, would ensure that development projects within the San Gabriel-Coyote Creek Watershed, including the proposed Project, would not contribute substantially to water quality impairments during construction. (DEIR, p. 4.9-26)

Operational activities on the Project site would be required to comply with the Project's WQMP to minimize the amount of waterborne pollution, including erosion and sediment, discharged from the site. Other development projects within the watershed would similarly be required by law to prepare and implement site-specific WQMPs to ensure that runoff does not substantially contribute to water quality violations. Accordingly, operation of the Project would not contribute to cumulatively-considerable water quality effects. (DEIR, p. 4.9-26)

Groundwater Supplies and Management

The Project site does not support infiltration and the Project site is not within and is not a part of a recharge facility for the Orange County Groundwater Basin. Also, as previously noted, implementation of the Project would not result in substantial adverse effects to local groundwater supplies or groundwater recharge. Thus, no component of the Project would obstruct or prevent implementation of the management plan for the Orange County Groundwater Basin and other development projects within the Orange County Groundwater Basin would be prohibited from any activity that would endanger the health and sustainability of the groundwater basin. Based on the lack of impacts to groundwater and compliance with the applicable Orange County Groundwater Basin management plan, cumulative development would not result in a considerable, adverse effect to local groundwater supplies and not conflict with any water quality control plans or sustainable groundwater management plans. (DEIR, p. 4.9-26)

Flooding

Construction of the Project and other development projects within the San Gabriel-Coyote Creek Watershed would be required to comply with federal, State, and local regulations and applicable regional and local master drainage plans in order to mitigate flood hazards both on- and off-site. Compliance with federal, State, and local regulations and applicable drainage plans would require

development sites to be protected from flooding during peak storm events (i.e., 100-year storm) and also would not allow development projects to expose downstream properties to increased flooding risks during peak storm events. In addition, future development proposals within the San Gabriel-Coyote Creek Watershed would be required to prepare hydrologic and hydraulic calculations, subject to review and approval by the responsible City Engineer, to demonstrate that substantial on- and/or off-site flood hazards would not occur. Accordingly, the construction and operation of the Project would not contribute to cumulatively considerable flooding impacts. (DEIR, p. 4.9-27)

3.11 LAND USE AND PLANNING

Project impacts for Land Use and Planning Thresholds a and b do not result in significant impacts. Findings are discussed below.

3.11.1 THRESHOLD A

Impact Statement: The Project would not physically divide an established community.

- ❑ **Findings**

Potential impacts of the Project related to Threshold a are discussed in Section 4.10.5 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold a; therefore, no mitigation is required.

- ❑ **Substantial Evidence**

The Project involves the redevelopment of a 12.3-acre site with a residential development of 246 units. The Project is consistent with the City's General Plan land use designations and zoning. The Project site is surrounded by Arbor Park to the north, the Navy Golf Course to the east, residential development to the south, and the Los Alamitos JFTB to the west. The proposed residential development is consistent with the surrounding land uses in the area and would not introduce a new use that potentially would separate existing communities through incompatible development (e.g., by limiting access to surrounding areas). For example, the Project would facilitate connections between the existing residential neighborhoods to the south and Arbor Park by providing additional parking for the park, improved sidewalks, signalized pedestrian intersections, and other circulation improvements. Additionally, the proposed Project would be developed within the confines of the Project site and would not introduce new major roadways or other infrastructure improvements that would bisect or transect the surrounding communities. For example, off-site improvements, including the replacement of the existing median curb/landscape and water line extension along Lampson Avenue would all occur within existing right-of-way. Therefore, redevelopment of the Project site would not physically divide an established community. No impact would occur and no mitigation is required. (DEIR, pp. 4.10-9 to 4.10-10)

3.11.2 THRESHOLD B

Impact Statement: The Project would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.

❑ Findings

Potential impacts of the Project related to Threshold b are discussed in Section 4.10.5 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold b; therefore, no mitigation is required.

❑ Substantial Evidence

The Project's consistency with land use plans, policies, and regulations adopted for the purpose of avoiding or mitigating an environmental effect is discussed below. DEIR Section 4.10.5 includes an analysis of consistency with Southern California Association of Governments (SCAG)'s Connect SoCal, the AELUP for the Los Alamitos JFTB, and the City's General Plan. The Project's consistency with the General Plan Mobility and Circulation Element is also discussed in DEIR Section 4.15, *Transportation*, of the DEIR. (DEIR, p. 4.10-10)

SCAG Connect SoCal

SCAG's Connect SoCal is the SCAG planning document that applies to the Project. Connect SoCal identifies voluntary best practices to approach growth and infrastructure challenges in an integrated and comprehensive way. The Connect SoCal goals are meant to provide guidance for considering proposed projects for municipalities throughout the SCAG jurisdictional area. As shown in DEIR Table 4.10-1, *SCAG Connect SoCal Goal Consistency Analysis*, the Project would not conflict with the Connect SoCal goals. Accordingly, the Project would have a less than significant impact and no mitigation is required. (DEIR, p. 4.10-10)

Airport Environs Land Use Plan (AELUP) for Joint Forces Training Base (JFTB) Los Alamitos

The City and the Project site are within the airport planning area of the Los Alamitos JFTB. Land uses within the airport planning-area boundaries are required to conform to four key areas of military airport compatibility including: 1) aviation safety; 2) aircraft noise; 3) aircraft overflight; and 4) airspace protection/height zoning. Section 2.1 of the AELUP describes the standards and criteria adopted by the Airport Land Use Commission for Orange County for establishing planning boundaries. (DEIR, p. 4.10-14)

Safety

As discussed in DEIR Section 4.8, *Hazards and Hazardous Materials*, of the DEIR, the Project site is not located within the clear zones (CZs) or APZ (refer to DEIR Figure 4.8-1, *JFTB Impact Zones*) for the JFTB. Therefore, the Project does not concentrate people in areas susceptible to aircraft accidents. Therefore, the Project would not result in a safety hazard for people residing at the Project site. As such, the Project would not conflict with the safety restrictions established in the AELUP for the JFTB.

Height

The Project site is located within the FAR Part 77 Notification Area and Horizontal Imaginary Surface for the Los Alamitos JFTB. Based on the FAA's Determination of No Hazard to Air Navigation (*Technical Appendix J2* of the DEIR), the Project would not penetrate FAR Part 77 Imaginary

Obstruction Surfaces for JFTB. Determination of No Hazard further determined that the location and height of the Project's proposed buildings would not interfere with the established, or planned, airport flight procedures, patterns, or navigational systems. The FAA further found that the Project would not raise the ceiling or visibility minimums for any existing or planned instrument procedure at the Base. The FAA found that the Project would not result in a loss of airport utility, operational efficiency and capacity and would not reduce the usable length of either Base runway. Further, the Project would not conflict with the visual flight rules (VFR) airspace used for traffic patterns or arrival/departure airspace areas. The FAA Determination of No Hazard stated that marking and lighting of Project structures is not necessary for aviation safety. As such, the Project would not conflict with the height restrictions established in the AELUP for the JFTB. (DEIR, pp. 4.10-15 to 4.10-16)

Noise Standards

The AELUP relies on the 1994 California Army National Guard Installation Compatible Use Zone Study (AICUZ) for noise contours surrounding JFTB. The 1994 AICUZ depicts the Project site outside of the 65 dB CNEL noise contour and between the 60 and 65 CNEL noise contours. The AELUP considers residential land uses "conditionally consistent" with the 60 decibels (dB) CNEL noise contour and recommends sound attenuation to ensure interior CNEL does not exceed 45 dB CNEL and outdoor signage "informing the public of the presence of operating aircraft." The City enforces California Building Code standards for residential construction practices and building materials to ensure that interior noise levels do not exceed 45 dBA. (DEIR, p. 4.10-16)

Although the AELUP considers the Project conditionally consistent with the 60 dB CNEL contour, the CNEL noise contours depicted in the 1994 AICUZ and used by the AELUP are outdated and do not reflect updated noise contour information set forth in the most recent 2020 Noise Assessment completed for the Base. Further, the ALUC estimated the 60 dB CNEL contour in the AELUP using the 1994 AICUZ by extrapolating from the outdated 65 dB CNEL contour "using a logarithmic scaling method and professional acoustical-engineering judgment". This method of extrapolation is both outdated and contrary to the US Department of Defense (DOD) aircraft noise analysis requirements. The US DOD requires the use of the aircraft noise model NOISEMAP to predict community noise exposure. As required by US DOD, the 2020 Noise Assessment for the Base used NOISEMAP to predict community noise exposure. (DEIR, p. 4.10-16)

The 2020 Noise Assessment included a noise analysis of the then-current aircraft operations as the "Baseline" and provided a forecast of additional operations by the California Air National Guard projected over a 10-year period ("Projected" operations). As shown in DEIR Figure 4.11-4, a small portion of the northwest corner of the Project site is within the 60 dB CNEL Projected Noise Contour (based on the 10-year operations forecast) but the remainder of the site remains outside of the 60 dB CNEL noise contour. DEIR Figure 4.11-4 depicts the Project site in relation to the Baseline and Projected noise contours under the 2020 Noise Assessment for the base. (DEIR, pp. 4.10-16 to 4.10-17)

Relative to the 2020 Baseline and Projected noise contours, the entire Project site is located outside of the 65 dB CNEL noise contour, and only a small portion of the Project site would be located within

the 60 to 65 CNEL contour. The remainder of the Project site would be outside the 60 dB CNEL contour. The AELUP considers residential land uses consistent in areas outside the 60 dB CNEL contour and indicates that there are "no special noise reduction requirements." For the small portion of the site within the 60 to 65 CNEL contour, the AELUP indicates that it would be conditionally consistent and recommends sound attenuation to ensure interior CNEL does not exceed 45 dB and outdoor signage. The Project would comply with these recommendations. As stated above, the City enforces California Building Code standards for residential construction practices and building materials to ensure that interior noise levels do not exceed 45 dBA. Indeed, current building codes require construction materials and construction techniques that generally provide a minimum of 20 dB of sound attenuation. Typical building construction would provide a Noise Reduction (NR) of approximately 12 dBA with "windows open" and a minimum 25 dBA noise reduction with "windows closed." (DEIR, p. 4.10-17)

Thus, interior noise for the small portion of the Project site within the 60 to 65 CNEL contour would be less than 45 dB CNEL with 20 dB of noise attenuation from standard construction practices. Interior noise within the rest of the Project site, which is located outside the 60 CNEL contour, would be even lower. Therefore, both the exterior and interior noise levels associated with the Project are consistent with the AELUP, and the Project would not expose people residing or working in the Project area to excessive noise levels from airport or aircraft operations. Impacts would be less than significant and no mitigation is required. (DEIR, p. 4.10-17)

Aircraft Overflight

Arrival and departure corridors used by inbound and outbound aircraft avoid direct overflight of residential areas as much as possible and avoid the Project site (see Figure 11 of *Technical Appendix J1)*. These corridors follow the major highways and streets to blend the majority of overflight noise with the background traffic noise. Navy Golf Course, Old Ranch Country Club and the Base's landside facilities, such as aircraft parking aprons, hangars, offices and roadways, also provide overflight setbacks from residential land uses. The objective is to reduce annoyance and minimize the number of people exposed to excessive noise levels from overflying aircraft. (DEIR, p. 4.10-17)

As noted in the Handbook, "very little guidance exists for limiting people's exposure to overflight." Nonetheless, regular updates to the AICUZ noise and overflight analysis are prepared and provided to members of the community as changes are made over time to the diverse mix of aircraft making use of the Base in its unique role as a "Joint Forces Training" facility. These operations, noise and overflight updates are required by the Department of Defense guidance for Base planning personnel and for dissemination to the public through the AICUZ program. (DEIR, p. 4.10-18)

AELUP Section 2.1.4 provides the ALUC guidance specific to overflight compatibility. The AELUP overflight policies follow State law and the California Airport Land Use Planning Handbook methods of achieving compatibility through buyer awareness and overflight information. The ALUC mandates the State's real estate disclosure provisions requiring buyer and renter notification for new residential land uses within an airport influence area (even if these state laws were to be revised or rescinded). The ALUC also requires that signs providing these disclosures and notices be "prominently posted" in

real estate sales offices and within the new development depicting overflight areas and helicopter traffic patterns. (DEIR, p. 4.10-18)

As identified in the Handbook, the primary overflight strategy is to ensure buyer awareness as opposed to any specific land use restrictions. This buyer awareness notification process is built into the real estate disclosure laws of the State to ensure that potential buyers are fully informed before buying a home near an airport if they are sensitive to the types of annoyances or disruptions that may come with the location. Buyer awareness is required as part of the City's approval process for the Project including the statement below:

> **NOTICE OF AIRPORT.** This property is presently located in the vicinity of an airport, within what is known as an airport influence area. For that reason, the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example: noise, vibration, or odors). Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associated with the property before you complete your purchase and determine whether they are acceptable to you. (DEIR, p. 4.10-18)

With this required notification, the Project is consistent with overflight notification requirements as required by State law provided by the Handbook, State law, the AICUZ and AELUP. (DEIR, p. 4.10-18)

Summary
The Project would not conflict with JFTB AELUP's safety, height, noise, or aircraft overflight criteria, and impacts would be less than significant. No mitigation is required. (DEIR, p. 4.10-18)

City of Los Alamitos General Plan

DEIR Table 4.10-2, *General Plan Consistency Analysis*, provides an analysis of the Project's consistency with all applicable General Plan goals and policies that were adopted for the purpose of avoiding or mitigating an environmental effect. As shown in DEIR Table 4.10-2, the Project would not conflict with any of the applicable General Plan goals and policies. Accordingly, the Project would have a less-than-significant impact with respect to a conflict with the City of Los Alamitos General Plan and mitigation is not required. (DEIR, p. 4.10-19)

City of Seal Beach General Plan

DEIR Table 4.10-3, *Seal Beach General Plan Consistency Analysis*, provides an analysis of the Project's consistency with all applicable General Plan goals and policies that were adopted for the purpose of avoiding or mitigating an environmental effect. As shown in DEIR Table 4.10-3, the Project would not conflict with any of the applicable General Plan goals and policies. Accordingly, the Project would have a less-than-significant impact with respect to a conflict with the City of Los Alamitos General Plan and mitigation is not required. (DEIR, p. 4.10-33, as revised in Section 4.0 of the FEIR)

3.11.3 CUMULATIVE IMPACTS

Impact Statement: The Project would not result in cumulatively considerable impacts related to land use and planning.

❑ **Findings**

Potential cumulative impacts of the Project related to land use and planning are discussed in detail in Section 4.10.6 of the DEIR. The City finds that the development of the proposed Project would not result in significant cumulative impacts related to land use and planning; therefore, no mitigation is required.

❑ **Substantial Evidence**

This Project, in conjunction with other cumulative related projects would not physically divide an established community. As discussed under Threshold a, the Project would not physically divide an established community because the Project site is currently developed, in an urbanized area and would not introduce new major roadways or other infrastructure improvements that would bisect or transect the surrounding communities. Similarly, the City is primarily built out and there are no cumulative related projects that could combine with the Project that would physically divide an established community. (DEIR, p. 4.10-33)

The Project, in conjunction with other cumulative development in accordance with the City's General Plan, would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. As discussed under Threshold b, the Project is consistent with SCAG's Connect SoCal, the City's land use and zoning designations for the Project site and would not conflict with any aspects of the City's General Plan or any other applicable land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating adverse environmental effects. Cumulative development would also be subject to site-specific environmental and planning reviews to ensure consistency with applicable regional and local plans reviewed in this section. Therefore, cumulatively considerable impacts from cumulative projects related to policy consistency would be less than significant. (DEIR, p. 4.10-33)

3.12 MINERAL RESOURCES

Project impacts for Mineral Resources Thresholds a and b do not result in significant impacts and findings are discussed below.

3.12.1 THRESHOLD A

Impact Statement: The Project would not result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state.

❑ Findings

Potential impacts of the Project related to Threshold a are discussed in Section 5.4.2 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold a; therefore, no mitigation is required.

❑ Substantial Evidence

The Project does not conflict with California Legislature's 1975 Surface Mining and Reclamation Act (SMARA), which provides guidelines of the classification and designation of mineral lands. The City of Los Alamitos and its sphere of influence fall within the Mineral Resource Zone-1 (MRZ) and MRZ-4. MRZ-1 represents areas where adequate geologic information indicates that no significant mineral deposits are present, or where it is judged that little likelihood exists for their presence. MRZ-4 indicates areas where available information is inadequate for assignment to any other MRZ zone. Specifically, the Project is within MRZ-1. Accordingly, no impact would occur. (DEIR, p. 5-8)

3.12.2 THRESHOLD B

Impact Statement: The Project would not result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan.

❑ Findings

Potential impacts of the Project related to Threshold b are discussed in Section 5.4.2 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold b; therefore, no mitigation is required.

❑ Substantial Evidence

There are no locally important mineral resource recovery sites in the City of Los Alamitos or its sphere of influence. As discussed above, no known valuable mineral resources exist on or near the Project site and no mineral resource extraction activities occur on the site. Thus, the proposed Project would not result in the loss of availability of locally-important mineral resources. Accordingly, no impact would occur. (DEIR, pp. 5.8 to 5-9)

3.13 NOISE

Except as indicated, Project impacts for CEQA Noise Thresholds a, b and c do not result in significant impacts and findings are discussed below.

3.13.1 THRESHOLD A

Impact Statement: The Project would not generate a substantial temporary or permanent increase in ambient noise levels during construction or on-site operation, in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.

❑ Findings

Potential impacts of the Project related to Threshold a are discussed in detail in Section 4.11.7 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold a, for construction or on-site operation; therefore, no mitigation is required for these.

❑ Substantial Evidence

The analysis presented on the following pages summarizes the Project's potential construction noise levels and operational noise levels, including off-site noise that would be generated by Project-related traffic.

Construction Noise

Construction activities on the Project site would proceed in six stages: 1) demolition, 2) site preparation, 3) grading, 4) building construction, 5) paving, and 6) application of architectural coating. Noise generated by the Project construction equipment would include a combination of trucks, power tools, concrete mixers, and portable generators that when combined could reach high noise levels and would cause a short-term increase in ambient noise levels. The Project's potential construction noise levels at nearby receiver locations are summarized in DEIR Table 4.11-5, *Construction Equipment Noise Level Summary*. (DEIR, p. 4.11-23)

To evaluate whether the Project will generate potentially significant short-term noise levels at nearest receiver locations, a construction-related daytime noise level threshold of 80 dBA L_{eq} is used to assess the daytime construction noise level impacts based on the FTA's Transit Noise and Vibration Impact Assessment Manual. Due to the lack of standardized construction noise thresholds, the FTA provides guidelines that can be considered reasonable criteria for construction noise assessment. This threshold takes into account the existing noise environment, the absolute noise levels during construction activities, the duration of the construction, and the adjacent land uses. The construction noise analysis shows that noise impacts at the nearest receiver locations will be less than the daytime 80 dBA L_{eq} significance threshold during Project construction activities. Because the highest construction related noise level is 63.31 dBA Leq at the nearest sensitive receiver, the noise impacts due to Project construction noise are considered less than significant and no mitigation is required. (DEIR, p. 4.11-24)

Operational Noise – Stationary Noise

On-site Project-only operational noise sources are expected to include: roof-top and ground-mounted air conditioning units, parking lot vehicle movements, outdoor activity, and trash enclosure activities. The daytime and nighttime Project operational noise levels at nearby sensitive receptor locations are summarized on DEIR Table 4.11-6, *Project Daytime and Nighttime Operational Noise Levels*. (DEIR, p. 4.11-24)

As shown in DEIR Table 4.11-6, operational noise levels associated with the Project will be less than the City of Los Alamitos's 55 dBA L_{eq} daytime and 50 dBA L_{eq} nighttime exterior noise level standards

at the nearest receiver locations. Therefore, operational noise impacts would be less than significant at the nearest noise-sensitive receiver locations and no mitigation is required. (DEIR, p. 4.11-25)

To describe the Project operational noise level increases, the Project operational noise levels are combined with the existing ambient noise levels measurements for the nearest receiver locations potentially impacted by Project operational noise sources. As indicated on Tables 10-5 and 10-6 of the Project's Noise Report (*Technical Appendix K* to this EIR), the Project would generate an unmitigated daytime and nighttime operational noise level increases ranging from less than 0.0 to 1.2 dBA Leq at the nearest receiver locations. Project-related operational noise level increases would be less than significant, and no mitigation is required. (DEIR, p. 4.11-25)

Operational – Off-site Transportation

To assess the off-site traffic CNEL noise level impacts associated with development of the proposed Project, noise level contours were developed based on 4665 Lampson Avenue Traffic Analysis. Noise level contour boundaries represent the equal levels of noise exposure and are measured in CNEL from the center of the roadway. Noise level contours were developed for six traffic scenarios based on the Traffic Analysis (DEIR *Technical Appendix N1*): Existing, Existing Plus Project, Opening Year Without and With Project, and General Plan Buildout Without and With Project conditions. (DEIR, p. 4.11-25)

The noise contours were used to assess the Project's incremental 24-hour dBA CNEL traffic-related noise impacts at land uses adjacent to roadways conveying Project traffic. The noise contours represent the distance to noise levels of a constant value and are measured from the center of the roadway for the 70, 65, and 60 dBA CNEL noise levels. The noise contours do not consider the effect of any existing noise barriers or topography that may attenuate ambient noise levels, which represents worst case conditions. (DEIR, pp. 4.11-25 to 4.11-26)

As shown on FEIR Table 4.11-7, *Existing Off-Site Project-Related Traffic Noise Impacts*, the Existing 2023 with Project will generate a noise level increase of up to 0.3 dBA CNEL on the study area roadway segments. Based on the significance criteria for off-site traffic noise impacts, the Project-related noise level increases are considered less than significant under Existing plus Project conditions at the land uses adjacent to roadways conveying Project traffic. (DEIR, p. 4.11-26, as revised in Section 4.0 of the FEIR)

FEIR Table 4.11-8, *Opening Year Off-Site Project-Related Traffic Noise Impacts*, shows that the Opening Year Project off-site traffic noise level increases of up to 0.2 dBA CNEL. Based on the significance criteria for off-site traffic noise presented for off-site traffic noise impacts, land uses adjacent to the study area roadway segments would experience less than significant noise level increases due to unmitigated Opening Year Project-related traffic noise levels. (DEIR, p. 4.11-26, as revised in Section 4.0 of the FEIR)

FEIR Table 4.11-9, *General Plan Buildout Off-Site Project-Related Traffic Noise Impacts*, shows that the General Plan Buildout Project off-site traffic noise level with Project increases of up to 0.2 dBA

CNEL. Based on the significance criteria for off-site traffic noise presented for off-site traffic noise impacts, land uses adjacent to the study area roadway segments would experience less than significant noise level increases due to unmitigated General Plan Buildout Project-related traffic noise levels with the Project. (DEIR, p. 4.11-26, as revised in Section 4.0 of the FEIR)

Based on the significance criteria for off-site traffic noise impacts, land uses adjacent to the study area roadway segments would not experience substantial noise level increases due to Project-related traffic noise level increases and off-site traffic related noise impacts would less than significant. No mitigation is required. (DEIR, p. 4.11-26)

The Project includes the following PDFs that will result in a reduction of the Project's impacts.

PDF N-1 Prior to the issuance of occupancy permits, the Project will construct a 7-foot-high noise barrier along Lampson Avenue. The noise control barrier will be constructed so that the top of each wall and /or berm combination extends to the planned height above the pad elevation of the lot it is shielding. Since the pad elevations varies, the top of each wall and/or berm combination will be 7' above each applicable pad elevation. When the roadway or terrain is elevated above the pad elevation, the barrier shall extend to the recommended height above the highest point between the residential home and the roadway. The barrier shall be built with a material surface weight of at least 4 pounds per square foot, with no decorative cutouts, perforations, or line-of-sight openings between residences and Lampson Avenue. The noise barrier shall be constructed using the following materials:

- Masonry block;
- Stucco veneer over wood framing (or foam core), or 1-inch-thick tongue and groove wood of at least four pounds per square foot;
- Material with sufficient weight per square foot capable of providing a minimum transmission loss of 25 dBA;
- Earthen berm; or,
- Any combination of these construction materials

PDF N-2 To comply with the State of California and City of Los Alamitos 45 A-weighted Decibels (dBA) Community Noise Equivalent Level (CNEL) interior noise standards for residential land use, the Project will provide the following or equivalent noise abatement measures on building plans:

- Windows & Glass Doors: At a minimum the Project will provide windows and glass doors that are well-fitted, well-weather-stripped assemblies with minimum sound transmission class (STC) ratings of 27. Additionally, all second floor facades adjacent to Lampson Avenue and JFTB Los Alamitos will be provided windows and glass doors that are well-fitted, well-weather-

stripped assemblies with minimum sound transmission class (STC) ratings of 29.

- Doors (Non-Glass): All exterior doors shall be well weather-stripped and have Well-sealed perimeter gaps around the doors are essential to achieve the minimum STC rating.
- Walls: At any penetrations of exterior walls by pipes, ducts, or conduits, the space between the wall and pipes, ducts, or conduits shall be caulked or filled with mortar to form an airtight seal.
- Roof: Roof sheathing of wood construction shall be per manufacturer's specification or caulked plywood of at least one-half inch thick. Ceilings shall be per manufacturer's specification or well-sealed gypsum board of at least one-half inch thick. Insulation with at least a rating of R-19 shall be used in the attic space.
- Ventilation: Arrangements for any habitable room shall be such that any exterior door or window can be kept closed when the room is in use and still receive circulated air. A forced air circulation system (e.g. air conditioning) or active ventilation system (e.g. fresh air supply) shall be provided in compliance with applicable State and local Building Codes (e.g. California Building Code, Chapter 3, R338.3).

3.13.2 THRESHOLD B

Impact Statement: The Project would not generate excessive groundborne vibration or groundborne noise levels.

❑ Findings

Potential impacts of the Project related to Threshold b are discussed in detail in Section 4.11.7 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold b; therefore, no mitigation is required.

❑ Substantial Evidence

Construction Analysis

Construction activities on the Project site would utilize equipment that has the potential to generate vibration, such as small bulldozers, large bulldozers, jackhammers, and loaded trucks. Vibration levels at sensitive receptors near the Project site during Project construction are summarized on DEIR Table 4.11-10, *Project Construction Vibration Levels*. At distances ranging from 51 to 5,046 feet from the Project construction activities, construction vibration velocity levels are estimated to range from less than 0.00 to 0.03 in/sec PPV. Based on maximum acceptable continuous vibration threshold of 0.30 PPV (in/sec), the typical Project construction vibration levels would be below the building damage thresholds at all receiver locations. Therefore, the Project-related vibration impacts are considered less

than significant during the construction activities at the Project site and no mitigation is required. (DEIR, p. 4.11-30)

Operational Analysis

Under long-term conditions, the Project would not include or require equipment or activities that would result in perceptible groundborne vibration at or beyond the Project site. The Project would not result in the exposure of persons to excessive groundborne vibration or noise levels during long-term operation. Impacts would be less than significant, and no mitigation is required. (DEIR, p. 4.11-30)

3.13.3 THRESHOLD C

Impact Statement: The Project would not expose people residing or working in the Project area to excessive noise levels due to airport noise.

❑ Findings

Potential impacts of the Project related to Threshold c are discussed in Section 4.11.7 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold c; therefore, no mitigation is required.

❑ Substantial Evidence

The Project site is located within the AELUP for JFTB Los Alamitos. An on-site exterior aircraft noise impact analysis has been completed to determine the noise exposure levels that would result from adjacent JFTB Los Alamitos aircraft noise sources in the Project study area, and to identify environmental impacts from the proposed Project and potential noise abatement measures for the proposed Project that would achieve acceptable Project noise levels, if required. (DEIR, p. 4.11-31)

The JFTB Los Alamitos is located adjacent to, and northwest of the Project. DEIR Figure 4.11-4, *APHC 2020 Airport Noise Level Contour Boundaries* shows the Project site in relation to the airport's projected noise level contour boundaries, as provided by the 2020 Noise Assessment for Los Alamitos Airfield, Joint Forces Training Base Los Alamitos. As shown on DEIR Figure 4.11-5, *On-Site Aircraft Noise Level Contours*, the northwestern portion of the Project site would locate residential uses between the 60 and 65 dBA CNEL noise level contours. Residential land uses exposed to noise levels less than 60 dBA CNEL are "normally consistent." Residential uses are considered "conditionally consistent" with AELUP Noise limitations, so long as sound attenuation as required by the California Noise Insulation Standards, Title 25, California Code of Regulations is implemented to ensure that the interior CNEL does not exceed 45 dB. (DEIR, p. 4.11-31)

The interior noise level is the difference between the predicted exterior noise level at the building facade and the noise reduction of the structure. Typical building construction would provide a Noise Reduction (NR) of approximately 12 dBA with "windows open" and a minimum 25 dBA noise reduction with "windows closed." However, sound leaks, cracks and openings within the window assembly can greatly diminish its effectiveness in reducing noise. Several methods are used to improve

interior noise reduction, including: (1) weather-stripped solid core exterior doors; (2) upgraded dual glazed windows; (3) mechanical ventilation/air conditioning; and (4) exterior wall/roof assembles free of cut outs or openings. (DEIR, p. 4.11-31)

The Project will provide mechanical ventilation (e.g. air conditioning) in all units. With implementation of PDF-N-2, which includes the use of windows with a STC rating of 29 on all second floor facades adjacent to Lampson Avenue and JFTB Los Alamitos, the Project would be designed to achieve a 25 dBA reduction and meet the 45 dBA CNEL interior noise standard. Accordingly, the Project would not expose people residing or working in the Project area to excessive noise levels from airport or aircraft operations, and impacts would be less than significant. No mitigation is required. (DEIR, p. 4.11-31)

3.13.4 CUMULATIVE IMPACTS

Impact Statement: The Project would not result in cumulatively considerable impacts related to noise (construction-related or on-site operational noise).

❑ Findings

Potential cumulative noise impacts of the Project related to construction and on-site operation are discussed in detail in Section 4.11.8 of the DEIR. The City finds that the development of the proposed Project would not result in significant cumulative impacts related to noise; therefore, no mitigation is required.

❑ Substantial Evidence

Construction Noise

Construction activities associated with the proposed Project, especially activities involving heavy equipment, could create intermittent periods of noise when construction equipment is in operation and could cause a short-term increase in ambient noise levels. The list of cumulative projects that have the potential to collectively increase noise is provided in Table 4.0-1 and the locations are shown in Figure 4.0-1 in Section 4.0, *Environmental Analysis*, of the DEIR. As shown, there are no on-going or imminent construction projects in the immediate vicinity of the proposed Project site with construction periods that are expected to overlap with the Project. Accordingly, there is no potential for Project-related construction activities to contribute to cumulatively-considerable impacts to sensitive receptor locations. (DEIR, p. 4.11-34)

Operational Noise

The analysis presented under Threshold a addresses the Project's contribution of noise to existing cumulative noise sources (i.e., ambient noise) in the Project area. As described above, the Project would not result in an increase in the cumulative noise levels at sensitive receiver locations. (DEIR, p. 4.11-24)

DEIR Table 4.11-11, *Cumulative Project Traffic Noise Increases*, shows that the Project's potential off-site contribution to cumulative traffic noise levels ranges from 0.7 to 1.0 dBA CNEL. Based on the significance criteria for off-site traffic noise presented for off-site traffic noise impacts, land uses adjacent to the study area roadway segments would not experience cumulatively considerable noise level increases due to Project-related traffic noise level increases and cumulative impacts would be less than significant. (DEIR, p. 4.11-34)

Groundborne Vibration and Noise

During construction, the Project's peak vibration impacts would occur during the grading phase when large pieces of equipment, like bulldozers, are operating on-site. (During the non-grading phases of Project construction, when smaller pieces of equipment are used on-site, the Project's vibration would be minimal.) Vibration effects diminish rapidly from the source; therefore, the only sources of cumulative vibration in the vicinity of the Project site could occur on properties abutting these sites. As described above, there are no known active or pending construction projects abutting the Project site that would overlap with the Project's proposed construction schedule. Accordingly, there is no potential for the Project to contribute to the exposure of persons to substantial temporary groundborne vibration or noise. (DEIR, p. 4.11-34)

Under long-term conditions, the Project would not include or require equipment or activities that would result in perceptible groundborne vibration beyond the Project site. Therefore, Project vibration would not combine with vibration sources from other related projects. The Project would not cumulatively-contribute to the exposure of persons to excessive groundborne vibration or noise levels during long-term operation. (DEIR, p. 4.11-34)

Airport Noise

There are no conditions associated with implementation of the Project that would contribute to airport noise or exposure of additional people to unacceptable levels of airport noise. DEIR Figure 4.11-4, *APHC 2020 Airport Noise Level Contour Boundaries* shows the Project site in relation to the airport's projected noise level contour boundaries, as provided by the 2020 Noise Assessment for Los Alamitos Airfield, Joint Forces Training Base Los Alamitos. As shown on DEIR Figure 4.11-5, *On-Site Aircraft Noise Level Contours*, the northwestern portion of the Project site would locate residential uses between the 60 and 65 dBA CNEL noise level contours. As discussed in Threshold c based on the Project's design, the Project would not expose people residing or working in the Project area to excessive noise levels from airport or aircraft operations, and impacts would be less than significant. The Project would not, when combined with related projects, affect airport-related military operations and related noise impacts. Therefore, the Project would not cumulatively-contribute to the exposure of persons residing or working in the Project area to excessive airport-related noise levels. All other development projects within the AELUP for JFTB Los Alamitos would be subject to the compatibility criteria and would be required to comply with statutory and regulatory noise requirements.

3.14 POPULATION AND HOUSING

Project impacts for Populations and Housing Thresholds a and b do not result in significant impacts and findings are discussed below.

3.14.1 THRESHOLD A

Impact Statement: The Project would not induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure).

❑ Findings

Potential impacts of the Project related to Threshold a are discussed in Section 4.12.5 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold a; therefore, no mitigation is required.

❑ Substantial Evidence

The Project would redevelop the Project site, which currently includes a vacant office building, with a residential development consisting of a variety of different product types, including single family detached homes, townhomes, and apartments. The unit mix would include 55 single family detached homes, 114 townhomes, and 76 for rent affordable multi-family apartment units, as well as one market rate manager's apartment unit totaling 246 residential units. The overall density for the Project would be 20 dwelling units per acre. This analysis assesses whether the construction and operation of the Project would induce direct or indirect substantial unplanned population growth. (DEIR, p. 4.12-8)

Construction

The Project would be developed over an approximately 39.5-month construction period. Project construction activities would require contractors and laborers. It is anticipated that general construction labor would be available from the local and regional labor pool and would not result in substantial population growth because the construction workers would commute from their respective homes. Additionally, each construction phase (e.g., demolition, grading, paving, electrical etc.) requires different skills and specialties, which would be needed for the length of time of that phase. Because of that, the Project's construction phases would not result in a long-term increase in employment which could induce substantial unplanned population growth from short-term construction activities. Therefore, the Project would not directly or indirectly induce substantial population growth in the City during construction. Impacts would be less than significant, and no mitigation is required. (DEIR, p. 4.12-8)

Operation

The Project would result in the development of 246 dwelling units. Assuming an average household size of 2.63, consistent with the household size reported in the City's 2021-2029 Housing Element, the Project would generate approximately 647 new residents in the City. (DEIR, p. 4.12-9)

As shown in DEIR Table 4.12-5, *Estimated Population and Housing in Los Alamitos with Project*, the Project's proposed 246 households and 647 residents were assumed in the growth projections of the City's General Plan. (DEIR, p. 4.12-9)

On February 21, 2023, the City adopted its General Plan Housing Element to reflect the 2021-2029 cycle. As shown in DEIR Table 4.12-4, *City of Los Alamitos Regional Housing Needs Allocation*, the City's RHNA allocation is 769 housing units based on SCAG 6th Cycle Final RHNA Allocation Plan. The Project site is identified within the City's Housing Element as a housing element site with an estimate of 246 units. Development of the Project with a total of 246 units would be consistent with the City's 2021–2029 Housing Element. (DEIR, p. 4.12-9)
The City's General Plan designates the Project site for "Multiple Family Residential-25" land use and the Project site is zoned as "Multi-Family Residential (R-3)." The R-3 zone applies to lots intended to provide multi-family housing. The maximum permitted density is 25 dwelling units per net acre. As discussed above, the Project would include a total of 246 units with an overall density of 20 dwelling units per acre, which is less than the 25 dwelling units per acre allowed by the underlying General Plan and zoning designations. Therefore, the Project would be consistent with the General Plan land use and zoning designation and the associated growth anticipated for the Project site pursuant to the General Plan as amended. (DEIR, p. 4.12-9)

The jobs-housing ratio is a general measure of the number of jobs versus housing in a defined geographical area and the recommended target is 1.0. As shown in DEIR Table 4.12-5, the City is "jobs-rich" and at a ratio of 3.4 jobs/housing, it is currently well above the target ratio. At Project buildout, the Project's addition of 246 units would be expected to beneficially affect the City's jobs-housing balance, by increasing more housing to the City and reducing the jobs-housing ratio from 3.33 to 3.17 at Project buildout (see DEIR Table 4.12-5). (DEIR, p. 4.12-10)

The Project would not result in substantial unplanned growth in the area because: 1) the Project is within the growth projections of the City's General Plan, 2) the planned housing is a requirement of State Housing Law and in response to an existing unmet need for housing, 3) the Project is consistent with the existing General Plan land use and zoning designations, and 4) the Project improves the City's job-housing balance by developing housing in a currently jobs-rich and housing-poor area. Therefore, implementation of the Project would not result in substantial unplanned population growth, and impacts would be less than significant. No mitigation is required. (DEIR, p. 4.12-10)

Indirect Impacts

Implementation of the Project could result in a substantial and unplanned level of growth if it would result in the extension of new roads or other infrastructure that could induce population growth. As detailed in DEIR Section 3.0, *Project Description*, of the DEIR, the Project would not require construction of new roadways but would require connection of utility infrastructure to serve the development. (DEIR, p. 4.12-10)

The Project would not result in the alteration of the segment of Lampson Avenue that abuts the Project site except for the replacement of the existing median curb and construction of the two proposed

driveways shown in DEIR Figure 3-27, *Physical Disturbance Area*. Additionally, it should be noted that a restricted emergency vehicle access point at Lampson Avenue would be provided at the eastern end of the site. Domestic water lanes would be provided as shown in DEIR Figure 3-23, *Utility Plan*. The Project would include a 1,200 feet watermain extension between the eastern driveway and the existing GSWC watermain at the intersection of Lunar and Lampson. The Project would include, at a minimum, an 8" watermain size for the extension. A lift station and force main are proposed at the southeast corner of the Project site (refer to DEIR Figure 3-23). The Project would connect the force main to the existing 8-inch sanitary sewer line at the southeast corner of the site. All connections to existing sanitary sewer lines would be constructed in accordance with City standards. The Project also would involve utility connections to existing facilities to provide electric power and telecommunications services to serve the Project site. (DEIR, p. 4.12-10)

Because all proposed utility infrastructure would connect to existing facilities and would exclusively serve the proposed development and would not increase capacity for other related projects in the area, this Project infrastructure would not indirectly induce substantial unplanned population growth. (DEIR, p. 4.12-10)

Summary

Based on the foregoing analysis, the Project is not expected to be a catalyst for any substantial, unplanned population increases. Based on the foregoing analysis, neither the Project nor any Project-related component would directly or indirectly result in substantial unplanned population growth that would cause a significant impact to the environment. Impacts would be less than significant, and no mitigation is required. (DEIR, pp. 4.12-10 to 4.12-11)

3.14.2 THRESHOLD B

Impact Statement: The Project would not displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere.

❑ Findings

Potential impacts of the Project related to Threshold b are discussed in Section 4.12.5 of the DEIR. The City finds that the development of the proposed Project would not result in significant impacts related to Threshold b; therefore, no mitigation is required.

❑ Substantial Evidence

Under existing conditions, the Project site is developed with a vacant two-story, 88,000 sf commercial office building and parking lot. The Project site does not contain any existing residential structures. Therefore, implementation of the Project would not displace a substantial number of existing people or housing, but, in fact, would provide additional housing opportunities for the community. As such, the implementation of the Project would not necessitate construction of replacement housing elsewhere. No impacts would occur, and no mitigation is required. (DEIR, p. 4.12-11)

3.14.3 CUMULATIVE IMPACTS

Impact Statement: The Project would not result in cumulatively considerable impacts related to population and housing.

❑ Findings

Potential cumulative population and housing impacts of the Project are discussed in detail in Section 4.12.6 of the DEIR. The City finds that the development of the proposed Project would not result in significant cumulative impacts related to population and housing; therefore, no mitigation is required.

❑ Substantial Evidence

The Project would provide 246 dwelling units, of which 76 would be affordable multi-family for rent apartment units, as well as one market rate manager's apartment unit, in the City of Los Alamitos. The related projects (see DEIR Section 4.0, *Environmental Analysis*, for the related projects list), would result in an increase of 107 residential units, 2,724 square feet of commercial uses, and 5,200 square feet of office uses. As shown in DEIR Table 4.12-6, *Cumulative Projects Population, Housing, and Employment Growth Trends in Los Alamitos*, the related projects' residential uses would generate approximately 281 residents, which when combined with the Project, results in 928 residents. As shown, the Project and related projects would be within the growth projections of the City's General Plan and would improve the City's job-housing balance by developing housing in a currently jobs-rich and housing-poor area. Therefore, the Project with related projects contribution to unplanned housing and population growth would not be cumulatively considerable. Cumulative impacts would be less than significant. (DEIR, pp. 4.12-11 to 4.12-12)

Under existing conditions, there are no existing people or housing located on-site. As such, the Project has no potential to contribute to a cumulatively significant impact associated with the need to construct unplanned housing units. (DEIR, p. 4.12-12)

3.15 PUBLIC SERVICES

Project impacts for Public Services Threshold a does not result in significant impacts and findings are discussed below.

3.15.1 THRESHOLD A

Impact Statement: The Project would not result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: Fire Protection; Police Protection; Schools; Parks; or Other Public Facilities.

❑ Findings

Potential impacts of the Project related to Threshold a are discussed in Section 4.13.5 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold a; therefore, no mitigation is required.

❑ Substantial Evidence

Fire Protection Services

Implementation of the Project would increase the overall demand on fire protection and emergency services in the City. Project buildout would result in an increase of 246 dwelling units and approximately 647 residents. This Project related growth is expected to create the typical range of fire and emergency service calls, and would increase call volumes, which may affect response times for emergency and non-emergency services. (DEIR, p. 4.13-9)

However, considering the existing firefighting resources available in the City, implementation of the Project is not expected to result in the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impact. Per correspondence with the OCFA, there are currently no deficiencies in fire protection service provided to the Project site. Additionally, response times would not decrease to necessitate the construction of a new fire station. In order to maintain acceptable service ratios, OCFA uses a fair share approach to mitigate fire service response impacts and facility/equipment needs. Project development would occur in an area of the City already served by OCFA; therefore, the Project would not result in an expansion of OCFA's service area. In the event of an emergency within the Project site that requires more resources than the primary fire stations that serve the area could provide, OCFA would direct resources to the site from other OCFA stations nearby. (DEIR, p. 4.13-9)

Further, the Project would be required to comply with all applicable fire code and ordinances for construction, access, water mains, fire flows, and fire hydrants. For example, site plans would be submitted to OCFA to ensure compliance with OCFA standard conditions, including fire flow requirement based upon the tenant type, building size, and building type. Access to and around structures would meet OCFA and CFC requirements. DEIR Figure 4.8-3, *Fire Master Plan*, demonstrates compliance with all codes and other regulations governing water availability for firefighting and emergency access to the Project site and structures. Compliance with OCFA requirements would ensure adequate provision of resources such as access, water mains, fire flows, and fire hydrants. (DEIR, p. 4.13-9)

In order to ensure adequate levels of fire protection service within the City of Alamitos, OCFA typically enters into a Secured Fire Protection Agreement with private developers. As a condition of approval, the Project Applicant is required to enter into a Secured Fire Protection Agreement to provide for fair-share funding of capital improvements necessary to establish adequate fire protection facilities and equipment, and/or personnel. OCFA has not indicated the need for a new fire station or expansion of existing facilities due to the Project. The Secured Fire Protection Agreement would ensure that

responses times and service ratios are met due to the implementation of the Project and no new fire station facilities would be required. (DEIR, p. 4.13-9)

Because the Project does not include construction of new fire station facilities and does not generate a need for additional facilities, Project-related impacts to fire protection services would be less than significant and no mitigation is required. (DEIR, p. 4.13-9)

Police Protection Services

Buildout of the Project would increase demands for police protection services in the City. During the construction and operation of the Project, the need for police services is expected to grow due to the increase in population. Crime and safety issues during Project construction may include theft of building materials and construction equipment, malicious mischief, graffiti, and vandalism. After construction, the Project is anticipated to generate a typical range of police service calls as similar developments. (DEIR, p. 4.13-10)

The increase in demands on police services resulting from the implementation of the Project would not adversely impact Los Alamitos Police Department's existing resources. There are currently no staffing or equipment deficiencies in the service area. The increase in potential services needed would not require the construction of a new police station or improvements to the existing station that serves the Project site. Implementation of the Project would result in an increase in calls for service; however, Los Alamitos Police Department has indicated that this increase would not adversely impact Los Alamitos Police Department's existing resources. The existing resources would be adequate to meet the additional demands generated by the Project. The Los Alamitos Police Department has not indicated the need for a new police station or expansion of existing facilities due to the Project. Responses times and service ratios would be met and would not require the construction of new facilities. (DEIR, p. 4.13-10)

Moreover, Project development would result in increased property and, indirectly, sales tax revenue proportionally increasing the City's General Fund revenue, providing funding for police protection services, equipment, and/or personnel. Because the Project does not include construction of new police facilities and does not generate a need for additional facilities, increases in demands for police protection resulting from implementation of the Project impacts would be less than significant. No mitigation is required. (DEIR, p. 4.13-10)

School Services

Project buildout would allow for up to 246 dwelling units, which would result in a population increase of approximately 647 residents. The population would lead to an increase in student population, which in turn may create additional demand for Los Alamitos Unified School District (LAUSD) service and facilities. (DEIR, p. 4.13-10)

Schools serving the Project site include Rossmoor Elementary School, McAuliffe Middle School, and Los Alamitos High School. Student generation rates are used by school districts to estimate the number

of students generated by new development in order to determine whether or not existing school facilities would be adequate for future students. As shown in DEIR Table 4.13-4, *Projected Student Populations*, the Project would generate a total of 135 students (51 students in K-5, 33 students in grades 6-8, and 51 students in grades 9-12). (DEIR, p. 4.13-10)

As shown in DEIR Table 4.13-5, *Projected School Capacity at Project Buildout*, there is adequate capacity to serve the students from the 6-8 and 9-12 grade levels. Based on current enrollment, there is a deficiency of 45 students at the K-5 grade level at Project buildout. However, the District currently has open enrollment which allows students to attend schools other than the school assigned based upon their area of residence. As shown in DEIR Table 4.13-5 there are four other K-5 elementary schools within a 2.5-mile radius of the Project site with a total excess capacity of 62 students and enough excess capacity to serve the Project generated 51 K-5 students. The projected student population is conservative because it represents a snapshot in time. It is unlikely that all students generated by the Project would occur at Project buildout but rather would fluctuate over the life of the Project. (DEIR, p. 4.13-11)

The Project would be required to pay development impact fees to LAUSD under SB 50 for the construction of new schools, which provides full and complete mitigation to school facilities. Development impact fees currently charged by LAUSD for residential uses are $4.79 per sf. Although Project buildout would result in an increase of 135 students, the availability of schools in the area and the payment of impact fees in compliance with SB 50 would address any potential impacts. Therefore, based on the preceding, impacts from implementation of the Project on school services would be less than significant. No mitigation is required. (DEIR, pp. 4.13-11 to 4.13-12)

Parks

As discussed in DEIR Section 4.14, *Recreation*, the additional dwelling units would result in an increase in the number of residents in the City, which could lead to an increase in demand for existing City parks and recreational facilities. Using a conservative figure, the City currently has a total of 58.44 acres of parkland. (DEIR, p. 4.13-12)

The Project would provide a variety of common open space amenities, as well as a variety of privately maintained open space and decks. The Project would provide a total of 58,027 square feet (sf) or 1.33 acres of open space on the Project site, including 16,508 sf of usable common open space and 41,519 sf of private open space (homeowner maintained). Additionally, as shown in DEIR Table 4.14-1, *Existing Parks and Recreation Facilities*, there are a total of 317.49 acres of parks, recreational facilities, and community centers throughout the City that would serve future Project residents. (DEIR, p. 4.13-12)

Development of the on-site open space and amenities have been evaluated throughout the DEIR as part of the Project. The Project would result in an increase in residents; however, the Project is not anticipated to increase the use of the existing parks such that substantial additional use or physical deterioration of the existing parks would occur or be accelerated. Based on the Project's Parks Impact Analysis (*Technical Appendix M* of the DEIR), there is sufficient capacity at existing neighborhood

parks to accommodate the Project residents. Moreover, the Project Applicant would be required pay in-lieu fees in accordance with the City's park dedication requirements under LAMC Chapter 16.18, Dedication of Land for Park Facilities and Payment of In Lieu Fees. Therefore, impacts would be less than significant. Refer to DEIR Section 4.14, *Recreation*, for further discussion. (DEIR, p. 4.13-12)

Other Public Facilities

Project buildout would increase population onsite by an estimated 647 residents, thus increasing demand for other public facilities, such as library services. Increased demands are expected to most affect the library facilities closest to the Project site – that is the Los Alamitos-Rossmoor Library. According to the administrative manager of the Orange County Public Libraries (OCPL), it is anticipated that the increase in residents may impact service. With the current renovations at the library, however, OCPL does not expect Project buildout to require construction of new or expanded physical library facilities, the construction of which could cause a substantial adverse impact. Although future Project residents would be mainly served by the Los Alamitos-Rossmoor Library, they would have access to all libraries within OCPL's system. Therefore, impacts to library services would be less than significant and no mitigation is required. (DEIR, p. 4.13-12)

3.15.2 CUMULATIVE IMPACTS

Impact Statement: The Project would not result in cumulatively considerable impacts related to public services.

❑ Findings

Potential cumulative public services impacts of the Project are discussed in detail in Section 4.13.6 of the DEIR. The City finds that the development of the proposed Project would not result in significant cumulative impacts related to public services; therefore, no mitigation is required.

❑ Substantial Evidence

This cumulative impact analysis considers development of the Project in conjunction with other development projects and planned development within the providers respective service areas. Residential and employment population increases and associated increases in the demand for public services have been taken into account in long-range planning efforts on behalf of the City and the agencies providing public services to the area. (DEIR, pp. 4.13-12 to 4.13-13)

Fire Protection Services

Future development projects within OCFA's service area would be required to comply with CFC and OCFA regulations and standards to maintain adequate access within the Project site, which further ensures an adequate level of service for fire protection and emergency services to residents, workers, and visitors in the Project site. Future development projects are reviewed by the City and OCFA to ensure compliance with all applicable building code and other code requirements in effect at the time building permits are issued. Additionally, OCFA requires new development (over 50 units) to enter into a Secured Fire Protection Agreement to provide for fair-share funding of capital improvements,

including facilities, equipment, and radio/communications systems. In order to maintain acceptable service ratios, OCFA uses a fair share approach to mitigate fire service response impacts and facility/equipment needs. Secured Fire Protection Agreements with future development would ensure that responses times and service ratios are met due to the implementation of cumulative development within its service area and facilities are upgraded as needed. Similar to the Project, future cumulative development projects would result in increased property and sales tax revenue, which would provide additional funding for any capital improvements necessary to maintain adequate fire protection facilities, equipment, and/or personnel. By maintaining a consistent level of service through expansion of facility improvements, OCFA would be able to ensure that its performance objectives are consistently met. The Project's increased demand for fire protection services, in conjunction with the increased demand for cumulative development pursuant to the City's General Plan, would not result in significant cumulative impacts. (DEIR, p. 4.13-13)

Police Protection Services

Local population growth would result in an increased demand for public services and facilities, including law enforcement. Service providers would continue to evaluate levels of service and potential funding sources to meet demand. The City performs long-range planning for the provisions of public services and facilities based on its growth projections, which are revised over time and includes areas within the City's sphere of influence. Through assessments of the City's capital improvement needs and annual budget review process, police department needs are assessed, and budget allocations are revised accordingly to ensure that adequate levels of police services, including police protection facilities, equipment, and/or personnel, are maintained throughout the City. (DEIR, p. 4.13-13)

The existing resources would be adequate to meet the additional demands generated by any known cumulative developments in addition to the Project (Claborn, 2024). Responses times and service ratios would be met and would not require the construction of new facilities. Increased property and sales tax from future new developments would provide funding for any capital improvements necessary to maintain adequate police protection facilities, equipment, and/or personnel. By maintaining a consistent level of service through expansion or facility improvements, Los Alamitos Police Department would be able to ensure that its performance objectives are consistently met. Furthermore, individual development projects pursuant to the City's General Plan would be reviewed by the City and would be required to comply with the requirements in effect at the time building permits are issued. Therefore, the demand for police services would not be adversely affected by the Project in conjunction with cumulative development pursuant to the City's General Plan. No significant cumulative impacts related to police services are anticipated. (DEIR, pp. 4.13-13 to 4.13-14)

School Services

Cumulative development in the LAUSD service area would increase the student population in LAUSD schools. As shown in DEIR Table 4.12-6, *Cumulative Projects Population, Housing, and Employment Growth Trends in Los Alamitos*, the projected population of the City at Project buildout, combined with related projects in the City, would be 12,922 by 2027, an increase of 1,049 residents over existing. Based on an average student generation factor of 0.7 student per dwelling unit, the cumulative

development, including the Project, would generate a total of approximately 734 students. Based on student enrollment of LAUSD schools, enrollment has decreased by approximately 970 students from 2016 to 2023 (see DEIR Table 4.13-2). Therefore, there is sufficient capacity within LAUSD schools to serve the Project and cumulative development. (DEIR, p. 4.13-14)

The related projects (see DEIR Section 4.0, *Environmental Analysis*, for the related projects list), would result in an increase of 107 multifamily residential units. Based on the student rates in DEIR Table 4.13-4, the related projects would generate a total of 21 students. When combined with the Project's projected 135 students, a total of 156 students would be generated. As shown in DEIR Table 4.13-6, *Projected Cumulative Student Populations*, there is adequate capacity to serve the students at all grade levels. Per discussion with LAUSD, capital improvements, including upgrades or the replacement of existing facilities with new facilities for their continued long-term use, are necessary to adequately serve future enrollment growth at all school levels. With proper planning and appropriate resources, LAUSD will be able to serve all students generated from future cumulative development. (DEIR, p. 4.13-14)

While there is currently available capacity at all grade levels, the cumulative effect of additional projects may increase enrollment beyond capacity. However, the capacity would be mitigated by applying SB 50 developer fees to accommodate new growth. In accordance with SB 50, the State Legislature provided authority for school districts to assess impact fees for both residential and nonresidential development projects to provide these resources. The fees, as authorized under Education Code Section 17620(a) and Government Code Section 65995(b), are collected by municipalities at the time building permits are issued and conveyed to the affected school district in accordance with a defined fee structure, and the payment of these fees constitutes full mitigation for the impacts generated by new development, per Government Code Section 65995. The Project and cumulative development must pay appropriate impact fees. Implementation of the Project in conjunction with other cumulative development would not result in a cumulative impact to school services. (DEIR, pp. 4.13-14 to 4.13-15)

Parks

As discussed in DEIR Section 4.14, *Recreation*, cumulative development will increase the demand in parks and recreational facilities. Recreational needs of future residents of the Project would add to citywide and regional demand for park and recreational facilities. As discussed in DEIR Section 4.14, *Recreation*, Project impacts to recreation would be less than significant. As shown in DEIR Table 4.14-1, there is a total of 317.49 acres of park and recreation facilities in Los Alamitos and 35.05 acres of park and recreational facilities in Rossmoor, for a total of 389.02 acres of park and recreational facilities in the City and its Sphere of Influence (SOI). Pursuant to the City's General Plan Update EIR, buildout of the General Plan (14,204 residents in the City and 10,540 residents in Rossmoor) would be accommodated by the existing parkland in the City and its SOI and no significant impacts would occur related to the physical deterioration of recreational facilities. Therefore, with the increase of projected population in 2027 at Project buildout, there is sufficient parkland and recreational facilities to serve City residents. The Project would not cumulatively contribute to deterioration of recreational facilities

or the construction of recreational facilities which might have an adverse physical effect on the environment. (DEIR, p. 4.13-15)

Cumulative development projects would be required to comply with all applicable existing regulations, procedures, and policies that are intended to address impacts to park and recreation facilities. For example, per the City's park dedication requirements under LAMC Chapter 16.18, Dedication of Land for Park Facilities and Payment of In Lieu Fees, all new residential development is required either to dedicate parkland or pay park facilities impact fees to offset the cost to expand or construct new park and recreational space and facilities to adequately serve the City's growing population. Therefore, cumulative impacts related to park and recreational space and facilities would be less than significant. (DEIR, p. 4.13-15)

Other Public Facilities

Cumulative population growth within the service area as a result of the cumulative projects will likely increase the demand on other public facilities, such as library services. Similar to the Project, future residents of development projects within the City may visit the Los Alamitos-Rossmoor Library. However, future residents would have access to all 32 OCPL branch libraries, online resources, and interlibrary loans. Therefore, library capacity would not be significantly impacted, and cumulative Project impacts would be less than significant. (DEIR, p. 4.13-15)

3.16 RECREATION

Project impacts for Recreation Thresholds a and b do not result in significant impacts and findings are discussed below.

3.16.1 THRESHOLD A

Impact Statement: The Project would not increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated.

❑ Findings

Potential impacts of the Project related to Threshold a are discussed in Section 4.14.5 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold a; therefore, no mitigation is required.

❑ Substantial Evidence

The Project includes a 246-unit residential development on an approximately 12.3-acre lot, which would increase housing capacity and increase population growth in the City of Los Alamitos. The increase of 246 dwelling units would result in a population growth of approximately 647 residents. (DEIR, p. 4.14-8)

There is a total of 316.83 acres of park and recreation facilities in Los Alamitos and 35.05 acres of park and recreational facilities in Rossmoor, for a total of 351.8 acres to meet the recreational needs of the City's residents. (DEIR, p. 4.14-8)

As shown in DEIR Figure 3-12, *Open Space Plan*, the Project would provide a total of 58,027 square feet (sf) or 1.33 acres of open space in the Project site, including 16,508 sf of usable common open space, 41,519 sf of private open space (homeowner maintained). The usable common open space areas would include amenities such as a tot-lot with rubberized play surface, shade surface with BBQ Island and dining furniture, lawn area with cornhole, ping pong table, and lounge seating with fire-pit. There are also 4,620 sf of multifamily private decks and 5,181 sf of townhomes private decks that would be provided onsite. The Project has been designed with these enhanced recreational amenities to meet the needs of its future residents. (DEIR, p. 4.14-8)

Although the designed neighborhood open space areas are anticipated to meet many of the park and recreation needs of Project residents, Project residents are also anticipated to utilize existing off-site park and recreation facilities in the City of Los Alamitos and nearby Rossmoor and City of Seal Beach Park system. Future residents of the Project site would also have access to (within walking distance) the following public park and recreational facilities, which comprise just over 14 acres of usable parkland and open space:

- Arbor Park, located directly north of the Project site, includes baseball fields leased by LAYB within its approximately 9.60-acre site.

- Arbor Dog Park, located directly north of the Project site, includes a dog park that is currently leased by the City of Seal Beach from the JFTB for its residents within its approximately 1.40-acre site.

- Orville Lewis Park, located approximately 1 mile northwest of the Project site, includes a grass area, baseball backstop, basketball court, play area, barbecue, picnic shelter and tables, and drinking fountain within its approximately 1.65-acre site. (DEIR, pp. 4.14-8 to 4.14-9)

- Heather Park, located approximately 350 feet southwest of the Project site, includes two lit tennis courts, one tot lot/play structure, one swing set, and four picnic tables within its approximately 1.6-acre site. (DEIR, p. 4.14-9)

The Project also includes a dedication or easement for the northerly 10 feet strip of land abutting Arbor Park and Arbor Dog Park, which comprises an area of approximately 10,000 sf of the Project site. (DEIR, p. 4.14-9)

If the Project were to generate park visitors that exceed its carrying capacity, it could result in additional maintenance requirements or physical deterioration of existing parks. Based on the Project's Parks Impact Analysis (*Technical Appendix M* of the DEIR), it is anticipated that a negligible amount of

Project residents will regularly visit parks in close proximity to the Project site specifically, Arbor Park, Arbor Dog Park, and Heather Park. Specifically, a total of 178 Project residents would visit the designed neighborhood open spaces within the Project site and 131 Project residents would visit the Arbor Park, Arbor Dog Park, and Heather Park as the parks they visit most often (*Technical Appendix M* of the DEIR). Project residents would visit (frequent) Arbor Park and Heather Park as follows: approximately 22 users 2 times per week, 18 users once per week, 27 users once or twice per month, 32 users several times per year, and 20 users once or twice per year. (see Table 2, *Technical Appendix M* of the DEIR). Project residents would visit (frequent) Arbor Dog Park at least 147 times at least once per week. (see Table 4, *Technical Appendix M* of the DEIR). (DEIR, p. 4.14-9)

The carrying capacity of the Arbor Park and Heather Park would be 337 visitors and there is no calculation for carrying capacity for Arbor Dog Park since dog parks do not have a calculation for carrying capacity unlike parks. Because the projected number of Project visitors to these parks are well within the carrying capacity, there is sufficient capacity at existing nearby neighborhood parks to accommodate the Project residents. With full occupancy of the Project, the designed neighborhood open spaces within the Project site, the capacity and existing maintenance and usage of existing parks, and the estimated visitation of the Project residents to the existing parks; the Project is not anticipated to increase the use of the existing parks such that substantial additional use or physical deterioration of the existing parks would occur or be accelerated. (DEIR, p. 4.14-9)

The Project Applicant would be required pay in-lieu fees in accordance with the City's park dedication requirements under Chapter 16.18 (Dedication of Land for Park Facilities and Payment of In Lieu Fees) of the City of Los Alamitos Municipal Code. Therefore, implementation of the Project would not result in significant impacts relating to the physical deterioration of recreational facilities and impacts would be less than significant. (DEIR, pp. 4.14-9 to 4.14-10)

3.16.2 THRESHOLD B

Impact Statement: The Project would not include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.

❑ Findings

Potential impacts of the Project related to Threshold b are discussed in Section 4.14.5 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold b; therefore, no mitigation is required.

❑ Substantial Evidence

The Project would include a variety of common open space amenities and private open space areas. The construction of these recreational facilities would occur within the boundaries of the Project site and would be constructed as part of the proposed Project. The Project's construction impacts are analyzed throughout the DEIR and mitigation is incorporated where necessary. As concluded in the DEIR, the Project's construction impacts would be less than significant, in some cases with the

implementation of mitigation. Therefore, impacts associated with the Project's on-site recreational facilities would be less than significant. (DEIR, p. 4.14-10)

Furthermore, per the analysis provided above under Threshold a, development that would be accommodated under the Project would not require the construction of new or the expansion of existing City parks and recreational facilities. Additionally, the Project does not propose to expand any existing recreational facilities. Therefore, implementation of the Project would not result in significant impacts relating to new and/or expanded park and recreational facilities. No mitigation is required. (DEIR, p. 4.14-10)

3.16.3 CUMULATIVE IMPACTS

Impact Statement: The Project would not result in cumulatively considerable impacts related to recreation.

❑ Findings

Potential cumulative recreation impacts of the Project are discussed in detail in Section 4.14.6 of the DEIR. The City finds that the development of the proposed Project would not result in significant cumulative impacts related to recreation; therefore, no mitigation is required.

❑ Substantial Evidence

This cumulative impact analysis considers development of the proposed Project in conjunction with other development projects and planned development in the City. (DEIR, p. 4.14-10)

The recreational needs of future residents of the proposed Project would add to citywide and regional demand for park and recreational facilities, which could contribute to a deterioration of recreational facilities. As shown in DEIR Table 4.14-1, there is a total of 316.83 acres of park and recreation facilities in Los Alamitos and 35.05 acres of park and recreational facilities in Rossmoor, for a total of 351.88 acres of park and recreational facilities in the City and its SOI available to meet the needs of City residents. To determine the cumulative public park and recreational impacts, citywide growth forecasts were considered. As shown in DEIR Table 4.12-6, *Cumulative Projects Population, Housing, and Employment Growth Trends in Los Alamitos*, the projected population at Project buildout, combined with related projects in the City, would be 13,806 by 2027. Pursuant to the City's General Plan Update EIR, Table 5.10-2, the buildout of the General Plan (14,204 residents in the City and 10,540 residents in Rossmoor) would be accommodated by the existing parkland in the City and its SOI and no significant impacts would occur related to the physical deterioration of recreational facilities. Therefore, with the increase of projected population in at Project buildout, there is sufficient parkland and recreational facilities to service city residents. The Project would not cumulatively contribute to deterioration of recreational facilities or the construction of recreational facilities which might have an adverse physical effect on the environment. (DEIR, p. 4.14-10)

Cumulative development projects would be required to comply with all applicable existing regulations, procedures, and policies that are intended to address impacts to park and recreation facilities. For

example, per the City's park dedication requirements under Chapter 16.18 (Dedication of Land for Park Facilities and Payment of In Lieu Fees) of the City of Los Alamitos Municipal Code, all new residential development is required either to dedicate parkland or pay park facilities impact fees to offset the cost to expand or construct new park and recreational space and facilities to adequately serve the City's growing population. Therefore, cumulative impacts related to park and recreational space and facilities would be less than significant. (DEIR, p. 4.14-11)

3.17 TRANSPORTATION

Project impacts for CEQA Transportation Thresholds a, c, and d do not result in significant impacts and findings are discussed below.

3.17.1 THRESHOLD A

Impact Statement: The Project would not conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities.

❑ **Findings**

Potential impacts of the Project related to Threshold a are discussed in detail in Section 4.15.5 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold a; therefore, no mitigation is required.

❑ **Substantial Evidence**

The Project's consistency with the City's General Plan Mobility and Circulation is discussed in DEIR Table 4.15-1, *Consistency with the General Plan Mobility and Circulation Element*. As presented therein, the Project would not conflict with applicable General Plan goals and policies. In addition, the Project's consistency with the SCAG's Connect SoCal is discussed in DEIR Section 4.10, *Land Use and Planning* and no conflicts were identified. The Project would not conflict with any programs, plans, ordinances, or policies addressing the circulation system including transit, roadway, bicycle, and pedestrian facilities. Impacts would be less than significant, and no mitigation is required. (DEIR, p. 4.15-9)

3.17.2 THRESHOLD C

Impact Statement: The Project would not substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).

❑ **Findings**

Potential impacts of the Project related to Threshold c are discussed in detail in Section 4.15.5 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold c; therefore, no mitigation is required.

- **Substantial Evidence**

During construction, frontage improvements including median improvements, sidewalks, driveway modifications needed to accommodate site access, and landscaping improvements would be constructed in accordance with City standards. Lane closures that may be required for median improvements would be temporary and require a permit and compliance with Los Alamitos Municipal Code (LAMC) 12.08.200, Safety precautions–Obstruction of traffic. This would ensure safe crossing and access for all vehicle and pedestrians at all times. Therefore, the Project would not substantially increase hazards due to a geometric design feature during construction activities. (DEIR, p. 4.15-16)

There are no incompatible uses such as farm equipment existing or proposed on the Project site. Vehicular access to the Project site would be provided via two driveways along the site's southern boundary on Lampson Avenue. One driveway would be located at the west side which would be the primary apartment entry. The second driveway, which would be the primary neighborhood entry, would be located in the central portion of the site along Lampson Avenue. In addition, the Project would include replacement of the existing median curb/landscape on Lampson Avenue with new median and landscape. (DEIR, p. 4.15-16)

A queuing analysis was performed for the Project driveways on Lampson Avenue under General Plan Buildout with Project traffic conditions in order to ensure that there is adequate and available stacking distance at peak hours and the Project would not create a safety hazard. Table 1-4 of the Project's Traffic Analysis (DEIR *Technical Appendix N1*) presents the queuing analysis summary for the General Plan Buildout with Project traffic conditions. The traffic modeling and signal timing optimization software package SimTraffic has been utilized to assess the queues. SimTraffic is designed to model networks of signalized and unsignalized intersections, with the primary purpose of checking and finetuning signal operations. SimTraffic uses the input parameters from Synchro to generate random simulations. These random simulations generated by SimTraffic have been utilized to determine the 95th percentile queue lengths observed for each applicable turn lane. The SimTraffic simulation has been recorded 5 times, during the weekday AM and PM peak hours, and has been seeded for 15- minute periods with 60-minute recording intervals. As a result, no site adjacent queues are anticipated at both driveways under these traffic conditions. The proposed eastbound left turn lane with a minimum of 150-feet of storage at the second driveway (primary neighborhood entry) would sufficiently accommodate the 95th percentile peak hour queues. (DEIR, pp. 4.15-16 to 4.15-17)

Additionally, there are no sharp curves or dangerous intersections proposed that would increase hazards due to geometric design features. The Project would not substantially increase hazards due to a geometric design feature or incompatible uses. Impacts would be less than significant, and no mitigation is required. (DEIR, p. 4.15-17)

A. Safey Evaluation

A Safety Evaluation was prepared for the Project (see *Attachment H* of the Final EIR) which analyzed collision data, pedestrian and bicycle safety, and site access management (e.g. driveway sight distance,

driveway spacing, project access and queuing, multimodal conflict points, and pedestrian/bicycle connections).

The Project's Traffic Analysis (see *Attachment G* of the Final EIR) evaluated this issue and determined that the primary neighborhood entry is not anticipated to meet peak hour or planning level (daily volume) based traffic signal warrants and no traffic signal at this location is needed or required. Based on the Safety Evaluation and for the reasons summarized below, the Project would not result in a safety impact or substantially increase hazards due to a geometric design feature.

Collision

As discussed in the Safety Evaluation (see *Attachment H* of the Final EIR), collision data was gathered by California Highway Patrol (CHP) Statewide Integrated Traffic Records System (SWITRS). The collision data includes 5 years of collision data gathered by CHP staff and members of its allied agencies throughout California (including the City of Los Alamitos). Table 1 of the Safety Evaluation provides a summary of the types of collisions by intersection for eight intersections. Table 2 of the Safety Evaluation provides a summary of the crash rate compared to the statewide average. The results indicated the following:

- **Basswood Street & Lampson Avenue** had a total of 1 reported collision in a 5-year period. The common collision included a sideswipe collision. Sideswipe collisions are commonly caused by failure to yield or impaired/distracted driving. The intersection of Basswood St. & Lampson Av. has a lower crash rate than the state average for similar facilities.

- **Candleberry Avenue & Lampson Avenue** had a total of 1 reported collision in a 5-year period. The common collisions included a broadside collision. Broadside collisions are commonly caused by failure to yield, failure to stop, or impaired/distracted driving. The intersection of Candleberry Av. & Lampson Av. has a lower crash rate than the state average for similar facilities.

- **Rose Street & Lampson Avenue** had a total of 2 reported collisions in a 5-year period. The common collisions included broadside and overturn collisions. Overturned vehicles are commonly caused by unsafe speeds, improper maneuvers, or loss of vehicle control. The intersection of Rose St. & Lampson Av. has a lower crash rate than the state average for similar facilities.

- **Tulip Street & Lampson Avenue** had a total of 1 reported collisions in a 5-year period. The common collision included a broadside collision. The intersection of Tulip St. & Lampson Av. has a lower crash rate than the state average for similar facilities.

- **Valley View St. & Lampson Avenue** had a total of 14 reported collisions in a 5-year period. The common collisions included rear-end and broadside collisions. Rear-end collisions are commonly caused by failure to yield, failure to stop, or impaired/distracted

driving. The intersection of Valley View St. & Lampson Av. has a lower crash rate than the state average for similar facilities.

The existing crash rates for the study area intersections are lower than the statewide average crash rates. A Project would have the potential to create an increase in collision rate if it introduced a geometric design feature that did not meet safety standards or incompatible uses (e.g. farm equipment). As demonstrated in the analysis below, implementation of Project improvements (within the public right-of-way) per Los Alamitos and Seal Beach standards ensures all that sight distance requirements, pedestrian crossing requirements, and street design requirements are met. Additionally, the Project vehicle mix is consistent with the adjacent land uses, including the residential neighborhood to the south. Therefore, it is not anticipated that the Project will result in a significant change in collision rates or result in an accident rate higher than the statewide average.

Bicycle and Pedestrian Facilities

As discussed in Section 4.7, *Transportation*, of the Draft EIR, existing sidewalks are present on both the westbound and eastbound side of Lampson Avenue, adjacent to the Project site. Crosswalks are present at the intersections of Lampson Avenue/Heather Street and Lampson Avenue/Rose Street (refer to Page 4.15-3 of the Draft EIR). Frontage improvements for the Project would include median improvements, sidewalks, driveway modifications needed to accommodate site access, and landscaping improvements as required by City standards (refer to Page 3-4 of the Draft EIR).

As discussed in the Safety Evaluation (*Attachment H* of the Final EIR), there are existing Class II (on-street, striped) bike lanes on the north and south sides of Lampson Avenue from Basswood Street to the east. In addition, there is a Class I bike/pedestrian path on Seal Beach Boulevard north of Lampson Avenue and a Class II bike lane south of Lampson Avenue. The Project would not remove any existing bike/pedestrian paths and would maintain the existing Class II bike lane on Lampson Avenue along its frontage to maintain bicycle safety. The existing sidewalks adjacent to the Project met design standards and the Americans with Disabilities Act (ADA) standards at the time they were constructed.

As stated, the sidewalks along the Project frontage will be improved as part of the Project. Frontage improvements include sidewalks, driveway modifications to accommodate site access, median modifications, and landscaping improvements as required by City standards. The proposed sidewalk along the Project's frontage on the north side of Lampson Avenue will provide connectivity with proposed sidewalks and paths internal to the Project.

The intersections at Lampson Avenue at Heather Avenue and Lampson Avenue at Rose Avenue are currently signalized and both have pedestrian crosswalks for Lampson Avenue. The wheelchair ramp on the north side of Lampson Avenue at Heather Avenue does not meet current ADA standards. However, the wheelchair ramp on the north side of Lampson Avenue at Rose Avenue does meet ADA standard requirements.

All Project driveways will be designed to meet current City standards and accommodate pedestrian crossing per current ADA standards. These improvements will ensure the Project meets all compliance requirements.

Intersection Sight Distance

Intersection sight distance at the primary neighborhood entry was evaluated by identifying limited use areas pursuant to Orange County Standard Plan 1117 – Intersection Sight Distance. The limited use areas determine the necessary sight distance to allow 7 ½ seconds for the driver on the crossroad (or left turn pocket) to safely cross the main roadway or turn left while the approach vehicle travels at the assumed design speed of the main roadway. All Project driveways are required to meet these sight distance requirements. Exhibit 3 of the Safety Evaluation shows that the primary neighborhood entry will meet the sight distance requirements, and that the Project would not create any new sight distance issues along Lampson Avenue.

Stopping Sight Distance

According to the Highway Design Manual (HDM), stopping sight distance is the minimum sight distance for a given design speed to be provided on multilane highways and on 2-lane roads when passing sight distance is not economically obtainable. Stopping sight distance also is to be provided for all users, including motorists and bicyclists, at all elements of interchanges and intersections at grade, including private road connections. Lampson Avenue has a posted speed limit of 45 miles per hour (mph). As stated in HDM Table 201, a stopping sight distance of 360 feet is the standard for a design speed of 45 mph. Therefore, the Project does not introduce any new stopping sight distance issues to Lampson Avenue.

On-Site Vehicle Circulation

The Project does not involve freight operations because the Project is a residential project. Since the proposed use is residential, a limited number of trucks would travel to the Project site (e.g. trash trucks, emergency vehicles, delivery vans). Therefore, congestion from freight trucks to and from the Project site would be negligible and there will be no conflicts between freight trucks and passenger vehicles. Attachment D of the Safety Evaluation identifies the on-site circulation for the site. The exhibits identify various vehicle paths (front-loading garbage trucks, fire trucks, delivery trucks, etc.) for various internal drive aisles, which allow for two-way traffic. Access to and from the site will be accommodated via driveways on Lampson Avenue. As shown in Attachment D of the Safety Evaluation, the vehicle turning templates show acceptable turning movements for the various vehicles and trucks anticipated to access the site. Therefore, there will be no conflicts between garbage trucks, fire trucks, and delivery trucks and passenger vehicles.

Conclusion

A review of available collision data indicates that the study area intersections have lower crash rates than the statewide average of intersections with similar configuration and settings. The addition of Project traffic is not anticipated to increase the crash rates by a significant margin. As discussed

throughout this evaluation, the implementation of Project improvements (within the public right of way) per Los Alamitos, Seal Beach, Orange County Public Works, Highway Design Manual (HDM), and American with Disabilities Act (ADA) standards ensures all sight distance requirements, pedestrian crossing requirements, and street design requirements are met. Additionally, the Project TA, *Attachment G* of the Final EIR, indicates the highest peak hour volume along Lampson Avenue at Driveway 2 is 561 vehicles (Refer to Exhibit 3-8 of the TA). The highest Project peak hour volume of 50 vehicles occurs at Driveway 2 in the evening (Refer to Exhibit 4-2 of the TA). The Project contributes 9% of the additional vehicles to the evening peak hour ([50/561]*100=9%). Therefore, the addition of Project-related traffic is not anticipated to cause any new or exacerbate any existing safety deficiencies along Lampson Avenue or in the vicinity of the Project's interface with Lampson Avenue. The City will impose upon the Project a condition of approval that will ensure that the intersection sight distance, pedestrian/bike facilities, and street facilities satisfy CA MUTCD, ADA, City of Los Alamitos, and City of Seal Beach standards.

3.17.3 THRESHOLD D

Impact Statement: The Project would not result in inadequate emergency access.

❑ Findings

Potential impacts of the Project related to Threshold d are discussed in Section 4.15.5 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold d; therefore, no mitigation is required.

❑ Substantial Evidence

As discussed in DEIR Section 3.0, *Project Description*, the Project includes a fire master plan to ensure proper installation and maintenance of fire access roadways, proper siting of hydrants, adequate water supply, and access to the structures. The Project would be required to comply with all applicable fire codes and ordinances for construction, access, water mains, fire flows, and fire hydrants. The Project would also provide adequate emergency access for emergency vehicles via Lampson Avenue. A restricted emergency vehicle access point with Lampson Avenue would be provided at the eastern end of the site. The effectiveness of emergency response and firefighting operations is directly related to the proper installation and maintenance of fire access roadways, the proper sitting of hydrants, adequate water supply, and access to structures. In accordance with OCFA Guideline B-09, Fire Master Plans for Commercial & Residential Development, Firesafe Planning Solutions prepared a Fire Master Plan for the Project (see DEIR Figure 4.8-3, *Fire Master Plan*). The Fire Master Plan demonstrates the Project's compliance with the California Fire and Building Codes and other regulations emergency access to the Project site, including but not limited to fire access and roadway design, fire lane identification, and access to structures. Compliance with OCFA Guidelines ensures that the Project is designed and constructed to provide adequate emergency access for emergency vehicles. Furthermore, the Project would be required to comply with all applicable fire code and ordinances for construction, access, water mains, fire flows, and fire hydrants. For example, site plans would be submitted to OCFA to ensure compliance with OCFA standard conditions, including fire flow requirement based upon the tenant type, building size, and building type. Access to and around structures would meet OCFA and

CFC requirements. Furthermore, OCFA submitted conditions of approval that the Project must comply with, ensuring implementation of OCFA standard conditions. Additionally, pursuant to LAMC Section 12.08, the Project would be required to provide adequate emergency access along abutting roadways during temporary construction activities within the public right-of-way. Specifically, the Project's compliance with LAMC 12.08.200 would ensure adequate access for all vehicles during temporary lane closures. (DEIR, p. 4.15-17)

Therefore, the Project would not result in inadequate emergency access and impacts would be less than significant. No mitigation is required. (DEIR, p. 4.15-18)

3.17.4 CUMULATIVE IMPACTS

Impact Statement: The Project would not result in a cumulatively considerable impact related to transportation (conflict with a program, plan, ordinance or policy addressing the circulation system; increase hazards; inadequate emergency access).

❑ **Findings**

Potential cumulative transportation impacts of the Project related to conflicts with a program, plan, ordinance or policy addressing the circulation system; increase in hazards; and inadequate emergency access are discussed in detail in Section 4.15.6 of the DEIR. The City finds that the development of the proposed Project would not result in significant cumulative impacts related to these topics; therefore, no mitigation is required.

❑ **Substantial Evidence**

This cumulative impact analysis considers development of the proposed Project in conjunction with other development projects and planned development. The analysis under Threshold a indicates that the Project would not conflict with relevant programs, plans, and policies addressing the circulation system. Each related project would also be required to comply with all applicable relevant programs, plans, and policies. Therefore, no cumulative impact would occur. (DEIR, p. 4.15-18)

As discussed under Threshold c and d, implementation of the Project would not result in hazardous conditions or result in inadequate emergency access. Impacts on a cumulative level would also be less than significant. (DEIR, p. 4.15-18)

3.18 TRIBAL CULTURAL RESOURCES

Project impacts for Tribal Cultural Resources Cumulative Impacts do not result in significant impacts and findings are discussed below.

3.18.1 CUMULATIVE IMPACT

Impact Statement: The Project does not have the potential to result in cumulative impacts to tribal cultural resources.

❑ Finding

Potential cumulative impacts of the Project related to tribal cultural resources are discussed in detail in Section 4.16.6 of the DEIR. The City finds that the development of the proposed Project would not result in significant cumulative impacts related to tribal cultural resources; therefore, no mitigation is required.

❑ Substantial Evidence

The potential for Project construction to result in cumulatively-considerable impacts to tribal, religious, and cultural resources were analyzed in conjunction with other projects other projects located in the immediate vicinity of the Project site. Impacts to previously undiscovered subsurface tribal cultural resources are typically site specific from ground disturbing activities and generally do not combine to result in cumulative impacts unless resources are identified immediately adjacent to the Project site. Nonetheless, the potential exists that a significant tribal cultural resource could be discovered during grading into native soils. However, there are no related projects in the vicinity that would affect tribal cultural resources in combination with Project implementation. Therefore, cumulative impacts to archaeological resources would be less than significant. (DEIR, p. 4.16-8)

3.19 UTILITIES AND SERVICE SYSTEMS

Project impacts for Utilities and Service Systems Thresholds a through e do not result in significant impacts and findings are discussed below.

3.19.1 THRESHOLD A

Impact Statement: The Project would not require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects.

❑ Findings

Potential impacts of the Project related to Threshold a are discussed in Section 4.17.5 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold a; therefore, no mitigation is required.

❑ Substantial Evidence

Water Facilities

Water service to the Project site would be provided by Golden State Water Company (GSWC). Water demand associated with the Project would consist of interior plumbing devices (i.e., showers, sinks, toilets, faucets), outdoor landscape irrigation, washers, and other uses similar to that of a residential development. Water supply is discussed in detail under Threshold b, below. Based on the water supplies available and the estimated water demand, there are sufficient water supplies available to serve the Project during average, single dry, and multiple dry years. The Project would not require the

construction of new or expanded water facilities. The Project would not require the relocation of water facilities. The Project would include the installation of new water lines within the Project site, connecting to existing facilities within Lampson Avenue. The Project would include a 1,200-foot watermain extension between the eastern driveway and the existing GSWC watermain at the intersection of Lunar and Lampson. The Project would include, at a minimum, an 8" watermain size for the extension. These connections would be part of the Project's construction phase, the impacts of which are evaluated throughout the DEIR. As that evaluation demonstrates, the construction of the Project's water lines necessary to serve the Project would not result in any significant physical effects on the environment. Impacts would be less-than-significant, and no mitigation is required. (DEIR, p. 4.17-13)

Wastewater and Wastewater Treatment Facilities

Although the Project site is located in the City of Los Alamitos, wastewater service would be served by the City of Seal Beach. Discussion of the sewer system and its capacity is discussed under Threshold c, below. The Project generated wastewater would be well within the capacity of Reclamation Plant No. 2. and would not require Orange County Sanitation District (OCSD) to build new or expanded wastewater treatment facilities. (DEIR, p. 4.17-13)

The Project would include the installation of an on-site lift station and force main at the southeast corner of the Project site. The Project would include sewer lines within the Project site, connecting to existing facilities within Lampson Avenue. These connections would be part of the Project's construction phase, the impacts of which are evaluated throughout the DEIR. As that evaluation demonstrates, the construction of the Project's sewer lines necessary to serve the Project would not result in any significant physical effects on the environment. Impacts would be less than significant and no mitigation is required. (DEIR, pp. 4.17-13 to 4.17-14)

Stormwater Drainage Facilities

As discussed in DEIR Section 4.9, *Hydrology and Water Quality*, the Project would increase the amount of impervious surface within the Project site. Two stormwater drainage facility plans have been proposed to accommodate stormwater runoff associated with the increase in this amount of impervious surface: an on-site storm drain facilities and an alternate off-site storm drain facilities. (DEIR, p. 4.17-14)

On-Site Storm Drain Facilities

The preferred treatment of stormwater runoff for the Project would be conveyance by roof downspouts or street surface flow to proposed gutters and collected by thru-curb inlet bio-filtration devices or catch basin inlets on-site for water quality treatment. The bio-filtration devices direct flows via onsite underground storm drain system to an underground detention system located under parking areas at the southwest portion of the site. From the detention system, a stormwater sump pump located in the southwest corner of the site would convey flows into the existing storm drain pipe at the southwest corner of the site to match the existing flow pattern. The combined, total 100-year peak flow rate for the Project site is approximately 44.31 cfs under the proposed conditions, which would be a higher

peak runoff flowrate than the existing condition of the site of 40.28 cfs. DEIR Figure 4.9-4, *Proposed Conditions Hydrology Map* illustrates the post-development drainage conditions of the Project site. The proposed drainage design would follow the existing drainage pattern with surface flows to on-site drainage facilities that would ultimately outlet into the existing headwall on the southwest corner of the Project site. (DEIR, p. 4.17-14)

Alternate Off-Site Storm Drain Facilities

In the event the proposed route described above is not available, an alternate treatment of stormwater runoff for the Project would be conveyance to offsite storm drain facilities. DEIR Figure 4.9-5, *Proposed Alternate Conditions Hydrology Map* illustrates the post-development drainage conditions for this drainage and detention alternate. From the detention system, a stormwater sump pump located in the southwest corner of the site will convey flows onto Lampson Avenue through a parkway culvert. Due to existing flooding concerns on Lampson Avenue, the onsite pump system would allow for low flows to enter Lampson Avenue up until the time that the flows begin to exceed the allowed 25-year storm event in Lampson Avenue. At that point, peak flows would be detained onsite. Once the flows are no longer above the allowed 25-year storm event in Lampson Avenue, onsite flows would continue pumping to Lampson Avenue normally. (DEIR, p. 4.17-14)

With respect to both of these facility designs, no new or expanded off-site storm drain facilities beyond those proposed as part of the Project are required to accommodate stormwater runoff from the Project site. The impacts of these designs are evaluated throughout the DEIR. As that evaluation demonstrates, the construction of the Project's storm drain facilities necessary to serve the Project would not result in any significant physical effects on the environment. Impacts would be less-than-significant, and no mitigation is required. (DEIR, pp. 4.17-14 to 4.17-15)

Dry Utilities

The Project also would involve utility connections to provide electric power and telecommunications services to the Project site. No natural gas would be used as a result of the Project (PDF GHG-2), and as such, use of natural gas is not considered in the EIR analysis. The Project would be served in accordance with the CPUC and Federal Energy Regulatory Commission tariffs. As discussed in DEIR Section 4.5, *Energy*, Project operational energy demands are estimated to be 98,388 kWh/year of electricity which would be supplied by SCE. The Project does not propose uses that are inherently energy intensive and the energy demands in total would be comparable to other residential uses of similar scale and configuration. No new or expanded off-site dry utilities are required to serve the Project, and therefore there would be no impact associated with any such facilities that could cause significant environmental effects. (DEIR, p. 4.17-15)

The installation of the proposed on-site infrastructure improvements would result in physical environmental impacts; however, these impacts have been included in the analyses of construction-related effects presented throughout the DEIR, (e.g., air quality impacts, impacts to biological and cultural resources, water quality impacts, and noise and vibration impacts, etc.). Any applicable Project-specific mitigation measures for construction identified for each topical issue would address potential significant impacts associated with construction and installation of utilities. Therefore,

through consistent implementation of a variety of measures related to construction impacts, no additional impacts related to construction and operation of utility systems would occur. No mitigation is required. (DEIR, p. 4.17-15)

3.19.2 THRESHOLD B

Impact Statement: The Project would have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years.

❑ Findings

Potential impacts of the Project related to Threshold b are discussed in Section 4.17.5 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold b; therefore, no mitigation is required.

❑ Substantial Evidence

As previously discussed, GSWC would provide potable water service to the Project site. According to GSWC's 2020 UWMP, the 2016-2020 average unit demand factors for single family and multi-family are 0.26 and 2.23 acre-feet of water per year (AFY)/Connection, respectively (GSWC, 2021). The Project includes 55 single family detached homes, 114 townhomes, and 76 for rent affordable multi-family apartment units (as well as one market rate manager's apartment unit) within three 3-story structures. The total water demand for the Project would be 50.63 AFY, which is comprised of 43.94 AFY for single family and 6.69 AFY for multi-family. (DEIR, p. 4.17-15)
DEIR Table 4.17-1, *Total Supplies Available to GSWC West Orange through 2045 (AFY)*, presents the supplies available to the West Orange service area through 2045 according to the most recent UWMP from GSWC (adopted July 15, 2021). DEIR Table 4.17-2, *GSWC West Orange Projected Water Demands through 2045*, presents the projected water use through 2045 for the West Orange service area. DEIR Table 4.17-3, *GSWC West Orange Projected Water Supply and Demand through 2024*, presents the projected water supply and demand through 2045 for the West Orange service area. GSWC West Orange service area will only access enough water to meet its needs in any given year. Accordingly, although some of the supplies available to GSWC West Orange service area are shared among three GSWC service areas, GSWC West Orange will not acquire the additional supplies unless they are needed as part of GSWC's regional water management among the three service areas. As such, GSWC West Orange will acquire the total projected supplies as shown in DEIR Table 4.17-2. (DEIR, p. 4.17-16)

Given the difference between GSWC's projected water demand through 2045 and the total water supplies available through 2045, GSWC West Orange's waters supplies would be sufficient for the Project's estimated water demand of 50.63 AFY in normal, single dry years, and five consecutive dry year conditions through 2045. GSWC West Orange service area will only access enough water to meet its needs in any given year. The GSWC 2020 UWMP concluded that it has reliable supplies to meet its retail customer demands in normal, single dry years, and five consecutive dry year conditions through 2045. Groundwater, imported water from MWDOC, and the small amount of recycled water delivered within the service area by the City of Cerritos are all resilient during dry conditions and

GSWC West Orange is therefore not faced with shortages during normal or dry years. (DEIR, p. 4.17-17)

Based on the water supplies available and the estimated water demand, there are sufficient water supplies available to serve the Project during average, single dry, and multiple dry years. Additionally, the Project is subject to connection and service fees to offset increased demand and assist in facility expansion and service (at the time of need). Accordingly, there would be sufficient water supplies available to serve the Project and impacts would be less than significant. No mitigation is required. (DEIR, p. 4.17-17)

3.19.3 THRESHOLD C

Impact Statement: The Project would result in a determination by the wastewater treatment provider which serves or may serve the Project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments.

❑ Findings

Potential impacts of the Project related to Threshold c are discussed in Section 4.17.5 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold c; therefore, no mitigation is required.

❑ Substantial Evidence

Wastewater Facilities

Although the Project site is in the City of Los Alamitos, sanitary sewer services are currently provided by and will be provided by the City of Seal Beach. Per the City of Seal Beach Sewer Master Plan 2018, the City provides sewer service throughout the City in a service area that collects and conveys wastewater from the service area for treatment by the OCSD. (DEIR, p. 4.17-17)

A Sanitary Sewer Analysis (*Technical Appendix O* of the DEIR) was prepared for the Project and investigates the sewer discharge route for the proposed development to the existing sewer mains of three manholes: 1) Basswood and Aster Street (Manhole A-16); 2) Candleberry Avenue and Aster Street (Manhole A-21); and 3) Elder Avenue (Manhole A-25). (DEIR, p. 4.17-17)

1. Basswood and Aster Street (Manhole A-16)

The existing sewer pipes were analyzed per City of Seal Beach Sewer Master Plan 2018 Table ES-1 for a maximum design depth at half-full for pipe sized at 15" or under. Based on the monitoring data collected, existing peak flow for Manhole A-16 at the northern inlet was measured at 0.391 million gallons per day (MGD) (0.6050 cfs), with a max peak depth flow of 4.52 inches (Flow depth to pipe diameter ratio (d/D) = 0.3013). The data shows that the 15" sewer pipe system capacity is capable of maintaining an adequate flow well below 50% of its flow depth capacity with the additional flow from the proposed development. According to the City of Seal Beach Sewer Master Plan 2018, the design

and analysis of collection system pipes is typically based upon the depth of flow to diameter ratio. All new pipe should be designed with a flow depth to pipe diameter ratio less than or equal to 0.5 for 15" and smaller pipes and 0.64 for 18" and larger pipes. The remaining pipeline capacity is reserved for wet weather related inflow and infiltration into the system. Additionally, the area above the water surface helps to keep the sewage aerated, preventing septic conditions, and resulting odors. The peak wet weather depth of flow to pipe diameter ratio should not exceed 0.80. (DEIR, pp. 4.17-17 – 4.17-18)

Based on the proposed development, the Project is estimated to result in a total peak flow output of 49,468 gallons per day (GPD) (0.0765 cfs) of effluent. After applying peak dry and wet weather factors, it was determined there would be 0.2348 cfs of effluent generated by the Project. The Project site would contribute an additional 0.0824 cfs to the trunk main. This would increase the flow depth-to-pipe diameter ratio to become 0.3216, an approximately 6.30 percent increase, which remains below the flow depth to pipe diameter ratio criteria and indicates that the proposed development would not have a significant impact on wastewater capacity. (DEIR, p. 4.17-18)

2. Candleberry Avenue and Aster Street (Manhole A-21)

The existing sewer pipes were analyzed per City of Seal Beach Sewer Master Plan 2018 Table ES-1, for a maximum design depth at half-full for pipe sized at 15" or under and pipes measured 18" or over with a d/D of 0.64. Since this is an elliptical sewer main sized at 17.88" x 17" (H x W), it was treated with the flow depth to pipe diameter ratio design criteria of 0.5 (half full). Based on the monitoring data collected, existing peak flow for Manhole A-21 at the northern inlet was measured at 0.377 MGD (0.5833 cfs), with a max peak depth flow of 5.84 inches (flow depth to pipe diameter ratio (d/D) = 0.3266). The data shows that the sewer pipe system capacity is capable of maintaining an adequate flow well below 50% of its flow depth capacity with the additional flow from the proposed development. The Project is estimated to be a total peak flow output of 49,468 GPD (0.0765 cfs) of effluent. After applying peak dry and wet weather factors, it was determined there would be 0.2348 cfs of effluent from the Project site. The Project is estimated to be a total peak flow output of 49,468 GPD (0.0765 cfs) of effluent. After applying peak dry and wet weather factors, it was determined there would be 0.2348 cfs of effluent from the Project site. The Project site would contribute an additional 0.0824 cfs to the trunk main. This would increase the d/D to become 0.3684, approximately 11.34 percent increase, which remains below the flow depth to pipe diameter ratio criteria and indicates that the proposed development would not have a significant impact on capacity. (DEIR, p. 4.17-18)

3. Elder Avenue (Manhole A-25)

The existing sewer pipes were analyzed per City of Seal Beach Sewer Master Plan 2018 Table ES-1, for a maximum design depth at half-full for pipe sized at 15" or under. Based on the monitoring data collected, existing peak flow for Manhole A-25 at the northern inlet was measured at 0.249 MGD (0.3853 cfs), with a max peak depth flow of 4.75 inches (flow depth to pipe diameter ratio (d/D) = 0.3958). The data shows that the 12" sewer pipe system capacity is capable of maintaining an adequate flow well below 50% of its flow depth capacity with the additional flow from the proposed development. The Project is estimated to be a total peak flow output of 49,468 GPD (0.0765 cfs) of

effluent. After applying peak dry and wet weather factors, it was determined there would be 0.2348 cfs of effluent from the project site. The Project site would contribute an additional 0.0824 cfs to the trunk main. This would increase the d/D to become 0.441, approximately 10.24 increase, which remains below the flow depth to pipe diameter ratio criteria and indicates that the proposed development would not have a significant impact on capacity. (DEIR, pp. 4.17-18 – 4.17-19)

In summary, the results from the Sanitary Sewer Analysis (refer to *Technical Appendix O* of the DEIR) demonstrate that the proposed flows, in addition to the observed flows, create a proposed depth of flow that would not impact the existing surrounding sanitary sewer systems. Based on sewer monitoring data collected in preparation of the Sanitary Sewer Analysis, the sewer systems in all three locations indicated good flow, along with hydraulics and relatively low depths. Wastewater volumes produced by the proposed development would not significantly impact or exceed the existing sewer capacity in the public system, and that the existing sewer system has adequate capacity for the proposed development. Accordingly, impacts would be less than significant and no mitigation is required. (DEIR, p. 4.17-19)

4. Sanitary Sewer Update

A revised Sanitary Sewer Analysis (*Attachment M* of the FEIR) was prepared in response to comment from the City of Seal Beach. A Sewer Demand Memorandum (*Attachment L* of the FEIR) was prepared to address the updates in the sanitary sewer analysis and respond to comments on the DEIR related to the Old Ranch Country Club.

The City of Seal Beach's updated Sewer Master Plan (September 2022) identified the sewer loads for potential development areas within the City of Seal Beach. Those sewer loads are summarized in Table 1 of that Sewer Master Plan. The Old Ranch Country Club is listed as Site B-5, and it is identified as comprising 150 acres, five of which are indicated as "redevelopment area," with a potential for 120 dwelling units and a sewer load of 19,200 gallons per day (gpd).

Since 2022, the proposed development of the Old Ranch Country Club Project has been further refined, and as of January 2023 now includes more than the residential component identified in Table 1 of the Sewer Master Plan. Per the Initial Study dated February 7, 2023, prepared to support the Old Ranch Country Club Specific Plan, the anticipated redevelopment area has increased from 5 acres to approximately 35 acres over the existing site, and includes a 116-unit multi-family housing development, a 51-unit senior housing complex including an approximately 25,340 square foot medical office facility on the ground floor, a 150-key overnight accommodation, an approximately 2,650 square foot relocated maintenance facility, a parking structure, and a new clubhouse pool and associated structures (21,000 square feet) abutting the existing clubhouse.

This more refined development proposal for the Old Ranch Country Club project would result in an increase in the sewer demand by approximately 32,246 gpd, totaling 51,626 gpd (see *Attachment L* of the FEIR).

The revised Sanitary Sewer Analysis, prepared in March 2024 (*Attachment M* of the FEIR), used sewer system model data provided by the City of Seal Beach (AKM's City wide sewer study). The data was based on an area calculation method which indicated there are 16 sewer segments shown to have a d/D level above 0.5. Because the area calculation is used to calculate flows for large areas and is not necessarily representative of actual flows, actual monitored flows were determined and evaluated. Using the actual monitored flows indicated that there are only 7 segments estimated to exceed the City's peak dry weather flows (PDWF) d/D criteria after the proposed project is implemented. The remaining capacity above a PDWF d/D of 0.50 is reserved for wet weather flows. Flows over the d/D criteria range from 0.51 to 0.55 and represent approximately 56% of the pipe's flow capacity, which is well within the capacity of the downstream sewer lines.

No additional pipe segments in the AKM study were found to be undersized. The nine (9) segments that were found to be undersized in AKM's study were determined to be acceptable after analysis using the actual monitored flows. The d/D levels are shown to be higher because the existing segments have flat slopes, ranging from 0.16% - 0.22%. However, the pipe size can handle proposed flow levels, and sewer pipe upgrades are not required.

To evaluate a potential increase in the flow depth to pipe diameter ratio (d/D) based on the increase in total demand associated with the further refined Old Ranch Country Club project and after taking into consideration the amount of sewer discharge associated with the Project, C&V Consulting, Inc. applied the increase in total demand from the further refined Old Ranch Country Club Project to manhole (MH) IDs B03-A14 and B01-A13 through B01-A02A, as shown in *Attachment L* of the FEIR. These manholes and their associated pipeline segments are located downstream of the three manholes that were monitored for the Project and as such include the upstream sewer flows anticipated by the Project and currently existing development. As shown in *Attachment L* of the FEIR, the overall d/D is anticipated to be less than 0.5 for the identified segments with the increased demand added to the system. This means that when the sewer flows from the further refined Old Ranch Country Club Project are added to the sewer flows from the Project based on the downstream monitored manhole flows, the depth of flow to pipe diameter ratio is less than 50%. This in turn means that even with the Old Ranch Country Club Project, the sewer pipe system capacity remains capable of maintaining an adequate flow well below 50% of its flow depth capacity. As such, adequate capacity exists to serve the Project's projected demand in addition to the sewer pipe systems existing commitments, even after taking into account the further refined Old Ranch Country Club project. The anticipated d/D increase determined from the 4665 Lampson Avenue Project plus the Old Ranch Country Club Project is approximately 2.6-3.4%, which is considered negligible.

As a result, the proposed flows from the Project, in addition to the observed flows, create a proposed depth of flow that would not impact the existing surrounding sanitary sewer systems, and that the existing sewer system has adequate capacity for the proposed development. Accordingly, impacts would be less than significant and no mitigation is required.

Wastewater Treatment

The existing residual capacity at OCSD Reclamation Plant No. 2, is approximately 105 mgd. Conservatively assuming that Project generated wastewater would be 100 percent of total water demand, the Project would generate 45,200 gallons per day, which is well within the capacity of Reclamation Plant No. 2. Therefore, the Project would not require OCSD to build new or expanded wastewater treatment facilities, and impacts would be less than significant. No mitigation is required. Moreover, Project generated wastewater would ultimately be treated at one or more of the OCSD wastewater treatment plants. Additionally, the Project is subject to connection and service fees to offset increased demand and assist in facility expansion and service (at the time of need). This would result in a less than significant impact. (DEIR, p. 4.17-19)

3.19.4 THRESHOLD D

Impact Statement: The Project would not generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals.

❑ Findings

Potential impacts of the Project related to Threshold d are discussed in Section 4.17.5 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold d; therefore, no mitigation is required.

❑ Substantial Evidence

Solid waste from the City is transported to Frank R. Bowerman Sanitary Landfill in the City of Irvine and the Olinda Alpha Sanitary Landfill near the City of Brea. Both facilities are operated by Orange County Waste and Recycling. The Frank R. Bowerman Sanitary Landfill has a permitted disposal capacity of 11,500 tons per day with a remaining capacity of 205,000,000 cubic yards. The Olinda Alpha Landfill has a permitted disposal capacity of 8,000 tons per day with a remaining capacity of 17,500,000 cubic yards. (DEIR, p. 4.17-19)

Construction-Related Impacts

Waste generated during the construction phase of the Project would primarily consist of discarded materials from the construction of structures, common areas, infrastructure installation, and other Project-related construction activities. Based on the anticipated building square footage of 397,381 s.f. and the US EPA's construction waste generation factor of 4.39 pounds (lbs) per sf for residential-uses, approximately 872 tons of waste would be generated during the building construction phase. The Project's building construction is reasonably expected to occur over a period of approximately 1,031 days (see DEIR Table 3-4, *Estimated Construction Schedule*), which corresponds to approximately 0.85 tons of construction waste generated per day during the building construction phase. Additional waste would be expected from infrastructure installation and other Project-related construction activities. (DEIR, pp. 4.17-19 to 4.17-20)

The two landfills that serve the Project site have a total remaining capacity of 222,500,000 cubic yards and a combined permitted disposal capacity of 19,500 tons per day. The estimated closing date of operation for the Frank R. Bowerman Landfill and the Olinda Alpha Landfill are 2053 and 2036, respectively. Based on the approximate construction waste generated per day, demolition and construction waste generated by the Project is not anticipated to cause these landfills to exceed their maximum permitted daily disposal volume. Furthermore, none of these regional landfill facilities are expected to reach their total maximum permitted disposal capacities during the Project's construction period. In addition, the Project would be required to comply with LAMC Chapter 8.13, Construction and Demolition Waste, which requires the Project Applicant to divert a minimum of 50 percent of the construction and demolition debris resulting from the proposed development in compliance with State and local statutory goals and policies. (DEIR, p. 4.17-20)

Operational-Related Impacts

The Project includes 55 single family detached homes, 114 townhomes, and 76 for rent affordable multi-family apartment units, as well as one market rate manager's apartment unit.. Based on the single-family generation rate of 11.4 pounds per dwelling unit per day, the single family and townhome portion of the Project would generate approximately 1,926.6 pounds of solid waste per day (~0.96 tons per day). Based on the multifamily generation rate of 8.6 pounds per dwelling units per day, the multifamily portion of the Project would generate approximately 662.2 pounds of solid waste per day (~0.33 tons per day). The total solid waste generation of the Project is approximately 1.29 tons per day. (DEIR, p. 4.17-20)

As previously stated, the two landfills have a combined permitted disposal capacity of 19,500 tons per day. The Project's estimated solid waste generation represents approximately 0.007% of the two landfills' capacity and therefore, would not contribute significantly to both of the landfills' daily capacity. Additionally, the Project is subject to connection and service fees to offset increased demand and assist in facility expansion and service (at the time of need). Accordingly, impacts would be less than significant, and no mitigation is required. (DEIR, p. 4.17-20)

3.19.5 THRESHOLD E

Impact Statement: The Project would comply with federal, State, and local management and reduction statutes and regulations related to solid waste.

❑ Findings

Potential impacts of the Project related to Threshold e are discussed in detail in Section 4.17.5 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Threshold e; therefore, no mitigation is required.

❑ Substantial Evidence

Federal, State, and local statues and regulations regarding solid waste generation, transport, and disposal are intended to decrease solid waste generation through mandatory reductions in solid waste

quantities (e.g., through recycling and composting of green waste) and the safe and efficient transport of solid waste. The Project would be required to coordinate with the City's solid waste service provider, Universal Waste Systems Inc., to develop a collection program for recyclables, such as paper, plastics, glass, and aluminum, in accordance with local and State programs, including Assembly Bill (AB) 341, Mandatory Commercial Recycling, and the California Solid Waste Reuse and Recycling Act of 1991. (DEIR, p. 4.17-21)

The California Integrated Waste Management Act (AB 939), signed into law in 1989, established an integrated waste management system that focused on source reduction, recycling, composting, and land disposal of waste. In addition, the bill established a 50% waste reduction requirement for cities and counties by the year 2000, along with a process to ensure environmentally safe disposal of waste that could not be diverted. LAMC Chapter 8.12, Integrated Waste Management, regulates solid waste handling and meets the City's obligations under AB 939. The Project would be required to comply with Chapter 8.12 – Integrated Waste Management and other federal, State, or local regulations related to solid waste management. Therefore, the Project would not conflict with federal, State, or local regulations related to solid waste management. The Project would not have a significant impact related to compliance with regulations addressing the reduction of solid waste generation and disposal. Impacts would be less than significant, and no mitigation is required. (DEIR, p. 4.17-21)

3.19.6 CUMULATIVE IMPACT

Impact Statement: The Project does not have the potential to result in cumulative impacts to utilities and service systems.

❑ Finding

Potential cumulative impacts of the Project related to utilities and service systems are discussed in detail in Section 4.17.6 of the DEIR. The City finds that the development of the proposed Project would not result in significant cumulative impacts related to utilities and service systems; therefore, no mitigation is required.

❑ Substantial Evidence

This cumulative impact analysis considers development of the proposed Project in conjunction with other development projects and planned development within the service area for the respective utility providers or the service area for specific facilities. (DEIR, p. 4.17-21)

As with the Project, individual development projects would require the construction of necessary infrastructure (water and wastewater lines, storm drain facilities, dry utilities, and others) to serve the projects. Each individual development project is subject to review for utility capacity to avoid unanticipated interruption of service or inadequate supplies. Coordination with the utility providers would allow for the provision of utility services to the Project and other developments. The Project and cumulative development is subject to connection and service fees to offset increased demand and assist in facility expansion and service (at the time of need). The infrastructure needed for the Project would be to the identified construction impact area, and no new or expanded off-site infrastructure is

required for the Project. The environmental impacts associated with the construction of these facilities are addressed throughout the DEIR and would be less than significant. Therefore, the Project would not have a cumulatively considerable contribution to a significant cumulative impact associated with construction of utility infrastructure. (DEIR, p. 4.17-21)

The cumulative area considered for water supply is the GSWC West Orange service area. The 2020 UWMP details current and future water supply in the service area. GSWC West Orange has reliable supplies to meet its retail customer demands in normal, single dry years, and five consecutive dry year conditions through 2045. Its contract water from the Municipal Water District of Orange County coupled with groundwater supplies derived from the Orange County Groundwater Basin are resilient during dry conditions. As such, GSWC West Orange is not faced with shortages during normal or dry years through 2045. Because GSWC West Orange extracts only as much groundwater as is necessary to meet customer demands and has a reliable water purchase agreement with Municipal Water District of Orange County, it is anticipated that supplies and demands are congruent across all the scenarios examined. Because the demand for water services can be met through 2045 with anticipated growth in its service area, cumulative impacts to water supply would be less than significant. (DEIR, pp. 4.17-21 to 4.17-22)

As discussed, based on sewer monitoring data collected in preparation of the Sanitary Sewer Analysis, the sewer systems in all three locations indicated good flow, along with hydraulics and relatively low depths. Wastewater volumes produced by the proposed development would not significantly impact or exceed the existing sewer capacity in the public system, and that the existing sewer system has adequate capacity for the proposed development. As such, the Project would not result in a cumulatively considerable contribution to a significant cumulative impact on wastewater facilities. (DEIR, p. 4.17-22)

The existing residual capacity at OCSD Reclamation Plant No. 2, is approximately 105 mgd. The City of Los Alamitos General Plan Update EIR forecasted that General Plan Buildout would generate approximately 2.4 mgd, well within Reclamation Plant No. 2 treatment capacity. Wastewater generation by the General Plan Update buildout would not require OCSD to build new or expanded wastewater treatment facilities, and cumulative impacts would be less than significant. (DEIR, p. 4.17-22)

AB 341 mandates the reduction of solid waste disposal in landfills (Public Resources Code Section 42649). The solid waste generated by construction and operation of the Project would represent nominal portion of daily disposal capacities at existing landfill facilities. The existing landfill facilities have sufficient daily capacity to handle solid waste during the Project's construction and operation and would not directly result in the need for expanded solid waste disposal facilities. Other cumulative development would be required to comply with applicable local, State, and federal regulations during both construction and long-term operation to reduce solid waste generation. Cumulative impacts associated with solid waste disposal would be considered less than significant. (DEIR, p. 4.17-22)

Other individual development projects would be required to comply with local and State regulations during both construction and long-term operation to reduce solid waste generation. Therefore, the Project would not have a significant cumulative impact related to compliance with regulations addressing the reduction of solid waste generation and disposal. (DEIR, p. 4.17-22)

3.20 WILDFIRE

Project impacts for Wildfire Thresholds a through d do not result in significant impacts and findings are discussed below.

3.20.1 THRESHOLDS A THROUGH D

Impact Statement: The Project would not substantially impair an adopted emergency response plan or emergency evacuation plan; the Project would not, due to slope, prevailing winds, and other factors, exacerbate wildlife risks, and thereby expose Project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire; the Project would not require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment; and the Project would not expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire instability, or drainage changes.

- ❑ **Findings**

Potential impacts of the Project related to Thresholds a through d are discussed in Section 5.4.3 of the DEIR. The City finds that the development of the proposed Project will not result in significant impacts related to Thresholds a through d; therefore, no mitigation is required.

- ❑ **Substantial Evidence**

According to the California Department of Forestry and Fire Protection's (Cal Fire) Fire and Resources Assessment Program (FRAP), the Project site is not located in a Very High Fire Hazard Severity Zone (VHFHSZ) and is not within proximity to lands classified as VHFHSZ. There are no lands classified as VHFHSZ within the City. The nearest VHFHSZ is located in the City of Fullerton, approximately 8.8 miles to the northeast. The Project site is located within the limits of the City of Los Alamitos and is not within a State Responsibility Area (SRA), which is the land where the State of California is financially responsible for the prevention and suppression of wildfires. Accordingly, no impact would occur. (DEIR, p. 5-9)

4.0 ENVIRONMENTAL IMPACTS MITIGATED TO A LEVEL OF LESS-THAN-SIGNIFICANT

4.1 BIOLOGICAL RESOURCES

4.1.1 THRESHOLD A

Impact Statement: The Project could have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service.

❑ **Findings**

Potential impacts of the Project related to Threshold a are discussed in detail in DEIR Section 4.3.6. The Project does provide limited suitable habitat for nesting birds and common raptor species. Construction activities have the potential to adversely impact nesting birds and raptors and roosting bats. Potentially significant impacts could occur. Implementation of Mitigation Measures MM 4.3-1 through MM 4.3-3 would ensure that pre-construction surveys are conducted for nesting birds, nesting raptors, and bat roosts prior to site disturbance. If nesting birds or raptors are present on the Project site, mitigation requires avoidance of active nests. With implementation of the required mitigation, potential impacts to nesting birds and common raptors would be reduced to below a level of significance. If roosting bats are detected on site outside of the bat maternity season, the roost tree will be removed in a manner to avoid and/or minimize injury to roosting bats. If roosting bats are detected onsite during the maternity season, the Project will avoid the subject roost(s) and incorporate an avoidance buffer (as determined by a qualified biologist) until after the maternity season or until a qualified biologist determines no maternity roosting is occurring. With implementation of the required mitigation, potential direct and cumulatively considerable impacts to bats would be reduced to below a level of significance. The City has determined that changes or alterations have been required in, or incorporated into, the Project which avoid or substantially lessen the significant environmental effect as identified in the DEIR.

❑ **Substantial Evidence**

Direct Impacts to Special-Status Plants

No special-status plants were determined to have potential to occur on the Project site. Therefore, Project temporary-construction related activities would not impact special-status plants. No mitigation is required. Additionally, long-term operation would not impact special-status plants. No mitigation is required. (DEIR, p. 4.3-29)

Direct Impacts to Special-Status Animals

Two special-status animals (State watch list) and Cooper's hawk and merlin (fly over only) were detected on the Project site during the general and focused biological studies. In addition, although the vermilion flycatcher was not detected onsite (foraging or nesting) during the biological studies, the

Project site does provide some suitable habitat for nesting (trees). Should vermilion flycatchers nest on the site during construction, construction activities could adversely impact nesting vermilion flycatchers in the absence of measures to protect the nesting individuals. Conservatively, this impact would be potentially significant before implementation of mitigation. (DEIR, pp. 4.3-29 to 4.3-30)

The Project site is estimated to provide approximately four acres of marginal foraging habitat for sensitive raptor species including the Cooper's hawk, northern harrier, wintering merlin, peregrine falcon, Swainson's hawk, and white-tailed kite as well as other common raptor species that are not identified as special status species. Raptor nesting was not documented during the biological surveys, but the Project site would be expected to support nesting by common raptor species. The Project is not expected to provide suitable nesting raptor habitat for the above-mentioned special-status raptor species due to species specific nesting habitat requirements, and level of existing anthropogenic disturbance from vehicles and people within and immediately adjacent to the Project site. (DEIR, p. 4.3-30)

Moreover, one merlin was observed briefly in March 2022 flying over the southwest corner of the parking lot to the JFTB. However, since the species is a winter resident, no impact is expected. (DEIR, p. 4.3-30)

Given the limited area (approximately four acres) of marginal foraging area, the Project would not result in significant impacts on raptor foraging, including for the special-status raptors noted above. The Project does not exhibit suitable nesting habitat for special-status raptors and there would thus be no significant impacts to nesting habitat for special-status raptors. However, there is a limited potential for nesting common raptor species on the Project site; impacts are potentially significant. (DEIR, p. 4.3-30)

Two sensitive bat species, the western red bat and the western yellow bat were detected foraging offsite within the adjacent Navy golf course. However, no evidence of roosting by any bat species was detected onsite during the four focused bat surveys performed for this analysis. As shown in DEIR Figure 3-18, *Landscape Plan*, (project design feature PDF B-1), the Project will incorporate larger sized box tree species (including the western sycamore) along the fringes of the development, adjacent to open space areas. The planting of trees preferred by bats adjacent to open space areas would minimize potential impacts to roosting bats because it would provide habitat for potential roosting. (DEIR, p. 4.3-30)

Nonetheless, because sensitive bat species were detected adjacent to the Project site and have the limited potential to establish a maternity roost onsite (specifically, the western yellow bat in suitable palm trees), conservatively, this impact would be potentially significant before implementation of mitigation. (DEIR, p. 4.3-30)

Direct Impacts to Critical Habitat

Temporary construction-related activities would not impact lands designated as critical habitat by the USFWS. No impact would occur and no mitigation is required. Long-term operation would not impact

lands designated as critical habitat by the USFWS. No impact would occur, and no mitigation is required. (DEIR, pp. 4.3-30 to 4.3-31)

Indirect Impacts to Biological Resources

The Project site is not surrounded by or is adjacent to natural open space; rather, adjacent facilities include Arbor Dog park, Arbor Park and the Navy Golf Course which are recreational facilities subject to regular human uses and associated disturbances. The Project is not expected to result in indirect effects to biological resources as the Project site is currently predominantly developed with existing outdoor lighting in place and the proposed Project would incorporate measures to minimize indirect light spillover into the adjacent areas including Arbor Park, Navy Golf Course, and JFTB. The Project would comply with any applicable lighting plan requirements of the Los Alamitos Municipal Code to ensure that light spillage is reduced to the maximum extent possible. Additionally, the Project's landscaping plan excludes invasive exotic species as listed on the California Invasive Plant Council (Cal-IPC) website. Impacts would be less than significant, and no mitigation is required. (DEIR, p. 4.3-31)

The Project includes the following Project Design Features (PDFs) that have the effect of minimizing and avoiding environmental impacts.

PDF B-1 Pursuant to Figure 3-18, *Landscape Plan*, the Project will incorporate larger sized box tree species (including the western sycamore and cottonwood trees) that foliage specialist bats prefer and will plant the trees on the fringes of the development, adjacent to open space areas.

PDF B-2 Pursuant to Figure 3-18, *Landscape Plan*, the Project will plant approximately 441 trees onsite (excluding shrubs and ground cover), including the western sycamore (*Platanus racemosa*), paperbark melaleuca (*Melaleuca quinquenervia*), olive (*Olive sp*.), southern magnolia (*Magnolia grandiflora*), Crape myrtle (*Lagerstroemia indica*), Brisbane box (*Lophostemon confertus*), Australian willow (*Geijera parviflora*), Italian cypress (*Cupressus sempervirens*), yew pine (*Podocarpus macrophyllus*) and other species. No plants listed on the California Invasive Plant Council (Cal-IPC) Inventory species will be planted and a list of approved species to planted shall be reviewed by a qualified biologist prior to planting.

The following mitigation measures have been incorporated into the Project:

MM 4.3-1 Vegetation clearing should be conducted outside of the nesting season (February 1 through September 15). If avoidance of the nesting season is not feasible, then a qualified biologist shall conduct a pre-construction nesting bird survey within three days prior to any disturbance to the Project site. Site disturbance includes disking, demolition activities, vegetation removal and grading. If active nests are identified, the biologist shall establish appropriate avoidance buffers around the nest (based on the species detected), and the buffer areas shall be avoided until the nests are no longer

occupied (through routine nest monitoring by the qualified biologist) and the juvenile birds can survive independently from their nest(s). In addition, if portions of the Project site have not been disturbed within three days after the initial nesting bird survey, additional nesting bird surveys will be conducted (within the nesting bird season, February 1 to September 15) until all portions of the Project site have been disturbed appropriately (as determined by a qualified biologist) as to not provide potential nesting habitat.

MM 4.3-2 If tree removal or ground disturbance occurs during the raptor nesting season (from approximately January 1 to July 31), pre-removal/disturbance surveys shall be conducted by a qualified biologist. The surveys shall include areas of suitable nesting trees within 300-feet from the limits of disturbance (to the extent that access is available). The survey shall be conducted no more than three days prior to disturbance. Should nesting raptors be detected either onsite or offsite, work would be delayed until fledglings have left the nest and area no longer dependent on the nest at which time, work could proceed.

MM 4.3-3 A qualified biologist shall conduct a pre-construction bat roost survey for roosting bats no more than 14 days prior to site disturbance. The pre-construction bat roost survey will consist of a minimum of two bat surveys (conducted consecutively or as determined by the biologist). If roosting bats are detected onsite outside of the bat maternity season, the roost tree will be removed in a manner to avoid and/or minimize injury to roosting bats. This may include using mechanical equipment to gently nudge the tree trunk multiple times prior to removal or for palm trees and other species, to de-frond or de-branch the tree using a mechanical lift and gently lower the cut fronds or branches to the ground. Regardless of the method, the fallen tree and/or material will be left undisturbed overnight until at least the next morning to give roosting bats time to exit before site disturbance.

If roosting bats are detected onsite during the maternity season, the Project shall avoid the subject roost(s) and incorporate an avoidance buffer (as determined by a qualified biologist) until after the maternity season or until a qualified biologist determines no maternity roosting is occurring. Once the qualified biologist approves removal of the subject roost tree(s), the same tree removal procedures as outlined above shall be implemented prior to tree removal.

Implementation of Mitigation Measures MM 4.3-1 through MM 4.3-3 would ensure that pre-construction surveys are conducted for nesting birds, nesting raptors, and bat roosts prior to site disturbance. If nesting birds or raptors are present on the Project site, mitigation requires avoidance of active nests. With implementation of the required mitigation, potential impacts to nesting birds and common raptors would be reduced to below a level of significance. (DEIR, p. 4.3-38)

If roosting bats are detected on site outside of the bat maternity season, the roost tree will be removed in a manner to avoid and/or minimize injury to roosting bats. If roosting bats are detected onsite during the maternity season, the Project will avoid the subject roost(s) and incorporate an avoidance buffer (as determined by a qualified biologist) until after the maternity season or until a qualified biologist determines no maternity roosting is occurring. With implementation of the required mitigation, potential direct and cumulatively considerable impacts to bats would be reduced to below a level of significance. (DEIR, pp. 4.3-38 to 4.3-39)

4.1.2 THRESHOLD D

Impact Statement: The Project could potentially interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors or impede the use of native wildlife nursery sites.

❑ Findings

Potential impacts of the Project related to Threshold d are discussed in detail in Section 4.3.6 of the DEIR. The Project has the potential to impact active bird nests if vegetation is removed during the nesting season (February 1 to August 31) and roosting bats including the western red bat and the western yellow bat. Implementation of Mitigation Measure MM 4.3-1 would ensure that pre-construction surveys are conducted for nesting birds protected by State and federal regulations if vegetation is removed from the Project site during the breeding season. If nesting birds are present on the Project site, the mitigation requires avoidance of active bird nests in conformance with accepted protocols and regulatory requirements. With implementation of the required mitigation, potential impacts to nesting birds protected by State and federal regulations would be reduced to below a level of significance. The City has determined that changes or alterations have been required in, or incorporated into, the Project which avoid or substantially lessen the significant environmental effect as identified in the DEIR.

❑ Substantial Evidence

Temporary Construction-Related Activities

The Project requires removal of existing ornamental trees that have the potential to provide suitable nesting opportunities for nesting birds. Therefore, the Project has the potential to impact active bird nests during construction activities, if vegetation is removed during the nesting season (February 1 to August 31). Construction activities could adversely impact nesting birds in the absence of measures to protect the nesting individuals. Moreover, as discussed above, two sensitive bat species, the western red bat and the western yellow bat were detected foraging offsite within the adjacent Navy golf course. Since sensitive bat species were detected adjacent to the Project site and have the limited potential to establish a maternity roost onsite (specifically, the western yellow bat in suitable palm trees), impacts are potentially significant during breeding season. Therefore, construction-related impacts to nesting birds and roosting bats are considered potentially significant before implementation of mitigation. (DEIR, p. 4.3-33)

Long-Term Operation

The Project site is not located within or part of a wildlife movement corridor. The site is located within the Pacific flyway; however, given the small area of the site, lack of native habitats and levels of disturbance, there is no potential for significant impacts to the Pacific flyaway. The Project site is developed and is adjacent to developed areas that do not contribute to wildlife movement. Therefore, the Project would not substantially interfere with an established migratory wildlife corridor. Additionally, MBTA makes it unlawful to take, possess, buy, sell, purchase, or barter any migratory bird listed in Code of Federal Regulations Title 50 Part 10, including feathers or other parts, nests, eggs, or products, except as allowed by implementing regulations. Moreover, California Department of Fish and Game Code Sections 3505, 3503.5, and 3800 prohibit the take, possession, or destruction of birds, their nests or eggs. The Project would be required to comply with existing laws including but not limited to MBTA and California Department of Fish and Game Code Sections 3505, 3503.5, and 3800. Therefore, no impact would occur, and mitigation is not required. (DEIR, pp. 4.3-33 to 4.3-34)

The Project has no area designated or recognized as wildlife nurseries, rookeries, or maternal bat roosts. Therefore, the Project would not impede the use of native wildlife nursery sites. No impact would occur, and mitigation is not required. (DEIR, p. 4.3-34)

Mitigation Measure 4.3-1 (provided above) has been incorporated into the Project.

Implementation of Mitigation Measure MM 4.3-1 would ensure that pre-construction surveys are conducted for nesting birds protected by State and federal regulations if vegetation is removed from the Project site during the breeding season. If nesting birds are present on the Project site, the mitigation requires avoidance of active bird nests in conformance with accepted protocols and regulatory requirements. With implementation of the required mitigation, potential impacts to nesting birds protected by State and federal regulations would be reduced to below a level of significance. (DEIR, p. 4.3-39)

4.2 CULTURAL RESOURCES

4.2.1 THRESHOLD B

Impact Statement: The Project has the potential to cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5.

❑ **Findings**

Potential impacts of the Project related to Threshold b (historical resources) are discussed in detail in Section 4.4.5 of the DEIR. No known archaeological resources are present on the Project site. Nonetheless, the potential exists for Project-related construction activities to result in a direct impact to significant subsurface archaeological resources should such resources be discovered during Project-related construction activities. Impacts would be potentially significant and therefore require mitigation. Implementation of Mitigation Measure MM 4.4-1 would ensure the proper identification and subsequent treatment of any significant archaeological resources that may be encountered during

ground-disturbing activities associated with implementation of the Project. With implementation of the required mitigation, the Project's potential impacts to archaeological resources would be reduced to less than significant. The City has determined that changes or alterations have been required in, or incorporated into, the Project which avoid or substantially lessen the significant environmental effect as identified in the DEIR.

❑ Substantial Evidence

The Project site is currently developed. The site was subject to construction and ground-disturbing activities similar to that which would occur under the Project. (DEIR, p. 4.4-16)

BFSA conducted a cultural resources inventory of the Project site, which included a records search through the SCCIC at CSU Fullerton and an intensive pedestrian survey of the site. The survey did not identify any archaeological resources within the property. The Project site is located in an area of Orange County and the City of Los Alamitos that reflects very few recorded cultural resources, due to past agricultural uses and subsequent commercial and residential developments. Most of the recorded resources in the area are associated with historic development of the region. (DEIR, p. 4.4-16)

Given the highly disturbed condition of the Project site and its surroundings, the potential for the Project's construction activities to affect an unidentified archaeological resource is considered low. However, while unlikely, the presence of previously undiscovered subsurface archaeological resources on the Project site remains possible during grading activities in native soils (e.g. previously undisturbed soils due to deeper excavation). The Project would result in grading to depths of 5 feet below existing grades with deeper excavations (8 to 10 feet) for underground utilities or localized removals. The depth of grading for the existing building and improvements are unknown. Conservatively, this impact would be potentially significant before implementation of mitigation. (DEIR, p. 4.4-16)

The following mitigation measure has been incorporated into the Project:

MM 4.4-1 Discovery of Inadvertent Resources. Prior to the issuance of any grading permits, the Project Applicant/Developer shall submit proof that a qualified consulting archaeologist meeting the Secretary of Interior's (36 CFR 61) Professional Qualifications Standards has been retained to conduct periodic spot checks during ground disturbing activities. Spot check should occur at initial ground exposure within the project; upon a 50 percent completion milestone of ground disturbance; upon an 80 percent milestone of ground disturbance; or at any other time determined necessary by the consulting archaeologist. If any potentially historic or archaeological resources are encountered during ground-disturbing activities, the archaeologist shall halt construction work within 50 feet of the find and assess the nature of the find for importance.

1. If the discovery is determined to not be important by the archaeologist (e.g. isolates and clearly non-significant deposits), work will be permitted to continue in the area. If a find is determined to be potentially important by the

archaeologist, the Lead Agency shall be notified, and additional investigation by the archaeologist would be required. Additional investigation work would include scientific recordation and excavation.

2. At the conclusion of ground disturbing activities, the archaeologist shall draft a report detailing the monitoring process and summarize any additional field study and analysis of resources, should any be discovered. The completed report shall be approved by the Planning Department prior to the issuance of an occupancy permit.

3. Excavated finds shall be curated at a repository determined by the archaeologist and approved by the City with verification of curation provided to the City prior to the issuance of an occupancy permit.

Implementation of Mitigation Measure MM 4.4-1 would ensure the proper identification and subsequent treatment of any significant archaeological resources that may be encountered during ground-disturbing activities associated with implementation of the Project. With implementation of the required mitigation, the Project's potential impacts to archaeological resources would be reduced to less than significant. (DEIR, p. 4.4-20)

4.2.2 THRESHOLD C

Impact Statement: The Project has the potential to disturb human remains, including those interred outside of formal cemeteries.

❑ Findings

Potential impacts of the Project related to Threshold c are discussed in detail in Section 4.4.5 of the DEIR. In the unlikely event that human remains are discovered during Project grading or other ground disturbing activities, disturbance of the remains would result in a significant impact and therefore require mitigation. Mitigation Measure 4.4-2 will ensure mandatory compliance with California Health and Safety Code Section 7050.5 and Public Resources Code Section 5097.98. Mandatory compliance with State law would ensure that any discovered human remains are appropriately treated and any potential impacts to human remains, including human remains of Native American ancestry, that may result from development of the Project would be reduced to less than significant. The City has determined that changes or alterations have been required in, or incorporated into, the Project which avoid or substantially lessen the significant environmental effect as identified in the DEIR.

❑ Substantial Evidence

The Project site does not contain a cemetery and no known formal cemeteries are located within the immediate site vicinity. Nevertheless, the limited potential exists that human remains may be unearthed during grading and excavation activities associated with Project construction. (DEIR, p. 4.4-17)

If human remains are unearthed during Project construction, the construction contractor would be required by law to comply with California Health and Safety Code Section 7050.5 "Disturbance of

Human Remains." According to Section 7050.5(b) and (c), if human remains are discovered, the County Coroner must be contacted and if the Coroner recognizes the human remains to be those of a Native American or has reason to believe that they are those of a Native American, the Coroner is required to contact the Native American Heritage Commission (NAHC) by telephone within 24 hours. Pursuant to California Public Resources Code Section 5097.98, whenever the NAHC receives notification of a discovery of Native American human remains from a county coroner, the NAHC is required to immediately notify those persons it believes to be most likely descended from the deceased Native American. The descendants may, with the permission of the owner of the land, or his or her authorized representative, inspect the Site of the discovery of the Native American human remains and may recommend to the owner or the person responsible for the excavation work means for treatment or disposition, with appropriate dignity, of the human remains and any associated grave goods. The descendants shall complete their inspection and make recommendations or preferences for treatment within 48 hours of being granted access to the site. According to Public Resources Code Section 5097.94(k), the NAHC is authorized to mediate disputes arising between landowners and known descendants relating to the treatment and disposition of Native American human burials, skeletal remains, and items associated with Native American burials. (DEIR, p. 4.4-17)

Given prior ground disturbances at the site, the likelihood of discovering human remains is low. In the unlikely event that human remains are discovered, disturbance would result in a significant impact. Conservatively, this impact would be potentially significant before implementation of mitigation. (DEIR, p. 4.4-17)

The following mitigation measure has been incorporated into the Project:

MM 4.4-2 Discovery of Human Remains. If human burial or skeletal remains are identified during excavation or construction, work in that location shall stop immediately until the find can be properly treated. The construction contractor would be required by law to comply with California Health and Safety Code Section 7050.5 "Disturbance of Human Remains." The County Coroner must be contacted and if the Coroner recognizes the human remains to be those of a Native American or has reason to believe that they are those of a Native American, the Coroner is required to contact the Native American Heritage Commission (NAHC) by telephone within 24 hours. Once the NAHC receives notification of a discovery of Native American human remains from a county coroner, the NAHC is required to immediately notify those persons it believes to be most likely descended from the deceased Native American. The descendants may, with the permission of the owner of the land, or his or her authorized representative, inspect the Site of the discovery of the Native American human remains and may recommend to the owner or the person responsible for the excavation work means for treatment or disposition, with appropriate dignity, of the human remains and any associated grave goods. The descendants shall complete their inspection and make recommendations or preferences for treatment within 48 hours of being granted access to the site. According to Public Resources Code Section 5097.94(k), the NAHC is authorized to mediate disputes arising between landowners and known descendants

relating to the treatment and disposition of Native American human burials, skeletal remains, and items associated with Native American burials.

Mitigation Measure 4.4-2 will ensure mandatory compliance with California Health and Safety Code Section 7050.5 and Public Resources Code Section 5097.98. Mandatory compliance with State law would ensure that any discovered human remains are appropriately treated and any potential impacts to human remains, including human remains of Native American ancestry, that may result from development of the Project would be reduced to less than significant. (DEIR, p. 4.4-20)

4.3 GEOLOGY AND SOILS

4.3.1 THRESHOLD A

Impact Statement: The Project has the potential to directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, and/or death involving:

i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other
ii. substantial evidence of a known fault? (Refer to Division of Mines and Geology Special Publication 42).
iii. Strong seismic ground shaking.
iv. Seismic-related ground failure, including liquefaction.
v. Landslides.

❑ **Findings**

Potential impacts of the Project related to Threshold a are discussed in detail in Sections 4.6.5 of the DEIR. The Project is not located on a known earthquake fault but would potentially be subject to strong seismic ground shaking. As structures would be designed to meet or exceed California Building Code (CBC) standards for earthquake resistance, development of the Project would create less than significant impacts related to seismic ground shaking. The Project site is susceptible to liquefaction. A significant impact could occur, and mitigation would be required. Compliance with the recommendations from the Geotechnical Report would reduce the risk of seismic-related ground failure due to liquefaction to less than significant. Mitigation Measure MM 4.6-1 would ensure that that the Project's design professionals and construction contractors implement the recommendations of the Project's Geotechnical Investigation (DEIR *Technical Appendix F1*), which in turn would ensure measures are implemented to address potential impacts due to the exposure of people or structures to adverse effects, including loss, injury, or death as a result of strong seismic ground shaking liquefaction hazards, soil settlement and expansion. Implementation of the required mitigation would ensure that impacts are reduced to less-than-significant levels. The City has determined that changes or alterations have been required in, or incorporated into, the Project which avoid or substantially lessen the significant environmental effect as identified in the DEIR.

- ❑ **Substantial Evidence**

Rupture of a Known Earthquake Fault

The Project site is not located within the State of California Earthquake Fault Zone (Alquist-Priolo) and no faults were identified on the site during the site evaluation. The possibility of damage due to ground rupture is considered low since no active faults are known to cross the site. Therefore, no impacts related to the rupture of a known earthquake fault would occur and no mitigation is required. (DEIR, p. 4.6-8)

Strong Seismic Ground Shaking

Southern California is a seismically active area and properties in the City of Los Alamitos, including the Project site, are subject to periodic ground shaking and other effects from earthquake activity along nearby regional faults. As indicated in the Geotechnical Report (DEIR *Technical Appendix F1*), the Project site is not at an increased risk relative to the surrounding areas. The Project would incorporate the construction recommendations contained with the geotechnical report as required by the LAMC Section 15.04.020. Project-related structures and buildings would be required to be designed and constructed in compliance with the CBC (California Code of Regulations, Title 24, Part 2), which contains provisions for earthquake safety based on factors including occupancy type, the types of soil and rock onsite, and the probable strength of ground motion. Therefore, as structures would be designed to meet or exceed CBC standards for earthquake resistance, development of the Project would create less than significant impacts related to seismic ground shaking and no mitigation is required. (DEIR, p. 4.6-8)

Seismic-Related Ground Failure, Including Liquefaction

The subject site is located within a liquefaction hazard zone per the State of California Seismic Hazard Zone for liquefaction potential. Subsurface field data indicates that the site contains isolated sandy layers susceptible to liquefaction interfingered with fine-grained non-liquefiable soils and dense sands. The recent explored groundwater elevation of 11 feet below existing grade and historic high groundwater elevation of 10 feet below existing grade were both used in the liquefaction analysis. Liquefaction potential was evaluated using the procedures outlined by Special Publication 117A and the applicable California Building Code seismic criteria. (DEIR, pp. 4.6-8 to 4.6-9)

Section 4.0 of the Geotechnical Report (DEIR *Technical Appendix F1*) identifies design recommendations to reduce liquefaction impacts to an acceptable level. The recommendations include seismic design parameters for the site, prevention of the intentional infiltration of storm water into subsurface soils and require foundations to be constructed based on the expansion index and shear strength of on-site soils. The estimated seismic settlement can be mitigated by performing the recommended remedial grading and constructing the buildings with the recommended post-tensioned slab and interconnecting isolated pad footings with grade beams. (DEIR, p. 4.6-9)

The Project would be required to be designed and constructed in accordance with applicable seismic safety guidelines, including the standard requirements of the CBSC. Furthermore, as stated in the LAMC Section 15.04.020, the Project would be required to comply with the grading and construction

recommendations contained within the geotechnical report for the Project site to further reduce the risk of seismic-related ground failure due to liquefaction. Implementation of the Project would have the potential to directly or indirectly expose people or structures to substantial hazards associated with seismic-related ground failure and/or liquefaction hazards. Conservatively, this impact would be potentially significant before implementation of mitigation. (DEIR, p. 4.6-9)

Landslides

Slope failures in the form of landslides are common during strong seismic shaking in areas of steep hills. The Project site and surrounding area are generally flat with no significant slopes. The Project site is not located within a landslides zone. Accordingly, no impact related to landslide hazards would occur and no mitigation is required. (DEIR, p. 4.6-9)

The following mitigation measure has been incorporated into the Project:

MM 4.6-1 Prior to the issuance of grading permits, the City of Los Alamitos Public Works & Engineering Department shall verify that all of the recommendations provided in Section 4.0 of the Project's December 21, 2021 "Preliminary Geotechnical Evaluation and Design Recommendations for Proposed Single-Family and Multi-Family Residential Development, 4665 Lampson Avenue, Los Alamitos, California," prepared by LGC Geotechnical, Inc. and included as Technical Appendix F1 to the Project's EIR, are incorporated into the Project's grading and building plans. These recommendations include but are not limited to a) Site Earthwork Considerations; b) Preliminary Foundation Recommendations; c) Site Grading Recommendations; d) Soil Bearing and Lateral Resistance Considerations; e) Lateral Earth Pressures for Retaining Walls Considerations; f) Nonstructural Concrete Flatwork Recommendations; and g) Preliminary Asphalt Concrete Pavement Design Parameters. Alternatively, the Project shall comply with the findings and recommendations of any geotechnical studies that may be required in association with future grading and/or building permits.

Mitigation Measure MM 4.6-1 would ensure that that the Project's design professionals and construction contractors implement the recommendations of the Project's Geotechnical Investigation (DEIR *Technical Appendix F1*), which in turn would ensure measures are implemented to address potential impacts due to the exposure of people or structures to adverse effects, including loss, injury, or death as a result of strong seismic ground shaking liquefaction hazards, soil settlement and expansion. Implementation of the required mitigation would ensure that impacts are reduced to less-than-significant levels. (DEIR, p. 4.6-16)

4.3.2 THRESHOLD C

Impact Statement: The Project has the potential to be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on-site or off-site landslide, lateral spreading, subsidence, liquefaction or collapse.

❑ Findings

Potential impacts of the Project related to Threshold c are discussed in detail in Section 4.6.5 of the DEIR. There is no potential for the Project's construction or operation to cause, or be impacted by, on- or off-site landslides or lateral spreading. Potential hazards associated with unstable soils would be precluded through mandatory adherence to the recommendations contained in the site-specific Geotechnical Report during Project construction. Project-related structures and buildings would be required to be designed and built in compliance with the CBC, which requires the Project to implement the recommendations of the site-specific Geotechnical Report. Conservatively, impacts would be potentially significant and therefore require mitigation. Mitigation Measure MM 4.6-1 would ensure that that the Project's design professionals and construction contractors implement the recommendations of the Project's Geotechnical Investigation (DEIR *Technical Appendix F1*), which in turn would ensure measures are implemented to address potential impacts due to the exposure of people or structures to adverse effects, including loss, injury, or death as a result of strong seismic ground shaking liquefaction hazards, soil settlement and expansion. Implementation of the required mitigation would ensure that impacts are reduced to less-than-significant levels. The City has determined that changes or alterations have been required in, or incorporated into, the Project which avoid or substantially lessen the significant environmental effect as identified in the DEIR.

❑ Substantial Evidence

Liquefaction

The Project site is susceptible to liquefaction. Project-related structures would be required to be designed and constructed in compliance with the CBC and the recommendations of the Geotechnical Report. The recommendations require foundations to be constructed based on the expansion index and shear strength of on-site soils. Conservatively, this impact would be potentially significant before implementation of mitigation. (DEIR, pp. 4.6-10 to 4.6-11)

Landslide

The Project site and surrounding area are generally flat with no significant slopes. The Project site is not located within a landslides zone. Accordingly, no impact related to landslide hazards would occur and no mitigation is required. (DEIR, p. 4.6-11)

Lateral Spreading

Due to the lack of a nearby "free face" condition and non-continuous nature of the subsurface layers, the potential for lateral spreading is considered very low. Impacts would be less than significant, and no mitigation is required. (DEIR, p. 4.6-11)

Settlement

The underlying soils were found to be generally stiff to very stiff silts and clays. Based on laboratory test data consisting of in-situ moisture content, consolidation tests, and blow counts, fine-grained soils are considered generally normally consolidated. Based upon in-situ testing, visual examination, lab

data, geotechnical evaluation and the proposed corrective grading and fill placement recommendations, static settlement induced by raising grades 1 to 3 feet is estimated to be on the order of 1-inch. The Geotechnical Investigation (DEIR *Technical Appendix F1*) provides standard recommendations for site grading, site preparation, and placement of fill material that would avoid the potential for settlement. The estimated seismic settlement can be mitigated by performing the recommended remedial grading and constructing the buildings with the recommended post-tensioned slab and interconnecting isolated pad footings with grade beams. The recommendations also require isolated pad footings to be interconnected with grade beams. This recommendation would prevent excessive settlement and ensure safety against sliding and overturning. Additionally, the Geotechnical Investigation provides recommendations for soil bearing and lateral resistance which is the amount of load the soil can take without experiencing failure or exceeding the allowable amount of settlement. Prior to mitigation implementing the geotechnical study recommendations, implementation of the Project would have potential impacts related to settlement. Conservatively, this impact would be potentially significant before implementation of mitigation. (DEIR, p. 4.6-11)

Implementation of Mitigation Measure MM 4.6-1 (provided previously) has been incorporated into the Project.

Mitigation Measure MM 4.6-1 would ensure that that the Project's design professionals and construction contractors implement the recommendations of the Project's Geotechnical Investigation (DEIR *Technical Appendix F1*), which in turn would ensure measures are implemented to address potential impacts due to the exposure of people or structures to adverse effects, including loss, injury, or death as a result of strong seismic ground shaking liquefaction hazards, soil settlement and expansion. Implementation of the required mitigation would ensure that impacts are reduced to less-than-significant levels. (DEIR, p. 4.6-16)

4.3.3 THRESHOLD D

Impact Statement: The Project has the potential to be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994) and would not create substantial direct or indirect risks to life or property.

❑ Findings

Potential impacts of the Project related to Threshold d are discussed in detail in Section 4.6.5 of the DEIR. The Project site contains soils with low susceptibility to expansion; however, the Geotechnical Report identified recommendations to minimize the impacts of expansive soils. Conservatively, this impact would be potentially significant before implementation of mitigation. The City has determined that changes or alterations have been required in, or incorporated into, the Project which avoid or substantially lessen the significant environmental effect as identified in the DEIR.

❑ Substantial Evidence

Based on the results of the Geotechnical Report (*Technical Appendix F1* of the DEIR), site soils are anticipated to have "low" expansion potential. Accordingly, the Project site would not create

substantial direct or indirect risks to life or property associated with the presence of expansive soils. Although the Project site has a low expansion potential, the Geotechnical Investigation provides recommendations for foundations and site improvements, such as flatwork and? Pre-soaking of the subgrade for building slabs to minimize the impacts of expansive soils. Conservatively, this impact would be potentially significant before implementation of mitigation. (DEIR, p. 4.6-12)

Implementation of Mitigation Measure MM 4.6-1 (provided previously) has been incorporated into the Project.

Mitigation Measure MM 4.6-1 would ensure that that the Project's design professionals and construction contractors implement the recommendations of the Project's Geotechnical Investigation (DEIR *Technical Appendix F1*), which in turn would ensure measures are implemented to address potential impacts due to the exposure of people or structures to adverse effects, including loss, injury, or death as a result of strong seismic ground shaking liquefaction hazards, soil settlement and expansion. Implementation of the required mitigation would ensure that impacts are reduced to less-than-significant levels. (DEIR, p. 4.6-16)

4.3.4 THRESHOLD F

Impact Statement: The Project has the potential to directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.

❑ Findings

Potential impacts of the Project related to Threshold f are discussed in detail in Section 4.6.5 of the DEIR. The Pleistocene alluvial deposits that underlie the Holocene alluvial deposits have a remote potential to exist at the Project site and have a moderate/undetermined potential to yield paleontological resources. Conservatively, the Project would have the potential to directly or indirectly impact a unique paleontological resource before mitigation. The City has determined that changes or alterations have been required in, or incorporated into, the Project which avoid or substantially lessen the significant environmental effect as identified in the DEIR.

❑ Substantial Evidence

The Project would result in grading to depths of 5 feet below existing grades with deeper excavations (8 to 10 feet) for underground utilities or localized removals. The depth of grading for the existing building and improvements are unknown. (DEIR, p. 4.6-12)

A limited subsurface geotechnical evaluation of the Project site consisting of the excavation of seven small-diameter borings ranging in depth from approximately 5 to 46.5 feet below existing ground surface was performed. Undocumented artificial fill, soils native to or near the site, was encountered at depths ranging from 0 to 2.5 feet below existing grade. Quaternary Young Alluvium (Holocene age) was encountered below the undocumented fill (*Technical Appendix F1* of the DEIR). (DEIR, p. 4.6-12)

According to the Paleontological Report (*Technical Appendix F2* of the DEIR), Holocene and late Pleistocene young alluvial deposits were mapped at the Project site in 2016 and the depth of the geologic age transition from Holocene to Pleistocene within the alluvial deposits is unknown. Within Orange County, Holocene-aged alluvial sedimentary deposits are usually geologically too young to produce fossils. Due to the lack of nearby significant fossil localities and young sedimentary deposits, there is a low potential to uncover paleontological resources. However, Pleistocene alluvial deposits underlie the Holocene alluvial deposits at the Project site and are considered to have a moderate/undetermined paleontological potential. (DEIR, p. 4.6-12)

Although the Geotechnical Report did not identify Pleistocene alluvial deposit within any borings on site, the depth to Pleistocene alluvial deposits is unknown. As a result, the Project has a remote potential to encounter paleontological resources during grading activities in native soils. Accordingly, the Project would have the potential to directly or indirectly impact a unique paleontological resource. Conservatively, this impact would be potentially significant before implementation of mitigation. (DEIR, pp. 4.6-12 to 4.613)

The following mitigation measure has been incorporated into the Project:

MM 4.6-2 If paleontological resources are discovered during earth disturbance activities, the discovery shall be cordoned off with a 50-foot radius buffer so as to protect the discovery from further potential damage, and an Orange County Certified Professional Paleontologist shall be consulted to assess the discovery.

If the discovery is determined to be significant by the paleontologist based on the Society of Vertebrate Paleontology guidelines, a monitoring and recovery plan shall be initiated, which will include notification of appropriate personnel involved and monitoring of earth disturbance activities. The monitoring and recovery plan shall include the following requirements.

a. Monitoring of mass grading and excavation activities shall be performed by a qualified paleontologist. Monitoring will be conducted full-time in areas of grading or excavation in undisturbed sediments of alluvial deposits.

b. Paleontological monitors will be equipped to salvage fossils as they are unearthed to avoid construction delays. The monitor must be empowered to temporarily halt or divert equipment to allow removal of fossils in a timely manner. Monitoring may be reduced if the potentially fossiliferous units are not present in the subsurface, or, if present, are determined upon exposure and examination by qualified paleontological personnel to have low potential to contain fossil resources. The monitor shall notify the project paleontologist, who will then notify the concerned parties of the discovery.

c. Paleontological salvage during trenching and boring activities is typically from the generated spoils and does not delay the trenching or drilling activities. Fossils will be collected and placed in cardboard flats or plastic buckets and identified by field

number, collector, and date collected. Notes will be taken on the map location and stratigraphy of the site, which is photographed before it is vacated and the fossils are removed to a safe place. If the site involves remains from a large terrestrial vertebrate, such as large bone(s) or a mammoth tusk, that is/are too large to be easily removed by a single monitor, a fossil recovery crew shall excavate around the find, encase the find within a plaster and burlap jacket, and remove it after the plaster is set. For large fossils, use of the contractor's construction equipment may be solicited to help remove the jacket to a safe location.

d. Recovered specimens will be prepared to a point of identification and permanent preservation, including screen-washing sediments to recover small invertebrates and vertebrates.

e. Recovered specimens shall be identified and curated into a professional, accredited public museum / repository with a commitment to archival conservation and permanent retrievable storage (e.g., Orange County [OC] Parks). The paleontological curation program should include a written repository agreement prior to the initiation of monitoring activities. Prior to curation, the lead agency (e.g., the City of Los Alamitos Planning Division) will be consulted on the repository/museum to receive the fossil material.

f. A final report of findings and significance will be prepared, including lists of all fossils recovered and necessary maps and graphics to accurately record their original location(s). The report, when submitted to, and accepted by, the appropriate lead agency, will signify satisfactory completion of the project program to reduce impacts to any potential nonrenewable paleontological resources (i.e., fossils) that might have been lost or otherwise adversely affected without such a program in place.

Mitigation Measure MM 4.6-2 would ensure the proper identification and subsequent treatment of any significant paleontological resources that may be encountered during ground-disturbing activities associated with implementation of the proposed Project. With implementation of the required mitigation, the Project's potential impacts to important paleontological resources would be reduced to less than significant. The Project's contribution to cumulative impacts would likewise be reduced to less than significant. (DEIR, p. 4.6-17)

4.4 TRIBAL CULTURAL RESOURCES

4.4.1 THRESHOLD A

Impact Statement: The Project has the potential to cause a substantial adverse change in the significance of a tribal cultural resource.

❑ Findings

Potential impacts of the Project related to Threshold a are discussed in detail in Section 4.16.5 of the DEIR. There is evidence indicating that tribal cultural resources are present on the Project site or have been found previously on the Project site. Project construction activities have the potential to unearth and adversely impact tribal cultural resources that may be buried in native soils at the Project site. Impacts would be potentially significant, and mitigation is required. Implementation of Mitigation Measures MM 4.16-1 through 4.16-3 would ensure the proper identification and subsequent treatment of any significant tribal cultural resources that may be encountered during ground-disturbing activities associated with Project development. With implementation of the required mitigation, the Project's potential impact to significant tribal cultural resources would be reduced to less than significant. The City has determined that changes or alterations have been required in, or incorporated into, the Project which avoid or substantially lessen the significant environmental effect as identified in the DEIR.

❑ Substantial Evidence

As discussed in DEIR Section 4.4, *Cultural Resources*, there are no historical resources identified within the Project site. Additionally, there are no known tribal cultural resources on the Project site. Because the site is currently developed, due to past grading activities and historic agricultural uses, the potential for the Project's construction activities to affect an unidentified tribal cultural resource is considered low. However, while unlikely, the presence of previously undiscovered subsurface tribal cultural resources on the Project site remains possible during grading activities in native soils (e.g., previously undisturbed soils due to deeper excavation). (DEIR, p. 4.16-7)

As part of the mandatory AB 52 consultation process required by State law, the City sent notification of the Project to Native American tribes with possible traditional or cultural affiliation to the Project area. The City sent notification letters of the proposed Project to the following 14 Native American tribes:

- Gabrielino-Tongva Tribe;
- Juaneno Band of Mission Indians Acjachemen Nation;
- Gabrielino Tongva Indians of California Tribal Council;
- Ewiiaapaayp Band of Kumeyaay;
- Pala Band of Mission Indians;
- Gabrielino/Tongva Nation;
- Campo Band of Diegueno;
- Mesa Grande Band of Diegueno;
- La Posta Band of Diegueno Mission Indians;
- Gabrieleno/Tongva San Gabriel Band of Mission Indians;
- Santa Rosa Band of Cahuilla Indians;
- Gabrieleno Band of Mission Indians – Kizh Nation;
- Manzanita Band of Kumeyaay Nation; and
- Soboba Band of Luiseno Indians. (DEIR, pp. 4.16-7 to 4.16-8)

During the course of the tribal consultation process, the Gabrieleno Band of Mission Indians – Kizh Nation responded to the City's invitation for consultation and provided the City with tribal archive information indicating that tribal cultural resources, as defined in Public Resources Code § 21074, have the potential to exist in the Project area have explained their concerns with specific subsurface ground disturbance activities that have impacted and destroyed their tribal cultural resources in the past. Accordingly, there is potential for significant impacts to occur if tribal cultural resources are inadvertently discovered during grading activities in native soils and mitigation is required. Conservatively, this impact would be potentially significant before implementation of mitigation. (DEIR, p. 4.16-8)

The Project would be required to comply with the following Mitigation Measures:

MM 4.16-1 Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities.

1. The project applicant/lead agency shall retain a Native American Monitor from or approved by the Gabrieleño Band of Mission Indians – Kizh Nation. The monitor shall be retained prior to the commencement of any "ground-disturbing activity" for the subject project at all project locations (i.e., both on-site and any off-site locations that are included in the project description/definition and/or required in connection with the project, such as public improvement work). "Ground disturbing activity" shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching.

2. A copy of the executed monitoring agreement shall be submitted to the lead agency prior to the earlier of the commencement of any ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity.

3. The monitor will complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs will identify and describe any discovered TCRs, including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., (collectively, tribal cultural resources, or "TCR"), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs will be provided to the project applicant/lead agency upon written request to the Tribe.

4. On-site tribal monitoring shall conclude upon the latter of the following (1) written confirmation to the Kizh from a designated point of contact for the project applicant/lead agency that all ground-disturbing activities and phases that may involve ground-disturbing activities on the project site or in connection with the project are complete; or (2) a determination and written

notification by the Kizh to the project applicant/lead agency that no future, planned construction activity and/or development/construction phase at the project site possesses the potential to impact Kizh TCRs.

5. Upon discovery of any TCRs, all construction activities in the immediate vicinity of the discovery shall cease (i.e., not less than the surrounding 50 feet) and shall not resume until the discovered TCR has been fully assessed by the Kizh monitor and/or Kizh archaeologist. The Kizh will recover and retain all discovered TCRs in the form and/or manner the Tribe deems appropriate, in the Tribe's sole discretion, and for any purpose the Tribe deems appropriate, including for educational, cultural and/or historic purposes.

MM 4.16-2 Unanticipated Discovery of Human Remains and Associated Funerary Object.

1. Native American human remains are defined in PRC 5097.98 (d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in Public Resources Code Section 5097.98, are also to be treated according to this statute.

2. If Native American human remains and/or grave goods discovered or recognized on the project site, then all construction activities shall immediately cease. Health and Safety Code Section 7050.5 dictates that any discoveries of human skeletal material shall be immediately reported to the County Coroner and all ground-disturbing activities shall immediately halt and shall remain halted until the coroner has determined the nature of the remains. If the coroner recognizes the human remains to be those of a Native American or has reason to believe they are Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission, and Public Resources Code Section 5097.98 shall be followed.

3. Human remains and grave/burial goods shall be treated alike per California Public Resources Code Section 5097.98(d)(1) and (2).

4. Construction activities may resume in other parts of the project site at a minimum of 200 feet away from discovered human remains and/or burial goods, if the Kizh determines in its sole discretion that resuming construction activities at that distance is acceptable and provides the project manager express consent of that determination (along with any other mitigation measures the Kizh monitor and/or archaeologist deems necessary). (CEQA Guidelines Section 15064.5(f).)

5. Preservation in place (i.e., avoidance) is the preferred manner of treatment for discovered human remains and/or burial goods. Any historic archaeological material that is not Native American in origin (non-TCR) shall be curated at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the

archaeological material, it shall be offered to a local school or historical society in the area for educational purposes.

6. Any discovery of human remains/burial goods shall be kept confidential to prevent further disturbance.

MM 4.16-3 Procedures for Burials and Funerary Remains.

1. As the Most Likely Descendant ("MLD"), the Koo-nas-gna Burial Policy shall be implemented. To the Tribe, the term "human remains" encompasses more than human bones. In ancient as well as historic times, Tribal Traditions included, but were not limited to, the preparation of the soil for burial, the burial of funerary objects with the deceased, and the ceremonial burning of human remains.

2. If the discovery of human remains includes four or more burials, the discovery location shall be treated as a cemetery and a separate treatment plan shall be created.

3. The prepared soil and cremation soils are to be treated in the same manner as bone fragments that remain intact. Associated funerary objects are objects that, as part of the death rite or ceremony of a culture, are reasonably believed to have been placed with individual human remains either at the time of death or later; other items made exclusively for burial purposes or to contain human remains can also be considered as associated funerary objects. Cremations will either be removed in bulk or by means as necessary to ensure complete recovery of all sacred materials.

4. In the case where discovered human remains cannot be fully documented and recovered on the same day, the remains will be covered with muslin cloth and a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24-hour guard should be posted outside of working hours. The Tribe will make every effort to recommend diverting the project and keeping the remains in situ and protected. If the project cannot be diverted, it may be determined that burials will be removed.

5. In the event preservation in place is not possible despite good faith efforts by the project applicant/developer and/or landowner, before ground-disturbing activities may resume on the project site, the landowner shall arrange a designated site location within the footprint of the project for the respectful reburial of the human remains and/or ceremonial objects.

6. Each occurrence of human remains and associated funerary objects will be stored using opaque cloth bags. All human remains, funerary objects, sacred objects and objects of cultural patrimony will be removed to a secure container on site if possible. These items should be retained and reburied within six

months of recovery. The site of reburial/repatriation shall be on the project site but at a location agreed upon between the Tribe and the landowner at a site to be protected in perpetuity. There shall be no publicity regarding any cultural materials recovered.

7. The Tribe will work closely with the project's qualified archaeologist to ensure that the excavation is treated carefully, ethically, and respectfully. If data recovery is approved by the Tribe, documentation shall be prepared and shall include (at a minimum) detailed descriptive notes and sketches. All data recovery data recovery-related forms of documentation shall be approved in advance by the Tribe. If any data recovery is performed, once complete, a final report shall be submitted to the Tribe and the NAHC. The Tribe does NOT authorize any scientific study or the utilization of any invasive and/or destructive diagnostics on human remains.

Implementation of Mitigation Measures MM 4.16-1 through 4.16-3 would ensure the proper identification and subsequent treatment of any significant tribal cultural resources that may be encountered during ground-disturbing activities associated with Project development. With implementation of the required mitigation, the Project's potential impact to significant tribal cultural resources would be reduced to less than significant. (DEIR, p. 4.16-12)

5.0 ENVIRONMENTAL IMPACTS THAT REMAIN SIGNIFICANT AND UNAVOIDABLE AFTER MITIGATION

The City finds the Project would result in significant and unavoidable impacts in the following impact categories after implementation of all feasible mitigation measures: Transportation. In accordance with CEQA Guidelines Section 15092(b)(2), the City cannot approve the Project unless it first finds (1) under Public Resources Code Section 21081(a)(3), and CEQA Guidelines Section 15091(a)(3), that specific economic, legal, social technological, or other considerations, including provisions of employment opportunities to highly trained workers, make infeasible the mitigation measures or alternatives identified in the EIR; and (2) under CEQA Guidelines Section 15092(b), that the remaining significant effects are acceptable under CEQA Guidelines Section 15093 because the economic, legal, social, technological or other benefits of the proposed Project outweigh its unavoidable adverse environmental effects. Therefore, a statement of overriding considerations has been prepared (see Section 9.0, herein).

5.4 TRANSPORTATION

5.4.1 THRESHOLD B

Impact Statement: The Project would conflict with CEQA Guidelines Section 15064.3, subdivision (b).

❑ Findings

Potential impacts of the Project related to Threshold b are discussed in detail in Section 4.15.5 of the DEIR. The Project would generate VMT per capita exceeding the City's adopted VMT impact threshold of 14.8 by 31.8% in the baseline condition and 27.7% in the cumulative condition. Impacts would be potentially significant and cumulatively considerable. As such, these impacts will require mitigation. Project components and mitigation measures available to reduce VMT include developing pedestrian network improvements and implementing transportation demand management (TDM) measures such as those listed in Mitigation Measure MM 4.15-1. Even where the TDM measures are implemented to their maximum effectiveness of 10%, the Project would still not be able to reduce its VMT impact to a level of less than significant which requires a 31.8% reduction for baseline (2022) conditions and 27.7% for buildout (2045) conditions. Therefore, the Project is found to have a significant and unavoidable VMT impact on a direct and cumulatively considerable basis. To ensure that all feasible mitigation measures were incorporated to reduce VMT impacts, measures identified in the 2021 California Air Pollution Control Officers Association (CAPCOA) Handbook were considered. As discussed above, the 2021 CAPCOA Handbook describes methods to reduce VMT. As discussed in Attachment C, VMT Reduction Matrix, of the VMT Report (DEIR *Technical Appendix N2*), all applicable transportation mitigation measures were evaluated to reduce VMT impacts. Even with incorporation of all feasible mitigation measures, impacts would remain significant and unavoidable. As discussed in DEIR Section 4.12, *Population and Housing*, the Project would place housing within a job-rich area. Although there would be a significant and unavoidable impact related to VMT, this is due to the fact that the Project site does not currently have transit or alternative

transportation opportunities and has a higher VMT per capita compared to the County's regional average. Nevertheless, co-locating housing near jobs reduces vehicle travel lengths and associated greenhouse gas emissions caused by long commute distances.

Pursuant to Section 21081(a)(3) of the California Public Resources Code the City has determined that specific economic, legal, social, technological, or other considerations make infeasible the mitigation measures and alternatives identified in the EIR.

❑ Substantial Evidence

Vehicle Miles Traveled

Small Project Screening
The Governor's OPR Technical Advisory on Evaluating Transportation Impacts in CEQA (December of 2018) (Technical Advisory) indicates that projects generating fewer than 110 daily vehicle trips may be presumed to have a less than significant impact. Trips generated by the Project's proposed land uses have been estimated based on trip generation rates collected by the Institute of Transportation Engineers (ITE) Trip Generation Manual, 11th Edition, 2021. The proposed Project is anticipated to generate 1,658 vehicle trip-ends per day, which exceeds the 110 vehicle trips per day threshold. (DEIR, p. 4.15-13)

Map Based Screening
As noted in the Technical Advisory, "residential and office projects that locate in areas with low VMT and that incorporate similar features (density, mix of uses, and transit accessibility) will tend to exhibit similarly low VMT." The Orange County Transportation Model (OCTAM) was utilized to obtain the Project's transportation analysis zone (TAZ) existing VMT information. The Project site is in TAZ 634. TAZ 634 has an existing VMT per capita of 22.71. Per the OCTAM model, the County of Orange regional average VMT per capita is 17.42. The Project is not located in a low VMT area because the existing VMT per capita of 22.71 in TAZ 634 is higher than the regional VMT per capita of 17.42. (DEIR, p. 4.15-13)

TPA Screening
The Technical Advisory states that projects located within a Transit Priority Area (TPA), ½ mile of an existing "major transit stop," or an existing stop along a "high-quality transit corridor" will have a less than significant impact on VMT. (DEIR, p. 4.15-13)

Once a project is determined to be within a TPA, the Technical Advisory also recommends consideration of secondary screening checks. For example, a proposed land use project is not eligible for TPA screening if the project meets any of the following sub-criteria:

1) Has a Floor Area Ratio (FAR) of less than 0.75;

2) Includes more parking for use by residents, customers, or employees of the project than required by the jurisdiction (if the jurisdiction requires the project to supply parking);

3) Is inconsistent with the applicable Sustainable Communities Strategy (as determined by the lead agency, with input from the Metropolitan Planning Organization); or

4) Replaces affordable residential units with a smaller number of moderate- or high-income residential units. (DEIR, p. 4.15-14)

Utilizing Graphical Information System (GIS) data obtained from SCAG, the Project's location relative to its proximity to TPA area was mapped. The Project is not located within a TPA. (DEIR, p. 4.15-14)

Affordable Residential Development Screening

The Technical Advisory states that "Adding affordable housing to infill locations generally improves jobs-housing match, in turn shortening commutes and reducing VMT." The Technical Advisory also identifies projects consisting of 100% affordable housing units as eligible for screening. Furthermore "low-wage workers in particular would be more likely to choose a residential location close to their workplace, if one is available." In areas where existing jobs-housing match is closer to optimal, low-income housing nevertheless generates less VMT than market-rate housing. Therefore, a project consisting of a high percentage of affordable housing may be a basis for the lead agency to find a less-than-significant impact on VMT. The Project is proposing 77 affordable housing units or 31% of the total 246 dwelling units. As previously discussed, the City of Los Alamitos has not formally adopted thresholds to determine the amount of affordable housing applicable to screening within the City, and in the absence of those thresholds, an affordable housing screening qualification cannot be made. (DEIR, p. 4.15-14)

Local Community Serving Retail Screening

The Technical Advisory identifies local serving retail uses are presumed to have a less than significant impact absent substantial evidence to the contrary. By adding retail opportunities into the urban fabric and thereby improving retail destination proximity, local-serving retail development tends to shorten trips and reduce VMT. The Project does not propose to develop any local serving retail uses, and therefore the Project is not eligible for screening as a local serving retail use. (DEIR, p. 4.15-14)

Model Based Project Generated VMT

Since the Project does not meet any of the screening criteria used to determine that a land use project is presumed to have less than significant VMT impacts, VMT modeling and analysis was performed. DEIR Table 4.15-2, *Project-Generated VMT Results*, presents the Project's potential VMT. As discussed previously, a VMT impact is considered significant if a residential project generates more than 15% below the existing regional residential VMT per capita. Consistent with the Technical Advisory, project level VMT analysis should evaluate home-based (HB) VMT divided by a project's population. HB VMT is calculated from OCTAM's Production/Attraction (PA) trip matrices and then divided by a project's population to derive the VMT efficiency metric VMT per capita. Productions are land use types that generate trips (residences) and attractions are land use types that attract trips (employment). Productions and attractions are converted from person trips to vehicle trips for the purposes of calculating VMT. (DEIR, p. 4.15-15)

The Project includes 77 affordable housing units, which generate vehicle trips at a lower rate per unit as compared to market rate housing. As the reduction in trips and associated VMT could not be accurately accounted for by the calculations conducted using the OCTAM model, these adjustments are made through calculations as described in the Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity. Specifically, "Land Use – T-4. Integrate Affordable and Below Market Rate Housing"; requires multifamily residential units to be permanently dedicated as affordable for lower income families. The Project's affordable units would reduce its Project generated VMT by 8.87% or 1,226 VMT. Additionally, the Project's parking supply will be limited to 577 parking spaces, which is 12 parking spaces below the 589 parking spaces required by the lead agency. This would reduce project-generated VMT by 0.28% or 39 VMT. This results in a Project generated VMT of 12,559 in the baseline condition and 12,174 in the cumulative condition as shown in DEIR Table 4.15-2. (DEIR, p. 4.15-15, as revised in Section 4.0 of the FEIR)

The Project would generate VMT per capita exceeding the City's adopted VMT impact threshold by 30.1% in the baseline (2022) conditions and 27.0% for long range (2045) conditions. As a result, the Project would result in a significant VMT impact. Mitigation is required. (DEIR, p. 4.15-15)

Transportation demand management (TDM) strategies have been evaluated for the purpose of reducing VMT impacts determined to be potentially significant. The effectiveness of TDM strategies to reduce VMT has been determined based on the 2021 California Air Pollution Control Officers Association (CAPCOA) Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity. In addition to specific tenancy considerations, which may affect the effectiveness of TDM measures, land use context is a major factor relevant to the potential application and effectiveness of TDM measures. More specifically, the land use context of the Project is characteristically suburban. The Project's suburban context acts to reduce the range of feasible TDM measures and moderates their potential effectiveness. According to the 2021 CAPCOA Handbook, the maximum effectiveness for the TDM measures under the neighborhood design features is 10%.

Consistent with VMT reduction measures described within CAPCOA, reductions to VMT shall include the strategies identified in Mitigation Measure MM 4.15-1. In addition to Mitigation Measure MM 4.15-1, the Project would provide pedestrian improvements within the development connecting to existing off-site facilities.

MM 4.15-1 Prior to the issuance of certificate of occupancy, the Project Applicant shall provide documentation that it has implemented the CAPCOA strategies identified below. Verification that the CAPCOA strategies were completed shall be verified by the City's Public Works Director.

1. Provide pedestrian and bicycle network improvements within the development connecting to existing off-site facilities, as detailed in Section 3.3.2 of the DEIR.

2. Confirm with the OCTA whether providing new or re-routing existing transit services to the site would be feasible, as determined by OCTA pursuant to OCTA's standards.
3. Install broadband infrastructure or other communication technologies that encourages telecommuting and working from home, which would reduce mobile source emission.

Project components and mitigation measures available to reduce VMT include developing pedestrian network improvements and implementing TDM measures such as those listed in Mitigation Measure MM 4.15-1. Even where the TDM measures are implemented to their maximum effectiveness of 10%, the Project would still not be able to reduce its VMT impact to a level of less than significant which requires a 31.8% reduction for baseline (2022) conditions and 27.7% for buildout (2045) conditions. Therefore, the Project is found to have a significant and unavoidable VMT impact on a direct and cumulatively considerable basis. (DEIR, p. 4.15-20)

To ensure that all feasible mitigation measures were incorporated to reduce VMT impacts, in addition to the TDM measures identified above, all measures identified in the 2021 CAPCOA Handbook were considered. As discussed above, the 2021 CAPCOA Handbook describes methods to reduce VMT. As discussed in Attachment C, VMT Reduction Matrix, of the VMT Report (DEIR *Technical Appendix N2*), all applicable transportation mitigation measures were evaluated to reduce VMT impacts. Even with incorporation of all feasible mitigation measures, impacts would remain significant and unavoidable. (DEIR, p. 4.15-20)

As discussed in DEIR Section 4.12, *Population and Housing*, the Project would place housing within a job-rich area. Although there would be a significant and unavoidable impact related to VMT, this is due to the fact that the Project site does not currently have transit or alternative transportation opportunities and has a higher VMT per capita compared to the County's regional average. Nevertheless, co-locating housing near jobs reduces vehicle travel lengths and associated greenhouse gas emissions caused by long commute distances. (DEIR, p. 4.15-20)

5.4.2 CUMULATIVE IMPACTS

Impact Statement: The Project would result in a cumulative VMT impact since the Project was found to have a significant and unavoidable impact at the project level. The Project would generate VMT per capita exceeding the City's adopted VMT impact threshold of 14.8 by 31.8% in the baseline condition and 27.7% in the cumulative condition.

❑ Findings

Potential cumulative impacts of the Project related to transportation are discussed in detail in Section 4.15-6 of the DEIR. The Project would result in a significant cumulative VMT impact. The Project is required to comply with Mitigation Measure MM 4.15-1, which would reduce impacts to the extent feasible; however, impacts would remain significant and unavoidable. The City finds that the above mitigation measures are feasible, are adopted, and will reduce some of the proposed Project transportation

impacts attributable to trips generated by the proposed Project. However, even where the TDM measures are implemented to their maximum effectiveness of 10%, the Project would still not be able to reduce its VMT impact to a level of less than significant which requires a 31.8% reduction for baseline (2022) conditions and 27.7% for buildout (2045) conditions. Therefore, the Project is found to have a significant and unavoidable VMT impact on a direct and cumulatively considerable basis. Pursuant to Section 21081(a)(3) of the California Public Resources Code, as described below, the City has determined that specific economic, legal, social, technological, or other considerations make infeasible the alternatives and mitigation measures identified in the EIR.

- ❑ **Substantial Evidence**

Pursuant to the City's cumulative VMT threshold, a significant cumulative impact would occur if the Project increased the total regional VMT compared to the cumulative no project condition. The Project is not proposing a general plan amendment nor a change of zone. Since the Project is consistent with the underlaying land use assumptions of the General Plan and Zoning the cumulative no project would be the same as the cumulative with project. Therefore, the cumulative impact would be less than significant. (DEIR, p. 4.15-18).

However, the Project would generate VMT per capita exceeding the regional VMT per capita threshold (15% below the regional average) by 27.0% under long range (2045) conditions. Therefore, although the Project would not exceed the City's adopted cumulative VMT threshold, it would not achieve 15% below the regional VMT per capita threshold under long range (2045) conditions. That said, as noted in the Technical Advisory, "A project that falls below an efficiency-based threshold that is aligned with long-term environmental goals and relevant plans would have no cumulative impact distinct from the project impact. Accordingly, a finding of a less-than-significant project impact would imply a less than significant cumulative impact, and vice versa."

Nonetheless, to be conservative given that the Project would not achieve 15% below the regional VMT per capita threshold under long range (2045) conditions, this analysis assumes the Project would result in cumulatively considerable VMT impacts. (DEIR, p. 4.15-18)

6.0 OTHER CEQA CONSIDERATIONS

6.1 SIGNIFICANT IRREVERSIBLE ENVIRONMENTAL CHANGES

The State CEQA Guidelines require EIRs to address any significant irreversible environmental changes that would be involved with the proposed action should it be implemented (CEQA Guidelines § 15126.2[d]). An environmental change would fall into this category if: a) the project would involve a large commitment of non-renewable resources; b) the primary and secondary impacts of the project would generally commit future generations to similar uses; c) the project involves uses in which irreversible damage could result from any potential environment accidents; or d) the proposed consumption of resources is not justified (e.g., the project results in the wasteful use of energy).

❑ Finding

The Project's potential to result in significant irreversible environmental changes are discussed in detail in Subsection 5.2 of the DEIR. The Project would not result in significant irreversible environmental changes, as described below. Construction and long-term operation of the Project would be compatible with the existing and planned land uses that surround the Project site and would not result in significant physical environmental effects to nearby properties. Although the Project would cause unavoidable impacts to the environment associated with transportation (VMT), the Project's impact related to VMT would not result in significant irreversible environmental changes. (DEIR, p. 5-2)

❑ Substantial Evidence

One factor in determining whether the Project may result in significant irreversible environmental changes requires a determination of whether key non-renewable resources would be degraded or destroyed in such a way that there would be little possibility of restoring them. (DEIR, p. 5-2)

Natural resources, in the form of construction materials and energy resources would be used in the construction of the Project. The consumption of these natural resources would represent an irreversible change to the environment. However, the development of the Project site as proposed would have no measurable adverse effect on the availability of such resources, including resources that may be nonrenewable (e.g., fossil fuels). Additionally, the Project is required by law to comply with the California Building Standards Code (CALGreen), which would minimize the Project's demand for energy, including energy produced from non-renewable sources. A detailed discussion of energy consumption is provided in DEIR Subsection 4.5, *Energy*, which determined impacts to be less than significant. (DEIR, p. 5-2)

Implementation of the Project would commit the Project site to residential uses for the lifespan of the Project. As demonstrated in the analysis presented throughout DEIR Section 4.0, *Environmental Analysis*, construction and long-term operation of the Project would be compatible with the existing and planned land uses that surround the Project site and would not result in significant physical environmental effects to nearby properties. Although the Project would cause unavoidable impacts to the environment associated with VMT, these effects would not commit surrounding properties to land uses other than those that are present under existing conditions. (DEIR, p. 5-2)

DEIR Subsection 4.8, *Hazards and Hazardous Materials*, provides an analysis of the Project's potential to transport or handle hazardous materials which, if released into the environment, could result in irreversible damage to the environment. As concluded in the analysis, compliance with federal, State, and local regulations related to hazardous materials would be required of all contractors working on the property during the Project's construction and of all users that occupy the Project's buildings. As such, construction and long-term operation of the Project would not have the potential to cause significant irreversible damage to the environment, including damage that may result from upset or accident conditions. (DEIR, p. 5-2)

As discussed under DEIR Subsection 4.5, *Energy*, the Project would not result in a wasteful consumption of energy or the consumption of resources that is not justified. The Project's energy requirements during construction and operation were analyzed in DEIR Section 4.5, *Energy*. As discussed, construction energy use would be typical for the type of construction proposed because there are no aspects of the Project's proposed construction process that are unusual or energy-intensive, and Project construction equipment would conform to the applicable CARB emissions standards. Construction contractors would be required to comply with applicable CARB regulation regarding retrofitting, repowering, or replacement of diesel off-road construction equipment. The Project is located on an infill site that is surrounded by existing urban uses; the existing transportation facilities and infrastructure would provide future residents, visitors, and employees associated with the Project access to a mix of land uses near the Project, thus further reducing fuel consumption and energy demand. Additionally, the Project will be providing a community electric vehicle for use by residents of the affordable housing component (PDF-GHG-3) as well as providing parking and EV infrastructure (PDF-GHG-4) that would further promote fuel efficient vehicles. In compliance with the California Green Building Standards Code and City requirements, the Project would promote the use of bicycles as an alternative means of transportation by providing short-term and/or long-term bicycle parking accommodations. (DEIR, pp. 5-2 to 5-3)

Because no significant non-renewable resources occur within the Project site, the Project would also not reduce the availability of non-renewable resources associated with long-term operational activities. Accordingly, the Project would not result in a significant, irreversible change to the environment related to energy use. (DEIR, p. 5-3)

6.2 GROWTH-INDUCING IMPACTS

CEQA requires a discussion of the ways in which the Project could be growth-inducing. The State CEQA Guidelines identify a project as growth-inducing if it would foster economic or population growth or the construction of additional housing, either directly or indirectly, in the surrounding environment (CEQA Guidelines § 15126.2 [e]).

❑ Finding

The Project's potential to result in growth-inducing impacts is discussed in detail in Subsection 5.3 of the DEIR. For the reasons described in detail below, the Project will not 1) remove obstacles to growth

because the Project's proposed utility infrastructure, on- and off-site, are designed to accommodate only the proposed development as opposed to widespread, new development; 2) result in the need to expand one or more public services (see Public Services of the DEIR); 3) encourage or facilitate economic effects that could result in other activities that could significantly affect the environment; and 4) involve a precedent setting action that could encourage and facilitate other activities that could significantly affect the environment because there are no proposed changes to the type or location of uses allowed by the General Plan and zoning ordinance. Based on the entire record, the City finds that the Project would not directly or indirectly induce growth in the surrounding area which could result in a significant adverse effect to the environment.

❑ Substantial Evidence

Would this project remove obstacles to growth (e.g., a major expansion of a wastewater treatment plan that may allow for more construction in service areas)?

No. Due to the developed nature of the Project site, the existing structures are currently connected to the existing utility infrastructure beneath Lampson Avenue and generate a demand for utility services. The Project involves the redevelopment of the Project site with residential uses, consistent with the existing land use designation and zone classification for the Project site. The proposed residential uses would be developed in accordance with the City's development standards. Furthermore, the Project accommodates the growth and development anticipated in the City's 2021-2029 Housing Element and would not change existing regulations pertaining to land development. (DEIR, p. 5-4)

The Project does not require the construction or extension of roadways; however, the Project would include the installation of new on-site utility connections to existing utility infrastructure and the construction of approximately 1,200 linear feet of water line off-site within Lampson Avenue to serve the development. The Project would not create major new infrastructure that could result in substantial, unplanned growth because the Project's proposed utility infrastructure, on- and off-site, are designed to accommodate only the proposed development as opposed to widespread, new development. Therefore, the Project is not considered to be growth inducing with respect to the removal of obstacles to growth. (DEIR, p. 5-4)

Would this project tax existing community service facilities, requiring construction of new facilities that could cause significant environmental effects?

No. As discussed in DEIR Subsection 4.13, *Public Services*, and 4.14, *Recreation*, the Project would increase the demand for public services (police, fire, schools, libraries, and parks and recreational facilities). The proposed residential use would create the typical range of service calls for police and fire services that occur with this type of use. However, per correspondence with Orange County Fire Authority, Los Alamitos Police Department, Los Alamitos Unified School District, and Orange County Public Libraries (DEIR *Technical Appendix L)*, the Project would not necessitate the unplanned construction of new, or the expansion of existing, public service facilities in order to maintain desired levels of service. Secured Fire Protection Agreements would ensure that response times and service ratios are met within its service area and facilities are upgraded as needed. The existing police services

and resources would be adequate to meet the additional demands generated by the Project. Additionally, funding mechanisms such as a Secured Fire Agreement, the City's General Fund revenue, development impact fees, and in-lieu fees are in place through existing regulations and standard practices to accommodate growth in the City, including the Project. As discussed in DEIR Subsection 4.17, *Utilities and Service Systems*, there is adequate water, wastewater, and storm drain infrastructure and capacity to serve the Project site. This Project would not, therefore, have significant growth-inducing consequences with respect to public services or utilities and service systems. (DEIR, pp. 5-4 to 5-5)

Are there characteristics of the project that encourage and facilitate other activities that could significantly affect the environment, either individually or cumulatively? For example, would this project encourage or facilitate economic effects that could result in other activities that could significantly affect the environment?

No. A project could indirectly induce growth at the local level by increasing the demand for additional goods and services associated with the increase in project population and thus reducing or removing barriers to growth. This occurs in suburban or rural areas where population growth results in increased demand for service and commodity markets responding to the new population. This type of growth is, however, a regional phenomenon resulting from the introduction of a major employment center or regionally significant housing project. For example, additional commercial uses may be drawn to the area by the increased number of residents in the area. (DEIR, p. 5-5)

Construction jobs from Project implementation would result in economic growth. During Project construction, a number of design, engineering, and construction-related jobs would be created. However, this would be temporary in nature and would only last until Project construction is completed. Construction impacts including construction worker commute trips and associated impacts were analyzed throughout the DEIR, specifically in Subsections 4.2, *Air Quality*, 4.7, *Greenhouse Gas Emissions*, and 4.11, *Noise*; the Project's impacts analyzed under these environmental topics were determined to be less than significant. (DEIR, p. 5-5)

As further described in DEIR Section 3.0, *Project Description*, the Project is proposing the development of up to 246 new residential units. The Project's proposed 246 households and 647 residents were anticipated by the City's General Plan projections. The City's Housing Element projected an increase of 2,023 people in the next eight years based on the RHNA allocation. The Project site is identified within the City's Housing Element as a housing element site with an estimate of 246 units. Development of the Project with a total of 246 units would be consistent with the City's 2021–2029 Housing Element. Additionally, the City's General Plan designates the Project site for "Multi-Family Residential-25" land use and the Project site is zoned as "Multi-Family Residential (R-3)." The maximum permitted density is 25 dwelling units per net acre and Project's proposed overall density is 20 dwelling units per acre. Therefore, the Project would be consistent with the General Plan land use and zoning designations and anticipated growth. Therefore, implementation of the Project's proposed residential use would support existing uses in the area and would facilitate the growth envisioned in the City's 2021-2029 Housing Element. (DEIR, p. 5-5)

As development occurs onsite, Project residents would seek shopping, entertainment, employment, home improvement, auto maintenance, and other economic opportunities in the surrounding area. Additional commercial uses may be drawn to the area by the increased number of residents in the area. The Project is located near existing employment centers and retail areas, which would help serve the employment and shopping needs of the future residents. According to the General Plan Housing Element, the City is an employment hub and its principal employers, as of 2021 (most current data available) include hospitals, aerospace manufacturers, business services, and restaurant/wholesale trade. DEIR Table 5-1, *City of Los Alamitos Top Employers*, lists the top employers in the City in 2021 and their distances from the Project site. (DEIR, p. 5-6)

There are several existing retail areas near the Project site within the City and surrounding cities (Cypress, Seal Beach, and Garden Grove). The nearest retail areas to the Project site include Old Ranch Town Center located at 12320-12430 Seal Beach Boulevard in the city of Seal Beach approximately 1.04 miles west and The Shops at Rossmoor located at 12501 Seal Beach Boulevard in the city of Seal Beach approximately 1.3 miles west. The Project site is already served by nearby commercial uses. Therefore, the Project's introduction of residents on the Project site would not induce substantial growth in the area. (DEIR, p. 5-6)

Are there characteristics of the project that encourage and facilitate other activities that could significantly affect the environment, either individually or cumulatively? For example, would approval of this project involve some precedent setting action that could encourage and facilitate other activities that could significantly affect the environment?

No. As identified above, there are no proposed changes to the type or location of uses allowed by the General Plan and zoning ordinance. Further, no changes to any of the City's building safety standards (i.e., building, grading, plumbing, mechanical, electrical, fire codes) are proposed or required to implement this Project. As identified in EIR Sections 4.1 through 4.17, the Project would be implemented in accordance with applicable regulations and identified mitigation measures, which would ensure there are no conflicts with adopted land development regulations and environmental impacts are minimized to the extent feasible. The Project does not propose any precedent-setting actions that, if approved, would specifically allow, or encourage other projects and resultant growth to occur. Furthermore, the Project is not extending any infrastructure that would facilitate further development. In the event that another property owner were to propose development or redevelopment of a property in the Project vicinity or in any part of the City, that project would require evaluation under CEQA based on its own merits, including an analysis of direct and cumulatively considerable effects. Therefore, approval of the Project would not involve some precedent setting action that could encourage and facilitate other activities that could significantly affect the environment. (DEIR, pp. 5-6 to 5-7)

7.0 ALTERNATIVES

7.4.1 ALTERNATIVES CONSIDERED AND REJECTED

An EIR is required to identify any alternatives that were considered by the Lead Agency but were rejected. Factors described by CEQA Guidelines Section 15126.6 in determining whether to exclude alternatives from detailed consideration in the EIR include: a) failure to meet most of the basic project objectives, b) infeasibility, or c) inability to avoid or substantially lessen one or more significant environmental impacts. The Project's significant impact that cannot be mitigated to less than significant are: traffic (VMT).

With respect to the feasibility of potential alternatives to the proposed Project, CEQA Guidelines Section 15126.6(f)(1) provides:

> *"Among the factors that may be taken into account when addressing the feasibility of alternatives are site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries…and whether the proponent can reasonably acquire, control or otherwise have access to the alternative site…"*

In determining a range of reasonable alternatives to be evaluated in the EIR, a number of possible alternatives were initially considered and, for a variety of reasons, rejected. Alternatives were rejected because either: 1) they could not accomplish most of the basic objectives of the Project, 2) they would not have avoided or substantially lessened significant adverse environmental impacts, or 3) they were considered infeasible to construct or operate. Alternatives that were considered but rejected are described below.

Alternative Sites

CEQA requires that the discussion of alternatives focus on alternatives to the project or its location that are capable of avoiding or substantially lessening any significant effects of the project. The key question and first step in the analysis is whether any of the significant effects of the project would be avoided or substantially lessened by developing the project in another location. Only locations that would avoid or substantially lessen any of the significant effects of the project need be considered for inclusion in the EIR (CEQA Guidelines Section 15126.6(f)(2). In addition, an alternative site need not be considered when implementation is "remote and speculative," such as when the alternative site is beyond the control of a project applicant. (DEIR, p. 6-4)

The Project proposes to redevelop an approximately 12.3-acre site with 246 residential units. Given the size and type of the proposed development, a similarly sized project and land use elsewhere would likely result in the same or similar transportation impacts. However, if the Project was located in a Transit Priority Area (TPA), significant and unavoidable VMT impacts could be eliminated. Currently, there is only one TPA in the City of Los Alamitos that is located at the intersection of Los Alamitos Boulevard and Katella Avenue. This area is currently developed with commercial uses and is not planned for residential uses. This area has a General Plan designation of Commercial and a zoning designation of General Commercial (C-G). A General Plan Amendment and Zone Change would be

required to develop residential uses in this area. Implementing the Project on a different parcel within the TPA would require acquisition of developed property, demolition of existing operational structures, and discontinuing existing land uses, which would likely be disruptive to existing businesses and operations. (DEIR, p. 6-4)

The Project site currently has a General Plan land use designation of "Multi-Family Residential-25" and a zoning designation of R-3 (Multi-Family Residential). The Project is consistent with the General Plan land use and zoning designations, and therefore the Project does not require a general plan amendment or zone change to implement the development. Furthermore, the Project Applicant does not control any other parcels of land in or near the Project site that could be used as an alternative location for the proposed Project. (DEIR, p. 6-4)

Therefore, because an alternative location is not available that would avoid or substantially lessen the significant environmental effects of the Project, and because the Project Applicant does not have control over, and cannot reasonably obtain control over, any other parcels of land in the jurisdiction of the City that could accommodate the Project, an alternative location alternative is not feasible. Accordingly, this alternative is not further considered in the Draft EIR. (DEIR, p. 6-4)

Alternatives to Eliminate or Lessen VMT Impacts

The Project would only result in one significant and unavoidable impact, i.e., impacts related to traffic (VMT) generated by the Project. All other impacts of the Project would be mitigated to less than significant with incorporation of mitigation measures. With the exception of VMT impacts, all environmental impacts of the Project are related to the physical disturbance of the Project site during construction activities and are not specific to the Project itself but are a result of redevelopment of the Project site. In other words, construction-related impacts related to biological resources, cultural resources, geology and soils, and tribal cultural resources would occur with any type of redevelopment of the Project site and would result in the need for the same or similar mitigation measures. The only alternative that would eliminate the construction-related biological resources, cultural resources, geology and soils, and tribal cultural resources impacts is the No Project/ No Development Alternative. (DEIR, p. 6-5)

A variety of alternatives were considered that would eliminate or lessen the Project's significant and unavoidable VMT impacts. Pursuant to the Governor's Office of Planning and Research (OPR) Technical Advisory on Evaluating Transportation Impacts in CEQA dated December 2018, projects that meet one of the screening criteria below, would not have a VMT impact. (DEIR, p. 6-5)

- Small Project Screening
- Map Based Screening
- Transit Priority Area (TPA) Screening
- Local Community Serving Project Type Screening

An alternative that meets the Small Project screening criteria would require the Project to generate fewer than 110 daily vehicle trips. In order to meet this criterion, the Project would need to be

significantly reduced to approximately 10 dwelling units, which would not be consistent with the City's General Plan or its Housing Element. As discussed in Section 4.12, *Population and Housing*, the City adopted its General Plan Housing Element to reflect the 2021-2029 cycle on February 21, 2023. The Project site is located within the Multiple-Family Residential-25 General Plan designation, which specifies a density range of 20 to 25 dwelling units per acre. Moreover, the Project site is identified within the City's Housing Element as a housing element site with an estimate of 246 units, which is identified to meet the Regional Housing Needs Allocation (RHNA) target of 769 units citywide. Furthermore, this alternative would not meet any of the Project Objectives. Therefore, this alternative was rejected from further consideration. (DEIR, p. 6-5)

In order to meet the Map Based screening criteria, the Project would need to be relocated into a transportation analysis zone (TAZ) with a low VMT. As discussed in detail above, an alternative location is not feasible because an alternative location is not available that would avoid or substantially lessen the significant environmental effects of the Project, and the Project Applicant does not have control over, and cannot reasonably obtain control over, any other parcels of land in the jurisdiction of the City that could accommodate the Project. Therefore, this alternative was rejected from further consideration. (DEIR, p. 6-5)

In order to meet the TPA screening criteria, the Project would need to be relocated to a TPA. As discussed in detail above, an alternative location is not feasible because there is only one TPA in the City of Los Alamitos that is currently used for commercial uses and not planned residential uses. Therefore, similarly, this alternative was rejected from further consideration. (DEIR, p. 6-5)

In order to meet the Local Community Serving Project Type screening criteria, the proposed land use would need to change from residential to commercial uses. Commercial uses would result in a substantial increase in vehicle trips in comparison to the Project, which would increase air quality, energy, greenhouse gas, and noise impacts. Additionally, this alternative would not meet any of the Project objectives and therefore was rejected from further consideration. (DEIR, p. 6-6)

Based on the preceding, alternatives to eliminate VMT impacts were rejected from further consideration. (DEIR, p. 6-6)

Reduced Density Alternative

The Reduced Density Alternative, which assumes the Project Site is proposed for a 25% reduction in residential units, was considered to analyze an alternative that could potentially accomplish most of the project objectives of the Project and could avoid or substantially lessen one or more of the Project's significant effects. (DEIR, p. 6-6)

Although a Reduced Density Alternative would have the ability to partially meet most of the Project objectives, it was rejected from further consideration because it would not avoid or substantially lessen the Project's significant impacts. More specifically, this alternative would not avoid the Project's significant and unavoidable VMT impacts. VMT impacts are evaluated based on VMT per capita (population). Although the Reduced Density Alternative would reduce vehicle trips and VMT, it would

also result in a proportional reduction in population, resulting in substantially the same VMT per capita and VMT impact as compared to the Project. In other words, because both the numerator and the denominator would be proportionally reduced, the ultimate VMT calculation would be the same as the Project. (DEIR, p. 6-6)

Furthermore, the California Air Pollution Control Officers Association (CAPCOA) Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity (December 2021) has been utilized to determine trip reduction measures that may be applicable to the Project (see Attachment C of *Technical Appendix N2* of the DEIR). CAPCOA Land Use Measure T-1 states that VMT reductions can be achieved by a project that is designed with a higher density of dwelling units compared to the average residential density in the U.S. Therefore, pursuant to CAPCOA, a Reduced Density Alternative would not result in a reduction in VMT impacts. (DEIR, p. 6-6)

In addition, as evaluated in this EIR, the Project's significant impacts related to Biological resources, cultural resources, geology and soils, and tribal cultural resources, would be less than significant with implementation of mitigation measures. The Reduced Density Alternative would have similar impacts to the Project related to biological resources, cultural resources, geology and soils, and tribal cultural resource because the development area under the Reduced Density Alternative would be the same. Because the Reduced Density Alternative would not avoid or substantially lessen the Project's significant and unavoidable VMT impacts, it was rejected from further consideration. (DEIR, p. 6-6)

Mixed Use Alterative

The Mixed Use Alternative, which assumes the Project site is proposed for mixed use development (75% residential and 25% commercial), was considered to analyze an alternative that could potentially accomplish most of the project objectives of the Project and that could avoid or substantially lessen one or more of the Project's significant effects. The Mixed Use Alternative would have the ability to partially meet most of the Project objectives (Objectives B, C, and D). However, this alternative would not meet Objective A which is to provide residential development consistent with the City's General Plan, including the 2021-2029 Housing Element, to help meet the City's RHNA requirement due to the reduction in residential units. This is because the Mixed Use Alternative would reduce the ultimate number of housing units constructed. (DEIR, p. 6-7)

Additionally, the Mixed Use Alternative would not be consistent with the existing zoning or General Plan designations. The Project site is zoned as "Multi-Family Residential (R-3)." The R-3 zone applies to lots intended to provide multi-family housing. The City's General Plan designates the Project site for "Multi-Family Residential-25" land use. The "Multi-Family Residential-25" land use designation is defined as "single family detached and attached residences, including all development permitted in other residential categories as well as stacked flats and other building types with 4 or more units. Mixed use or commercial uses are not permitted in these designations. Therefore, a zone change and General Plan Amendment would be required for the Mixed Use Alternative. The City is not required to evaluate alternatives that would not be allowed by the existing zoning because it is remote and speculative. (DEIR, p. 6-7)

In addition, this alternative would not avoid or substantially lessen the Project's significant and unavoidable VMT impacts. VMT impacts are evaluated based on VMT per capita (population). The Mixed Use Alternative would result in a 25% reduction in residential uses to allow for the commercial component. As discussed above under the Reduced Density Alternative, the reduction in residential units would result in a proportional reduction in VMT and population, resulting in substantially the same VMT per capita and VMT impact as compared to the Project. The commercial component of the Mixed Use Alternative could potentially screen out from VMT impacts, meaning that it would be presumed to have less than significant VMT impacts, by adding local serving retail opportunities in an urban area. However, because the residential component would result in the same VMT impact as the Project and the Project site is within an area with higher VMT per capita compared to the County's regional average, this alternative would not avoid or substantially lessen VMT impacts. (DEIR, p. 6-7)

Furthermore, as evaluated in this EIR, the Project's significant impacts related to biological resources, cultural resources, geology and soils, and tribal cultural resources, would be less than significant with implementation of mitigation measures. The Mixed Use Alternative would have similar impacts to the Project related to biological resources, cultural resources, geology and soils, and tribal cultural resource because the development area under the Mixed Use Alternative would be the same. Therefore, this alternative was rejected from further consideration. (DEIR, p. 6-7)

7.4.2 ALTERNATIVES UNDER CONSIDERATION

B. No Project/No Development Alternative

- ❑ **Finding**

The No Project/No Development Alternative assumes that no development or improvements would occur on the Project site and the existing vacant two-story, 88,000 sf commercial office building would remain on the 12.3-acre site. No vehicle trips would be associated with this alternative. Under this alternative, no impact would occur and all significant and unavoidable impacts would be eliminated. However, none of the Project Objectives would be met. Thus, the City finds that each of the reasons set forth below is an independent ground for rejecting the No Project/No Development Alternative, and by itself, independent of any other reason, justifies rejection of the No Project/No Development Alternative, and hereby rejects the No Project/No Development Alternative.

- ❑ **Substantial Evidence**

The No Project/No Development Alternative assumes that no development or improvements would occur on the Project site and the existing vacant two-story, 88,000 sf commercial office building would remain on the 12.3-acre site. No vehicle trips would be associated with this alternative. Under this Alternative, no improvements would be made to the Project site. This alternative is required by CEQA Guidelines Section 15126.6(e)(3)(B) to compare the environmental effects of the Project with an alternative that would leave the Project site in its existing condition (as described in DEIR Section 2.0). (DEIR, p. 6-8)

The No Project/No Development Alternative would result in no physical environmental impacts to the Project site. All significant impacts of the Project related to construction activities would be eliminated by the selection of the No Project/No Development Alternative. Additionally, this alternative would eliminate the Project's significant and unavoidable impact related to VMT. However, this alternative would not receive the environmental benefits from the implementation of stormwater drainage and water quality filtration features that would be constructed by the Project. The No Project/No Development Alternative would fail to meet all the Project Objectives, as described in Section 6.1.1. (DEIR, p. 6-13)

C. Maximum Density Allowed Alternative

❑ Finding

The Maximum Density Allowed Alternative considers the development of the Project site consistent with the maximum density allowed under the Multi-Family Residential (R-3) zoning designation, which allows for a maximum permitted density of 25 dwelling units per net acre. Under this alternative, a total of 307 dwelling units would be constructed on the 12.3-acre Project site, resulting in an increase of 61 units. Additionally, no single family detached homes would be constructed under this alternative and the Project would consist, instead, of townhomes and multi-family units. The Maximum Density Allowed Alternative would result in greater impacts related to air quality, energy, GHG emissions, noise (operation), public services, recreation, and utilities and service systems due to the increased residential units and associated vehicular trips. This alternative would result in a new significant and unavoidable impact related to GHG emissions, primarily due to the increased number of mobile sources as compared to the Project. Impacts related to aesthetics, biological resources, cultural resources, geology and soils, hazardous and hazardous materials, hydrology and water quality, land use and planning, population and housing, transportation, and tribal cultural resources would be similar to the Project. Impacts related to transportation (VMT) would be similar to the Project and significant and unavoidable under this alternative. The Maximum Density Allowed Alternative would meet most of the Project's objectives. The City finds that each of the reasons set forth above is an independent ground for rejecting the Maximum Density Allowed Alternative, and by itself, independent of any other reason, justifies rejection of the Maximum Density Allowed Alternative, and hereby rejects the Maximum Density Allowed Alternative.

❑ Substantial Evidence

The Maximum Density Allowed Alternative considers the development of the Project site consistent with the maximum density allowed under the Multi-Family Residential (R-3) zoning designation, which allows for a maximum permitted density of 25 dwelling units per net acre. Under this alternative, a total of 307 dwelling units would be constructed on the 12.3-acre Project site, resulting in an increase of 61 units. Additionally, no single family detached homes would be constructed under this alternative and the Project would consist, instead, of townhomes and multi-family units. The development area and access to the Project site would be the same, with a proportional increase in the number of parking spaces. The Maximum Density Allowed Alternative would generate 1,921 daily trips, including 120 AM peak hour, and 153 PM peak hour trips, resulting in an increase of 263 daily, 8 AM peak hour, and 7 PM peak hour trips compared to the Project. (DEIR, p. 6-13)

The Maximum Density Allowed Alternative would result in greater impacts related to air quality, energy, GHG emissions, noise (operation), public services, recreation, and utilities and service systems due to the increased residential units and associated vehicular trips. This alternative would result in a new significant and unavoidable impact related to GHG emissions, primarily due to the increased number of mobile sources as compared to the Project. Impacts related to aesthetics, biological resources, cultural resources, geology and soils, hazardous and hazardous materials, hydrology and water quality, land use and planning, population and housing, transportation, and tribal cultural resources would be similar to the Project. Impacts related to transportation (VMT) would be similar to the Project and significant and unavoidable under this alternative. The Maximum Density Allowed Alternative would meet most of the Project's objectives, as described in Subsection 6.1.1. However, as compared to the Project this alternative would to a lesser extent meet Objective B–provide a variety of housing types and affordability (for lower income, and above moderate income households) that satisfies the residential market and accommodates increased demand for housing, primarily because the Maximum Density Allowed would eliminate the development of single family homes. (DEIR, p. 6-18)

D. Senior Housing Alternative

❑ Finding

The Senior Housing Alternative considers the development of the Project site with 55 single family detached homes, 114 townhomes, and 77 age-restricted multi-family apartment homes. In other words, this alternative would replace the Project's affordable multi-family units with senior housing. The Senior Housing Alternative would result in reduced impacts related to air quality (operation), energy, GHG emissions, noise (off-site traffic-related), and transportation (VMT) due to the decrease in vehicular trips and trip lengths. However, significant and unavoidable impacts related to VMT would occur with the implementation of this alternative, similar to the Project. Impacts related to aesthetics, biological resources, cultural resources, geology and soils, hazardous and hazardous materials, hydrology and water quality, land use and planning, population and housing, public services, recreation, tribal cultural resources, and utilities and service systems would be similar to the Project. The Existing Zoning Alternative would meet some of the Project's objectives (Objectives A, D–E), but would only partially meet Objective B and would not meet Objective C. Thus, the City finds that each of the reasons set forth above is an independent ground for rejecting the Senior Housing Alternative, and by itself, independent of any other reason, justifies rejection of the Senior Housing Alternative, and hereby rejects the Senior Housing Alternative.

❑ Substantial Evidence

The Senior Housing Alternative considers the development of the Project site with 55 single family detached homes, 114 townhomes, and 77 age-restricted multi-family apartment homes. In other words, this alternative would replace the Project's affordable multi-family units with senior housing. Access to the site would be the same as the Project. The Senior Housing Alternative would provide a total of 594 parking spaces, an increase of 20 spaces compared to the Project. Assuming all senior housing for the multi-family component of the Project, the Senior Housing Alternative would generate 1,538 daily trips, including 99 AM peak hour, and 130 PM peak hour trips, resulting in a decrease of 120 daily, 13

AM peak hour, and 10 PM peak hour trips compared to the Project (see *Technical Appendix R* of the DEIR). (DEIR, p. 6-18)

The Senior Housing Alternative would result in reduced impacts related to air quality (operation), energy, GHG emissions, noise (off-site traffic-related), and transportation (VMT) due to the decrease in vehicular trips and trip lengths. However, significant and unavoidable impacts related to VMT would occur with the implementation of this alternative, similar to the Project. Impacts related to aesthetics, biological resources, cultural resources, geology and soils, hazardous and hazardous materials, hydrology and water quality, land use and planning, population and housing, public services, recreation, tribal cultural resources, and utilities and service systems would be similar to the Project. (DEIR, pp. 6-23 to 6-24)

The Existing Zoning Alternative would meet some of the Project's objectives (Objectives A, D–E), as described in Subsection 6.1.1, but would only partially meet Objective B and would not meet Objective C, as follows:

- *Objective B–Provide a variety of housing types and affordability (for lower income, and above moderate income households) that satisfies the residential market and accommodates increased demand for housing*. This alternative would only partially meet Objective B because although this alternative would result in units restricted for seniors, it would not result in a variety of affordable housing types for lower income, and above moderate income households.

- *Objective C–Provide a variety of affordable housing types to support middle-income workers, providing an opportunity for residents to live closer to where they work.* This alternative would not meet this objective because the affordable component would not be comprised of workforce housing, unlike the Project which would provide a range of affordability levels to support middle-income workers seeking to live closer to where they work. (DEIR, p. 6-24)

7.4.3 ENVIRONMENTALLY SUPERIOR ALTERNATIVE

CEQA requires the identification of an environmentally superior alternative. Section 15126.6(e)(2) of the CEQA Guidelines states that, if the No Project Alternative is the environmentally superior alternative, then the EIR shall also identify an environmentally superior alternative among the other alternatives. (DEIR, p. 6-24)

The No Project/No Development Alternative has the least impact to the environment because it would not involve any construction activities or residential operations. In addition, it would eliminate a significant unavoidable impact of the Project, VMT. While this alternative would avoid the significant effects of the Project, it would not receive the environmental benefits from the implementation of stormwater drainage and water quality filtration features. Additionally, none of the Project Objectives would be met. (DEIR, p. 6-24)

Pursuant to Section 15126.6(e)(2), since the environmentally superior alternative is the No Project/No Development Alternative, another alternative was selected as the environmentally superior alternative.

The Senior Housing Alternative is environmentally superior to the Project. As shown in DEIR Table 6-1, *Comparison of Alternatives and Project-related Environmental Impacts*, the Senior Housing Alternative would have less impacts under five of the environmental topical areas. The reduction in impacts is due to the fact that the use would generate reduced vehicular trips and trip lengths as compared to the proposed Project, which would result in a reduction in operational-related impacts, including air quality, GHG emissions, energy, noise, and transportation impacts. However, this alternative would still result in significant and unavoidable VMT impacts. DEIR Table 6-2, *Alternatives Attainment of Project Objectives*, identifies the ability of each alternative to meet the fundamental purpose and basic objectives of the Project. The Senior Housing Alternative would meet some of the Project's objectives (Objectives A, D–E), but would only partially meet Objective B and would not meet Objective C. (DEIR, pp. 6-24 to 6-25)

8.0 GENERAL CEQA FINDINGS

8.4.1 RECIRCULATION NOT REQUIRED

The City finds that the DEIR does not require recirculation under CEQA (CEQA Section 21092.1, CEQA Guidelines Section 15088.5).

(a) CEQA requires that the lead agency recirculate an EIR when significant new information is added to the EIR after public notice of its availability has previously been given but prior to its certification. "Significant new information" requiring recirculation includes, for example, a disclosure showing that:

(1) A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented;

(2) A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance;

(3) A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the environmental impacts of the project, but the project's proponents decline to adopt it; or

(4) The draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded.

(b) Recirculation is not required where the new information added to the EIR merely clarifies or amplifies or makes insignificant modifications in an adequate EIR.

(c) If the revision is limited to a few chapters or portions of the EIR, the lead agency need only recirculate the chapters or portions that have been modified.

(d) Recirculation of an EIR requires notice pursuant to Section 15087, and consultation pursuant to Section 15086.

(e) A decision not to recirculate an EIR must be supported by substantial evidence in the administrative record.

The FEIR documents changes to the DEIR. The FEIR provides additional analysis that was not included in the DEIR. Furthermore, Responses to Comments contained in the FEIR fully considered and responded to comments claiming that the Project would have significant impacts or more severe impacts not disclosed in the DEIR. Moreover, the Responses to Comments include substantial evidence that none of these comments provided substantial evidence that Project would result in changed circumstances, significant new information, considerably different mitigation measures, or new or more severe significant impacts than were discussed in the DEIR. In addition, CEQA Guidelines

Section 15088.5(b) provides that "recirculation is not required where the new information added to the EIR merely clarifies and amplifies or makes insignificant modifications in an adequate EIR." Recirculation also is not required simply because new information is added to the EIR — indeed, new information is oftentimes added given CEQA's public/agency comment and response process and CEQA's post-DEIR circulation requirement of proposed responses to comments submitted by public agencies.

The City has thoroughly reviewed the public comments received regarding the Project and the DEIR to determine whether any of the public comments provide substantial evidence that would require recirculation of the EIR prior to its adoption.

8.4.2 MITIGATION MONITORING AND REPORTING PROGRAM

To the extent that these Findings conclude that the proposed mitigation measures outlined in herein are feasible and have not been modified, superseded, or withdrawn, the City hereby commits to implementing these measures. These Findings, in other words, are not merely informational, but rather constitute a binding set of obligations that will come into effect when the City approves the proposed project. The mitigation measures that are referenced herein and adopted concurrently with these Findings will be effectuated through the process of construction and implementation of the proposed Project. In accordance with the Requirements of Public Resources Code § 21081.6, the City must adopt the Mitigation Monitoring Program, which is described in full in Section IV of the DEIR and is incorporated herein by this reference. The City reserves the right to make amendments and/or substitutions of mitigation measures if the City determines that the amended or substituted mitigation measure will mitigate the identified potential environmental impacts to at least the same degree as the original mitigation measure, and where the amendment or substitution would not result in a new significant impact on the environment which cannot be mitigated.

8.4.3 CONSIDERATION OF RECORD; INDEPENDENT JUDGMENT

In approving the proposed Project, the City decision-makers have reviewed and considered the DEIR and appendices, the FEIR and appendices, and all other pertinent evidence in the record of proceedings. The Applicant's consultants prepared the screen check versions of the DEIR, FEIR and technical studies. All such materials and all other materials related to the EIR were extensively reviewed and, where appropriate, modified by the Planning Department or other City representatives and/or peer review consultants. As such, the DEIR, FEIR, technical studies, and all other related materials reflect the independent judgment and analysis of the Lead Agency.

9.0 STATEMENT OF OVERRIDING CONSIDERATIONS

Public Resources Code Section 21081(a)(3) and (b), and CEQA Guidelines Section 15093, require the City, acting as the Lead Agency, to balance the economic, legal, social, technological, or other benefits, including region-wide or statewide environmental benefits, of the Project against its significant and unavoidable adverse environmental impacts and determine whether those benefits of the Project outweigh its significant and unavoidable impacts. If the City finds that these benefits of the Project outweigh its significant and unavoidable adverse environmental impacts, the City may approve the Project.

As set forth in Section 3.0 above, the EIR identified all of the Project's adverse environmental impacts and mitigation measures that would reduce the Project's impacts to less-than-significant level where feasible. As further set forth in Section 5.0, the EIR presents evidence that implementing the Project would cause or contribute to one impact (transportation VMT impact) that would remain significant and unavoidable even after the imposition of all feasible mitigation measures. Finally, as set forth in Section 7.0, herein, there are no feasible alternatives to the Project that would mitigate or avoid the Project's significant and avoidable VMT impact to less-than-significant level while still attaining most of the Project's basic objectives.

Based on the facts presented throughout this document, the EIR, and all other evidence in the record, the City makes the following finding:

As the CEQA Lead Agency for the proposed Project, the City has reviewed the Project description and the alternatives to the Project, as presented in the EIR., The City finds and determines that:

(i) All of the significant impacts of the Project, except for one transportation impact (VMT), will be reduced to less-than significant levels by the mitigation measures described in the Final EIR and approved and adopted by these Findings;

(ii) The City's approval of the Project will result in one significant adverse environmental effect (transportation VMT impact) that cannot be avoided even with the incorporation of all feasible mitigation measures into the Project; and

(iii) All potential adverse environmental impacts and all feasible mitigation measures to reduce the impacts from the Project have been identified in the DEIR, Final EIR and public testimony and there are no other feasible mitigation measures or feasible Project alternatives that would further mitigate or avoid the remaining significant environmental effect. The significant effect related to transportation (VMT) has not been mitigated to a less-than-significant level and is considered significant and unavoidable. Having considered the potential for the Project to cause or contribute to significant and unavoidable adverse impact related to transportation (VMT), the City hereby determines that all feasible mitigation measures have been adopted to reduce or avoid the significant and unavoidable impact identified in the EIR, and that no

additional feasible mitigation or alternatives are available to further reduce or avoid significant impacts.

(iv) Economic, legal, social, technological, and other benefits of the Project outweigh the Project's significant and unavoidable impact and approval of the Project is appropriate.

Despite the significant and unavoidable impact, it is the City's considered judgment that the benefits offered by the proposed 4665 Lampson Avenue Project outweigh its adverse effect. Each of the overriding considerations and Project benefits set forth below separately and individually outweighs the unavoidable adverse environmental effect (VMT) identified in the EIR, and the City therefore finds the impact to be acceptable. Substantial evidence in the record demonstrates that approval and implementation of the Project will provide the benefits listed below. Each of the separate benefits listed below provides a separate and independent ground for the City's decision that the Project's benefits outweigh the significant and unavoidable environmental impact identified in the EIR.

1. The Project Furthers the City's Housing Goals and Contributes to the City's RHNA Requirements in Accordance with State Housing Law

The Project will comply with State Housing Element Law and help the City to meet the City's Regional Housing Needs Allocation (RHNA) target. State Housing Element Law mandates that local governments adequately plan to meet the existing and projected housing needs of all economic segments of the community. The law recognizes that in order for the private market to adequately address housing needs and demand, local governments must adopt land use plans and regulatory systems that provide opportunities for (and do not unduly constrain) housing production. Housing element statutes also require the State Department of Housing and Community Development (HCD) to review local housing elements for compliance with state law and to report their findings to the local government. The City has an identified RHNA of 769 units for the 2021–2029 planning period, distributed among extremely low, very low, low, moderate and above moderate-income categories. The RHNA represents the minimum number of housing units each community is required to provide "adequate sites" for and is one of the primary threshold criteria necessary to achieve approval of the element by the HCD.

As recently recognized by the California Legislature, "California has a housing supply and affordability crisis of historic proportions." (Gov. Code § 65589.5; *see also* Gov. Code §§ 65009 ["The Legislature finds and declares that there currently is a housing crisis in California and it is essential to reduce delays and restraints upon expeditiously completing housing projects"].) In order to alleviate that crisis, the Legislature has taken a number of steps to ensure that local jurisdictions accommodate their share of needed housing, including by requiring that cities adopt—and update according to a fixed schedule—the Housing Element portion of their General Plan, and submit the Housing Element to HCD for review. (Gov. Code § 65585.) Among other things, the Housing Element is required to demonstrate how the city will meet its share of regional housing needs, which is reflected in its RHNA. (Gov. Code § 65583.) If a city does not have adequate sites to accommodate its RHNA, it is required

to rezone sites in order to meet its allocation. (See Gov. Code, § 65583(c)(1)(A); see also Gov. Code, § 65913.1 [requiring cities to "zone sufficient vacant land for residential use"].)

On February 21, 2023, Los Alamitos City Council adopted the comprehensive update of the City's Housing Element for the reporting period of 2021-2029 (Resolution No. 2023-02). The 2021-2029 Housing Element addressed the Housing Element law, the RHNA allocation for the City, and a site inventory to meet the RHNA. Upon adoption of the City's 2021-2029 Housing Element Update, City Council adopted Resolution No. 2023-01 approving General Plan Amendment (GPA) 22-02 to ensure that the zoning code updates in Ordinance 2023-1 will maintain internal consistency with the actions, goals, objectives, and policies of the General Plan and will not create any inconsistencies therein. On March 20, 2023, City Council adopted Ordinance 2023-01 which approved a Multi-Family Residential - 36 Zone (R-4) Zoning District in the City, amended the Town Center Mixed Use Zone, and rezoned certain properties to the R-3 and new R-4 Districts in order to implement the City's RHNA. Following adoption of the resolution and ordinance in connection with the 2021–2029 Housing Element update, the Project site General Plan land use and zoning designations were changed to Multi-Family Residential-25 and Multi-Family Residential-25 Zone (R-3), respectively.

The Project site is identified within the City's 2021-2029 Housing Element as a housing element site with an estimate of 246 total units. Therefore, if approved, the Project would help the City to meet its total RHNA allocation and its affordable housing allocation. The Project would provide 246 units (including 76 affordable), approximately 32% of the City's total RHNA allocation of 769 units and 24.6% of the City's affordable housing allocation.

This would be the first affordable housing Project that the City has approved in approximately 30 years. Several of the Housing Element Policy Programs relate directly to the promotion of affordable housing. Policy actions under Housing Strategy Areas 2, 4, and 5 all help promote affordable housing and ensure that the City meets its RHNA goals. Such programs include Section 8 rental assistance (Policy Action 2.2), affordable housing development assistance (Policy Action 4.1), land subdivisions (Policy Action 4.10), and partnerships and coordination with developers and outside agencies (Policy Action 5.3). Development of the Project with a total of 246 units would be consistent with the City's 2021–2029 Housing Element.

2. The Project would Reduce Commute Travel and In Turn Reduce VMT and GHG Emissions Consistent with SCAG Connect SoCal and the City General Plan Goals and Policies.

The Project will support reduced commute distances. First, the Project will provide that a portion of the affordable units will be given local residency and work preference. In other words, preference will be given to lease a certain number of affordable units to households who are residents of the City or persons employed or that have been offered employment in the City. Second, the Project would improve the City's job housing balance by providing an opportunity for residents to live closer to where they work. As discussed in Section 4.12, Population and Housing of the EIR, the Project would place housing within a job-rich area; co-locating housing near jobs reduces vehicle travel lengths and

associated greenhouse gas emissions caused by long commute distances. Third, developing housing near an established transportation network (I-405, SR-22, and I-605) would reduce commute distances. Fifth, the Project would install broadband infrastructure or other communication technologies that encourage telecommuting and working from home that would reduce vehicle trips and mobile source emissions.

In addition, the Project furthers the City's General Plan Goals and Policies (see Table 4.10-2 of the DEIR) and SCAG Connect SoCal Goals (see Table 4.10-1 of the DEIR). With respect to policies that encourage alternative modes of transportation, the Project would include pedestrian connectivity with existing sidewalks along Lampson Avenue, including an existing signalized pedestrian connection to the south at Rose Street and Lampson Avenue and pedestrian "paseo" connections with Arbor Park and the Arbor Dog Park to the north. A 4-foot-wide community natural colored concrete sidewalk and 6-foot-wide public natural colored concrete sidewalk would be constructed throughout the Project site to link residential neighborhoods to open spaces and amenities. Additionally, the Project would construct frontage improvements along Lampson Avenue, including median improvements, sidewalks, driveway modifications needed to accommodate site access, and landscaping improvements as required by City standards. Roadways adjacent to the Project, site access points and site-adjacent intersections will be constructed to be consistent with the identified roadway classifications and respective cross-sections in the City of Los Alamitos General Plan Circulation Element. The Project would maintain the existing Class II bike lane on Lampson Avenue along the Project site's frontage to connect to bike lane improvements that are currently ongoing on Lampson Avenue between Basswood Street and Seal Beach Boulevard.

3. The Project Implements Green and Sustainable Building Practices

The Project will be required to be designed and constructed in accordance with the City's zoning ordinance and the California Building Code, including energy and water conservation and reduction standards. Additionally, the Project would exceed energy standards and promote the use of alternative means of transportation through:

- Installation of solar photovoltaic rooftops (generating up to 1,229,520 kWh/annually),
- Use of 100% electricity and no natural gas,
- Preferential parking of fuel-efficient vehicles,
- Installation of EV charging stations,
- Provision of short-term and/or long-term bicycle parking accommodations, and
- Provision of a car share community electric vehicle for the affordable housing development

4. The Project will Provide Community and Social Benefits

- The Project Applicant will be providing additional Community and Social Benefits supporting the City and surrounding community, including but not limited to the following:

- Provision of high quality architectural design and site programming to provide the gold standard for residential product types in the City;

- Dedication or granting of an easement for the northerly 10 feet strip of land abutting Arbor Park and Arbor Dog Park, which comprises an area of approximately 10,000 square feet of the Project site. This dedication or grant of easement would support the use of this area for parking after construction of the Project specifically, this area would provide an approximate capacity of 154 to 200 parking spaces to serve the adjacent parks, depending on the ultimate configuration of the parking;

- Provision of on-site amenities for residents, including a tot-lot with rubberized play surface, shade surface with BBQ Island and dining furniture, lawn area with cornhole, ping pong table, and lounge seating with fire-pit;

- Replacement of the existing median curb/landscape on Lampson Avenue with new median and landscaping.

5. The Project Will Provide Economic Benefits

The Project would have a positive net fiscal impact on the City annual General Fund operating budget. The Project would result in monetary contributions to established fee programs including, but not limited to, the Development Impact Fees (DIF) for transportation improvements, and for the Los Alamitos Police Department, City's Public Works and Engineering Department, City's Recreation & Community Services Department, and Orange County Fire Authority and school fees to Los Alamitos Unified School District which will be directed to needed local improvements. Additionally, the Project would increase local and regional tax revenues, including sales and property taxes.

Conclusion

In conclusion, the City finds after consideration of the EIR and the evidence in the record, that each of the specific overriding economic, legal, social, technological and other benefits of the Project as set forth above independently and collectively outweighs the identified significant adverse environmental impact and is an overriding consideration warranting approval of the Project. The City further finds that each of the individual benefits discussed above outweigh the unavoidable adverse environmental effect identified in the EIR and, therefore, finds the impact to be acceptable. The City further finds that each of the benefits listed above, standing alone, is sufficient justification for the City Council to override the unavoidable environmental impact.

The reasons for approval cited above are not unitary, so that even if a court were to conclude that not every reason is supported by substantial evidence, the City determines that each remaining reason standing alone would be sufficient to justify approval of the Project. The substantial evidence supporting the identified benefits can be found in the EIR and the CEQA Findings, above. On the basis of the Findings made in Sections 3.0 through 8.0 included herewith, and the substantial evidence in the

whole record of this proceeding, it is specifically found that there are significant benefits of the Project in spite of its single unavoidable significant impact. It is further found that, as part of the process of obtaining Project approval, all significant effects on the environment from implementation of the Project have been eliminated or substantially lessened where feasible. Any remaining significant effect on the environment found to be unavoidable is found to be acceptable due to the above-discussed specific overriding economic, technical, legal, social and other considerations.

10.0 ADDITIONAL FACTS ON RECORD

10.1 CUSTODIAN OF RECORD

The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Los Alamitos, Development Services Department – Planning Division, 3191 Katella Avenue, Los Alamitos, California 90720. The custodian for these records is Tom Oliver, Associate Planner. This information is provided in compliance with Public Resources Code Section 21081.6.

EXECUTIVE SUMMARY

Southwest Regional Laboratory
4665 Lampson Avenue
Los Alamitos, CA 90720

Tetra Tech, Inc. (Tetra Tech) has completed a Phase I Environmental Site Assessment (ESA) of the Southwest Regional Laboratory located at 4665 Lampson Avenue, Los Alamitos, California 90720 (Site), for the benefit of the United States (U.S.) General Services Administration (GSA). The project scope-of-work was designed and executed to assess the potential for recognized environmental conditions (RECs) associated with the Site.

The environmental assessment was conducted based on the methods and procedures described in the ASTM International (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (E 1527-13) modified to meet GSA specific standards.

The Site consists of a rectangular parcel totaling approximately 12.367 acres. Based on the Site reconnaissance and information obtained from the Site representatives, the Site is improved with a 2-story, 88,000 square foot commercial building with a parking lot and landscaped areas.

This Phase I ESA identified the following findings at the Site:

- Electricity is supplied to the Site by a utility-owned, pad-mounted transformer observed outside the west wall of the Site building. This transformer was not identified in the previous Phase I ESA dated April 16, 1998 and completed by Tecumsah Professional Associates, Inc.; however, Tetra Tech believes the transformer was present based on the photo documentation in the Phase I ESA report. This transformer may contain PCBs. Other transformers observed within the Site building appeared to be dry-type units; however, no labeling indicating PCB content was observed on the transformers. No evidence of leaks or staining was observed in the vicinity of the pad-mounted transformer, and the transformers at the Site are not anticipated to represent an environmental concern at the Site.
- A 1,500-gallon diesel aboveground storage tank (AST) and associated emergency generator for the used for the cooling tower and to power the building in an emergency was observed during the site reconnaissance within the 1st floor of the Site building. The AST was observed to be enclosed in secondary containment and was reportedly partially full at the time of Site reconnaissance with no visible staining or indication of a release, and the cooling tower was no longer in operation. According to the Site representatives, Mr. Jonathan Mills and Mr. Mark Shegich, the cooling tower had been installed for a former tenant, California State University (CSU) Long Beach, for the purpose of cooling a data laboratory that was once located within the Site building. The emergency generator is serviced by Duthie Power Services on an approximate annual basis. One partially full 55-gallon drum of cooling water treatment was observed during the site reconnaissance. The emergency generator, associated AST, and cooling tower are not anticipated to represent an environmental concern at the Site.

- The Site was identified three times in the Hazardous Materials Generator (HAZNET) database. In 2000, the Site was identified as generating asbestos containing waste with disposal in a landfill. In 2003, the Site was identified as a generator of off-specification, aged or surplus organics with a disposal method identified as transfer station. In 2010, the Site was identified as generating ages or surplus organics with a disposal method identified as other treatment. In 2012, the Site was identified as generating a hazardous waste with a disposal method of storage, bulking, and/or transfer off site with no treatment or recovery. No violations were listed for the Site. Based on the lack of a reported release and regulatory enforcement associated with these listings, the HAZNET databases listings for the Site are not considered a REC.
- At the time of Site reconnaissance, a chemical/wet laboratory was observed within the tenant space occupied by the California Department of Fish and Wildlife. Small amounts of hazardous/flammable materials were observed in containers of 8-ounces or less and one 5-gallon container. Safety Data Sheets were posted within the laboratory space. The California Department of Fish and Wildlife also maintained a dive locker. This locker contained oxygen and nitrox tanks. No leaks or spills were identified in association with these containers or general work inside the laboratory. According to the Site contacts, the lab wastes were disposed of by a third party contractor. Tetra Tech does not consider the use of chemicals in the lab area to be a REC.
- Within the Site building's primary maintenance shop and shipping/receiving area, containers of 5-gallons or less of paints and commercial cleaning products such as soaps and vinegars utilized for the building upkeep were observed. Several 1-quart motor oil containers for small equipment maintenance were stored within cabinets. No leaks or spills were identified in association with these containers inside the maintenance shop. Tetra Tech does not consider the maintenance shop and shipping/receiving area to be a REC.
- Within the Site building's main electrical and emergency generator room, small paint containers containing marking paint or striping paint were observed. No leaks or spills were identified in association with these containers inside the main electrical and emergency generator room. Tetra Tech does not consider the main electrical and emergency generator room to be a REC.
- A 5-gallon bucket of lubricant was observed within the elevator equipment room at the time of the site reconnaissance. No leaks or spills were identified in association with the lubricant container inside the elevator room. Tetra Tech was unable to assess the elevator pit at the time of Site reconnaissance because it was inaccessible. Tetra Tech does not consider the container in the elevator equipment room to be a REC.

1.0 INTRODUCTION

Tetra Tech, Inc. (Tetra Tech) was retained by the United States (U.S.) General Services Administration (GSA) to perform a Phase I Environmental Site Assessment (ESA) for the Southwest Regional Laboratory located at 4665 Lampson Avenue, Los Alamitos, California (Site) (Figure 1). Tetra Tech was authorized to conduct this Phase I ESA under the GSA Contract Number GS-00F-168CA and Award Number GS-10F-0076K. Ms. Heidi Yavornicky, a Tetra Tech Environmental Scientist, performed the site visit on September 23, 2015. Access to the Site was granted by the owner representative, Mr. Jonathan Mills, Director of Property and Facilities Management of WestEd and the Facilities Manager, Mr. Mark Shegich. It is Tetra Tech's understanding that the GSA has performed these environmental activities in preparation for potentially transferring the property out of federal ownership.

The purpose of the assessment was to identify potential environmental issues due to current and historical activities conducted on or near the Site and to qualify for a Landowner Liability Protection (LLP) under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). During the site inspection, environmental conditions of the Site and neighboring properties were noted. Additional information used to evaluate the Site was obtained from historical and regulatory agency sources. The environmental assessment was conducted based on the methods and procedures described in the ASTM International (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (E 1527-13). Information regarding the site inspection is presented below:

Date of site inspection: September 23, 2015.

Name of Tetra Tech staff that performed site inspection: Ms. Heidi Yavornicky.

Name(s) of Site representatives providing information during site inspection: Mr. Jonathan Mills, Director of Property and Facilities Management of WestEd and owner representative, and Mr. Mark Shegich, Facilities Manager.

At the time of the site inspection, the Site status was: one parcel totaling approximately 12.367 acres. The Site was improved by a 2-story, 88,000 square foot commercial building with a parking lot and landscaped areas at the time of Site reconnaissance.

1.1 LIMITATIONS/RELIANCE

This report was compiled based partially on information supplied to Tetra Tech from outside sources and other information in the public domain. The conclusions and opinions herein are based on the information Tetra Tech obtained in compiling the report. Tetra Tech makes no warranty as to the accuracy of statements made by others that may be contained in the report, nor are any other warranties or guarantees, expressed or implied, included or intended by the report, except that it has been prepared in accordance with the current generally accepted practices and standards consistent with the level of care and skill exercised under similar

circumstances by other professional consultants or firms performing the same or similar services. Because the facts forming the basis for the report are subject to professional interpretation, differing conclusions could be reached. Tetra Tech does not assume responsibility for the discovery and elimination of hazards that could possibly cause accidents, injuries, or damage. Compliance with submitted recommendations or suggestions does not ensure elimination of hazards or the fulfillment of client's obligations under local, state, or federal laws or any modifications or changes to such laws. None of the work performed hereunder shall constitute or be represented as a legal opinion of any kind or nature, but shall be a representation of findings of fact from records examined.

Estimates and professional opinions of this potential are based upon information derived from the site reconnaissance and from other activities described herein. The GSA is herewith advised that the conditions observed by Tetra Tech are subject to change. Indicators of the presence of hazardous substances and petroleum products that were not indicated or observable at the time of the most recent site reconnaissance may subsequently become present or observable.

Tetra Tech has generally used the standard of care recommended by Standard E 1527-13 developed by ASTM and modified to meet client specific standards. Because these standards of care only set forth minimums, any additional services and service enhancements that the GSA has authorized are contained in the scope of services.

Representatives for the GSA are the only parties that have been involved in shaping the scope of services needed to satisfactorily manage risks from the GSA's point of view; therefore, the GSA is the only intended beneficiary of this report. Reliance on this report by parties other than the GSA may result in reliance on assumptions whose extent and nature could distort the meaning and impact of the estimates given in this report. As such, no party, except the GSA, should rely upon estimates for the potential of hazardous materials to exist at the Site. With the consent of the GSA, Tetra Tech is available to work with other parties in developing probability estimates, given other parties unique risk management concerns. The guidelines used to define hazardous substances and petroleum products were obtained from the ASTM Standard of Practice E 1527-13. For the purposes of this report, the vicinity of the Site is defined as properties located within an approximately one-eighth mile radius of the Site.

This ESA does not include a radon survey, lead paint sampling, a comprehensive asbestos survey, or wetland delineation. This ESA report is based on information obtained from a variety of usually reliable sources, which are listed in the report. Tetra Tech does not guarantee the authenticity or reliability of the information it has received from outside sources.

This report is not a comprehensive site characterization and should not be construed as such. This report presents opinions that are based on the findings of visually observable on-site and off-site conditions, a review of specific regulatory records and historical sources, and comments made by interviewees. ESAs, by their very nature, are limited. Tetra Tech has endeavored to meet the applicable standard of care and in so doing, is advising the GSA of the ESA limitations. Tetra Tech believes this information is essential to help the GSA identify and manage risks. These

risks can be reduced, but cannot be completely eliminated through additional research. Tetra Tech will, upon request, advise the GSA of the additional research opportunities available, their impact on risk, and their cost.

1.2 PURPOSE

The goal of this ESA is to identify whether recognized environmental conditions (RECs), controlled RECs (CRECs), historical RECs (HRECs), or *de minimis* conditions are present on the Site. RECs are the presence or likely presence of any hazardous substances or petroleum products on a Site under conditions that indicate an existing release, a past release, or a material threat of release of any hazardous substances or petroleum products into structures on the Site or into the ground, groundwater, or surface water of the Site. CRECs are the result of a past release of hazardous substances or petroleum products that have been addressed to the satisfaction of the applicable regulatory authority. HRECs are a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The terms include hazardous substances or petroleum products, even under conditions in compliance with laws. The terms are not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies (Section 1.1.1 E 1527-13, ASTM 2013).

2.0 SITE LOCATION AND DESCRIPTION

The Site is located at 4665 Lampson Avenue, Los Alamitos, California (**Figure 1**). **Figure 2** shows the layout of the Site and surrounding areas and **Figure 3** shows an aerial photograph of the Site. Based on communication with the Orange County Assessor, the property is identified with Parcel Number 130-012-35. The owner of the Site is identified as the United States of America. The legal description of the Site is identified as:

ALL THAT CERTAIN PIECE OR PARCEL OF LAND CONTAINING 12.367 ACRES, MORE OR LESS, BEING A PORTION OF SECTION 32, TOWNSHIP 4 SOUTH, RANGE 11 WEST, SITUATE AND LYING IN THE COUNTY OF ORANGE, STATE OF CALIFORNIA.

Table 1 below summarizes information obtained regarding the Site visit. Copies of select Site photographs are included in **Appendix A**.

Table 1: Summary of the Southwest Regional Laboratory Site

Address	Year Built (approx.)	Building Size (square feet)	Lot Size (acre)	Property Description	Occupied
4665 Lampson Avenue	1971	88,000	Approximately 12.367 acres	Commercial building with parking lot and landscaped areas	Yes

The Site consists of approximately 12.367 acres of land developed with an 88,000-square foot commercial building with a parking lot located on the western portion of the Site and landscaped areas located north, east, and south of the Site building. Tetra Tech observed a pad-mounted transformer outside the west wall of the Site building as well as other transformers inside the building. All transformers in the interior of the building were observed to be dry-type. Stormwater drains were observed in the parking lot and an on-site concrete-lined drainage channel was observed on the southern portion of the property, traversing east to west.

2.1 TOPOGRAPHY

According to the United States Geological Survey (USGS) 7.5-minute series, 1981 Los Alamitos, California Topographic Quadrangle Map, the Site is located at approximately 22 feet above mean sea level (msl).

2.2 SURFACE WATER/WETLANDS

The Site was inspected for potential wetlands and water bodies. For purposes of this report, potential wetlands include areas that are saturated with water or covered by shallow water and

support hydrophytic vegetation (cattails, fern, bald cypress, etc.). Wetlands do not include constructed drainage ditches and retention ponds that are maintained for the purpose of stormwater or wastewater control. A wetlands delineation study was not included in the scope-of-work for the Phase I ESA.

Potential wetlands were not observed on the Site. According to the U.S. Fish and Wildlife Service's (USFWS) Online Wetlands Mapper (http://www.fws.gov/wetlands/Data/Mapper.html) and National Wetland Inventory (NWI), the Site is not listed in a Federal or State designated wetland area. The closest wetland is identified approximately 0.06 miles east of the Site associated with a freshwater pond. The Site is not identified in a 100- or 500-year floodplain.

A permanent body of water and/or other standing water was not observed on the Site. The closest major water feature is Bolsa Chica Channel located approximately 0.33 miles east of the Site.

2.3 AREA GEOLOGY AND SOILS

Tetra Tech used Geocheck® - Physical Setting Source Summary, provided by Environmental Data Resources, Inc. (EDR®) and the 2010 Geologic Map of California (State of California Geological Survey), to determine the geology of the area. The Site is identified as overlying marine and nonmarine (continental) sedimentary rocks. The age is described as Pleistocene-Holocene and material description is alluvium, lake, playa, and terrace deposits. Further, the rock type is described as unconsolidated and semi-consolidated and mostly nonmarine (California Geological Survey 2010).

According to the United States Department of Agriculture (USDA) Natural Resources Conservation Service's (NRCS) Web Soil Survey (WSS) Orange County and Part of Riverside County, California (http://websoilsurvey.nrcs.usda.gov), native soils in the vicinity of the Site primarily consist of drained Hueneme fine sandy loam. Hueneme find sandy loam is described as poorly drained with a depth to water greater than 80 inches. The soils have a high potential of corrosion to uncoated steel and are not considered hydric (USDA NRCS 2015).

2.4 AREA HYDROLOGY AND HYDROGEOLOGY

According to the California Groundwater Bulletin 118 from the California Department of Water Resources, the Site is underlain by the Coastal Plain of Orange County Groundwater Basin which is bound by the Pacific Ocean to the southwest and by a low topographic divide to the northwest in the proximity of the Orange County and Los Angeles County line. The upper aquifer system is comprised of Holocene alluvium, older alluvium, stream terraces, and upper Pleistocene deposits of the La Habra Formation. Recharge to the upper aquifer system is mostly in the northeast portion of the basin. The middle aquifer system is comprised of lower Pleistocene Coyote Hills and San Pedro Formations which include sand, gravel, and some clay. Recharge is primarily from the Santa Ana River channel to the northeast. The lower aquifer system includes the Upper Fernando Group of upper Pliocene age and is sand and conglomerate.

According to groundwater contour maps provided by the Orange County Water District, groundwater was identified approximately at an elevation of 70 feet below msl (NGVD29) and the groundwater flow direction is reportedly to the southwest to the Pacific Ocean (Orange County Water District, 2014).

3.0 SITE OWNERSHIP AND USE

Information pertaining to the historical nature of the Site was obtained through EDR.

3.1 SITE OWNERSHIP

According to the EDR 1940 Chain of Title reports, included in **Appendix G**, the parcel associated with the Site is currently owned by the United States of America which acquired the property through eminent domain from the Fred H. Bixby Rancho Company. The date that the United States of America obtained ownership was not available. The Orange County Assessor's Office parcel number associated with the Site is 130-012-35.

3.2 SITE USE - HISTORICAL

General information regarding the historical use of the Site was obtained from a review of available historical documents. According to historical information, the Site was undeveloped vacant land prior to the current Site building's construction in 1971.

Historical documents reviewed to gather information about historical site use included:

- Historical aerial photographs;
- Historical topographic maps;
- Historical Sanborn® Fire Insurance Maps;
- Historical City Directories; and,
- Other historical information provided by GSA.

Historical Aerial Photographs

Fifteen (15) aerial photographs of the property dated 1928, 1938, 1947, 1952, 1963, 1972, 1977, 1989, 1990, 1994, 2002, 2005, 2009, 2010, and 2012 were obtained from EDR® (EDR 2015b). Copies of the aerial photographs are included in **Appendix C**. Aerial photographs show that the areas north of the northern adjoining property to the Site were first developed between 1947 and 1952 with what appears to be two airstrips associated with the Los Alamitos Armed Forces Reserve Center. Prior to the 1947 aerial photograph, the Site appears to be undeveloped or agricultural land. Based on the aerial photographs, the Site has been undeveloped land dating to at least 1963. The Site building and associated parking lot to the west in the same configuration as was observed during the Site reconnaissance were first visible in the 1972 aerial photograph.

With exception of the two airstrips located on a property beyond the northern abutter and a residential property adjacent to the south of the Site in the 1928 and 1938 aerial photographs, the surrounding areas in the vicinity of the Site generally appear to be undeveloped land in the 1928

through 1963 aerial photographs. The 1972 aerial photograph shows the Site, and residential developments to the south of the Site with Lampson Road visible to the south of the Site. The 1977 aerial photograph shows the abutting property to the east developed as a golf course. The 1989 aerial shows the abutting property to the north developed as a park. The western abutting properties appear to be cleared with no structures in aerials dating from 1977 to 2012. The surrounding areas of the Site in the 1977 through 2012 aerial photos appear similar to conditions observed during Site reconnaissance in the remaining photos. No RECs were observed in association with the historic use of the Site and surrounding areas during the review of the aerial photographs.

Historical Topographic Maps

Ten (10) historical USGS topographic maps were obtained from EDR® (EDR 2015d). The maps, dated 1896, 1901, 1902, 1935, 1947, 1950, 1951, 1964, 1972, and 1981 are included in **Appendix D**. The maps dated 1896, 1902, and 1947 are USGS 15-minute maps depicting the Downey, California quadrangle; the map dated 1901 is a USGS 60-minute map depicted the Southern California Sheet 1, California quadrangle; the maps dated 1935, 1950, 1964, 1972, and 1981 are USGS 7.5-minute maps depicting the Los Alamitos, California quadrangle; and the map dated 1951 is a USGS 7.5-minute map depicting the Longbeach Vicinity, California quadrangle. The maps indicate that the Site is located at approximately 20 feet above msl. Based on the topographic maps from 1896 through 1947, the Site is depicted as undeveloped land. On the topographic maps from 1950 through 1964, the Site is depicted as undeveloped land on a U.S. Naval Reservation. The Site building is depicted on the 1972 and 1981 topographic maps.

The surrounding areas are depicted as undeveloped areas on the 1894 through 1947 with the U.S. Naval Reservation present beginning in the 1950 topographic maps. The surrounding areas on the 1972 topographic map include residential development to the south of the Site. No RECs were observed in association with the historic use of the Site and surrounding areas during the review of the topographic maps.

Historical Fire Insurance Maps

Historical Fire Insurance Maps were requested from EDR® (EDR 2015c); however, coverage was not available for the Site. The No Coverage notice is included in **Appendix E**.

Historical City Directories

Historical City Directories were obtained from EDR® (EDR 2014e). Cole Information Services and Haines Criss-Cross Directory were searched for the following years: 1971, 1972, 1975, 1980, 1985, 1990, 1995, 1999, 2003, 2008, and 2013, and is included in an EDR summary report in **Appendix F**. The Site address was identified in the 1975, 1980, 1995, 1999, 2003, 2008, and 2013 City Directories searched by EDR®. Details for each year are provided below:

- **1975**: Southwest Regional Laboratory

- **1980**: Southwest Regional Laboratory
- **1985**: Association of California School Administrators, Inc., National Center Building, Provident Credit Union, Southwest Regional Laboratory
- **1990**: Association of California School Administrators, Inc., National Center Building, Southwest Regional Laboratory
- **1995:** Association of California School Administrators Inc., Southwest Regional Labs Education Research & Development, Amanda Titus
- **1999:** Association of California School Administrators Inc., Association of California School Administrators, WestEd
- **2003:** California Department of Fish and Game, Southwest Regional Labs Co., WestEd
- **2008:** Association of California School Administrators Inc., California Department of Fish and Game, California State University, General Services CAL Department, WestEd,
- **2013:** California Department of Fish and Game, James J. Mentas Attorney At Law, State of California, and West Ed

The former Southwest Regional Laboratory identified in the City Directories was an educational research center. The historic use of the Site and surrounding properties, in Tetra Tech's opinion, do not appear to represent RECs for the Site.

3.3 SITE USE - CURRENT

The Site is currently owned by the United States of America. The current site building is used primarily as commercial office space. At the time of the site reconnaissance, there were four building tenants:

- **WestEd (formerly Southwest Regional Laboratory)**: WestEd operates jointly between the Southwest Regional Laboratory and another laboratory and occupies the majority of the building on both the first and second floors. WestEd conducts research and consulting for education improvement.
- **California Department of Fish and Wildlife:** The California Department of Fish and Wildlife became a tenant in 2000 and occupies approximately 11,000 square feet on both the first and second floors. The California Department of Fish and Wildlife also utilizes exterior storage on the northwest corner of parcel primarily for vehicle/vessel storage. The Department maintains a public counter to obtain hunting/fishing permits, utilizes the Site as a field office where illegal game is processed for evidence, and conducts research on local fish in the area using a wet lab. Tested fish is disposed of by grinding and washing down the sink. Small amounts of hazardous/flammable materials were observed in containers of 8-ounces or less and one 5-gallon container. Safety Data Sheets (SDS) were posted within the laboratory space. The California Department of Fish and Wildlife also maintained a dive locker. This locker contained oxygen and nitrox tanks. No leaks or spills were identified in association with these containers or general work inside the laboratory.

According to the Site contacts, the lab wastes were disposed of by a third party contractor. The Department also maintains a dive locker that contains several oxygen and nitrox tanks.

- **James J Mentas Attorney At Law:** The law office of James Mentas occupies approximately 400 square feet on the first floor of the Site building.
- **National Comfort Institute:** This tenant occupies approximately 11,000 square feet on the first floor and is a heating, ventilating, and air condition (HVAC) training school. According to the Site representatives, this tenant recently moved in.

4.0 SITE INSPECTION

Section 4.0 describes general site observations from the September 23, 2015 Site visit. Photographs of selected Site features were taken during the Site visit. Copies of select Site photographs are included in **Appendix A**.

4.1 SITE BUILDINGS AND GROUNDS

The Site is located at 4665 Lampson Avenue in Los Alamitos, Orange County, California (**Figures 1, 2** and **3**). The Site consists of one parcel totaling approximately 12.367 acres. Based on the Site reconnaissance, the Site is improved by an 88,000 square foot commercial building with a parking lot located on the western portion of the Site and landscaped areas located north, east, and south of the Site building. The current site building is used primarily as commercial office space.

4.2 UTILITY AREAS, HEATING, VENTILATING AND AIR CONDITIONING SYSTEM

A central HVAC system with cooling towers/boilers on the second floor were noted during the Site reconnaissance. Potable water is available from Golden State Water and sewer services are available from the Los Alamitos Sewer. Electricity is available via Southern California Edison. In addition, natural gas is provided by the Southern California Gas Company.

4.3 DRYWELLS/STORM DRAINS

No drywells were identified in the vicinity of the Site. Storm drains were identified in the parking lot on the western portion of the Site. No stains or odors were noted during the site reconnaissance. The stormwater flow is directed to the south to an on-site concrete-lined drainage channel that traverses east to west on the southern portion of the property.

4.4 SURFACE WATER, PITS/PONDS/LAGOONS

No surface water bodies, pits, ponds or lagoons were observed on the Site during Site reconnaissance. The closest major water feature is the Bolsa Chica Channel located approximately 0.33 miles east of the Site. A freshwater pond associated with the abutting property's golf course is located approximately 0.06 miles east of the Site. Tetra Tech observed a concrete-lined drainage channel located along the southern boundary of the Site. The drainage channel receives water from the portions of the Site to the north. Stormwater from the Site is discharged to the local publicly-owned treatment works.

Floor drains were observed within the Site building in janitorial closets and in restrooms. No staining or odors were noted during the Site reconnaissance.

4.5 SURFACE STAINING

No staining was observed during the site reconnaissance that would pose a REC to the Site during site reconnaissance.

4.6 STRESSED VEGETATION

Tetra Tech did not observe any areas of dead, distressed, discolored or stained vegetation at the Site property.

4.7 STORAGE TANKS

A 1,500-gallon diesel aboveground storage tank (AST) and associated emergency generator for the used for the cooling tower and to power the building in an emergency was observed during the site reconnaissance. According to the Site representatives, the AST was observed to be enclosed in secondary containment and was reportedly partially full at the time of Site reconnaissance with no visible staining or indication of a release, and the cooling tower was no longer in operation. The cooling tower had been installed for a former tenant, CSU Long Beach, for the purpose of cooling a data laboratory that was once located within the Site building. The emergency generator is serviced by Duthie Power Services on an approximate annual basis. One partially full 55-gallon drum of cooling water treatment was observed during the site reconnaissance. According to historical documentation and interviews with the Site contacts, no underground storage tanks (USTs) were formerly used or associated with the Site. The use of storage tanks at the Site is not considered a REC.

4.8 SITE RECORDS

The Site is currently improved by a 2-story, 88,000-square foot commercial building. Records which were reviewed are discussed in pertinent sections of this report. GSA provided a previous Phase I ESA Report prepared for the Site dated April 16, 1998 by Tecumseh Professional Associates, Inc.

4.9 WASTEWATER

No evidence of mishandling of wastewater was observed at the time of Site reconnaissance. As discussed in Section 4.4, Tetra Tech observed a stormwater drainage channel located along the southern boundary of the Site. The drainage channel receives water from the northern portions of the property.

4.10 ELECTRICAL TRANSFORMERS AND EQUIPMENT

U.S. Environmental Protection Agency (USEPA) Code of Federal Regulations (CFR) Title 40, Part 761, governs the manufacturing, processing and distribution of polychlorinated biphenyls (PCBs). The guideline defines a PCB transformer as any transformer that contains 500 parts per million (ppm) PCBs. PCB-containing electrical equipment is defined as "any electrical equipment including, but not limited to, transformers (including those used in railway locomotives and self-propelled cars), capacitors, circuit breakers, reclosers, voltage regulators, switches (including sectionalizers and motor starters), electromagnets, and cable, that contain PCBs at concentrations of 50 ppm and < 500 ppm in the contaminating fluid."

Electricity is supplied to the Site by a utility-owned, pad-mounted transformer observed outside the west wall of the Site building. This transformer was not identified in the previous Phase I ESA dated April 16, 1998 and completed by Tecumsah Professional Associates, Inc.; however, Tetra Tech believes the transformer was present based on the photo documentation in the Phase I ESA report. This transformer may contain PCBs. Other transformers observed within the Site building appeared to be dry-type units; however, no labeling indicating PCB content was observed on the transformers. No evidence of leaks or staining was observed in the vicinity of the pad-mounted transformer, and the transformers at the Site are not anticipated to represent an environmental concern at the Site.

A hydraulic elevator serviced by ThyssenKrupp Elevator was observed in the Site building. No evidence of leaks or staining was observed in the elevator equipment room. The elevator pit was not accessible during Site reconnaissance. The elevator is not anticipated to represent an environmental concern at the Site.

4.11 PESTICIDE AND HERBICIDE USE

Tetra Tech did not observe pesticide or herbicide use or storage at the Site during Site reconnaissance.

4.12 INDOOR AIR

Mold

The Site building was inspected for signs of mold. Evidence of water damage or potential mold was not observed during the Site reconnaissance.

Radon Gas

Radon gas is a colorless, odorless gas that occurs naturally from the breakdown of uranium. Radon can be found in high concentrations where there are soils and rocks containing high levels of uranium, granite, shale or phosphate. In open air or in areas with high air circulation, radon is not considered a health problem. However, in confined spaces (such as poorly ventilated basements), radon can concentrate and become a health hazard.

The USEPA has classified Orange County, California as being located within the USEPA Radon Zone 3, with indoor average radon levels less than 2 picocuries per Liter (pCi/L). Based on information provided by the GSA, radon testing has not been conducted at the Site.

The USEPA Radon residential threshold value for radon in indoor air is 4 pCi/L. According to the EDR report, a total of 34 facilities were tested in the 90720 zip code with each of the facilities under 4 pCi/L. Site-specific radon testing has not been conducted at the Site according to historical information. Based on the results of this testing and the non-residential usage of the Site, radon is not considered a concern for the Site.

Indoor air is not anticipated to be a concern at the Site.

4.13 RADIOACTIVE MATERIALS

GSA personnel and the Site contact were not aware of permitted radiological activities or materials at the Site. No information obtained indicated radioactive material use or storage within the neighboring properties. Therefore, radioactive materials are not a concern associated with this Site.

4.14 ASBESTOS

Asbestos assessment is not in the scope of work or ASTM standard and was not conducted as part of this investigation. However, during the inspection, a limited visual survey for potential asbestos-containing materials (ACMs) was performed. ACMs were used in the construction of new structures prior to 1980, when use gradually was reduced in the United States. Based on the Site building's construction date of 1971, it is Tetra Tech's opinion that suspect asbestos containing material may include floor tiles and mastic, carpet mastic, vinyl baseboard mastic, drywall and or plaster and ceiling tiles. The potential ACMs at the Site appeared to be in good condition at the time of Site reconnaissance.

4.15 LEAD-BASED PAINT

A lead-based paint (LBP) survey was not conducted as of this investigation. LBP is not an ASTM scope item. Tetra Tech did not observe evidence of LBP (as indicated by peeling, chipping, or flaking paint) at the time of the ESA site visit. LBPs were mainly used prior to 1980, when use began to decline in the United States. However, based on the Site building's construction date of 1971, lead-based paint may be present at the Site.

5.0 REGULATORY REVIEW

5.1 RECORDS REVIEW

Various State and Federal lists that identify properties with confirmed or possible contamination, facilities that generate hazardous wastes, sites with USTs, and properties involved in Federal enforcement actions were reviewed to assess the environmental status of the Site. **Table 2** presents a summary of the information provided by EDR® (EDR 2015a) for the Site. The complete Environmental EDR® Report is provided in **Appendix B**.

5.1.1 SITE

The Site was identified three times in the Hazardous Materials Generator (HAZNET) database. In 2000, the Site was identified as generating asbestos containing waste with disposal in a landfill. In 2003, the Site was identified as a generator of off-specification, aged or surplus organics with a disposal method identified as transfer station. In 2010, the Site was identified as generating ages or surplus organics with a disposal method identified as other treatment. In 2012, the Site was identified as generating a hazardous waste with a disposal method of storage, bulking, and/or transfer off site with no treatment or recovery. No violations were listed for the Site. Based on the lack of a reported release and regulatory enforcement associated with these listings, the HAZNET databases listings for the Site are not considered a REC.

5.1.2 SURROUNDING AREAS

Nine (9) sites were identified on State or Federal database lists searched by EDR within their respective search radii. The facilities' listings included two Department of Defense (DOD) sites; one state Hazardous Waste Site (SHWS) facility; one Spills, Leaking, Investigation, and Cleanup (SLIC) facility; three California Department of Toxic Substances Controls Site Mitigation and Brownfields Reuse Program (ENVIROSTOR) facilities; two Leaking Underground Storage Tank (LUST) facilities; a RCRA-NonGenerator (NonGen) facility; one Historical State Water Resource Control Board, Integrated Waste Board, one state RESPONSE hazardous waste site, and one Department of Toxic Substances Control Sites (HIST CORTESE) facility within the regulatory search limits for each database. The facilities of concern are discussed below and on the following pages:

- Seal Beach Naval Weapons Station is located in the inferred downgradient direction, approximately 0.633 mile south of the Site and is listed as a Navy DOD facility. No other information was provided in the EDR Report regarding this property. Based on this property's distance, Orange County groundwater flow direction to the southwest away from the Site, and downgradient location, this property is not considered a REC.
- Los Alamitos Armed Forces Reserve Center is located less than 1/8th mile from the Site and listed as an Army DOD facility. No other information was provided in the EDR Report

regarding this property. Topographic maps reviewed for the Site indicate that the Site prior to development was once along the southern boundary of the Los Alamitos Armed Forces Reserve Center. Based on a review of historical documentation and the lack of environmental database listing for this property in the EDR Report, this property is not considered a REC.

- David Rutledge (4533 Hazelnut, Seal Beach, CA) is a residence located approximately 0.101 mile southwest of the Site. This property is listed in 1987 in the RCRA-NonGenerator (NonGen) facility database as a transporter of hazardous waste with no violations identified. Based on the regulatory status of the property with no identified releases and reported groundwater flow direction to the southwest, the facility is not considered a REC.
- Bolsa Chica Channel Dewatering (5250 Lampson Avenue, Garden Grove, CA) is located approximately 0.358 mile east of the site and is listed in the SLIC database. The status of this listing is listed as case closed as of Mjimmarch 23, 2009. The material released is listed as a solvent and potentially impacted groundwater and soil. Based on the regulatory status of the closed SLIC listing with a documented responsible party and distance from the Site, Bolsa Chica Channel Dewatering facility is not considered a REC.
- Jerry Giragossian and ARCO #3015 (5262 Lampson Avenue) is located 0.365 mile east of the Site and is listed in the LUST database twice and in the HIST CORTESE database once. The EDR report indicates that this property is a gasoline fueling station. Based on the regulatory status of the closed LUST listings and distance, the Jerry Giragossian/ARCO #3015 facility is not considered a REC. A description of each listing is provided below:
    - Jerry Giragossian (5262 Lampson Avenue). The EDR report indicates that the case opened on December 22, 1987 when a leak of solvents/gasoline was identified and potentially affected the aquifer used for drinking water supply. Remediation consisted of excavation and was conducted in July 1988 and September 1999, site assessment activities took place from 1988 through 2001 and quarterly monitoring reports were required from July 2002 through January 2004. An enforcement action took place in February 2004 and the case was closed in December 22, 2004.
    - ARCO #3015 (5262 Lampson Avenue). The EDR report indicates that the case opened on March 31, 1988 for a release of solvents discovered during tank closure activities. The abatement method implemented included excavation of impacted soil and disposal off site at an approved site. The case closure date is listed as December 22, 2004. During investigation of the UST release, impacts of chlorinated hydrocarbon levels were identified at the property which were perhaps attributable to a nearby drycleaner. The listing indicated further investigation was required and a search for the responsible party would be conducted. No additional information was provided in the HIST CORETESE database.
- Naval Air Station Los Alamitos facility is located 0.616 mile north-northwest of the Site and is listed in the ENVIROSTOR database. The status is listed as inactive and in need of evaluation as of July 1, 2005. No additional information was provided. Based on the

regulatory status of the facility and distance, Naval Air Station facility is not considered a REC.

- Los Alamitos RAD Bomb/Score Site is located approximately 0.616 mile north-northwest of the Site and is listed in the ENVIROSTOR database as a military facility with a status listed as closed and in need of evaluation as of July 1, 2005. The database listing indicates that this property may have potential contaminants of concern (COCs) of explosives. Based on the distance and closed status of this facility, this property is not considered a REC.
- Joint Forces Training Base, Building 34 (4250 Constitution Avenue) is located approximately 0.874 mile north-northwest of the Site and is listed in the ENVIROSTOR and state RESPONSE databases within the specified search radii. According to the ENVIROSTOR database listing, this property's past uses included fire training areas, small arms firing range and potential COCs included munitions debris. This property has a listed status of "no further action" as of February 3, 2010. The EDR report indicates that a Preliminary Endangerment Assessment Report was completed in April 1995, a Removal Action Completion Report was completed in February 1996, an Action Memorandum was issued in April 1997, and a Preliminary Assessment/Site Inspection Report was completed in September 2008. According to the EDR Report, in September 2008, the California Department of Toxic Substances agreed with the Army's determination that no further evaluation was required unless new information indicating that the decision was not appropriate became available. Based on the distance from the Site, and the property's site status of "no further action", this property is not considered a REC.

The EDR database report indicates one orphan facility was identified. Tetra Tech reviewed the orphan information and the address listed is located more than 3 miles west of the Site and based on distance, is not considered a REC to the Site.

5.2 LOCAL RECORDS

Tetra Tech contacted the Orange County Fire Authority and the Orange County Health Department via telephone and facsimile on October 6, 2015, to request copies of environmental records and permits related to the Site. The Orange County Health Department indicated they did not have records for the Site on October 19, 2015. The Orange County Fire Authority indicated they did not have records for the Site on December 14, 2016. Tetra Tech also accessed California's State Water Resources Control Board GeoTracker database on October 6, 2015 to assess if the Site or adjacent properties were listed in their database of environmental data for regulated sites. No listings existed for the Site and adjacent properties.

According to the EDR LienSearch™ report, no environmental liens or activity use limitations (AUL) are associated with the Site.

6.0 ADJACENT AND NEIGHBORING PROPERTIES

Section 6.0 provides information on the history of neighboring properties to identify potential environmental impacts to the site.

6.1 NEIGHBORING PROPERTIES - CURRENT

The Site's property is bound by the Arbor Park and Arbor Dog Park to the north with the Los Alamitos Joint Forces Training Base beyond; to the east by a Navy Golf Course; to the south by Lampson Avenue with single-family residential properties beyond; and to the west by the Los Alamitos Joint Forces Training Base. No environmental concerns were observed on neighboring properties at the time of the Site reconnaissance.

6.2 NEIGHBORING PROPERTIES - HISTORICAL

With exception of the two airstrips located on a property beyond the northern abutter, the neighboring properties in the vicinity of the Site appear to be undeveloped land in the 1928 through 1963 aerial photographs. The 1972 aerial photograph shows the Site, and residential developments to the south of the Site with Lampson Road visible to the south of the Site. The 1977 aerial photograph shows the abutting property to the east developed as a golf course. The 1989 aerial photograph shows the abutting property to the north developed as a park. The western abutting properties appear to be cleared with no structures in aerial photographs dating from 1977 to 2012. The surrounding areas of the Site in the 1977 through 2012 aerial photographs appear similar to conditions observed during Site reconnaissance in the remaining aerial photographs. Historical aerial photographs and topographic maps are included in **Appendices C** and **D**, respectively. No historical environmental concerns were noted for the neighboring properties.

7.0 HAZARDOUS MATERIALS AND WASTE MANAGEMENT

7.1 HAZARDOUS MATERIALS

At the time of Site reconnaissance, a chemical/wet laboratory was observed within the tenant space occupied by the California Department of Fish and Wildlife. Small amounts of hazardous/flammable materials were observed in containers of 8-ounces or less and one 5-gallon container. Safety Data Sheets were posted within the laboratory space. The California Department of Fish and Wildlife also maintained a dive locker. This locker contained oxygen and nitrox tanks. No leaks or spills were identified in association with these containers or general work inside the laboratory. According to the Site contacts, the lab wastes were disposed of by a third party contractor. This locker contained oxygen and nitrox tanks.

Within the Site building's primary maintenance shop and shipping/receiving area, containers of 5-gallons or less of paints and commercial cleaning products such as soaps and vinegars utilized for the building upkeep were observed. Several 1-quart motor oil containers for small equipment maintenance were stored within cabinets.

Within the Site building's main electrical and emergency generator room, small paint containers containing marking paint or striping paint were observed.

An approximate 1,500-gallon diesel AST enclosed in secondary containment and a cooling tower was observed within the Site building in a 1st floor room adjacent to the Site building's main electrical and emergency generator room. According to the Site representatives, Mr. Jonathan Mills and Mr. Mark Shegich, the cooling tower was not in use and had been installed for a previous tenant, CSU Long Beach for cooling of a former data laboratory. One partially full 55-gallon drum of cooling water treatment was observed.

A 5-gallon bucket of lubricant was observed within the elevator room at the time of the site reconnaissance.

7.2 HAZARDOUS AND NON-HAZARDOUS WASTE MANAGEMENT

At the time of Site reconnaissance, one 55-gallon drum of PCB-containing ballasts were observed within the Site building's primary maintenance shop and shipping/receiving area. No landfills or dumps were observed at the Site. Tetra Tech does not consider waste management at the Site to be a concern.

8.0 USER PROVIDED ENVIRONMENTAL INFORMATION AND INTERVIEWS

The objective of the interviews is to obtain information concerning RECs in connection with the Property. This information was obtained verbally, as indicated below.

8.1 INTERVIEW WITH OWNER OR REPRESENTATIVE

Tetra Tech interviewed Mr. Jonathan Mills, the owner representative and representative for the site building occupant WestEd.

According to Mr. Mills, he was not aware of (1) any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the Site; (2) any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Site, or (3) any notices from any government entity regarding any possible violations of environmental laws or possible liability relating to hazardous substances or petroleum products.

8.2 INTERVIEW WITH PAST OCCUPANTS

Past occupants were not readily available for interview. Based on site operations and review of regulatory data, Tetra Tech does not consider this data gap a REC for the Site.

8.3 INTERVIEW WITH ADJACENT PROPERTY OWNERS

Tetra Tech attempted to speak with neighboring property owners and or operators during Site reconnaissance; however, the neighboring property owners were not readily available or unwilling for interview during the time of the site reconnaissance. Tetra Tech does not consider this data gap a REC for the Site.

8.4 USER PROVIDED INFORMATION

The GSA provided a copy of a Phase I Environmental Site Assessment conducted at the Site property for WestEd dated April 16, 1998 and completed by Tecumsah Professional Associates, Inc. Tetra Tech performed a review of this document which did not identify RECs for the Site. A copy of this document can be found in **Appendix H**.

9.0 DEVIATIONS

There were no deletions or deviations from ASTM E 1527-13 with the exception of the following:

- Interviews with previous land owners were not conducted.
- Time gaps of more than 5 years were noted in available historical information.
- The elevator pit was inaccessible during the time of site reconnaissance.

Tetra Tech does not believe that the identified deviations impact our ability to render an opinion regarding potential RECs, CRECs, HRECs, or *de minimis* conditions for the Site.

10.0 CONCLUSIONS AND RECOMMENDATIONS

Tetra Tech has performed this Phase I ESA in conformance with the scope and limitations of the ASTM Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (E 1527-13) for the property located at 4665 Lampson Avenue in Los Alamitos, Orange County, California. This assessment has revealed the following findings that relate to potential for contamination or liability in connection to the Site.

10.1 CONCLUSIONS

The Phase I ESA identified the following findings at the Site:

- Electricity is supplied to the Site by a utility-owned, pad-mounted transformer observed outside the west wall of the Site building. This transformer was not identified in the previous Phase I ESA dated April 16, 1998 and completed by Tecumsah Professional Associates, Inc.; however, Tetra Tech believes the transformer was present based on the photo documentation in the Phase I ESA report. This transformer may contain PCBs. Other transformers observed within the Site building appeared to be dry-type units; however, no labeling indicating PCB content was observed on the transformers. No evidence of leaks or staining was observed in the vicinity of the pad-mounted transformer, and the transformers at the Site are not anticipated to represent an environmental concern at the Site.
- A 1,500-gallon diesel aboveground storage tank (AST) and associated emergency generator for the used for the cooling tower and to power the building in an emergency was observed during the site reconnaissance within the 1st floor of the Site building. The AST was observed to be enclosed in secondary containment and was reportedly partially full at the time of Site reconnaissance with no visible staining or indication of a release, and the cooling tower was no longer in operation. According to the Site representatives, Mr. Jonathan Mills and Mr. Mark Shegich, the cooling tower had been installed for a former tenant, California State University (CSU) Long Beach, for the purpose of cooling a data laboratory that was once located within the Site building. The emergency generator is serviced by Duthie Power Services on an approximate annual basis. One partially full 55-gallon drum of cooling water treatment was observed during the site reconnaissance. The emergency generator, associated AST, and cooling tower are not anticipated to represent an environmental concern at the Site.
- The Site was identified three times in the HAZNET database. In 2000, the Site was identified as generating asbestos containing waste with disposal in a landfill. In 2003, the Site was identified as a generator of off-specification, aged or surplus organics with a disposal method identified as transfer station. In 2010, the Site was identified as generating ages or surplus organics with a disposal method identified as other treatment. In 2012, the Site was identified as generating a hazardous waste with a disposal method of storage, bulking, and/or transfer off site with no treatment or recovery. No violations were listed for the Site.

Based on the lack of a reported release and regulatory enforcement associated with these listings, the HAZNET databases listings for the Site are not considered a REC.

- At the time of Site reconnaissance, a chemical/wet laboratory was observed within the tenant space occupied by the California Department of Fish and Wildlife. Small amounts of hazardous/flammable materials were observed in containers of 8-ounces or less and one 5-gallon container. Safety Data Sheets were posted within the laboratory space. The California Department of Fish and Wildlife also maintained a dive locker. This locker contained oxygen and nitrox tanks. No leaks or spills were identified in association with these containers or general work inside the laboratory. According to the Site contacts, the lab wastes were disposed of by a third party contractor. Tetra Tech does not consider the use of chemicals in the lab area to be a REC.
- Within the Site building's primary maintenance shop and shipping/receiving area, containers of 5-gallons or less of paints and commercial cleaning products such as soaps and vinegars utilized for the building upkeep were observed. Several 1-quart motor oil containers for small equipment maintenance were stored within cabinets. No leaks or spills were identified in association with these containers inside the maintenance shop. Tetra Tech does not consider the maintenance shop and shipping/receiving area to be a REC.
- Within the Site building's main electrical and emergency generator room, small paint containers containing marking paint or striping paint were observed. No leaks or spills were identified in association with these containers inside the main electrical and emergency generator room. Tetra Tech does not consider the main electrical and emergency generator room to be a REC.
- A 5-gallon bucket of lubricant was observed within the elevator equipment room at the time of the site reconnaissance. No leaks or spills were identified in association with the lubricant container inside the elevator room. Tetra Tech was unable to assess the elevator pit at the time of Site reconnaissance because it was inaccessible. Tetra Tech does not consider the container in the elevator equipment room to be a REC.

10.2 RECOMMENDATIONS

Based on the conclusions outlined above, Tetra Tech makes the following recommendations to the GSA for consideration with respect to the Site:

- No further action is recommended in association with the transformer located at the Site.
- No further action is recommended in association with the chemical storage containers at the Site.
- No further action is recommended in association with the emergency generator and associated AST at the Site.
- General housekeeping activities should be maintained in the wet laboratory, maintenance shop, and emergency generator rooms.

- No further action is recommended in association with the HAZNET database listings associated with the Site.

10.3 LIMITATIONS

The conclusions of the report are professional opinions based solely upon visual site observations, and interpretations of analyses as described in this report. The opinions presented within this report apply to the site conditions existing at the time of the investigations, and interpretation of current regulations. Therefore, opinions and recommendations provided within this report might not apply to future conditions that may exist at the Site.

The resumes of the environmental assessor who conducted the site reconnaissance and prepared the report and the resume of the environmental professional who oversaw completion of this work are provided in **Appendix I**. We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 40 CFR 312.10 of this part. We have the specific qualifications based on education, training, and experience to assess a Site of the nature, history, and setting of the Site. We have developed and performed the all appropriate inquiries in general conformance with the standards and practices set forth in 40 CFR Part 312 and attest to the completeness and accuracy of the information contained in this report.
